Mr. Charles Cross (32) exhibits cravats, some of which are very elegant; but never, surely, was there a greater waste of means and material than is seen in his woven portraits of the Queen and the Prince. People who attempt things of this kind should first learn to draw, and, having done that, next use their intellect to direct their artistic talent to some useful purpose. Here we have a perfect burlesque both in portrait and in ornament.

Messrs. Marshall and Snellgrove, Vere-street (33), exhibit broad silks and shaded glacé silks, manufactured by Messrs. Winkworth and Proctor, of Manchester. The examples are excellent, and some of the dyes peculiar. Messrs. Carter, Vavasour, and Ex, Cheapside (30), show a few good figured brocades. The cravat patterns are simply ridiculous—suitable, doubtlessly, for very "fast" young men. The skull and cross-bones is an insult to common sense. It is really wonderful where the people come from who buy such things, if they really do sell at all. The furniture damasks exhibited by Messrs. Stilwell and Sons are good examples of an ordinary class of productions. The specimen of the coronation robe of her Majesty is a good imitation of antique embroidery.

Messrs. Grant and Co., Foster-lane (36), exhibit crapes of a very beautiful character, gossamers, and lissé gauze. The scarfs are ornamented with less taste than we thought it possible to have got into such a material. The forms are badly selected, and worse drawn. Here are materials of great beauty, to which art, judiciously applied, would add a hundredfold in value. The crapes of Messrs. S. Courtauld and Co. are very excellent examples of this class of goods.

Mr. George Mason, Yately, Hampshire, exhibits specimens of manufacture made from British grown silk by Messrs. James Houldsworth and Co., of Manchester. These consist of borders for curtains, and an embroidered table-cover, the silk for which has been the result of Mr. Mason's attention to the culture of that material. The two specimens exhibited by the Spitalfields School of Design are of a good class of textile art, and do credit to those who have produced them as special efforts. We wish, however, that the influence of this institution was more visible in the general productions of the locality in which it is situated, and which it is intended to benefit; doubtlessly some of them may have felt its influence, but we fear the majority of the designs shown by manufacturers are the production of artists who never had anything to do with the school in any shape.

And now that this once-dreaded ordeal has been gone through by the silk manufacturers of Spitalfields, what have they learned by the lesson? Truly, that which has been over and over again impressed upon them—to rely more upon themselves and less upon adventitious aid. Under protective tariffs we had Spitalfields grievances and distresses continually before us—bails for the relief of the operatives, and the shelves of the manufacturers of unsaleable stock at the same time; because any lady who went to the Opera House to dance at a ball for so charitable a purpose, must needs be dressed, for once at least, in the fabrics made by the hands of those for whose relief the profits of the festival were ostensibly to be devoted. Yet all this has passed away; although, according to the calculations of the wisest amongst them, every manufacturer in Spitalfields was to be immediately ruined if he were thrown on his own resources. Silk was an exotic, and therefore required the fostering aid of protection as if we grew our own cotton. Our manufacturers of cotton, however, were compelled to make constant improvements in their methods of production, to develop mechanical aids, if not artistic elegances, and, in running a healthy race, gained strength and force in the operation; whilst Spitalfields was driving its trade away by the retention of antiquated statutes, only fit for an antediluvian state of society.

MACCLESFIELD.

Out of the absurd restrictions of the Spitalfield Weavers Act this place arose, and now we see the result; not that the two localities ought to be considered as rivals, but the diffusion of the trade was no doubt that in the branch now under consideration the publicity afforded by the Exhibition will be the means of opening up a widely-extended trade. The specimens engraved are the front and flounce of a dress.

WORKED MUSLIN DRESS.—BY MESSRS. BROWN, OF BANGOR, COUNTY DOWN.

Messrs. Brown, of Bangor, county Down, employ a vast number of hands, at their own houses, in the ornamental working of muslins for dresses, handkerchiefs, and other purposes; and the samples which they display on the present occasion speak highly for the talents and taste bestowed upon them. In the present depressed state of Ireland's internal resources, every effort of her industry ought to be encouraged; and we have

rendered inevitable by a law which compelled an employer to give certain wages within a given locality; hence, manufacturers sought to create other fields of labour, and they succeeded.

The display from Macclesfield is on the whole a creditable one. No special effort of any great moment appears to have been made, and the productions exhibited appear to partake of the usual fabrics manufactured at Macclesfield. Messrs. Brocklehurst and Sons (38) show light and elegant silks, of choice tints and effective appearance. The brocaded dresses are better in design than in drawing; that is, the intention has been superior to the power to do. The shawl with the rose pattern is an excellent example of broad and effective textile design. Messrs. Critchley, Brinsley, and Co. (40) exhibit a few good and tasteful articles; the rest are commonplace. The attempt at the national emblems is not a successful one, the colours not having been sufficiently considered. A less ambitious attempt would have been more successful. Messrs. H. T. Wardle and Co. (41) show a good series of designs, the majority of which are conventional. Those of the Hindoo type prevail, and are effective and pleasing, the colours are generally well selected. The example with the map of the world and the conchant lion introduced, is an unpardonable piece of extravagance, and spoils an otherwise effective arrangement. The specimens of silk dying, by Messrs. Adshead and Co., are deserving of notice.

MANCHESTER.

The Manchester display is an elegant and effective one, although there are many houses who have not exhibited, probably influenced by the apathy which characterised the general proceedings of this important town in almost everything connected with the Exhibition.

In furniture damasks and brocatelles, together with embroideries by machinery, Messrs. James Houldsworth and Co. (64) sustain the reputation they have earned in this department of the silk manufactures. The brocatelles are bold and effective. The one labelled the "Grand Scroll," designed by Messrs. Laugher, Dwyer, and Co., of Poland-street, an illustration of which has been given, is excellent in many points. In some colours, however, it looks wiry, and the lines are too apparent. The medallions for chair backs, also designed by the above firm, the series representing the Acts of Mercy, are very good, their use being the only justification of figure weaving. The *Helianthus* pattern, also by Laugher, Dwyer, and Co., is an exceedingly effective design, a little angular, perhaps, in the details, and somewhat wanting in breadth of effect. The banner designed and executed for Mrs. F. West, of Newlands, Hampshire, as a memorial of the efforts of the late Mrs. Whitby, of that place, to introduce the silk culture into England, is very rich and effective, and the design, on the whole, superior; as is the mulberry pattern, though the latter is rather spotty in its detail. These are manufactured from silk grown and reeled at Newlands, and form a touching and appropriate memento of an earnest and useful woman, who was desirous to promote the cultivation of a material of great importance, as a distinct pursuit in our agricultural districts.

The machine embroidery of Messrs. Houldsworth and Co., who are the sole proprietors of the patent machinery by which it is produced, has long been noted; and there are several specimens of the highest character to be found in this exhibition of their current production. The border of the window-curtains is rich, massive, and effective, whilst those of the table-covers are tasteful and appropriate. The chintz embroidery we do not like; the colouring is very *bizarre*. The quilting is another curious and valuable application of the embroidering machine which, it is to be regretted, Messrs. Houldsworth did not exhibit.

Messrs. Winkworth and Proctor display excellent examples of brocaded silks for dresses. The drawing is good, and the design generally so appropriate. The hollyhock pattern is a very excellent chiné, as these things are usually drawn. The adaptation of the passion flower is one of the best conventionalised patterns from nature, for the purpose of textile manufacture, we have seen for a long period. It is at once pure in principle and appropriate in treatment. The colours of Messrs. Winkworth and Proctor's examples are tasteful and well selected.

Messrs. Harrop, Taylor, and Pearson (62) exhibit specimens of an important class of goods, in a commercial point of view, since they are those purchased by the great mass of buyers, coming within their means by the reasonableness of price, and adapted to their taste by the unobtrusive character of colour. Rich and effective-looking, without ornamentation, these articles present points of excellence upon which the Manchester silk manufacturer may pride himself, and, in all probability, bid defiance to all competition. For variety and excellence, these goods are superior to anything of the kind in the Exhibition.

Messrs. Booth and Pike (8) make a very elegant and interesting display of hat plush, galloons, and hat linings, of good manufacture, and tastefully and excellently arranged.

At the back of the Manchester exposition are arranged the miscellaneous contributions of exhibitors from various localities, Mr. William Grosvenor, of Kidderminster (52), taking the central compartment, and occupying a considerable space with his furniture silks. These consist of brocatelles, of fair design and good manufacture, together with a selection of tabarets, tasteful in colour and excellent in quality. The great feature, however, of Mr. Grosvenor's display is the patent double brocatelle, a fabric which, in our opinion, must come into extensive use, since the two sides are equally effective for use, and no lining is, consequently, required for the curtains made of it. The satin figure of the one side becomes the twilled ground of the other, and *vice versâ*. It seems probable that it can be manufactured at nearly the same price as the ordinary one-faced brocatelle, the only difference being the extra quantity of silk required for the two satin faces.

Mr. S. Evans, of Wirksworth (60), exhibits some excellent silk velvets; and several manufacturers of Leek exhibit sewing silks in skeins and bobbins, buttons, and shoe mercery, the arrangement of which is pretty and effective.

The preparation of silk is admirably illustrated by Messrs. Hadwin and Sons, of Heyroyd Mills, Halifax (42)—specimens of raw material, single and double spun yarns, waste silk in various qualities, and spun thread. There are, also, three cocoons spun from worms raised during the summer in the Building, from eggs deposited in Messrs. Hadwin's case, as illustrative of the different states of raw silk: these having been duly attended to by Mr. Waterhouse Hawkins, the superintendent of this district of the Building.

Messrs. James Holdforth and Sons, of Leeds (61), exhibit examples of silk waste spun into yarns, and specimens of numerous useful articles, as exemplifying its applicability to a great variety of goods.

Messrs. Allen and Holmes, of Derby, and Messrs. T. Bridget and Co., of the same place, show specimens of silk manufactured for a variety of uses, including black ribbons and braids, sewing silk for saddlers and tailors, and plain sarsnet ribbons.

COVENTRY RIBBONS.

The manufacturers of Coventry have exerted themselves in a manner highly creditable to their public spirit; and the exposition of their industry and skill cannot fail to do them good service: not, however, that we think their manufacture the perfection of its class, but because we believe that they have much to learn, and that the present effort will be useful as a step in the right direction. In saying that the principle, or rather non-principle, of design, as applied to the manufacture of ribbons, is almost universal, we do not by any means select the manufactures of Coventry for particular animadversion, but it is because we see in what is here shown such a proof of the terrible mistake into which the manufacturers of ribbons have generally fallen, the ultra and microscopic imitations of nature. Ladies wear flowers in their bonnets or in their hair, or place them in their girdle; therefore ribbons, whether for hair, bonnet, or garniture, must be decorated with flowers! This appears to be the process of reasoning, if, indeed, there is any reasoning at all. Now, to our mind, the use of flowers, natural or artificial, as named, is the very reason why flowers should not be woven with the ribbons, and that conventional ornament of a severe character should be used for the purpose of contrast. Did space permit, this could be easily illustrated. Still we desire not to be misunderstood. For most certainly the Coventry display is a highly creditable one as things go.

The garniture ribbon, manufactured by subscription, as a specimen of what Coventry could produce in this way, is at once creditable to the energy and spirit of all parties engaged, since it proves that with better artistic direction Coventry can do much better things. Of this special example, then, it will be sufficient to say that, disagreeing as we do *in toto* with the mode in which it is decorated, there are few examples of the kind which have pleased us better. In some parts of this pattern the effects are beautiful, and, tested by imitative rules, almost perfect. A committee was formed to superintend its manufacture, and certainly they have nothing to feel ashamed of, so far as mechanical excellence is concerned.

The whole of the manufacturers have also united in a general display in an uniform manner, each individual having his own locality for the arrangement of his goods.

Messrs. R. S. Cox and Co. (66) make a good show. In patterns the imitation of flowers prevails, and is carried to a painful extent; and in order to show how perfect the textile adaptation is, the coloured lithographs from Mr. Paxton's new work are placed side by side with ribbon. This is a sufficient proof of perfect innocence of true artistic knowledge, as applied to such materials and for such uses. A garniture ribbon, manufactured for Howell and James, is well arranged and effective. The lilac pattern, too, for Marshall and Snellgrove, is good in some colours, but would be best in a self colour, a doctrine which ribbon manufacturers cannot understand, since contrast is the great ruling law.

Mr. C. Bray (67) and Mr. C. Culdicott (68) exhibit the ordinary fancy ribbons, of good character. Messrs. Sharp, Oddell, and Co. (69) show good and tasteful examples, except the figured ones, which are too harsh in contrast, whilst two or three of Messrs. Cope, Hammerton, and Co.'s are very effective, without being too striking in the forms.

Messrs. J. and C. Ratcliff (73) display an admirable series of ribbons, illustrative of the regular manufacture of Coventry; and the examples exhibited by Mr. Thomas Robinson (77), Mr. James Hunt (78), and others, are all praiseworthy. Messrs. Sturdy and Turner show bold and effective garniture ribbons. The roses introduced in one pattern mar the effect intended, by being so badly drawn. The gimp trimmings and other fanciful articles, such as bullion and silk fringes, exhibited by Messrs. J. and W. Browett, are tasteful in manufacture and arrangement.

In thus concluding our notice of the Coventry display, we may instance the dyes as being generally clear and good. The finish, too, of the articles is unexceptionable. Tints are occasionally very beautiful; and except for that utter disregard of every principle of decorative art, which the manufacturers of ribbons seem to share in common with those of carpets, to notice which critically is a task we do not intend to undertake, the Coventry productions are both interesting as specimens of the productions of the loom, and excellent as articles of manufacture.

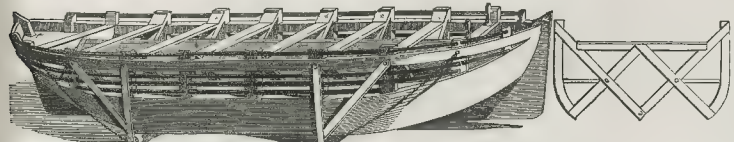
G. R. SMITH'S COMIC ELECTRIC TELEGRAPH.

Among the telegraphs exhibited in that portion of the middle gallery north of the British side of the nave, which is appropriated to philosophical instruments, is one which is sure to attract the attention of those who for awhile pause to examine the numerous examples of the application of electricity to the transmission of signals between distant places. Surely, the inventor of this contrivance—called a Comic Electric Telegraph—must have determined in his own mind to produce an instrument, at any rate, in external appearance, wholly different from anything of the kind which had previously appeared. In this he has certainly succeeded; but we are not at present prepared to say to what extent a communication by this instrument may be transmitted. As the inventor truly says, the instrument would, no doubt, prove an amusing and instructive addition to the ornaments of the drawing-room, as it might be used to illustrate the principle of magnetic induction.

COMIC ELECTRIC TELEGRAPH.—BY G. R. SMITH.

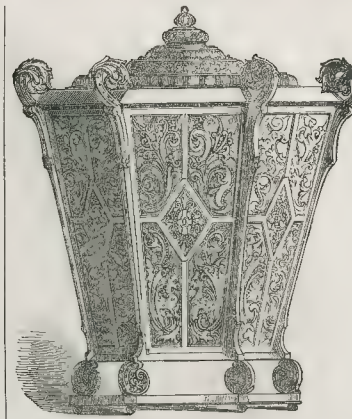
The action on the eyes and mouth of a comic face is produced by three bent iron bars within the figure, which are rendered magnetic by induction, and attract either of the features as above by means of armatures attached thereto. In addition to these novel signals, there are also the signs —, +, and ·–, by which not only all the letters of the alphabet are represented, but also the end of each word and sentence respectively properly indicated. These signals are shown by the elevation of shutters above the face. As each of the bars is capable of being separately magnetised, either of the signals can be shewn at the will of the manipulator, by touching the corresponding key in front of the figure. The telegraphic alphabet of Mr. Smith is made up of combinations of lines and crosses, and is therefore rather of a retrograding character as regards this important branch of telegraphy, which has been sadly neglected by most of the inventors of telegraphs.

A bell, used to call attention, is placed inside the figure.



TRIUNE-BOTTOMED BOAT.—BY DEANS.

This model is exhibited amongst the life-boats, at the extreme Western Gallery. The triangular form of the timbers at the bottom of the boat is considered to give increased strength, and improve the disposal of it.

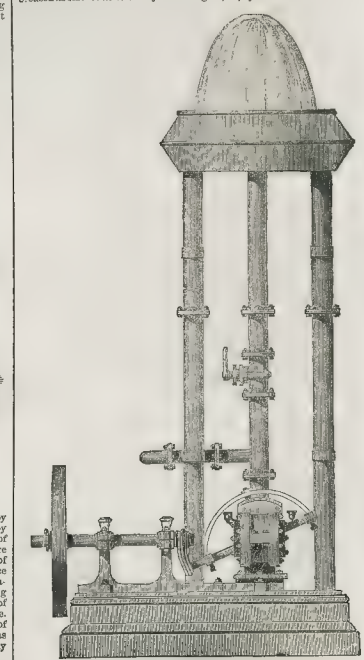


LADY'S WORK-BASKET, PAPIER MACHE.—BY A. RENEL, OF VIENNA.

The *papier korb*, or paper basket, from the Zollverein, is a good specimen of the *papier maché* manufactures which have been sent in such variety from that quarter.

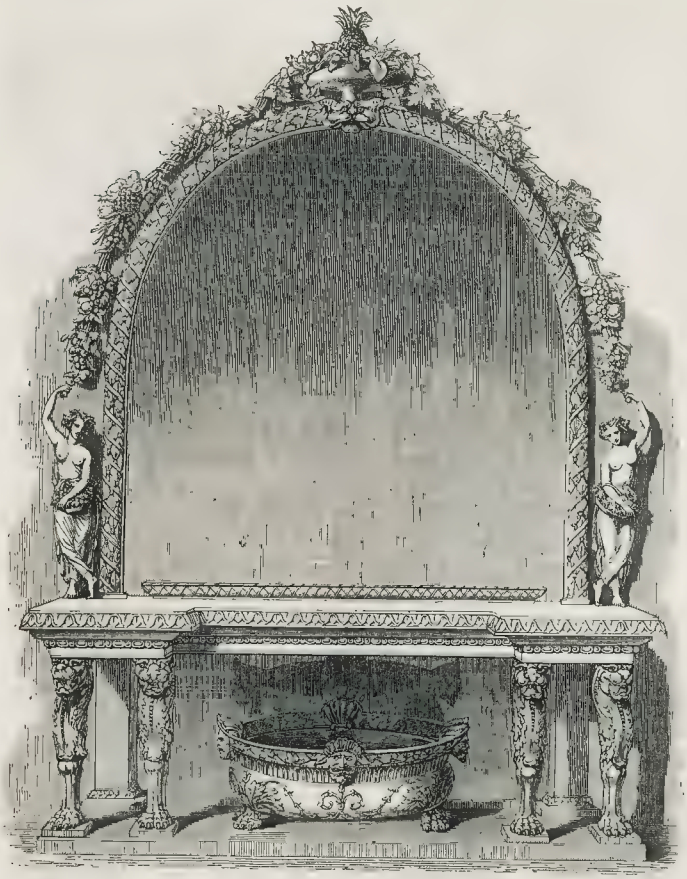
DONKIN'S DISC PUMP.

In the Machinery in Motion department of the Great Exhibition the pumps attract a great share of public attention, and trials as to the relative performances of some of the most noted of this particular class of hydraulic machines have lately been made in the presence of scientific judges. The pump exhibited by Bryan Donkin and Co. is on the disc principle, the spherical cylinder of which has a diameter of 15 inches, the cones and disc, which acts the part of a piston in ordinary engines, being required to have their surfaces most perfectly finished to prevent leakage; and the more work done by the cones and disc, the better it is for the prevention of any leakage, as they must necessarily fit still closer. The angle of the cone is 18 deg., and the contents of the cylinder 478 cubic inches. The greatest number of revolutions which can be effected by this sized pump is about 90 per minute: thus the quantity of water raised in that time would be equal in bulk to 24 cubic feet; and the altitude that would be attained would be 60 to 70 feet in height. The pump would certainly have been exhibited at the Exhibition to greater advantage had the cylinder been increased in size even to a very small degree, as, by an increase of 4 inches



DISC PUMP.—BY BRYAN DONKIN AND CO.

diameter, double the quantity of water would be raised, the contents increasing the cube of the diameter. Another disadvantage must be mentioned, which is this: on account of being prohibited from using any kind of steadiment in the way of ties, the exhibitors had some difficulty in rendering the whole sufficiently steady while in action, and are necessarily limited in point of speed, as the tank at top, into which the water is pumped, merely rests on three vertical pipes, which also answer for carrying off the water to the tank below. To all appearance, there are four delivery-pipes; but this is not the case, as we have already mentioned, the three outer ones being for the waste water, while the centre one alone is for the purpose of delivery. A water-meter is attached to this delivery-pipe, having a diameter of five inches, the cubical contents being equal to a pint, and the size of the pipe fixed thereto being of one inch diameter. The advantage of this meter is, that it may be worked under any head of water, without any alteration being made in it; and the water will exert the same pressure at the outlet as at the inlet, deducting the small amount required to turn the index. Another advantage is, that, whether a cock or sluice be opened slowly, or only partially opened, the amount passed through it will be indicated in an equally accurate manner.



SIDEBOARD.—BY MESSRS. SNELL.

SIDEBOARD, &c. BY SNELL AND CO.

The sideboard is of handsome proportions, carved in mahogany, of a rich colour, the slab of Galway marble. The glass, which is of wide dimensions, is rather unusual in shape; and the frame, of grapes, &c., is almost too light for the proportions, whilst the two figures painfully balancing themselves upon each edge might be dispensed with with advantage to the general effect. The oval cistern beneath is handsomely designed and executed. The sculpturing is from designs by Baron Marochetti. But this work, if open to any animadversions on account of its variation from the usual routine, deserves praise for the very great elaboration bestowed upon its execution, which fully maintains the high reputation of the factory; the two figures, which are the first production of a carver, are finished in a manner equal to some of the most celebrated examples; and the foliage, with the fruit, and the magnificent cellaret, will extort from the spectator their due meed of approbation.

FENDER. BY JEAKES

The novelty and good taste of this piece of furniture has been already mentioned at page 24, where will be found an Illustration of the grate to which it belongs.

ORNAMENTAL HAIR-WORK. BY A. FORRER.

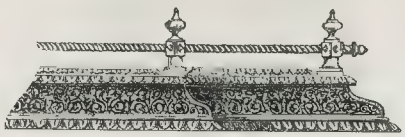
Mr. Farrer has brought the art of working hair to a perfection which it was little thought to be susceptible of some years ago, and applying it in combination with gold, produces a variety of objects very beautiful in themselves, and extremely interesting to the wearers, as souvenirs, &c. The collection exhibited in the glass case 99, Class 22, comprises a variety of bracelets, brooches, rings, chains, &c. There is also an ornamental frame, containing miniatures of the Queen, Prince Albert, and the Royal Family, mountedin hair and gold.

OR MOULU PANEL TO HALL-STOVE. BY BAILEY.

The or moulu panel to the hall-stove exhibited by Bailey and Sons is extremely rich and elaborate in pattern, and executed with wonderful brilliancy of effect.

BLACK MARBLE VASE, &c BY SELIM BRIGHT.

The various works in Derbyshire marble exhibited by Selim Bright, of Buxton, are worthy of attention for the admirable colour and surface of the material, and the masterly workmanship bestowed upon them. In a former Number we gave an Engraving of the table-top, inlaid with coloured marbles, representing flowers, butterflies, &c. The subjects of our present Engraving are a black vase, "exhibited for size, colour, polish, and finish," the material from the Duke of Devonshire's quarries; and a large tripod vase and stand—a very handsome specimen.



FENDER.—BY J. JAKES.

OR MOULU PANEL TO HALL-STOVE. BY BAILY AND SONS

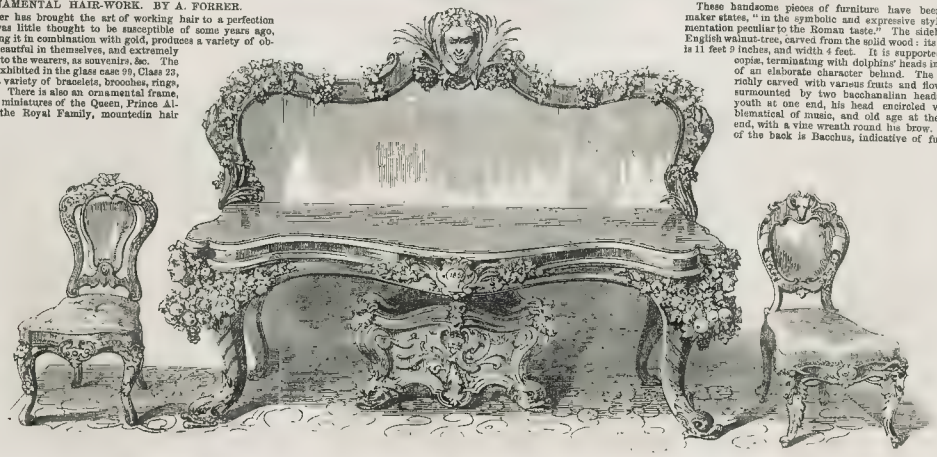
BLACK MARBLE VASE AND TRIPOD. BY MR SELIM BRIGHT.

PARASOLS. BY SANGSTER.

Mr. Sangster has, in the course of a long experience in business, introduced several new features and improvements into the manufacture of parasols. Amongst others is a contrivance (patented) for closing the parasol with a slight pressure of the thumb, without calling the other hand to aid. We observe, also, the application of feathers as an ornament worthy of commendation. The application of alpaca, both to umbrellas and parasols, has been very successful; it is a material said to be more durable than silk. The carving of the handles, and general finish of all the articles here exhibited, display great taste and admirable workmanship.

SIDEBOARD, CELLARET, AND CHAIRS. BY W., J. R., AND E. HUNTER.

These handsome pieces of furniture have been designed, the maker states, "in the symbolic and expressive style of rich ornamentation peculiar to the Roman taste." The sideboard is of fine English walnut-tree, carved from the solid wood: its extreme length is 11 feet 9 inches, and width 4 feet. It is supported on two cornucopiæ, terminating with dolphins' heads in front, and legs of an elaborate character behind. The cornucopiæ are richly carved with various fruits and flowers, which are surmounted by two bacchanalian heads, representing youth at one end, his head encircled with reeds, emblematical of music, and old age at the corresponding end, with a vine wreath round his brow. In the centre of the back is Bacchus, indicative of full maturity or



SIDEBOARD AND CHAIRS.—BY MESSRS. HUNTER.

VASE, IN MARBLE.—BY VAN LINDEN.

manhood, surmounted with the palm tied by a ribbon, bearing the inscription "*Possunt quia posse videntur.*" Over the head is the skin of a fawn, representing good cheer; on each side of the centre, the vine, the hop, and the oak flow in rich clusters, with the hound on the left, and the wild boar on the right emerging from the foliage, emblematical of the chase—the boar with a branch of oak in his mouth: this, with a brilliant mirror, completes the back. On the front is a tablet, encircled with a wreath of oak, having the year 1851 inscribed on it; from under which the vine entwines over the massive moulding right and left, connecting itself through holes with the cornucopiæ—thus forming a complete and uninterrupted line of ornament throughout the whole sideboard. A slab of beautiful black marble, from Galway, Ireland, having a handsome moulding, forms the table part. The cellaret underneath is of a similar style to the side-board, and is embellished with sylvan emblems. The four sides are bold massive shields, supported at each corner by four trusses, terminating with dolphins' heads, and over the trusses are goats' heads, the horns resting on the top, forming handles to it; from each of the trusses the oak and the ivy alternately spring. On the front is a fox emerging from brambles, making an effort to seize some grapes which are hanging from the top—illustrative of the old fable. The lid is encircled with the vine, which springs from the centre, forming a complete wreath, meeting at all the angles. The two chairs were made, though different in pattern, for the object of showing what would harmonise with the side-board and cellaret: one partakes of the sylvan character, having goats' heads and feet, forming the front of the seat, while the other is richly ornamented with designs of a strictly classical character.

VASE IN MARBLE. BY VAN LINDEN.

P. Van Linden, of Antwerp, exhibits a very pretty cup, or vase, in marble, with four sculptured reliefs, from subjects in Spenser's "Faëry Queen;" viz. Cupid trying his bow; Conqueror of strength; Fidelity the end of his occupation; the whole surmounted with Cupid captive to Venus. It is very neatly chiselled, and wonderfully successful considering the material, the dimensions being such as would be more properly adapted to executions in one of the precious metals.

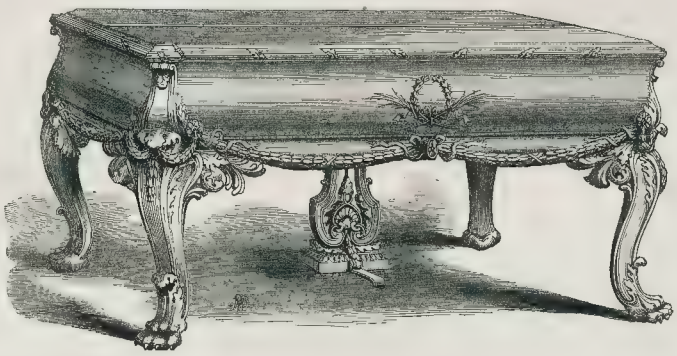
VASE AND TWO GROUPS, IN SILVER. BY FROMENT-MEURICE.

The display of ornamental and sculptured silver by M Froment-Meurice is, taken altogether, the handsomest on the foreign side of the Exhibition, some of the works displaying an amount of artistic feeling and executive power worthy of the days of Cellini. The very handsome vase represented in our Engraving is one presented by the city of Paris to M. Emmeny, an engineer of eminence, to whom the Parisians are largely indebted for their present water supply. The sculpture is by Klagmann, and is partly done *en repoussé*, or by punching, and partly cast; the whole richly chased and engraved. The little groups on either side are two out of twelve representing the months, or seasons—very elegant little works, about ten inches high, and all done *en repoussé*.

SQUARE PIANOFORTE. BY COLLARD AND COLLARD.

This is one of the handsomest pianofortes in the whole Exhibition, though one of the least pretending in outward show—made of a fine specimen of walnut-tree wood. The legs and edges are handsomely carved, but there is no attempt at plastering on ornaments in foreign materials: but honour be given where honour is due; and assuredly the house of Collard and Collard is entitled to unqualified praise for the substantial elegance exhibited in the production before us, one which will be an ornament to a drawing-room after the Crystal Palace has been removed, and its gaudy contents dispersed over the four quarters of the globe.

VASE AND TWO GROUPS IN SILVER.—BY FROMENT-MEURICE.



SQUARE PIANOFORTE.—BY COLLARD AND COLLARD.

ORNAMENTAL PANELS. BY C. MOXON

These panels are painted in imitation of marbles, or wood inlaying, richly varnished, and are admirably executed. They are to be seen in the Furniture Room.

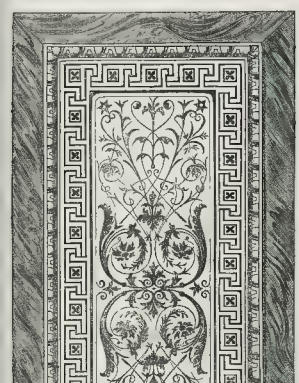
GROUP OF CHINA FROM BAVARIA.

The Royal porcelain manufactory at Nymphenburg, near Munich, is of comparatively recent foundation, and has had a great deal of care and talent bestowed upon the development of its resources. The forms are not always very elegant being wanting in lightness and delicacy of outline; and there is a tendency evidenced in them to crowd in all sorts of concetts of ornamentation, as statuettes, &c., which are out of place in works of this fabric The colours, however, are generally good, and the articles of utility exhibit a substantial character which will recommend them.

LAMP. BY LEROLLE, FRERES

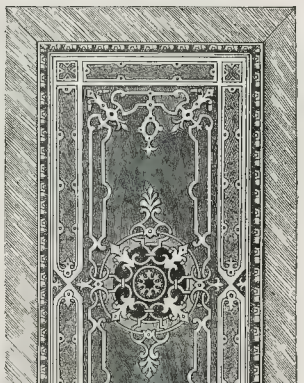
This is a lamp on an ordinary Gothic model, and very well cast in bronze, and gilt.

(*See page* 421.)



PAINTED PANEL. BY C. MOXON.

GROUP OF CHINA, FROM BAVARIA.



PAINTED PANEL.—BY C. MOXON.

THE SHELLS, SHELL-WORK, AND PEARLS OF THE EXHIBITION.

SHELLS are entitled to a high place among those dainty fancy-works of nature which we generally—for no very good reason, perhaps, other than that the eye is considerably gratified by their form and colouring—class as ranking among the more intrinsically valuable and finalised objects of creation. Shells there are, doubtless, of very prosaic and not at all attractive forms or hues. The oyster does not rejoice in a peculiarly elegant case, and it would require a highly fanciful temperament to find grace in a mussel, or anything removed from the most homely utility in the scalloped shell of a respectable cockle. But the tribe of housekeeping fishes which never cross the threshold of their houses, have an aristocracy as well as a democracy of abodes. Shells there are as gracefully curved and as daintily painted as any flower—the proof that much of the fancy shell-work in the Crystal Palace might at a little distance very well pass for the bouquets and vases of buds and blossoms which it is designed to imitate; while a class of larger shells, matched from bright southern seas, are not uncommon upon the chimney-pieces of even humble dwellings at home, which show in their lustrous polish and vivid painting, almost as bravely as gems from the mine, at the same time that their frequently exquisite form, the very types of flowing grace, far transcend any shapes which can be given by art to the glittering minerals which we prize so much. The popular taste for pretty shells is a very widespread one. It is possible, that, owing to the great cheapness and plenty of specimens, they are sinking as a means of household adornment into a lower class of society than that which used to patronise them. It is generally in comparatively poor neighbourhoods, often in close dark alleys, that we see the shell hawker with his barrow glittering with dainty masses of ornamental conchology, often driving a brisk trade, principally with the women, who have a great notion of a prettily decked mantel-piece, and always surrounded by the clamourous admiration of the children, instinctively taken with the elegant forms and brilliant colours of the ware. Inside the houses, in such localities as we have indicated, spotted, striped, and speckled shells will alternate, as domestic ornaments, with cheap china dogs, shepherds and shepherdesses, mugs with gold-wreathed initials, and, perhaps, strings of birds' eggs and peacocks' feathers, if the family have any rural connexion or the sympathies. But the shells are the most genuine adornments of all. The speckles and blending shades upon the fragile string of blown eggs are pale, and dim, and inglorious compared with the deep tints and the pearly lustre and vivid *éclat* of the productions of the sea; while in their shapes, varied and so elegant, in the spiral roll, and the beautiful curve of the pellucid screen which so often rises like the crest of a wave back from the aperture of the shell, are traced the everlasting principles of the symmetry of nature, to which all art is an approximation of more or less exactness. These rounded shells with the large aperture are also those which the children love, from the buzzing sound which they produce when held to the ear. The notion that the hollow empty shells still rang with the echoes of the distant surf, was perhaps an obvious one to enter into the mind of a listener, and that the more as the sound certainly strongly resembles the low moan of the sea when heard at some distance from the beach. But the fancy was none the less pretty or poetical, and would in our minds give a beauty and a fanciful sacredness to the faithful shell which has never forgotten its place of nativity, were the substance the least inviting and the least symmetrical of nature's workmanship. Shells have another element of poetic beauty attached to them in the association connecting them not only with the Nereids and Tritons, and another sea deities, but with the more modern notions of mermaids and water spirits. Neptune and his train could never get on without shells—the sea chariot was embossed with them, or it was made out of one enormous specimen; while the jolly fishers would be sure to have them as deprived of their sounding conches. In the palaces and submarine halls of all the preternatural inhabitants of the sea, shells, of course, formed the prevailing style of ornament; and the fanciful descriptions given of those abodes no doubt suggested the shelleries and grottos so common as ornamental garden devices, but which have now very generally become *rococo* and old-fashioned. So, in the more modern notion of strange creatures of the sea, shells are always accessories shells in their crystal and coral grottos shells as personal and symbolic ornaments.

> Where the mermaid was decking
> Her green hair with shells,

rhymes Byron; and certainly a lady of the species would be as poorly provided, without necklaces of fairy shellery, as without those indispensable implements of her condition, a comb and a looking-glass.

So much, then, being premised as to the general favour in which shells are held as pretty and graceful natural objects, and as to the poetic and preternatural associations which people still in a degree have invested these gems of the sea, we proceed to sketch the collection got together in the Exhibition, which is only to a small extent scientific -the vast majority of shells shown being arranged into divers fancy devices and floral combinations. For our own part we are not thoroughly going, hard-headed conchologist would, of course, disdain to take any note. He deals with shells as a scientific matter of business, and looks upon ornamental qualities as beneath his attention. He is great in generalising, classifying, mapping out endless numbers of genera, species, and families. The marks and tokens by which he proceeds would never be seen, and would with difficulty be understood, by an ordinary observer. The form of a certain portion of the edge of the shell, whether jagged or smooth; the construction of the hinge, by means of which, in the case of bivalves, the creature opens its dwelling-place; the action of the muscle by which this is effected; the depth and exact shade of colouring of the ridges or stripes which are marked upon the shell—all these minute afford the marks and indications by which long Latin names are affixed to each variety; and with the task of classifying and appending suitable nomenclature, the care of the conchologist, *par excellence*, seems to be at an end. A book has still to be written upon the natural history of shell-fish; and, although we would at first think that there could be little matter for entertainment extracted from the manners and customs of periwinkles, or the lives and adventures of whelks, the fact is, that there is not one species of animated nature, however low in the scale of creation, connected with the habits and modes of life a great deal of curious and interesting matter may not be discovered by the careful observer, and put into delightful literary shape by the enthusiast in natural history. All our pleasantest books relating to birds, beasts, and fishes have been the product of prolonged and dignified personal observation. Natural history written-out books, like Goldsmith's "Animated Nature," for example, is only fit for the waste paper shop. White, of Selbourne, was the first English author who wrote about such insignificant things as sparrows, swallows, cats, bats, and mice; and because all he put upon paper he found out with his own eyes, his humble book possesses an everlasting and a delightful charm. We would like, then, to see a volume upon the natural history of shell-fish Conchological technicalities, principally existing, as we have said, to the classification of the shells are dry work; but only a very few of the more interesting species of shell-fish, such, for example, as the nautilus, have ever attracted any other notice.

There, so far as we can find, but one scientifically arranged collection of shells in the Exhibition; and the cases which contain it are not in the slightest degree attractive to the ordinary spectator. Indeed, the shells look ugly enough as a general rule to have been chosen so precisely for that quality, and they are carelessly jumbled up in the drawers plotted to them, with no other index to their merits than their Latin names written upon the smooth inner lining of the substances. Nine-tenths, then, of the visitors to the American department, where these shells are deposited, pass over, with the notion that they very much resemble a lot of ugly oysters, one of the most remarkable and complete collections of a series of families of shells ever put together. They belong to a Dr. Feuchtwanger, of the United States, and illustrate, we believe, almost in their entirely, every variety of fresh-water shell—for the fish seems to thought very little of in comparison with his house, which are to be found in the rivers, streams, and lakes of the United States of America. The vast majority of these shells are flat oyster-like affairs, belonging to the family of the *Unio*, and of this family there are here collected not less than 252 varieties Of these a great number are to be found only in America; and of these some are so rare, that the individuals in Dr. Feuchtwanger's cabinet form the only known specimens. They cannot be duplicated in the States or elsewhere. We have said that the majority of the shells are flat bivalves, but there are also shells of the limpet class of the cockle and the mussel, and the spiral wreathed form which may be most conveniently designated as that of the periwinkle. The general colour of the *Unios* is a dirty brown; and the distinctions between family and family consist in the most minute differences in the form of the ridges, wrinkles, and asperities of the shells, such as no eyes, save those of a practised conchologist, could ever discover. The polite agent of Dr. Feuchtwanger, a gentleman who seemed to have every one of the 252 varieties of the *Unio* at his finger ends, smiled, as well he might, at the notion of popularly explaining the differences, or say of these between the species. It must be the study of a life; and, even when the end is attained, it must be found—we should think a comparatively unprofitable and thankless one. For, after all, what avails it to know that one *Unio* has a wrinkle and another shell than another, when perhaps nothing is understood of the food of the fish—nothing of the way in which he procures or digests it. These prolific *Unios* were collected in all parts of the United States. Many of them were dug out of the sand of the slimy southern rivers. The Mississippi has contributed a large collection. Others come from the rocks and limpid streams of the north and west. Several individual shells are curious. One, for example, is furnished with long spikes or thorns, which, we are told, took for their ornaments of dried weed adhering to the shell; but which, we were informed, constituted the animal's means of locomotion. How they were used, did not appear. They seemed to have no muscular substance, and to be, in fact, mere spicules of solid shell. A cluster of limpets was so mixed together as to give them somewhat the appearance of water-flowers. And there are shown specimens of cockles, which appear to grow to a great size in their fresh-water homes. For any useful purposes, freshwater shell-fish appear to be valueless. We never heard of their being eaten either raw or dressed, except by the natives of New South Wales; and certainly a Mississippi muddy *Unio* can hardly be expected to furnish forth a very savoury morsel. That they occasionally furnish some bad, small, and ill-coloured pearls is all that can be said of our river oysters and mussels. The *Unio*, in this respect, is not quite unprofitable, and various specimens of its pearls are shown—dim greyish morsels, about the size of peas, flamed and flushed, and veined with shades of dark and muddy colouring. We were informed that the collection of the cabinet in question has been a very long and difficult affair. The shells, it seems, can only be got at in certain seasons at the end of summer, when the water is very low in the rivers and lakes, and this time of great drought seldom lasts long. Dr. Feuchtwanger's cabinet, then, is a work of years, and has evidently required much knowledge of the subject, and will, no doubt, be appreciated by the conchologist learned in the technicalities of his pursuit; but the casual spectator will hardly find it metal attractive. Beside the river shells, we may mention that there is deposited a small collection of fossil shells found principally near New Charleston, and which have a geological and mineralogic, as well as conchologic, interest and importance.

Leaving the continent of America, still in pursuit of our shells, we find an abundance of specimens deposited from the groups of the Bahama or Leeward Islands, which speck the West Indian Sea, extending from Cuba nearly to the coast of Florida. The long extending sand-banks, coral reefs, and lonely little keys, clustered in the channels between the larger islands, have ever been noted for the production of delicate and beautiful shells, particularly for an abundance of those semi-transparent white specimens, spreading out in a rounded oval form from the hinge which unites them to the other valve, somewhat in the manner of a fan. Shell-work, in saying thereby the arrangement of shells in fantastic forms, or in imitation of natural objects, seem to be quite a staple of elegant industry in the Bahamas; and the particular shells to which we have adverted are, from their leaf-like shape, employed in the manufacture. It is from Nassau, in New Providence, the capital city of the group, that the Bahama shell-work comes. One of the principal contributors is Miss Caroline Nicolls, whose gracefully fashioned trophy of an altar and crown exhibited considerable attention, favourably placed as it is in the West Indian department. The delicate taste of the lady is fully displayed upon a square groundwork of dark velvet. Upon the summit is placed a shell made crown, and the sides and angles are elaborately ornamented with cyphers, heraldic devices, and copious imitations of flowers, plants, and cereals, all done in white shells. There are only about four sorts used. A very small rounded shell, of an oblong form, not so big as a pea, is copiously employed in all the Bahama work—strung upon fine threads, to form the slenderer lines of the devices; but the flaky valve, arranged in different stages in the trophy, is chiefly disposed upon a square groundwork of dark velvet. Upon the summit is placed a shell made crown, and the sides and angles are elaborately ornamented with cyphers, heraldic devices, and copious imitations of flowers, plants, and cereals, all done in white shells. There are only about four sorts used. A very small rounded shell, of an oblong form, not so big as a pea, is copiously employed in all the Bahama work—strung upon fine threads, to form the slenderer lines of the devices; but the flaky valve, arranged in different stages in the trophy

a great local reputation for its productions in this way; and "Corran pearls" have a certain local value. The only specimens, however, of native pearls which we notice in the Exhibition, beyond a half dozen little discoloured globules, about the size of pins' heads, from the Channel Islands, are the specimens of Irish pearls, many of them, we believe, found in the Shannon, and which are set in black bog oak, which, by the force of contrast, sets off their lustre to the best possible advantage. These fresh-water productions are, we think, rather larger and more lustrious than the American river pearls; but there is little to choose in the way of beauty between them. Mother of pearl, the shining lining of the oyster shell, and which is certainly, changing its colours as it does under the different angles of the falling rays, a far more beautiful substance than the dim uniform grey pearl itself—mother of pearl is principally exhibited by the *papier maché* manufacturers, who use it copiously in their glittering wares, to which, indeed, it furnishes some of their prettiest attributes. An inlaid table or chessboard of mother of pearl, gleaming and glancing like the amethyst and emerald as the eye catches it in different lights, forms one of the gayest and most graceful ornaments of the drawingroom.

POTTERY FOUNTAINS, &c.—BY RIDGEWAY AND CO.

We engrave specimens of these very serviceable fountains, basins, &c., in pottery, manufactured by Ridgeway and Co., of Newcastle-under-Lyme, which deserve to be extensively known and patronised.

POTTERY FOUNTAIN, &C. BY RIDGEWAY AND CO.

A LADY'S GLANCE AT THE GREAT EXHIBITION.

No. 5.

Having, in former glances at the Great Exhibition, directed my attention to the flowers, laces, silks, and jewellery, I propose commencing my present paper with some observations on another branch of attire, which appears likely to become of increasing interest to ladies in general, and to those of our own country in particular. Of *shawls*, the simplest and earliest form of manufactured clothing, the display in the Crystal Palace is both rich and varied; almost every nation has performed its tribute to the perfection, or, at least, every native industry produced from the *Hibiscus*. It is most interesting to observe these simple efforts of untrained ingenuity thus brought into close proximity with the elaborate productions of France and England, and the still more highly prized Cashmere, wrought from the wool of the Thibet goat, the inhabitant of the "happy valley of perpetual spring." It would be a study of some little interest, could we trace all the minute advances in the art of shawl weaving and dyeing, comparing the first coarse fabrics with their meaningless lines and rambling curves intended for decorations, with the present perfection of colour and elegance of pattern, which have been the result of centuries of experiments almost infinite in number. It is not, however, to the offerings of a dawning civilization that I must now direct the attention of my readers, but rather to those masterpieces of Eastern magnificence which are presented to our view in the Indian course of the Great Exhibition. On approaching the glass cases in which these treasures are enshrined, our attention is attracted by various specimens of a description of brocade called Kincobs, principally sent from Benares, Surat, and Mysore. Although some of these are evidently intended for robes rather than for shawl drapery, this material has many of the characteristics of the rich scarfs by which it is immediately surrounded; the favourite pine pattern of different sizes is the decoration usually selected in both. In several examples of Kincobs the ground or silver pine is woven on some dark colour, but in one instance the background is entirely of wrought gold; and, from the absence of any other perceptible material, it might almost be described as some metallic substance, made pliable by the most consummate art. It would be a task indeed to count the number of threads of gold, but the pattern, executed in silver, is of a somewhat singular description. It represents scenes of Indian life, ladies in palanquins, elephants, horsemen, &c., and would seem to be the work of some patient artist, ungifted with imagination, who, though employing the richest materials, could only copy in rough outline objects with which he was most familiar. The loveliness of this design forms quite a contrast to the delicate silver muslin with which it is closely associated, in which the minuteness of detail defies all attempt at description. A shawl of surpassing beauty is exhibited, of which the background is formed of gold: it has a small running pine, bordered, and deep pines at the corners, all embroidered in raised silver, which at a short distance assumes the appearance of large pearls; whilst various-coloured beetles' wings, which are plentifully introduced, give the effect of precious stones. Judging from its beauty, the price of this shawl must be something enormous; and so skilfully are its various decorations blended together, that, although each individual ornament is brilliant in itself, no idea of gaudiness suggests itself to the mind. The sole defect which our most critical observer in this specimen is, that its size is scarcely large enough to admit of the graceful folds which render a shawl, as now worn, so elegant a form of attire. Two very large scarfs of crimson and mulberry-coloured silk, down the centres of which run stripes of gold, about an inch and a half wide, are, with their deep gold borders, two of the most effective, and, for actual use, most tasteful articles in this department. A blue shawl, from Lahore, is worthy of remark, from the extreme fineness of its texture; the ground is almost covered by a graceful pattern of intermingled pines. A red scarf, simply embroidered with gold and pearls, is as beautiful as the most costly materials and the most finished workmanship could render it. The freedom from any mixture of styles in the adornment of Indian fabrics is a peculiarity worthy of adoption in a country like our own, where the variety of designs and the constant demand for novelty offer great temptations for the incautious union of pattern, equally destructive of beauty, and at variance with the simplest elements of acknowledged art. I must not entirely omit from my description a scarf, which, from its contrasting situation allotted to it, is evidently highly estimated by its exhibitor, although offering few attractions to our European eyes. The centre is composed of salmon-coloured muslin of somewhat faded appearance, and is surrounded by a deep silver border, which is sewn on, the seam being concealed by a fringe of the same material. In this instance we are struck by the incongruity between the rich and massive adornments, and the simplicity, I may almost say meanness, of the fabric which they are designed to ornament. The same may be said of the worked net scarfs and shawls from Dacca, which abound in this collection, and decidedly give the preference to others of a different description from the same place, which consist of gold and silver embroidery on groundworks of blue, crimson, or scarlet Cashmere. Of the gold and silver handkerchiefs, so frequently alluded to in Eastern tales, many instances present themselves; but they are of so tinsel-like an appearance, that, but for the consequence imparted to them by their association with so much that is beautiful, we should accord them but little notice.

Having concluded my description of what may be termed the Indian shawls of state, I now turn to those of a more familiar, but not less valuable description. The real Cashmere shawl, with several specimens of which this department is enriched, although presenting little, perhaps, to distinguish it to the eye of the uninitiated, is valued and admired above every other description by those who are conversant with the subject in detail. The number of these shawls displayed in the Crystal Palace has recently gradually diminished, the danger of injury from sun and dust, probably, rendering their withdrawal necessary; enough, however, still remain to gratify the curiosity and reward our patience even for a visit of some duration. Two examples, of very fine texture, are worthy of remark, as appearing to have afforded the models for several of the most successful imitations of our own manufacturers. A blue Cashmere, in the Indian department, is almost too beautiful for any description to do it justice; another, worked in green, crimson, blue, and yellow, and embroidered in gold and silver, is very handsome. Several examples of these shawls may be described as consisting principally of border, the diameter of the centres scarcely exceeding ten or twelve inches; the pine and the palm, variously arranged, with a diversity of colours skilfully blended, usually form the decoration. One remarkable exception to this general rule may be seen in the French division of the Exhibition, in the form of a splendid Indian shawl, which is there displayed as a curiosity. It is a large scarf shawl, on which the pattern runs upwards from each end and almost to the centre in the form of a pyramid, the outline of which is decorated with flags on a white ground. On close inspection, a Chinese temple reveals itself, with every variety of adornment which such an edifice would be likely to present. Doors, bay windows, jalousies, cages of birds depending from the balcony, others at liberty to enjoy themselves in the foliage around—nothing has been omitted, even to the most minute details. It is certainly an admirable piece of workmanship, and merits careful examination, as at a mere casual glance its beauties might be overlooked.

The genuine Cashmere was first introduced into England in the year 1666. Of the nature of its reception at that period we are not informed, but it would, doubtless, be valued as a curiosity rather than estimated according to its intrinsic merits. From that period, individual specimens, generally the property of Anglo-Indians, to whom they had been presented by some native prince, were occasionally seen; but it was not until the middle of the last century that they became objects of general merchandise in this country, nor until some time afterwards were they familiar even to those interested in such matters, their price confining them, then as now exclusively to the possession of the very rich. Since the beginning of the present century many circumstances have combined to diffuse throughout Europe a taste for these elegant fabrics. It is well known that the Emperor Napoleon, in his march to scenes of conquest, was too wise to omit any opportunity of adding glory to his country or grace to his arms; hence the *savans* and men of letters followed in his train, to glean from foreign lands all that might enlighten or embellish his own. The artist eye of Denon and his associates, who accompanied the Egyptian expedition, was quick to discover and to gather everything that was beautiful, not only from that country of ancient memories, but from the wandering tribes collected there from the Eastern shores—nothing was too great or too minute for their observation. The filmy muslin, the Delhi scarf, the Cashmere handkerchief and shawl, were collected and imported to France. Josephine, the queen of taste, adopted them all more or less; but the Cashmere, especially, was too effective, when associated with the Greek style of dress, which she had herself introduced, not to become a *furour* with her, and, consequently, with the higher classes of her countrywomen, from whom it extended to our own. Many amusing anecdotes are related respecting this taste of the Empress, and the risks encountered by her *employées*, in endeavouring to secure a succession of these costly favourites for her wardrobe at a time when France was at war with the whole world. An eye-witness relates, that on one occasion two exquisite shawls had been secured for her, differing materially from all her former acquisitions—they were of the finest undyed white wool. In the elation of the moment, consequent on so pleasant a piece of good fortune, Josephine communicated the fact to Napoleon, who, on this occasion, neither reproved her extravagance, nor proceeded to calculate how far their price would have gone towards clothing a regiment of soldiers; in fact, he appeared almost if not quite as well satisfied as herself. On the evening of the same day, the court at the Tuileries was about to visit the opera, when, on descending the staircase, two members of the party, whom Josephine had little cause to love, were simultaneously seized with a shivering fit. Josephine, in the simplicity of her heart, offered to send for shawls. An affirmative nod from Napoleon to an attendant was immediately answered by the introduction of the highly-prized acquisitions of the morning, which were immediately seized by the Empress, and placed on the shoulders of the two ladies, apparently much to their satisfaction, but equally to the dismay of the Empress, to whom the smothered laugh of her husband revealed his share in this domestic plot at her expense. She could not console herself with the hope of ever seeing her less favourites when they had served the occasion, since her high rank precluded the possibility of her wearing articles which had been exhibited by others in the face of all Paris. As, however, but few really new shawls were then attainable, she had, doubtless, had the revenge of many which had been worn by far more questionable characters in the country from which they came.

The value of a Cashmere shawl depends no less on the quality of the wool from which it is made, than on the amount of labour and skill employed in its manufacture. Each fleece produces about eight ounces of the finest quality; each ounce of fine wool requires the labour of a day to separate it from that of a less valuable description, which, in its turn, is again and again separated, and worked up in fabrics of inferior quality. This delicate wool, once the sole produce of a remote country, has been cultivated with some success in many parts of Europe, and even by ourselves. About twenty years since, a gentleman who had travelled for many years in the East, and had introduced its tastes, naturalised a small flock of Thibet goats in Surrey, and exhibited, with natural pride, two shawls made from their wool, but at a cost too considerable for private enterprise to repeat.

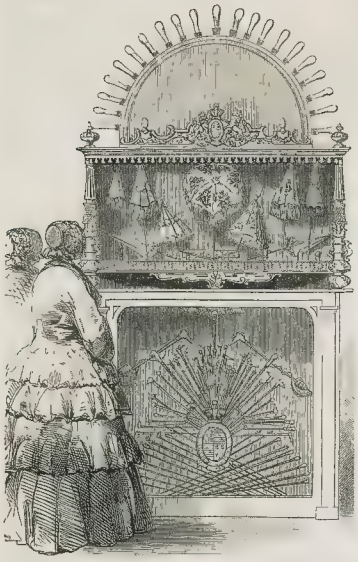
In connexion with the subject of genuine Cashmere shawls, a slight sketch related by a traveller, of some amusing circumstances which attended their sale about twenty years since, may not be considered irrelevant. At a miserable village called Makarieff, on the confines of Europe and Asia, was held annually a fair, which was numerously attended by merchants of all nations, and at which property of the most valuable description was exhibited for sale. Among the articles of merchandise most highly prized were Cashmere shawls, which were disposed of in large bales or parcels, the purchaser seldom examining them in detail, but acquainting himself with their merits and qualities through the medium of a descriptive catalogue, procured with some difficulty from Cashmere. The conclusion of a bargain for shawls invariably took place in the presence of witnesses, the transaction being chiefly carried on by brokers, who moved continually from buyer to seller, informing them in low whispers of the progress of affairs. When the price first asked so far approached the sum offered as to admit some hope of an engagement, the goods were introduced, and the principals commenced their part of the negotiation. This consisted in enthusiastic praise of his merchandize by the owner, and contemptuous criticisms on it by the would be purchaser. The latter then made a direct offer, upon which the seller rose as if to leave the room; this purpose, if entertained, was frustrated by the brokers, who brought him back by main force—they contended and struggled, and it was a scene of confusion difficult to imagine. When this had proceeded for some time, and the brokers conceived that the two had sufficiently expressed the poor Hindoo seller, who acted throughout a most passive part, they seized his hand, and forcibly endeavoured to place it in that of the buyer, who held out his own, and repeated his offer with a loud voice. The Hindoo always resisted, wrapping up his hand in the wide sleeve of his robe, and repeating his original price in a lachrymose tone. When this comedy had continued for some time, the brokers, after many additional struggles, compelled the seller to ratify the treaty by placing his hand in that of the purchaser. When this ceremony was performed, great tranquility prevailed, although the Hindoo appeared inclined to weep, and regretted bitterly his own precipitation. All that had passed, ridiculous though it may seem, was indispensable, as, unless the owner appeared to have been duped and deceived, and, if he had not been sufficiently pushed, pulled, and otherwise ill used, he repented the transaction until the next fair, when it was more than usually difficult to bring him to terms. I should add, that when the time and mode of payment was arranged, small bowls of rice were brought in, and the ceremony concluded with a prayer, in which all present united, notwithstanding their diversity of creed.

The value and importance attached to Oriental shawls offer, I trust, sufficient justification for the space here devoted to them; but our attention is now fully due to those of European manufacture, the beauty of which entitles them, likewise, to a description of some length. It may readily be supposed, that in a country like France, where government lends its fostering aid to every branch of manufacture demanded by the national taste, the progress of shawl weaving has been both marked and satisfactory. Hence the display of this description of clothing will be found to occupy a considerable space in the French department of the Great Exhibition. Although each example is more or less attractive, I must confine my notice to two of superlative beauty: No. 1592 is the production of Duchesse and Co., Rue des Petits Pères, Paris; the other (1493) is the property of the Duchess of Orleans, and was manufactured by Hebert and Son, Rue du Mail, Paris. It would not be possible to do full justice to the intricate pattern displayed in the first-mentioned shawl by mere description, but I will endeavour to give some idea of its beauty. It is about five yards long, and of proportionate breadth: the pattern consists of an irregular border of pines and feathery palm trees, growing up, as it were, from the ends; the rich fruit is half hidden by the foliage, and half revealed on a small background of shaded silk, gold, and silver: the pattern, of a new and irregular form, the result of the peculiarity of design. This shawl is said to contain 240 shades of colour, and I see no reason to doubt the fact; it is certainly a *chef d'œuvre*, and richly merited the medal awarded to it at the French exposition. We now turn to the one above alluded to as belonging to the Duchess of Orleans. It is wrought of pure Cashmere wool, the colours of which are deep and rich, but not remarkably numerous; the pattern is chaste and quiet, composed principally of straight lines, and presenting something of an Egyptian character. These two shawls are perfect specimens of their respective kinds: one magnificent enough to enliven the most simple attire; the other, though exquisitely elegant, sufficiently quiet and sober to subdue the most showy and brilliant *toilette*. Messrs. Chambellan, of the Rue du Fossés Montmartre, also exhibit some scarfs and shawls of great interest: one, of the usual pine pattern, but considerably elongated and intermingled, is very effective. Messrs. Lion and Co. display (1327) two shawls of a new description, called brocaded Cashmeres: although not favourably placed for inspection, the patterns, no less than the gold and silver wrought in, present all the characteristics of rich brocade. Many other specimens of different kinds, as silk barège, &c., are extremely beautiful, and worthy of all honour; but my space only permits me to mention them in terms of general admiration.

Although our own countrymen have never had the advantage possessed by their French neighbours in the patronage of Government, or been encouraged in any remarkable degree by the countenance of the higher classes of the country, in the manufacture of shawls, we cannot do otherwise than warmly congratulate them on the display which they have been enabled to make in this department of the Exhibition. Fettered as their enterprise has necessarily been, by the duty still existing on cardboard and other requisite materials (from which their foreign rivals are wholly exempt), it is a matter of surprise that they should have succeeded in producing specimens of so high a class, both in fabric and design. The well-known predilection of the Queen for this form of clothing, and the introduction, as a fashion, of printed muslins, in which our Continental neighbours always specialize an elegant shawl, appear likely to give a great and deserved impetus to this branch of our native art. In the production of woollen or Scotch shawls, where the machinery required is less expensive, and for which the demand is almost universal, we have no successful rivals, notwithstanding the many beautiful specimens contributed from Saxony and elsewhere. In the South-West Transept Gallery we find a collection of shawls, the honour of which is chiefly though not exclusively due to the manufacturers of Paisley and Norwich. Amongst the number of the former, Mr. R. Kerr has greatly distinguished himself by the exquisite texture and general elegance of his productions (No. 300). They are described as India long and square shawls; and, could we divest ourselves of the unprepossessing veneration engendered by the fame and value of their Oriental rivals, it is probable that we might regard these beautiful imitations as equally deserving of approval. Leaving this point to the decision of my readers, I may observe merely that one specimen in this case is, in my opinion, unsurpassed by any other in this department; it is almost covered with a fine pattern of more than ordinary elegance, which is relieved by a background of scarlet: this brief description, however, can give but an imperfect idea of its excellent effect. Messrs. Morgan and Co., also of Paisley (299), display a varied assortment of great merit. Those most attractive to the eye are the long shawls, woven of Cashmere yarn, of silk and wool, termed the Mosaic style: of these two may be particularly distinguished a blue one purchased by her Majesty, and another of white, the design for which either resembles an antique urn. Amidst the numerous contributions from Scotland, those which I have mentioned are not, of course, the only ones remarkable for their perfection; but, as there is much similarity of pattern between them, an enumeration would become tedious. The well established reputation of the Norwich silk shawls is worthily supported by Messrs. Towler and Campin; but their productions, though beautiful, are of the ordinary patterns, and need no special description. A curiosity is displayed by Mr. Blakely, of Norwich, the manufacturer, in the shape of an Anglo-Indian scarf, which has been sold to the Queen. The principal part is of a greenish blue, ornamented with small pines in gold thread: it certainly possesses the merit of being a most perfect imitation of Indian fabric, every minute detail being copied, even to the talisman of gold. I must not omit, to mention, the names of Clabburn and Son with the other successful exhibitors of Norwich manufactures, since their case (284) is very attractively ornamented with Cashmere, Albanian, and spun silk shawls of much beauty. The almost universal patronage bestowed, since their recent introduction, on the barège shawls, has induced the manufacturers to devote much attention to these very elegant and useful articles of summer clothing. Of this fact we have evidence in the numerous examples here displayed, amongst which those made by Mr. Swasland, of Crayford, undoubtedly bear away the palm. The peculiar merit of these shawls consists in the brilliancy and depth of the colours employed in the ornamental pattern, which is perfectly clear and distinct, although printed on the thinnest and most delicate texture. In this case (289) are three specimens equally beautiful: one is of a chocolate brown with satin checks, and deep pine ornamental border, the second of bright scarlet, and the third of blue, the designs in each being different. Messrs. Holmes and Co., of Regent-street, exhibit (280) a novelty in the circular shawls, designed by themselves: they are presented to view in various colours, all adorned with the ordinary shawl bordering. At a short distance from these we have the opportunity of observing their effect when made up, which much resembles that of the Arab or gipsy cloaks. A very handsome green one is displayed in a separate glass case, with a hood of the same material, similarly bordered and lined with green satin; it forms, as may be imagined, a very elegant wrap.

Before concluding my survey of shawls in general, I must not omit to direct attention to two plain Cashmeres exhibited by his Royal Highness Prince Albert, which are situated in the Nave of the Building. They were manufactured in Yorkshire, and are especially interesting as being made of wool grown in this country: a full description of the process was given in a recent Number of the Illustrated News.

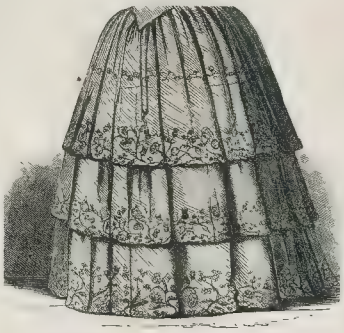
The space occupied by the examination of articles of manufacture so varied and beautiful as the shawls in the Great Exhibition, compels me to defer noticing the miscellaneous objects of interest to ladies until the next and concluding paper of the present series.



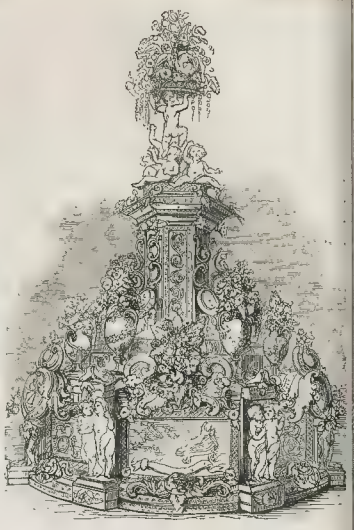
PARASOLS.—W. AND J. SANGSTER

LADY'S EMBROIDERED DRESS. BY SMITH AND WHYTE, OF GLASGOW.

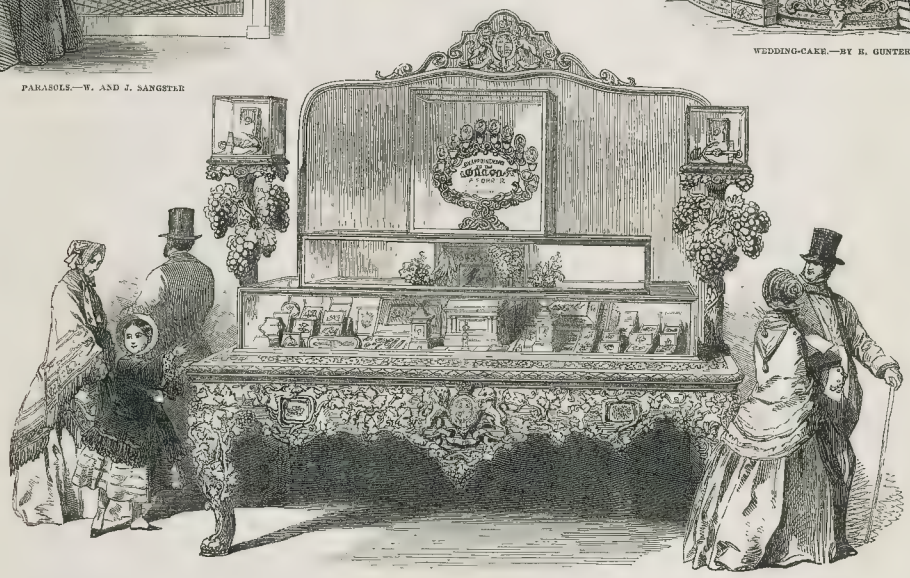
Messrs. Smith and Whyte, of Glasgow, are large producers of embroidered muslins, and two specimens which they exhibit—an embroidered *robe de chambre*, and a lady's dress—are extremely handsome specimens of that manufacture. Our wives and daughters certainly need not go to France for embroidery, when such as that forwarded from Ireland and Scotland is within their reach.



LADY'S DRESS. BY WHYTE.



WEDDING-CAKE.—BY H. GUNTER.



SPECIMENS OF HAIR-WORK.—BY MR. FORRER, REGENT-STREET.

GROUP OF SILVER. BY REID, NEWCASTLE.

IN THE BATH.—BY C. HANCOCK.

THE ILLUSTRATED LONDON NEWS.

SECOND SUPPLEMENT.

VOL. XIX.] FOR THE WEEK ENDING SATURDAY, OCTOBER 4, 1851. [GRATIS.

THE GREAT EXHIBITION.

THIS week we present our readers with another Extra Supplement half-sheet, Gratis, comprising representations of a vast number of objects of interest, in various departments of useful and ornamental art. We shall jot down a few notes in regard to the more important of them.

This magnificent centre ornament and *plateau*, by Messrs. Hunt and Roskell, which stands in the West Nave, near the Canadian department, has been executed with a view to exhibit the capabilities of silver in its application to sculpture and decorative art. It is adapted as a stand for flowers by day, and as a candelabrum by night; and with these objects the various groups are selected to agree in subject. On each quarter of the *plateau* are groups representing the seasons: Flora, attended by her nymphs, playing with flowers, and a lamb, personifying Spring, Zephyrs, bearing on their shoulders a female figure, crowned with wheat, and carrying the sickle, representing Summer. Autumn is typified by the figures of Silenus, Bacchus, and Pomona. Winter by aged Saturnus, who, seated on a leafless tree, spreads his mantle over shivering nature. On his left is a figure representing storm and tempest, accompanied by wolves. Beneath the groups are the signs of the Zodiac. On the foot of the centre ornament are figures representing the quarters of the world, each being accompanied by appropriate animals. The alto-relievo around the column represents Day and Night, attended by the Hours; and around the stem which supports the vase are four figures, representing the elements. The whole is richly decorated with ornament of the Cinque Cento period.

Mr. E. Hill, of Olney, produces several specimens of Pillow-Lace (engraved on page 435), a manufacture for which the county of Buckinghamshire has long been famous. The execution of the several patterns is exceedingly good, and shows that capabilities for the production of fine lace exist at home as well as abroad. Ladies who cheapen a collar or a piece of edging little know the amount of labour required in lace making, and still less the wretched poverty of lace-makers. In the agricultural districts of Bedford, Buckingham, and Northamptonshire, there are upwards of 30,000 people (women and children) employed in making lace. The average weekly earnings of women is not more than 2s., while that of children is about 8d. In the production of the specimen engraved, comprising an oak-branch with pendent acorns, encircled with laurel-leaves, there are upwards of 700 "bobbins" employed, and the number of stitches in a yard is considerably more than a million. It would take a lace-maker, working twelve hours per day, five weeks to make a single yard.

Some notion of the process of lace-making may be gathered from an inspection of the lace pillow exhibited by Messrs. Groucock and Co., placed on one of the bridges in Class 19, and which is an object well worthy of observation, on account of its singular appearance and the exceeding fineness of the lace in process of making upon it.

Messrs. Heyman and Alexander also show a good specimen of Nottingham Lace (engraved on page 435), produced by machinery.

In the same page are some specimens of Brussels Lace of great magnificence, amongst which will be remarked a scarf, by Pagny, manufactured for the Duchess of Somerset, as shown by the ducal arms in the corners.

The Convolvulus Silk Pattern, by Hill and Co., of Spitalfields (engraved on page 435), is of extremely light and graceful design, well adapted for the height of summer.

M. Defaux exhibits three pianofortes in various styles. That which we engrave on page 440 is extremely bold in design, and gaudy as to decoration—black and gold. The effect, however, is that of heaviness, and is by no means to our taste.

The house of Woolams and Co. has not allowed itself to be behind others in the great improvement which has lately taken place in the manufacture of decoration. In all the works which they exhibit (except their "Tudor" pattern) may be seen the satisfactory effects produced by colours rendered clear and distinct by proper manipulation, good drawing, and harmonious arrangement of tints, suited to the purpose of the various apartments for which they are separately intended.

The Ladies' Dress, of French merino, by Smith and White, of Glasgow (engraved on page 435), is embroidered on a three-graduated flower-pattern, with the rose, thistle, and shamrock. This dress exhibits flower-pattern, with the rose, thistle, and shamrock. This dress exhibits two new features in embroidery, the first being the introduction of the scolloping round the bottom of the flounces, which is put in with the pattern, and formed by the pattern instead of a formal festoon scollop, separate altogether from the pattern, as used formerly to be worked; the other the introduction of shading in these dresses, produced by the use of silk dyed in four shades. The effect is very pleasing.

The specimen of Silk Damask, by Messrs. Houldsworth (engraved at the foot of page 438), is a very brilliant one; the flower pattern coming out very boldly above the scroll-work, which is of graceful form. That on the opposite page, from the same house, is rich in appearance, though we do not approve of the imitation of *plaid* in a silk pattern.

Amongst the articles of a decorative character, we were particularly struck with the Muslins for Dresses and Window-curtains by Messrs. Mair, Son, and Co., of Glasgow and London (engraved on page 438). These muslins are figured in the loom, and have a beautiful effect. The specimen which we have selected for engraving is a floral subject, very graceful and pretty design and execution.

The Mousselin de Laine of Liddiards (engraved on page 438) is a magnificent specimen of printing on textile fabrics. The colours are wonderfully bright and effective. *All* of Liddiard's productions are admirable in colours, and effective in design.

The Silk and Worsted Damasks, by M'Crea and Co., of Halifax (engraved on page 438), exhibit great boldness in the patterns, and are effectively executed.

Dewar, Son, and Co.'s Table-Cover (see page 438) is of extremely rich appearance—perhaps a little too close in the arrangement of the flowers at the corners.

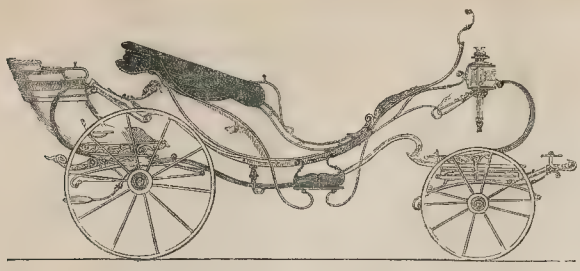
The very elegant Pianoforte engraved on page 440 is from the manufactory of Mr. A. Dimoline, Bristol. The foundation is made from the best white Archangel deal, the sound-board of the finest Swiss pine, the strings from the most perfect wire made; it is also strengthened by metallic plates and bolts. The action presents a well-wrought piece of mechanism, quite a picture in itself, registered by Act 5 and 7 Vic., c. 65.; its intrinsic merit being in its lightness and rapidity of touch. The compass is seven octaves. The exterior, or case, is of *papier maché* and mother-o'-pearl, and has been manufactured by Messrs. Jennens and Bettridge. The design is Italian: the outline is elegantly carved, notwithstanding the somewhat untractable character of the material; the lid of the key-board, the upright ends, and the top exhibiting very graceful sweeping lines. The style is at once bold and elegant: the ornaments are in excellent keeping. The artists have selected a plain black for the body; and upon this is laid the rainbow-hued mother-o'-pearl, the varying colours of which give warmth to the design, while they preserve its purity and repose. The boards underneath and above the key-board are richly perforated. The upper one is divided into three panels, each of which is enriched by an inlaid centre-piece.

Our second page contains Engravings of several elegant productions in the carriage department, some of which exhibit novel features of some terest.

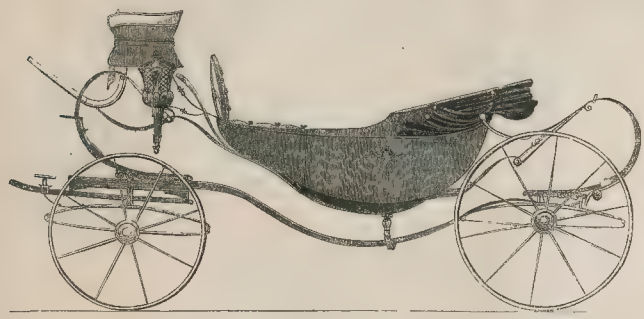
The first is a Par Phaëton, by Silk and Brown, of Long-acre, got up in a very elegant and costly manner. The body, which exhibits graceful curves in the outline, is hung upon a swan-necked perch carriage, on C and under springs. The body panels are painted an emerald green of a dark shade; the carriage wheels, a pale primrose yellow, delicately relieved with green and crimson. The inside is trimmed with emerald-coloured figured silk, and green and white velvet lace; the mountings and wheel hoops are of silver; the hook at the end of the pole forming a double-headed snake. The lamps are extremely beautiful in design. Altogether, a more elegant vehicle of the kind has seldom been produced.

The underspring Stepplece Barouche, by Hallmarke and Adolbert, is a handsome and serviceable carriage; the workmanship and colouring of that

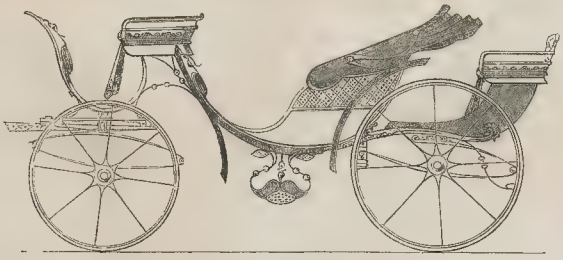
CENTRE-PIECE.—BY HUNT AND ROSKELL.



PHAETON.—BY SILK AND BROWN, LONG-ACRE.

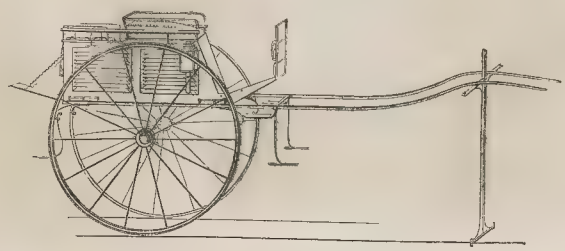


UNDERSPRING STEP-PIECE BAROUCHE.—BY HALLMARKE AND ALDERSEY, LONG-ACRE.

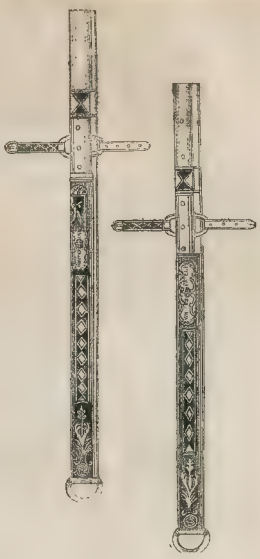


CAB PHAETON. BY JONES, OF BRUSSELS

AMEMPTON CARRIAGE BY KESTERTON, LONG-ACRE.



DOG CART.—BY H. AND A. HOLMES, DERBY.



WHITE'S PATENT TUGS.

excellent style and quality which distinguish all the works of this old-established house.

Jones, Brothers, of Brussels, exhibit four very light and elegant carriages, a cab phaëton, a caleche (which we engrave), and a buggy. For make and style they fairly compete with many of the best things of the kind on this side the Channel.

Kesterton's Amempton Carriage is intended to combine an open and a close carriage in one, upon a plan which is exceedingly ingenious, with as little complexity as possible. The open carriage is constructed as a double step-piece barouche, with a half-head, which is raised and lowered in the usual manner; and it is also furnished with a folding knee-flap, which is removed when the close carriage is formed. The front portion of the Amempton to form the close carriage is made of framed work, with double concave corners at bottom and quadrant glasses above, and furnished with doors, door-glasses, and front glasses, made to rise and fall at pleasure; the whole being surmounted or covered by a roof. The framework is secured to the head of the barouche by very simple fastenings, and drops into suitable recesses in the body of the carriage. The door-glasses, when down, are received into the lower door, the same as in a carriage permanently closed. The back of the carriage, instead of being flat, is of a curved form, by which the sides

SILVER MOUNTED CARRIAGE HARNESS.—BY J. C. WHITE.

of the back seat are shorter—rendering the carriage lighter in appearance, and at the same time more commodious inside.

The Dog-cart at the foot of the page, by H. and A. Holmes, of Derby, is light and elegant in its construction.

We also engrave a very handsome set of pair horse carriage, silver mounted harness, with patent tugs, by J. C. White. These tugs are intended to supersede the use of the old tug buckles, and are lighter in appearance. They consist of straight tubes, into which the trace passes, when it is secured by a bolt passing through, and by which it is easily adjusted to any length. The trace having a straight pull from the bolt is not liable to meet with the unsightly curve or bend, which causes it to crack and break.

ENGLISH PILLOW LACE BY B. HILL, OLNEY, BUCKS.—(SEE FIRST PAGE.)

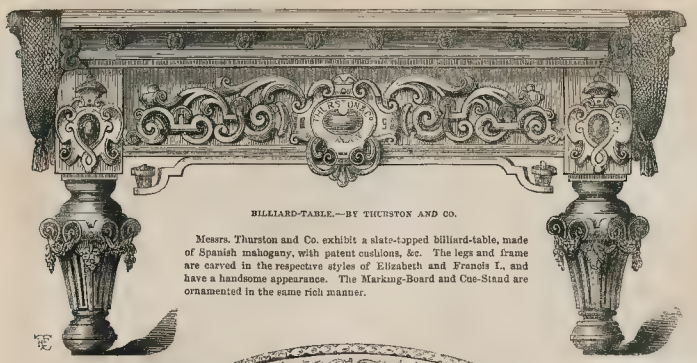
CONVOLVULUS SILK PATTERN.—BY JAMES HILL AND CO., SPITALFIELDS. (SEE FIRST PAGE.)

LACE CURTAIN. BY MESSRS. HEYMAN AND ALEXANDER, NOTTINGHAM.—(SEE FIRST PAGE.)

LACE.—BY L. ROBYT, BRUSSELS. (SEE FIRST PAGE.)

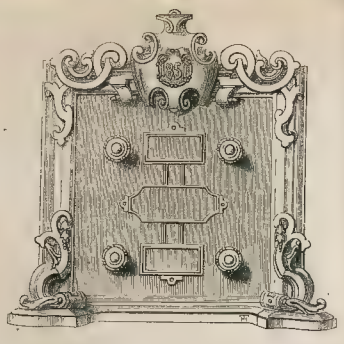
LACE SCARF.—BY L. PAGNY, BAYEUX.—(SEE FIRST PAGE.)

MERINO DRESS PATTERN.—BY SMITH AND WHITE, GLASGOW.—(SEE FIRST PAGE.



BILLIARD-TABLE.—BY THURSTON AND CO.

Messrs. Thurston and Co. exhibit a slate-topped billiard-table, made of Spanish mahogany, with patent cushions, &c. The legs and frame are carved in the respective styles of Elizabeth and Francis I., and have a handsome appearance. The Marking-Board and Cue-Stand are ornamented in the same rich manner.



BILLIARD MARKING-BOARD.—BY THURSTON AND CO.

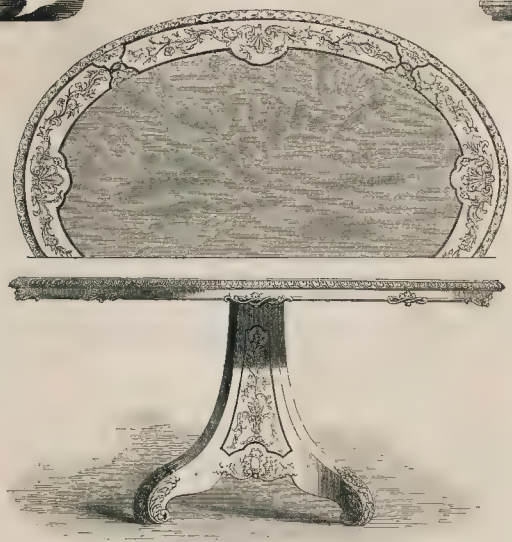


TABLE AND TOP.—BY MESSRS. BANTING.

The extreme finish which has been bestowed upon the oval Table, by Messrs. Banting, was well deserved by the beauty of the wood employed, and by the very graceful and really elegant design: it is one of the simple, useful pieces of furniture for which London has become famous.

Although it cannot be said that the free city of Hamburg has sent any very wonderful works of art, yet it is certain that the Table represented underneath is one of the nearest approaches to a really fine work; the inlaying, especially of the historical pieces, is very good.

IRON SCROLL-WORK FOR DOOR.—BY GIDNEY.

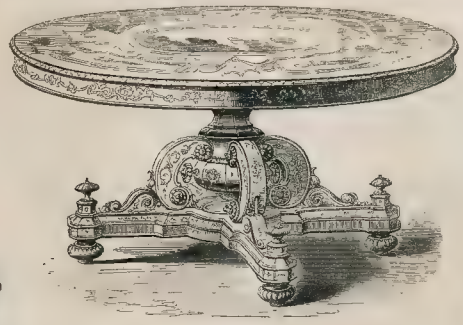

TABLE.—FROM HAMBURG.

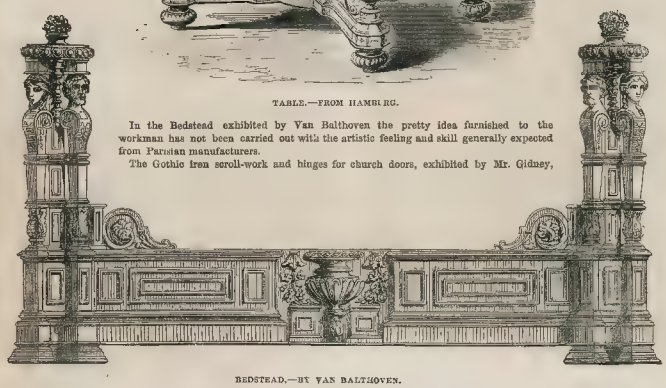
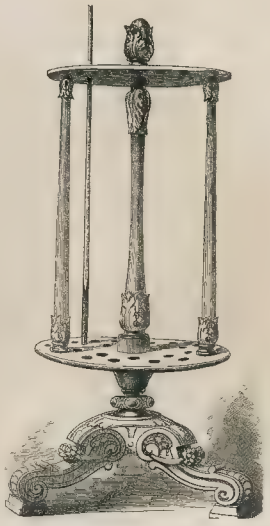


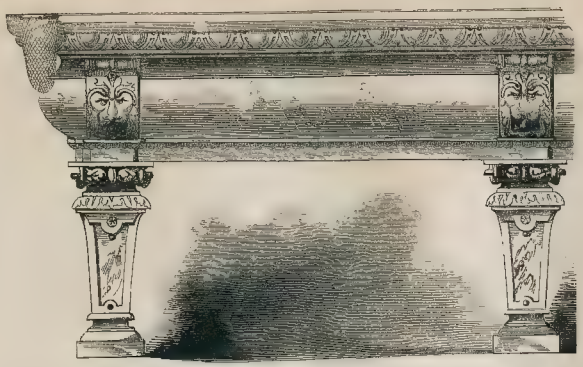
BEDSTEAD.—BY VAN BALTHOVEN.

In the Bedstead exhibited by Van Balthoven the pretty idea furnished to the workman has not been carried out with the artistic feeling and skill generally expected from Parisian manufacturers.

The Gothic iron scroll-work and hinges for church doors, exhibited by Mr. Gidney, are very accurate imitations of what were much in vogue in the middle ages, in which strength and beauty of effect were simultaneously consulted, and which a return to Gothic models in architecture almost renders unavoidable. They are from the designs of Mr. Teulon, who is also the architect of the new church at Benwick, near Doddington, Isle of Ely, to which they are intended to be applied.

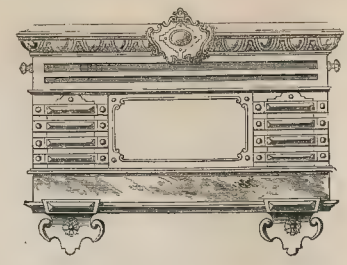


BILLIARD CUE-RACK. BY THURSTON AND CO.

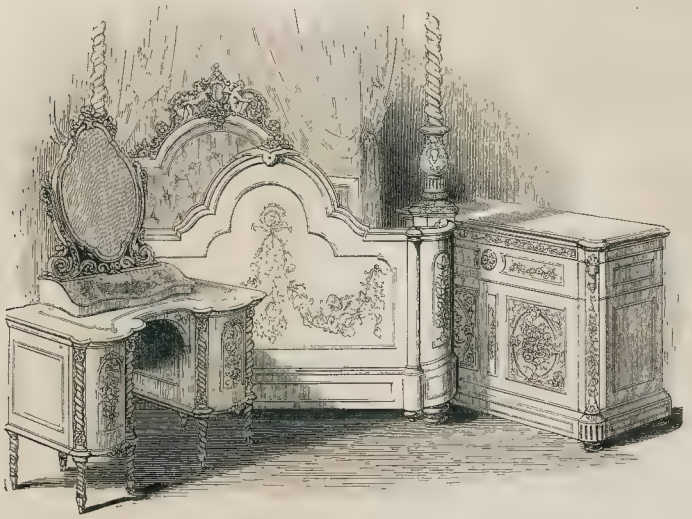


ELIZABETHAN BILLIARD-TABLE. BY BURROUGHES AND WATTS.

Above is an Engraving from a billiard table, in the Elizabethan style, manufactured of rich brown English oak, grown in Woburn Park, on the estate of his Grace the Duke of Bedford, designed and manufactured by Burroughes and Watts, of Soho-square. The design is more simple than that of Thurston's, but of good character; and the marking-board is upon a different principle.



BILLIARD MARKING BOARD.—BY BURROUGHES AND WATTS.



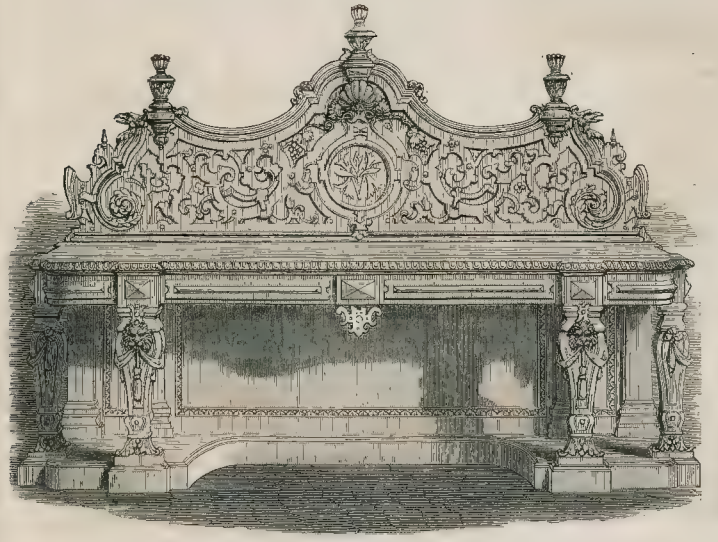
BEDROOM FURNITURE.—BY TROLLOPE AND SON.

The Bed-room Set, by Trollope and Sons, is in very good taste; the material is satin-wood, inlaid with various-coloured woods. The bedstead and dressing-table have turned spiral legs; and the ornamentation throughout, without offending by redundancy or undue prominences, is remarkable for its admirable finish.

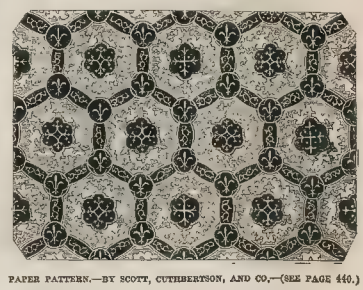
The Sideboard by Caldecott (engraved below), in the Elizabethan style is capitally fashioned and carved; the material good old English oak.

PANEL DECORATION.—BY HASELDEN.

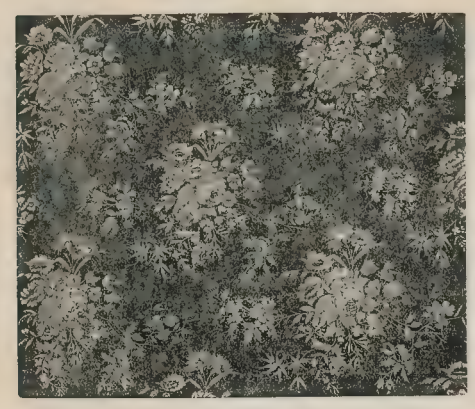
In the South-Eastern Gallery, amongst some specimens of wall ornament, stands this design for paper-staining, which is very meritorious, and worth comparison with the best efforts of that mode of decoration.



ELIZABETHAN SIDEBOARD.—BY CALDECOTT.



PAPER PATTERN.—BY SCOTT, CUTHBERTSON, AND CO.—(SEE PAGE 440.)

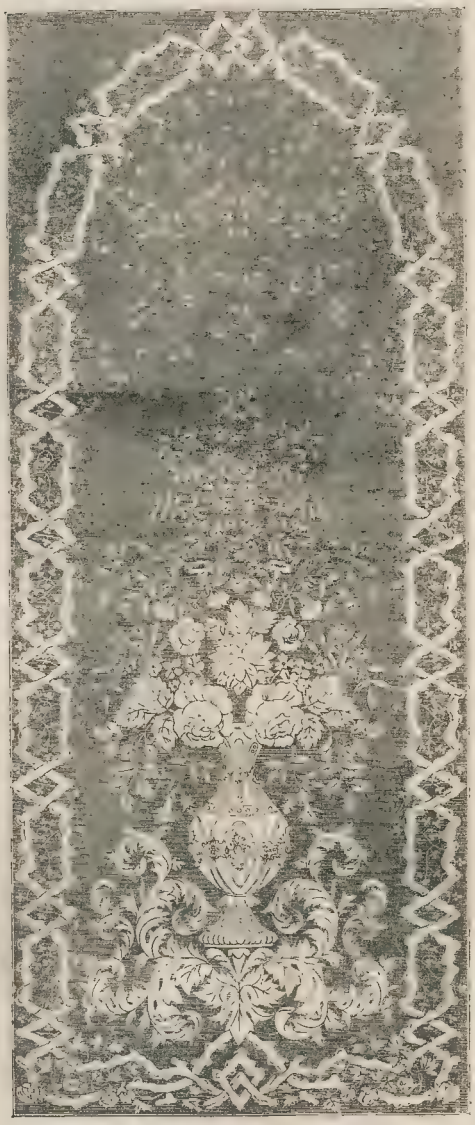


MOUSSELIN DE LAINE.—BY MESSRS. LIDDIARD.—(SEE FIRST PAGE.)

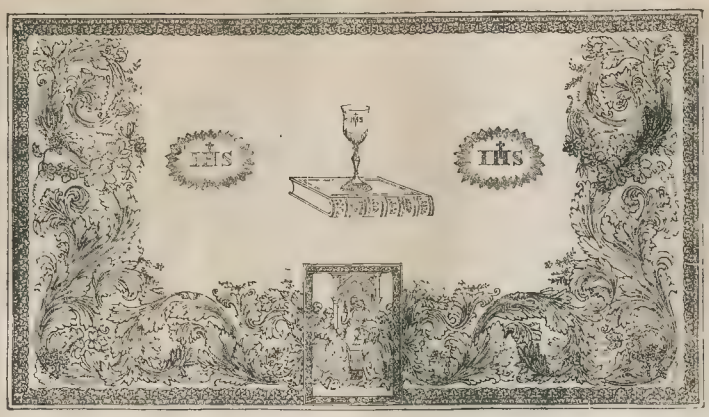
TABLE-COVER.—DESIGNED BY WEBB, FOR DEWAR, SON, AND CO.—(SEE FIRST PAGE.)

SILK AND WORSTED DAMASK.—BY M'CREA AND CO., OF HALIFAX.—(SEE FIRST PAGE.)

SILK DAMASK.—BY HOULDSWORTH, MANCHESTER. (SEE FIRST PAGE.)



MUSLIN CURTAIN.—BY MAIR AND SON, GLASGOW.—(SEE FIRST PAGE.)



COMMUNION TABLE-COVER.—BY PEGLER, LEEDS.

SILK PATTERN.—BY BOYD, SPITALFIELDS.

The Communion Table-Cover, by Pegler, of Leeds, is a rich specimen of damask table-cloths, the design comprising a representation of the Last Supper and other appropriate emblems.

The Silk Pattern, by Boyd, of Spitalfields, exhibits a pretty combination of flowers, of various colours.

One of the most brilliant specimens of textile manufacture in the Exhibition is an Irish poplin, by Messrs. Atkinson, of Dublin, the pattern of which shows the rose, the thistle, and the shamrock combined in a group; and which is of additional interest as it is to be seen upon the loom, in the compartment of the West Nave devoted to Irish productions.

The ground colour is of most exquisite blue, the pattern being worked in white and gold thread, producing an effect of extreme richness and beauty.

We were much pleased with the ingenious brocading machine attached to Messrs. Atkinson's loom, and were informed they were the first to

IRISH POPLIN.—BY ATKINSON, OF DUBLIN.—PATTERN WOVEN IN THE BUILDING.

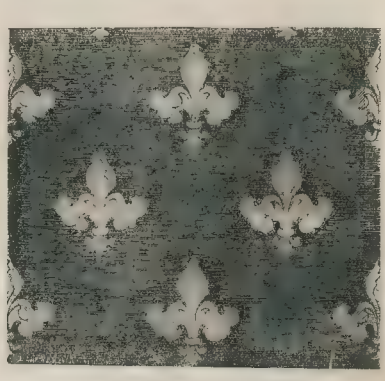
SILK DAMASK.—BY HOULDSWORTH AND CO., MANCHESTER.—(SEE FIRST PAGE.)

introduce it into Ireland, and that even in England it is but little known. It is certainly a great improvement on the old method of putting in coloured flowers with the shuttle, as it only puts in the colours where they are wanted in the pattern; in fact, it should be called an embroidering machine, as the flowers are formed exactly as if embroidered.

The use of fringe and gimp in the furniture of rooms is not so much in vogue as it was some fifty years ago; still the manufacture is kept up, presenting its highest features of excellence, and remarkable variety and ingenuity of design, by a few old-established houses. E. Burgh, of Bartholomew-close, exhibits a large assortment of deep bullion fringe, trimmed and ornamented, for windows, ornamental hangings, drops, ropes, gimps, cords, and tassels for drapery, all highly finished productions of their kind, of which we engrave a few specimens.

Underneath is a specimen of Mr. Ward's (of Halifax) very beautiful furniture damasks, in which the figure is worked in the warp, and which we more particularly referred to in an article in the Supplement of the 7th of June.

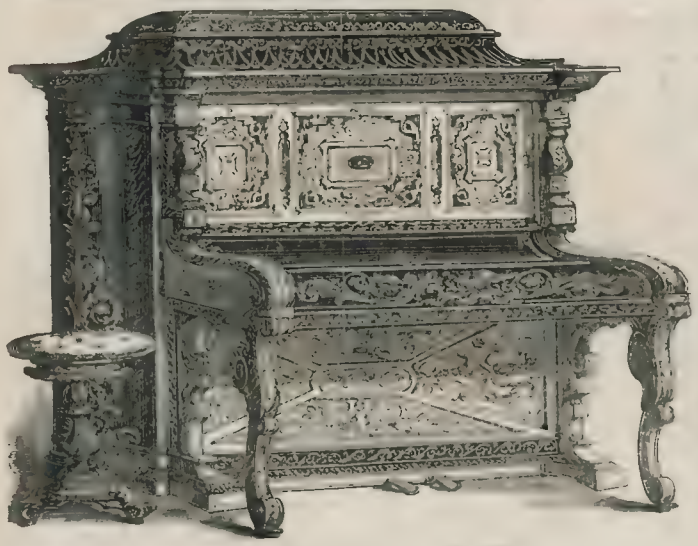
TASSELS AND FRINGE.—BY BURGH



FURNITURE DAMASK.—BY WARD, OF HALIFAX.

PIANOFORTE.—BY J. B. DEBAIN, BRUSSELS. (SEE FIRST PAGE.)

DECORATION FOR ROOM.—BY MESSRS. WOOLLAMS AND CO. (SEE FIRST PAGE.)



PAPIER MACHE PIANOFORTE.—BY A. DIMOLINE, BRISTOL. (SEE FIRST PAGE.)

TOP OF DECORATION FOR ROOM.—BY MESSRS. HORNE.

The room decoration, by Messrs. Horne, is a handsome production of the kind, uniting floral with arabesque devices, producing a gorgeous and satisfactory effect.

BOTTOM OF DECORATION FOR ROOM.—BY MESSRS. HORNE.

The three specimens of paper patterns—one by Messrs. Hinchliff, the other two by Scott, Cuthbertson, and Co.—are extremely meritorious

THE ILLUSTRATED LONDON NEWS.

No. 522.—VOL. XIX.] SATURDAY, OCTOBER 11, 1851. { TWO NUMBERS, 1s. WITH LARGE VIEW, GRATIS.

CLOSE OF THE EXHIBITION.

THIS day closes the Great Exhibition of 1851. The marvellous Palace of Crystal, with the varied and splendid repertory of skill and ingenuity, of art and science, which for the last six months it has exposed to the view of millions of admiring spectators, is to be henceforth shut against all except those interested in the dispersion of its treasures. In the course of a few days the work of dismantling will begin. A new bustle and excitement will succeed to the roar of the applauding people who rushed in such astonishing numbers to its fairy avenues. The pleasure-seekers will disappear—the equipages of the wealthy will no more block up the approaches—the humbler vehicles of the people will cease to deposit their living cargoes at its doors—waggons and carts will supersede them all—and the sound of the hammer, the hoisting of heavy goods, the gesticulations of porters, the creaking of cranes and pulleys, and the rumble of heavy wheels, will for many weeks to come render Hyde Park and its purlieus a scene of even greater animation than it has been since the memorable 1st of May.

> Thus fades and perishes, grows dim, and dies,
> All that the world is proud of.

Whether the Palace itself was to share the fate of its contents, was long a doubtful and an interesting question. We presume that all doubt is now at an end upon this point; and that, although the press, with a rare unanimity, was loudly and earnestly in favour of retaining it as a permanent addition to the few public buildings in London of which an Englishman cares to boast, and although the people were so convinced that such an act of Vandalism as its demolition was so incredible that they did not even take the trouble to petition or remonstrate against the designs or whims of the few who entertained a contrary opinion—the Building must come down. The fiat of destruction appears to have gone forth, and we suppose that in a few months the glittering Palace of iron and glass, the most unique and remarkable building in the world, will be as entirely a thing of the past, as the ice-palace of the Empress of Russia that thawed in the summer sun, or the hanging gardens and glittering halls of a Babylon, shorn of its glory three thousand years ago. Perhaps, if we looked only to the romance and sentiment of the Great Exhibition, it would be better that such should be the case, and that the Crystal Palace, and its marvellous garniture of wealth and beauty, should exist only in the imagination of the present and future generations; and that no visible and palpable remnants of it should continue upon the solid earth to disprove imagination by reality, and to withdraw the scene from the regions of tradition and mythology into those of actual matter of fact in our hard and working world.

But whether the Building shall be wholly demolished, or whether it shall remain where it stands, or be taken to pieces only to be reconstructed upon a site which shall have the advantage of displeasing and inconveniencing nobody, and whether or not any portion of the works of beauty and utility that are now congregated within it shall be reserved for the permanent enjoyment of the people and the adornment of the capital, the Great Exhibition must be considered a thing of the past. It has served its end, and stands upon record as the most gratifying and surprising event of our time. As a mere show, the history of the world offers no parallel or rival to it; and if at any previous period of its existence it was not popular or marvellous enough to satisfy the sanguine expectations of the most sanguine of its promoters, the scenes enacted within it during the last week would of themselves be more than sufficient to render it almost fabulously grand. Such multitudes never before met in such an area, or in any covered area since the world began; and we may justly boast of the good sense and the good temper, of the head and of the heart of the British people, who upon this as well as upon former occasions have shown themselves a multitude without becoming a mob; and who, without any other object than the gratification of a laudable curiosity, have read the whole civilised world an admirable lesson of peace, order, and self-respect. Had the Exhibition done nothing else, it would not have been established in vain; and we are fain to hope, that, should it have elicited no new merit, should it have promoted the improvement of no branch of industry, and should art, science, and manufactures have gained nothing by it, the moral influence it has exercised will be beneficially felt in all the civilised nations of the earth. But we are far from indulging in any such idea as that it will have proved useless for the more immediate purposes for which it was started. It cannot fail, either now or at some period not distant, to exercise a very considerable influence upon the arts and industry, as well as upon the commerce and international relationship of the world. The amount of that influence it is at present impossible to determine, and perhaps idle to speculate upon; but that it will be altogether imperceptible or even trifling in amount, it would assuredly be still more idle to deny.

The Exhibition, though finally closed and on the eve of dispersion, will not speedily be forgotten. At this moment, without ignoring the fact that all the circumstances connected with it are not to be looked at with commendation, and that some errors, both of omission and commission, on the part of many of those who were influentially concerned in its management, have been and are felt, and will yet have to be commented upon by those who represent the public opinion of the country, we think it ill-timed to dwell upon them. There is a time for all things; and the triumphant close of the Exhibition is not the time for ill-natured, even if just criticism. The Exhibition, upon the whole, has been a great success, and must have far surpassed the expectations, not only in a pecuniary but in a far more elevated sense, of those who originated it, and carried it through evil as well as through good report, through doubt, difficulty, and peril, as well as through the sunshine of popular favour, to its final triumph. In that light, we, in common, we believe, with the large majority of the public, are well contented to look upon it. Success, like charity, covers a multitude of sins; and if the sins that might be laid at the doors of the Exhibitors were very much more heinous than they are, its promoters and conductors would still have abundant reason to remember with pride in all their future lives the part they took in the great and gratifying event, which will ever throw a halo upon the memory of the year 1851.

We must not forget, however, that the Exhibition does not die childless. As was said in France, and as is still said in all constitutional and hereditary Monarchies, "Le Roi est mort, vive le Roi!" The Exhibition is defunct, and will speedily be interred, but its heir remains in the comfortable shape of nearly £300,000 sterling, to be expended hereafter in furtherance of objects similar to its own. The proper application of this large fund, if not yet finally decided upon, will, no doubt, occupy for some weeks or months the anxious attention of the Royal Commissioners; and the country will expect in due time a determination worthy of the source of the money and the occasion of its investment. If, by the lapse of an Exhibition designed originally to be temporary, we shall possess hereafter a permanent structure—the seat of an institution for the encouragement of industry, art, and science, endowed with a liberality worthy of its objects—we shall have another reason to be grateful to the

LOUIS KOSSUTH. (SEE NEXT PAGE.)

illustrious patronage under which the defunct Exhibition was f ... tered and maintained. But upon this point, notwithstanding the many rumours which are in circulation, it is premature to pass any opinion. We may be sure that nothing will be proposed without careful forethought; and it will be time enough to discuss the matter when it is formally before the public.

KOSSUTH.

THE Hungarian patriot, it is anticipated, will be on the English soil before the publication of the Portrait presented by our Artists in this day's ILLUSTRATED LONDON NEWS. His arrival in the United States steam-frigate *Mississippi*, from Marseilles, which port was quitted on the 1st inst., after the refusal of the French Ministry to permit Kossuth a passage through France, has been anxiously expected at Southampton, where a public banquet will greet him at the ancient Guildhall. The illustrious Kossuth is a native of Monck, in the county of Zemplin: he was born in the year 1801, and is of an ancient family. He studied at Patak, a Protestant institution, and obtained his diploma as an advocate. On the meeting of the second Diet, in 1832, summoned by Austria, after the peace of 1815, Louis Kossuth's writings began to attract attention, and he was committed to the fortress of Ofen, on a charge of high treason. He was sentenced to imprisonment for life, and actually passed four years in close confinement, when he received a pardon, extorted by the force of public opinion on his behalf. Shortly after he was set at liberty he married the daughter of his fellow-prisoner, Meszlenyi, a noble of Stuhlweissenburg. Kossuth afterwards published, with eloquence and power, the emancipation of the serfs, in order eventually to secure the independence of the country.

In a notice of Kossuth, "his Career, Character, and Companions," just published, it is stated that Kossuth, in 1843, had an interview with Prince Metternich, at Vienna, and that the former indignantly spurned an offer of the wily Minister to use his pen for the existing order of things.

A very interesting letter on "Kossuth and the Hungarian Question," written by Algernon Massingberd, Esq., published by Newby, has recently appeared. The writer is an officer in the Blues, and is related to the late Lord Liverpool and the Bishop of London. He distinguished himself early in life in the navy in the war with China, and subsequently entered the army. Mr. Massingberd was, in the first instance, impressed in favour of Austria; but, having visited Hungary and Asia Minor, and made the acquaintance of Kossuth in his exile at Kutaya, his early impressions were removed, and he is now the defender of the Hungarian cause. Mr. Mass ngberd, in a masterly summary, describes the exactions of the Hungarian Diet in the assertion of their parliamentary rights, and the acts of the Imperial Cabinet to excite the Croatians, Servians, and Wallachs to rebel, and destroy the Magyar population. It was Kossuth, when Finance Minister under the Emperor, who stanched his belief in the connivance of the Austrians with Jellachich, the Ban of Croatia, and who raised the population to fight the battle of independence. It should be recollected that the constitutional struggle at Pesth began years before the risings in France and Germany in 1848.

The declaration of the Hungarian Diet, for the forfeiture of the Crown by the House of Hapsburg, was the consequence of the decision of the Austrian Cabinet for the abrogation of the Hungarian Constitution and its incorporation with Austria. "This is an historical page," writes Mr. Massingberd, 'well worthy of meditation. Here we see the barrister, the statesman, the gentleman, the poet, who, in the midst of, and in the teeth of, incredible difficulties, had raised himself to the proud post of saviour of the national honour and property of his country—the Hungarian Hampden, whose resistance to ship-money had been his persistence in publishing, in conformity with the national rights, the debates of the Hungarian Diet. Like Hampden, he had suffered a long captivity; but not, like the glorious Marquis of Wendover, cut short in his career; though in the same manner inciting his country, when the sword was drawn, to an energy of action, which was in equal contrast with his former moderation. Mr. Massingberd, in his 'Essay on the Materials of Hungarian Song,' has great and terrible crisis came: a direct attack was made on an arbitrary Government on a right which was the chief security for all their other rights. Eloquent men had arisen to defend it. Calmly and unostentatiously, the plain Buckinghamshire Esquire placed himself at the head of his countrymen, and right before their face and across the path of tyranny. The time grew darker and more troubled. Decision—perilous, arduous, delicate—was required; and to every nerve the intellect and the courage of this wonderful man were found fully equal. He became a debater of the first order, a most dexterous manager of the House of Commons, a negotiator, a soldier.' The sim bar ty between the two is very striking; and we find in the bread of our Hampden; so have the Magyars or Hungary, and all who admire their character, or sympathise in their struggle, a true and heartfelt gratitude to the genius of Kossuth, who restored and raised his country and its interests."

Mr. Massingberd dwells on the English notions and ideas—the English strength that he found pervading all connected with the Hungarian circles at Kutaya. "To find," he remarks, "the most powerful and eloquent appeals raised up armies from the crowd, the simplicity of a child, connected with the business-like manners of the statesman, who upheld in Parliamentary contests that cause which he afterwards fought in more stirring fields; to find the Protestant Kossuth discussing English politics, in quaint though flowing English, which reminded me of the language of Shakspeare (from the study of whose works his knowledge of our English institutions, long previously, was evidently derived), and to hear him recommending, months back, the establishment of an Anglican Bishopric in Rome, as the sole method of resisting, without infringement of the rights of conscience, that Papal Aggression which he foresaw," was peculiarly impressive.

Kossuth in his exile lived in the humblest style; a scanty iron service replacing the costly plate presented to him by the Diet. He laboured for at least ten hours a day, despite precarious health: amongst his studies was the compilation of a Turkish grammar, and the study of the whole military art, with which he was previously unacquainted.

Kossuth has a mother and four sisters, one of whom is the widow of the brother of his wife, one is married to an Aulic councillor in Mishlic; a third to a physician, and the other to Ruttkay. The sisters possess remarkable talents, one being well versed in financial matters, and another skilled in history and law. He has three children: the two elder are boys, and will be left in this country for education. The step of Kossuth in England will be about ten days. The pronunciation of the name is Kosh'ut.

Count Casimir Batthyany, who was nominated by Kossuth Minister of Foreign Affairs, is now in Paris. He intends to accompany Kossuth to this country. His will be received at Southampton by M. Pulszky, who was sent to England, in December, 1848, as the accredited representative of Hungary, by Kossuth.

We noticed last week the expected arrival in this country, within a few days, of the Hungarian patriot, Kossuth, and the ungracious refusal of the French Government to permit him to pass overland from Marseilles to Havre, so as to avoid the circuitous and rough sea passage through the Straits of Gibraltar and Bay of Biscay to Southampton.

The following is a letter addressed by M. Kossuth, on his arrival at Marseilles, to the Prefect of the department:—

"M. le Prefet, Released from confinement at Kutahsi through the generous mediation of humane Governments, I have arrived at Marseilles on board the *Mississippi*, a sent expressly for me by the Government of the United States. I beg to demand of the Government of the French Republic a free passage and protection through France, it being my intention to proceed directly to England. I am accompanied by my wife and family. I am desirous of receiving my children at school in London, provisions to my departure for the United States, to land in the people and the Government for the generous assistance with which they have kindly honoured my misfortunes. My secretary and his family, inventor of my children, two officers, and one servant, form my suite. I place my command (purely a question of humanity) under the protection of French honour, and of your generous sentiments, Mons. le Préfet; and I have the honour to request Accept, I pray you, M. le Consul, the assurance of my high consideration.

"The Prefect of the Bouches du Rhone.

"SOLEAU."

In consequence of this refusal, M. Kossuth published the following address to the people of Marseilles:

"Citizens,—The Government of the French Republic having refused me a passage to traverse France, the people of Marseilles, yielding to the generous instincts of the French heart, which are the inexhaustible source of its greatness, the manifestation of its power, and the happiness of its destinies, hastily for its resolution, peaceable in its ardour, and as majestic in its calmness, as nature, the grand image of God, before the tempest. I have heard my name blended with the hymn of the 'Marseillaise,' and with the sounds of *'Vive la République!'*—a cry which is the only legal one in France, the only one whose legitimacy has been won by the blood of the martyrs of liberty! I am a patriot to love freedom! It is no light to suffer for it! It is almost less the mere duty; but there is, indeed, a sup eme glory in the thought of being identified with the principle of liberty in the mind of the French people. I have no desire for glory—but this glory I accept, in order to merit it. I accept it as a pledge of common interests (*solidarité*), and I accept it as a testimony of the fraternity of the French nation with all nations. I accept it as a sign of salvation for my beloved country. To you, Frenchmen! Republicans! is the honour of that salvation! To you, poor Hungarians, the duty of meriting it! We shall merit it! My nation will understand the appeal to your fraternity. It will be moved of, and bravely respond to it, as those ought to do who are honoured in being called 'brothers' by the French people. These are the only thanks worthy of the people of Marseilles; worthy of their manifestation with which they have honoured me, yet not me, but my nation; and, in my nation, the pas; less than the future!

"Permit me not to speak any more of the refusal of the Government of the French Republic to grant me a passage through its territory. I know that the French people are not responsible for, and are not identified with, its acts. I know that neither M. de Lamartine nor M. Ledru-Rollin are French nations. I knew, and I know, that the Executive Power is delegated to them; but that the honour of the French nation is not in their keeping. I shall no longer bear in mind (nor refuse, even in the case that humanity shall not remember it, if by any chance those who have been already in exile, and who, to all appearance, have forgotten it, should again be so. Last evening one of your brethren (or our brethren), an operative of Marseilles, while I was in prison, and I shall not forget his name, in spite of the cold, and swimming through the water, on board the American frigate, to press my hand. I pressed his hand with pity, with emotion, and greatly reproached him for his temerity. 'Que voulez-vous?' he answered, 'I desired to touch your hand, I could not find a boat, I took to the water, and here I am. Are there any obstacles to him who wills?' I bowed to these noble words. The love of liberty, the sentiment of duty and fraternity were mine before coming to Marseilles; but it is at Marseilles that I have found the motto, 'There are no obstacles to him who wills.' That motto shall be mine. *Vive la République!* Health and fraternity!

"LOUIS KOSSUTH.

"Marseilles Roads, on board the frigate *Mississippi*, of the United States, September 29th, 1851."

During the short stay of Kossuth at Marseilles, he was the object of the most enthusiastic expression of sympathy and admiration on the part of the more liberal politicians of the place, who seemed to feel it as a stain on the national honour that the most ordinary hospitality was refused by the authorities to the illustrious exile. The *Messenger* sailed, on the 2nd inst., from Marseilles for Southampton. The *People* of Marseilles, of the 3rd inst., gives the following details about the departure of Kossuth:—"At least 4000 people collected on the *Jetty* and shore to give a last token of their sympathy to the illustrious exile. A deputation of bakers' workmen came to offer Kossuth a magnificent bouquet, and the manifestations of Sunday and Monday were renewed with still more energy and enthusiasm. Shouts of the Marseillaise were mingled to achieve lodge the salutations and cheers of the democracy of Mar ... "

In this country public demonstrations, in the shape of banquets, addresses, &c., await him from the various districts of the metropolis, and the leading towns, such as Birmingham, Southampton, &c.

THE AUSTRALIAN GOLD DIGGINGS.

The following letters, which have come by the *Thomas Arbuthnot*, the vessel which has brought us some specimens of the precious metal, have been published by the gentleman to whom they were addressed. The writers are parties in the position to learn the truth, and willing to tell it: -

Sydney, May 31.

As I am sure that this extraordinary news will create as great, or perhaps greater, sensation in England, I will give you daily news of the diggings until the sailing of the ship.

May 29. Bathurst mail arrived with both official and private accounts from the "field of gold," confirming most fully all the previous reports of the existence of abundance of gold. Much speculation in consequence in Sydney, particularly in wheat, flour, all kinds of provisions, and spirits. Sixteen passengers by one ship bound for New Zealand, and thirty-one passengers by two ships bound for California, left the ships just previous to their departure, forfeiting their passage-money, and are going or gone to Bathurst. Every man in Sydney is a hung of going. Flour has risen at Bathurst in two or three weeks from £30 to £63 per ton, at which price it is said it cannot be obtained. Carriage of supplies by drays from Sydney, usual y about £5 per ton, can only with great ... charge be obtained at £16 and £18 per ton. Bread in Sydney has risen from 3d. per 2 lb. loaf to 5d. per 2 lb. loaf, and all other things in the same proportion.

May 24. Saturday.—Bathurst mail arrived, not only confirming all the previous accounts, but stating that they could scarcely be exaggerated; in consequence the excitement in Sydney is greater than it was before, and hundreds of the respectable working class have left, and are preparing to leave Sydney with the least possible delay. I send you this day's *Sydney Herald*, and can't your particular attention to all I have to say. Mr. Clarke, the well-known surveyor-general of New South Wales, and most certainly to be relied on, Mr. S. Clarke's, geological account of the gold discovery. Mr. C. ar se is well known as a first-rate geologist and man of practical abilities; and what he writes can be depended upon with the most implicit confidence. I also send you a slip of this *Sydney Herald* of this day (May 24) not reach you, I strongly advise both you, my father especially, to go to the Jerusalem Coffee House, or elsewhere, to read it. The accounts are so extraordinary that you will not be to be made fully acquainted with all its contents in reference to the gold discovery. In consequence of this day's news per post, the 3-lb. loaf has risen to 5s., exactly double the price it was this day week. Flour has risen to £60 per 100 lb., and it is said to have risen to £80 per ton. At Bathurst it is certain that one Sydney merchant has sold one ton of flour, to be delivered at the gold diggings, 130 miles from Sydney, during the present week. One principal brewers in Sydney have this day raised the wages of all their men, giving men an extra ten shillings per week with a promise of a further increase. Large quantities of gold dust are coming down from the diggings under a safe escort to Sydney; it is said that £8000 to £10,000 worth of gold is already collected and deposited there. I this day saw a letter from a gentleman whom I know very well, and who is likely to be one of the first to get at truth, and who for many years has lived in that district; he writes that "one party of four persons collected 34 oz. of gold one day, and that another party within the fortnight had collected 46 oz. of gold."

Ten shillings per bushel for a cargo of wheat just arrived in Sydney has been offered and refused; 8s. per bushel was a high price last year. One large ship of 800 tons left Sydney this day for a cargo of wheat from Va paraiso. A gentleman of the name of Hamilton, a passenger by the *Lysander*, left Sydney the past week, and a proclamation has been issued (See the enclosed paper). A body of constables refused to do their duty this evening, unless their pay was considerably increased. Many others have resigned their offices. How could they do otherwise, when they hear that gold is picked up in lumps varying in weight from 4 oz. to 17½ oz. (seventeen and a half ounces each lump—this is a fact.)

May 27. Another post-day from the diggings, bringing more and more astonishing news. One gentleman has arrived and brought with him £1000 worth of gold purchased at the diggings; one piece of gold which I have just now in my own hands, weighing within two ounces of pounds weight. This piece of gold is sent by this same ship to Messrs. Dun... and Sons, of London, and placed in the Exhibition. Call on Messrs. Dun... and you can see and handle this four pounds of gold, and for which £3300 was paid. A pocket of gold was also found in a cleft of a rock, from which one lucky ... brought out eleven pounds of gold. Thank God, on each of the days of excitement now existing in Sydney. The post-office runners, who deliver letters, have all given notice to leave for the gold-mines. Private men-servants in Sydney are also leaving. A few such reports as we have heard this day, and Sydney will be empty. Flour is 1s. per lb. at Bathurst.

May 28.—I cannot better give you the news than by enclosing to you a paper of this day's date. It brings the glorious account that I said it could not be more than ten to one chance of its being lost, sent as a paper. Sailors are deserting their ships, and in one instance the whole of one ship's crew has deserted leaving each man £17 and £18 due to him for wages. Indeed, the whole city is in a rage with a few exceptions, all making preparations for an early departure to the diggings

May 29. The post this day brings more astounding news. Emeralds and rubies, it is said, have been discovered in the golden regions; people are a little more mad; salaries demand £76 to £80 for the voyage home, instead of something under £15. It is reported that Government will be obliged to put a few soldiers on board the ships to keep the men to their duty. Great run on the savings-bank yesterday, in consequence of the labouring classes withdrawing their savings for the purpose of purchasing an outfit for the gold diggings, and the manager was obliged to call in eight special constables to keep order. Another piece of gold has arrived in Sydney 4 lb. in weight. The number of men reported to be on the "field of gold" is 1000 at the least, where a fortnight since not a man was to be seen. Two reputable persons that I have heard of, and which I have no reason to be true, is that of a poor Scotchman, who was paid £283 sterling for the gold which he had picked up in four days. Eight others realised £3 each within the week. Hundreds are daily arriving from the diggings.

May 31.—The accounts from the diggings are still most flourishing. There are now about 2000 persons, averaging, it is said, from 30s. to 25s. per day. Some have had great success. One is reported to have got 70 lb. weight of gold, the result of two days' labour at the mines. Another party obtained 36½ oz. of gold in one day. Several pieces of gold have been found, weighing three, four, and five pounds, also pieces of eight pounds and upwards. Another lucky ... Other gold diggings have been discovered in the immediate vicinity. There are many instances of gold being picked up of the value of £5 to £50 ... piece.

I have from very good authority that, independently of the discovery of gold, something still more valuable has been found, and yet is only known to the Government; some say plumbago, some say platina. Gold has also been lately discovered at the Clarence River and at [Moreton B]ay.

Lord Dudley Stuart, Messrs. Gilpin, Chilton, and Witton, are prepared to act as trustees to the fund for Kossuth. Messrs. Currie and Co., Coutts and Co., and the Commercial Bank, will receive subscriptions to the fund.

Among the distinguished persons who are now awaiting at Kutah ampton the arrival of Kossuth, are H. Vidovicz, the late Minister of Justice in Hungary; Count Alexa Teick; Colone. Baron Kemeny, the hero of Peski; Col. Alexander Gal and Nicholas Katona, Mayor Szotgah, and Francis Pulsky.

The Hungarians in London on Monday attended mass in commemoration of the events of the 6th of October, or, as the handbills explained, in memory of the defenders of constitutional liberty in Hungary, who, after the surrender of the Hungarian army to the Russians, were put to death by Austrian executioners.

FOREIGN AND COLONIAL NEWS

FRANCE.

The political accounts from Paris this week present no feature of particular interest or importance; discussions on the Electoral law, the refusal to permit Kossuth to pass through France, and the Marquis of Londonderry's letters to the President of the Republic to raise a Aid-al Kader from imprisonment, wholly occupy the Paris journals. With respect to Kossuth, the *National* announces that, having received communications, not only from Republicans, but also from persons who have been hitherto opposed to its policy, soliciting it to promote a manifestation which would permit every citizen to protest against the participation in the expulsion of Kossuth from the French territory, it has followed the example of *La Revolution*, and opened a subscription at its offices, "for the purpose of striking a medal to commemorate the indignation felt at such an outrage on the feelings of the French people." The smallest sum, it says, will be received; subscriptions of ten sous will be entitled to a copy of hot-pressed paper of the head of Kossuth to the demands of Marseilles.

The democrats of Paris have forwarded a congratulatory address to Kossuth.

During the week there was the usual crop of political rumours, the most important of which revived the probability rumoured last week of an impending change of Ministry, the cause alleged being, that Louis Napoleon is partic... respecting the repeal of the electoral law of the 31st of May, while M. ... Fauchet is so determined to support that measure. Should the latter, therefore, be defeated upon the question, he will, it is said, not only go out of office, but others will, doubtless, follow his example.

Other rumours related to the proceedings of the Assembly, on its meeting after the recess, when some strong measures, it was said, would be brought forward, in order to secure the peace of the country; for, though the surface society is tranquil, there is an under current at work which threatens disturbance, if active means are not employed to prevent it.

Some of the Italians who have long resided in Paris have received notice to quit. In a few cases, however, the order has since been revoked.

The *Constitutionnel*, which always takes the most affable and prejudiced views of everything English, complains greatly of the partiality and injustice manifested by the English jury of the Great Exhibition, in making their award of merit to foreign and particularly French exhibitors.

Some of the commanding officers of regiments have from time to time lately issued orders of the day to their troops, in which they appeared to inculcate ... idea that the main business of a soldier should consist in entertaining moderate democratic opinions as being the natural enemies whom he ought eagerly to desire an opportunity of exterminating. The following is a specimen of those documents which was issued by the Colonel of the 6th regiment of the line on receiving the route to Paris from Metz:

"The chief of the State, who is not ignorant how much the 6th regiment of the line since 1830 has shown itself devoted to order and the country, does it the honour to call it to Paris. The 6th is the only one of the four regiments charged to practise this honour which makes a movement this year. The Colonel has none himself responsible to the Prince President that it is the best regiment of the army, the finest of that compiled under his orders. He has the certainty that, under all circumstances, the 6th will justify his promise, carry high its flag, and not compromise its responsibility which is the best of guarantees. Officers, non-commissioned officers, comrades, and soldiers! We will remain men of duty and devotedness—all France only counts on our patriotism. Yes, we will march as a single man; and your colonel, who swears to show you the road to plant the flag of order on the barricade of anarchy, as formerly he planted, amidst the dead and the dying, bullets and grape-shot, that of the standard of the breach of Constantine, only demands of you to avenge him, if he should fall, beneath the shots of the parricides of our beautiful country. This order is to be read at two consecutive appels. DE CASTARÈRES DE BOISSE

Colonel commanding the 6th regiment of the line.

The Government has at length interfered to put a stop to these unbecoming manifestoes, and the Minister of War has caused the following "communicated note" on the above order to be inserted in the *Moniteur de l'Armée* of Monday:

"In the view of War has only known by the newspapers the order of the day of Colonel de ... of the 6th of the line, leaving Metz. The forms, expression of his discretion ... have been delayed. From this order it might be supposed that the movements of troops are ... means out of the gaze of the mission of the Minister, according to preformers without motive. It must be believed that the Government attributes peculiar bravery to certain corps ... has no superiority. Resolute and devoted as they are, always ready to sign the movements of troops, and the Minis ... of War knows that he can have equal confidence, for the defence of order and the laws, in all the corps of the army.

On Saturday night last, the once politically powerful and celebrated Spanish grandee, Don Manuel Godoy, Prince of Peace, died at his lodging in the Rue Michodière, Boulevard des Italiens, Paris, in the 87th year of his age. He had been residing in the same house for the last three years. In the year 1847 the Spanish Ministry published a Royal decree, authorising the return of the Duke ... (one of Prince of Peace not being recognised) to Spain, and that a certain portion of his once vast property should be restored; but no pecuniary ... was permitted to him from the Spanish funds. The queen has, however, an allowance made him by one of his children in Spain. The Palace of Buen... Vista, once to the Prede, in Madrid, belonged to the Prince.

A funeral service for the late Queen Dowager was performed on Monday in the church at Kueil. Louis Napoleon was present upon the occasion.

DENMARK.

We learn from Copenhagen this week, that, in consequence of a serious division in the Cabinet on the settlement of the government of the Duchies, the whole of the Danish Cabinet have resigned. The question is the re-establishment of the *status quo ante* between the Duchies and Denmark, which M. de Reedtz and his section of the Cabinet were willing to accept. The arrangement has been submitted to the Diet, and the Ministry has the support being ... Hereupon the new Ministry would be more under the influence of the Democratic and National party, and that the change would be detrimental to the progress of the organisation of the government of the Duchies.

UNITED STATES.

We have accounts this week from New York to the 27th ult. A fire had occurred, on the 26th ult., at Buffalo City, which destroyed property extending over seven acres of ground, and including 500 buildings, principally wooden, and in the centre of the town not richly inhabited.

From Havannah we have advices to the 17th ult.; but they contain no news of particular import. The services of the British Consul at Havannah in behalf of the American prisoners are spoken of highly. More of the liberators had been captured and taken to Havannah.

The commercial reports from New York are most discouraging. Credit is greatly effected by the number of insolvencies. The steamer renews intelligence of the failure of several country banks, and even the city banks could not hold out much longer. Money cannot be had on any terms, and the knowledge of this had caused stock to decline, and business generally to suffer. The exportation of specie did not appear likely to diminish, and altogether mercantile affairs present a most gloomy aspect.

The New York ... mention that the deposit of £100,000 (500,000 dollars) for stock in the European and North American Railroad had all been paid in, and a meeting called for the organization of the company on the 23rd of October. This deposit was understood to secure, on the part of the company, the large bonus pledged by the provincial Government.

The explosion of the steamer *James Jackson* had taken place on the Ohio river, when some 20 persons were instantly killed, and ... severely scalded.

Another steam-boiler explosion had occurred on the railroad near Cleveland, by which one poor fellow was instantly killed, and several others were greatly scalded.

A very large amount of damage appears to have been done by the fires now burning in the woods of Maine, said on the frontiers of New Brunswick. A letter from Bangor says:—"The whole country is literally on fire. Scarcely an acre of green land remains along the whole seaboard of this country. And the fire is raging fearfully on our river (Narraguagus)." A letter in the *Portland Advertiser* says, "Many farms have been burned over. Dead trees, fences, and even Mount Desert, and destroyed several houses. Two dwellings in Jonesport had been burned. The dams on the west branch of Narraguagus were burnt to the bed of the river, and most of the meadow hay on the river was lost."

The Vigilance Committees of Grayston county, Virginia, on the 13th ult., arrested John Cornutt, a friend of Bacon, the Ohio Abolitionist: they required him to renounce his anti-slavery sentiments, which he refused to do. They then stripped him, tied him to a tree, and after receiving a dozen lashes, he agreed to renounce abolitionism, sell his land and negroes, and leave the State. Great excitement prevailed, and the committee were in pursuit of others.

WEST INDIES.

Our advices this week from Jamaica are to the 18th of September. They do not convey any intelligence of importance. There was no political news stirring. The Legislature of the Island, it was expected, would be called together on the 14th of October. What measures were to be introduced, was not known. It was very generally believed, however, that most stringent laws would be brought in to repress the fearful system of bribery which is carried on to a most alarming extent among every class. The cholera was unanimous in denouncing it. The Island must be said to be healthy generally. Cholera had almost entirely disappeared. Small pox had appeared in Trelawny some few weeks before the departure of the last packet, but we not hear any accounts of its spreading.

From Trinidad, we learn that Dr. Gavin, the medical inspector appointed by the Home Government to visit the different colonies, had arrived in Trinidad, and had placed himself in communication with the local Government. The sanitary condition of the island was unsatisfactory, the number of deaths during the months of September being nearly double that of the corresponding month of the preceding years. The influenza had also invaded the colony. A smart shock of an earthquake was experienced at 3 A.M., on the 9th ult.

In Antigua the influenza was very prevalent.

In Barbadoes also the ravages of this epidemic had been to a serious extent, and business had been much interrupted thereby.

We have Surinam papers to the 26th of August. The yellow fever epidemic, which had been raging in that colony with destructive effect for several weeks, was rapidly on the decline.

Our accounts from British Guiana are to the 11th ult. Governor Barkly had left Georgetown on a visit to the neighbouring country, of Berbice to make himself acquainted with its condition and prospects. The Court of Policy was to re-assemble on the 22nd of September, when the plan of reform in the political institutions of the colony was laid before the Court on the 26th of August, was to be brought forward and considered.

METROPOLITAN NEWS.

CITY OF LONDON REGISTRATION.

The revision of the list of voters terminated on Friday week, having occupied the Court eight days; the result showing a majority of 116 in favour of the Conservative party, as will be seen by the following figures:—

OBJECTIONS.

	Conservative.				Radical.			
	Number which.	Sustained.	Withdrawn.	Disallowed.	Number which.	Sustained.	Withdrawn	Disallowed.
Occupiers	38	22	1	5	184	171	2	11
Household	706	575	18	113	432	369	13	50
	734	597	19	118	616	540	15	61

CLAIMS.				
Conservative.			Radical.	
No.	Allowed.	Disallowed.	No.	Allowed.	Disallowed.
3	3	0	133	59	74

OMITTED FROM NEW LISTS.

	Voted.	
Conservatives		264
Radicals		157
Did not vote		1179
Split		14
Total		1772
Majority in favour of Conservatives upon the omissions		104
Ditto ditto upon objections		37
Ditto ditto expunged by Court		5
Less gained by Radicals on claims		166 50
Total majority for Conservatives		116

It will be recollected that at the last general election parties were on evenly balanced, that Mr. Masterman returned by a majority of 3. It proves, therefore, that the close attention paid to the registration on both sides is of the utmost importance, and it is curious that the number of objections sustained on each side should be so nearly the same.

The points of greatest interest which were brought under the consideration of the court were the following:—

The form of the notice of objection served by the Radicals.

The construction of the Compound Householders Act, passed last session (with regard to claims to be rated), which the court held to have a retrospective effect.

The non-payment, on the 5th of JANUARY, of assessed taxes due the 5th of October, which, though legally due quarterly, are only collected half-yearly, which the court held not to be a valid objection.

THE CITY REGISTRATION.—IMPORTANT DECISION.—Mr. M'Christie, the revising barrister, in going through the City registration, disposed of a case of considerable importance. The question was, whether, for the purposes of registration, the assessed taxes *quarterly*—in fact the whole of the assessed taxes to be entitled to be registered, must pay by the 5th of January a quarter's assessed taxes, supposed to be payable on the 20th December. Taking the acts of Parliament and the decisions of the commissioners to be found in the acts of Parliament and the decisions of the commissioners to be found in the books together, Mr. M'Christie held that those taxes, for the purposes of the registration, are only payable *half-yearly*, and that if it were to be held otherwise, almost every man in London would be liable to be disfranchised, because those taxes are never asked for, nor (almost without exception) ever paid, except half-yearly. The question was, perhaps, of greater importance, from the circumstance that the revising barrister for the Tower Hamlets had laid it down, that those who do not go to their collector and pay a quarter's assessed taxes in the beginning of January, are not entitled to be registered.

RESULT OF THE MIDDLESEX REVISION.—Mr. Launcelot Shadwell, the revising barrister, having concluded the revision of the lists of voters for the county of Middlesex, the result is as follows:—

	Number struck off the old Register.	New Claims allowed.
Bedford public	44	2
Bethnal-green	90	85
Brentford	40	30
Edgeware	43	44
Enfield	83	7

Hampstead	13	8
King's-cross	83	130
City of London	97	102
Mile-end	75	190
Uxbridge	39	49
Westminster	24	97
Totals	717	1046

THE ROMAN CATHOLIC ARCHBISHOP OF TUAM.—On Monday Archbishop MacHale received an address of congratulation on his Catholic triumph from the clergy of Isterkenwell and Islington. The address, which was brought up by the clergy, accompanied by deputations of laity, was as follows:—

TO HIS GRACE THE MOST REVEREND JOHN LORD ARCHBISHOP OF TUAM, &c. &c. &c.

We, the undersigned Catholics of the contiguous districts of St. Peter and St. Paul Rosemount-street, and St. John the Evangelist, Islington, with the respective clergy of those districts, approach your Grace with the deepest feelings of devotion, veneration for your sacred person and office. We recognise in your Grace an able and zealous champion of that great cause which all the saints have illustrated by their lives and many of them have sanctified by the seal of their blood, the cause of ecclesiastical liberty, or the right of the Church, in virtue of her divine constitution, to all matters affecting the glory of her Lord and the salvation of his people, apart from the encroachments of the temporal power, which, however august its position, is necessarily subordinate to the ordained representative of Christ on earth.

Your Grace has had a bat lately recovered (if, indeed, recovered) from an agitation almost unexampled in the animosity with which it has been conducted, and not a little depressing in the disheartening aspect under which it has passed us. Yet we perceive in it evident traces of the disinterestedness of those who called them forth for the final triumph of His Church, the goodness of Almighty God, who orders all things for the best, friends has served to show, more than the researches of the Catholic Church are in herself, and that she can command the sympathies of the world, or, what is more, turn into her holy politics, without injury to her character as the spouse of Christ, and peril to the souls of those who are entrusted to her. Again, we acknowledge the providential effect of the recent agitation in cementing the union of the Catholic Churches of England and Ireland, by the providentially attaching bonds of community in trial. And we pray to God, through the intercession of the Saints of England, that your generous Church and your generous people may be supported by the same grace which has sustained you in the past, and which has been so powerfully manifested in your own person, and which will enable you to show forth the excellence of Christian charity in your future conduct towards those who have assailed you with unmerited obloquy.

We are your Grace's faithful servants.

The Archbishop replied in words to the following effect:—

It is really without affectation that I say I have never felt more gratified than by this demonstration of your affectionate sympathy. I should feel indeed unwilling to accept such a compliment as I have taken them as merely personal. But it is my privilege to be associated with a community whose virtues are such as to supply for my own individual deficiencies. For with a community whose virtues are such as to supply for my own individual deficiencies. For with a community whose virtues are such as to supply for my own individual deficiencies. For it is a part of God's dispensations, that the merits which appertain to bodies of men in his Holy Church more as a body than as individuals, and that if we were to compose it, so that I have strength as a Bishop of Ireland which I have not in myself. You have alluded to the present aggression of the Church in terms which I cordially admit. I am sure that, however aggressive in its consequences. It will ultimately redound to the glory and to the advantage of our holy religion. I see among you some of those excellent gentlemen who have spirited their position and prospects in the Establishment, to embrace the faith which they are now adorning by their ardent zeal and noble exertions. Their names are dear to Ireland; and I feel confident with you that the strengthening of the bonds of affection between the two countries which must result from our community in trial, will greatly consolidate the power of the Catholic Church in the islands.

A grand high mass was celebrated on Sunday morning at the Roman Catholic chapel, Clerkenwell; after which Dr. M'Neile preached a sermon in the church of the rosary of Our Most Blessed Virgin." Having explained the nature of this festival, the most Rev. Doctor addressed the poor natives of his own distracted land a considerable length, exhorting them to show forth the excellence of their religion by habits of peace, peaceableness of demeanour, and all the beauties of practical piety. There was "a procession of the Blessed Sacrament" afterwards, "his Grace" carrying the host under a canopy, attended by "the holy guild," and a number of beautiful children of both sexes dressed in white, who, our correspondent (a Roman Catholic) says, "strewed flowers in the path of the holy of holies Mr. Sheriff Swift and his lady, accompanied by the chaplain, the Very Rev. O'Connor, of Loughley, with all the official insignia of his office, arrived in his state carriage prior to the service, and formed part of the congregation. Dr. M'Hale left London on Thursday for Hilton Grange, in company with Cardinal Wiseman.

MUNIFICENT CHARITABLE BEQUEST.—Mr. James Mentor, late of Rose-street, Soho, coffee roaster, recently deceased, has, by his will, after leaving various legacies to his relatives and friends, bequeathed the residue of his property, amounting to between £2000 and £3000 to the Grocers' and Tea Dealers' Benevolent Pretension Society, to be applied for the objects of the said society, and in accordance with the rules thereof. Mr. Mentor was an annual subscriber to this society for many years, but took no part in its affairs, though he often expressed his approval of the objects of the society, and of the careful management of its funds. The Grocers' and Tea Dealers' is strictly a benevolent institution, having for its object the granting of permanent annuities to distressed honest members of the trade and their widows in old age and infirmities, and of temporary assistance, at the discretion of the committee, to their orphan children. The society also embraces in its sphere East and West Indian merchants, brokers, sugar-refiners, and importers of and dealers in colonial and foreign produce, whose principal business is connected with the traded a grocer or tea-dealer.

THE "BLOOMERS" AGAIN.

On Monday evening a meeting was held in the Soho Theatre (late Miss Kelly's), to hear from an American lady, who is stated to have come directly from New York to explain the merits of the Bloomer costume, an address on that subject, and to adopt resolutions in connexion with the new transatlantic dress reform. The bill concerning the meeting ran as follows:—

LONDON BLOOMER COMMITTEE.—In consequence of the great interest with which the "Bloomer question" is received by the public, a certain number of ladies have been formed into a committee, in order to give it the necessary attention and publicity. That the subject may be fully understood, an address will be delivered at the Royal Soho Theatre, Dean-street, on Monday, October 6, relating to the same. Resolutions will be proposed, which the committee and friends present are earnestly invited to attend, and by their presence forward the welfare at the present and future generations, by adopting so rational a costume as described. The present fabrics are and artificial modes of dress. The ladies of the committee will attend, attired in the Bloomer costume.

The doors of the theatre were opened more than an hour before the time appointed for the commencement of the proceedings. The building was soon densely filled. At the appointed time the Bloomers appeared on the stage, eight in number. They appeared to be timid persons, amused to the dress, and not very happy in their new situation, for now it evidently was. Four of them were mere children of from 7 to 14 years of age, one was about 17, two were of from 23 to 30 (it would puzzle anybody to tell what might be the nearest point to either), and the lady who delivered the address was 25 or 26, a blooming young American, full of enthusiasm. This lady bears the appropriate name of Mrs. Smart, and in her address she mainly dwelt upon the influence of fashion and the rights of women. Fashion was a tyrant, and that tyrant now of women of America had determined to bring before the bar of public opinion on three separate charges: 1. That nature had been violated and endangered by its rules. 2. That in consequence of the requirements a vast amount of money had been expended which might have been devoted to higher and holier purposes. And 3. That by encumbering women it incapacitated them from rendering services to society worthy of their high destiny. These, doubtless, were strong charges; and for them she hoped the tyrant fashion would receive either banishment or transportation for life—hanging she could not recommend, as it was contrary to her American creed. She went somewhat fully into the question of "stays," and their deteriorating effect upon the human frame. She implored the women of England to follow the example of the women of America, and no longer countenance such an obscene system. She confessed, that, in many parts of the country, the Bloomer costume has been received with much disfavour, but so had pelettes when they were first suggested for ladies' wear. When the first article of bonnet satin was first introduced, it was said that none wives were about to wear their husbands' coats. A lady of her acquaintance in America, who was looking over a book of fashions from England, exclaimed, "Oh, what a delightful invention. Whenever I am in a hurry for dress, all I shall have to do is to pop on William's coat." (Laughter.) The lecturer concluded by thanking her audience for the treatment she had received. Three cheers were given for Mrs. Amelia Bloomer, and a request was called upon to read the National Anthem. This performances convulsed the audience with laughter. There was a cry for "Yankee Doodle," but the request was not complied with. The assembly then dispersed.

On Wednesday evening Mrs. Smart delivered a second lecture in the Soho Theatre, and on this occasion the charge for admission was increased from 4d. to 1s. 6d., and soon after the opening of the doors the house was well filled in every part. As on the previous evening, the ladies who have dubbed themselves the London Bloomer Committee took up a position on the stage amidst the litters of those assembled, dressed in the new costume, and appeared very ill at ease: their continual hitchings from side to side on their seats, and involuntary change of position, gave evident proofs that wearing "breeches" was rather uncomfortable. Mrs. Smart was dressed in plum-coloured silk, cut in Bloomer fashion. She was listened to with much attention, and declared her object to be the conversion of the women of England to the principles of Bloomerism, as a stepping-stone to political enfranchisement, and the other rights of women, as unjustly kept from them; and at the close of her address she was heartily cheered.

Mrs. Dexter has been lecturing in Glasgow to immense audiences on the Bloomer costume. It does not seem likely to come into favour with the northern ladies. They say, that, although the men appear in petticoats north of the Tweed, that is no reason why the fair sex should adopt "continuations."

STATUE OF THE LATE LORD G. BENTINCK.—The works for the foundation of the statue to the memory of the late lamented statesman, Lord George Bentinck, are completed, and in the course of a few days it will be placed in its position. The pedestal sits in the centre of Cavendish-square, fronting Holles-street, facing the statue of William Pitt, in Hanover-square, at the other side of Oxford-street, from which thoroughfare, as also Regent-street, Vere-street, &c., a full view of the statue will be obtained. The pedestal will occupy a space of 81 square feet, the entire height of that and the statue being 30 feet.

Mr. Sheriff Swift entertained a distinguished circle at dinner, on Wednesday evening, at his mansion on Hanover-terrace, Regent's-park. Among the guests were the Most Rev. Dr. M'Hale, Roman Catholic Archbishop of Tuam; the right Rev. Dr. Grant, Roman Catholic Bishop of Southwark; and the Right Rev. Dr. Morris, Bishop of Troy.

DIVIDEND DAY AT THE BANK AND SOUTH SEA HOUSE.—Notice was issued on Wednesday, at the Bank of England and South Sea House, that the October dividends will be paid to the public on Tuesday next, the 14th inst., and that the October transfer-books for the following stock will be opened on the undermentioned dates; viz.—Bank Stock on Friday, the 17th inst.; Reduced Three per Cent. Annuities, ditto; Long Annuities, ditto; Annuities 1726, and Three per Cents. Consolidated-a-Quarter per Cent. Annuities on Tuesday, the 21st inst.; South Sea Annuities on Friday, the 17th inst.

ROYAL MAIL STEAM-PACKET COMPANY.—On Thursday the half-yearly meeting of the proprietors of this company was held at the London Tavern; Thomas Baring, Esq., M.P., in the chair. The report stated that the change of routes upon the West India line, which took place in August, 1850, had answered the sanguine anticipations of the directors, and in January last the company opened an entirely new line of steam communication with the Brazils and the River Plate, requiring considerable expenditure. The receipts, however, as the report stated, were quite equal to the expenditure. The gross receipts, with the Panama Railroad Company, as they considered that great importance was to be attached to the early completion of the railroad across the Isthmus of Panama. The report was adopted; a dividend at the rate of £5 for the half-year (free of income-tax) was declared, and, after a vote of thanks to the chairman, the meeting separated.

ROYAL SEA-BATHING INFIRMARY.—On Thursday the half-yearly meeting of this charitable institution was held, at the London Tavern; Mr. Rupert Pugh in the chair. It appeared that the financial position of this charity had very much improved since the last meeting, the public having responded to the appeal. This had enabled them to admit during the last half-year 250 in-patients, and give advice to a similar number of out-patients. Her gracious Majesty the Queen had recently forwarded £50; and the donations and subscriptions had already exceeded £2200; and Exchequer Bills to the amount of £1300 had been purchased on behalf of the institution. The medical board during the year had been called upon to decide whether it would be considered advisable to have the infirmary open during the winter months, and it had been recommended by that body of gentlemen that it would not be expedient to retain scrofulous patients at the sea side during the winter months. Some discussion ensued on this point, after which the report was carried, and a vote of thanks to the chairman concluded the proceedings.

LIVERPOOL WORKHOUSE.—On Tuesday, forty-two children—twenty-four boys and eighteen girls—were admitted into the workhouse, Brownlow-hill, without being obliged to undergo the ordeal of an election. The committee of the school determined on this arrangement to give *eclat* to the year 1851. This pleasing circumstance, which is without a parallel in the annals of any similar institution in the country, attracted a large number of the friends of the school, who witnessed the inauguration of the candidates with feelings of intense satisfaction. Mr. Findley, the governor, and the chaplain, Mr. Hall, conducted the children into the establishment, and great gratification pervaded all present upon the occasion. With this addition to the children at present on the foundation, the number receiving the benefits of a sound secular and moral education will be 1000.

SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE.—This society held its first monthly meeting after the vacation, on Tuesday. A tribute of respect to the memory of the late Rev. J. Tyler, one of the secretaries, was unanimously passed. Mr. W. Cotton bearing testimony to the zeal and efficiency of his lamented colleague in the treasurership, who had been connected with the society as one of its members for forty years. Interesting letters from various colonial bishops and clergy working in the colonies and dependencies of the empire were read, and considerable grants made. The Bishop of Cape Town urged similar grants in the case of the Bishop of Graham's Town, and the appeal was favourably received. Grants were also made for a large number of the friends of the school, who witnessed the inauguration of the candidates with feelings of intense satisfaction. Mr. Findley, the governor, and the chaplain, Mr. Hall, conducted the children into the establishment, and great gratification pervaded all present upon the occasion. With this addition to the children at present on the foundation, the number receiving the benefits of a sound secular and moral education will be 1000.

SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE.—This society held its first monthly meeting after the vacation, on Tuesday. A tribute of respect to the memory of the late Rev. J. Tyler, one of the secretaries, was unanimously passed. Mr. W. Cotton bearing testimony to the zeal and efficiency of his lamented colleague in the treasurership, who had been connected with the society as one of its members for forty years. Interesting letters from various colonial bishops and clergy working in the colonies and dependencies of the empire were read, and considerable grants made. The Bishop of Cape Town lamented that in consequence of the ruinous war in the Kaffir country, the revolution by religious and the Church had been thrown back, and that many persons whom he had known as affluent settlers are now receiving alms from the clergy. Churches and schools in Toronto, Nova Scotia, Prince Edward's Land, and Brunswick, as well as in the East, were aided by votes of money, and a sum of £200 was granted towards a chapel provided for the English congregation at Gibraltar, through the exertions of the bishop of that diocese. Besides 110 special applications, upwards of 140 general grants for parochial purposes in England and Wales were made. The secretaries laid before the board, the society's report for 1851, by which it appeared that the efforts made by the board, in resisting the religious waste of foreigners visiting our shores during the Great Exhibition, had been well received, and it may be hoped was very successful. It appeared that the total number of books and tracts issued between the audit of April, 1850, and April, 1851, had amounted to 4,316,234.

THE DUTIES OF PARLIAMENT.—By order of the Commissioners of Woods and Forests, a number of piles have been driven into the bed of the river in the open space lying between the New Houses of Parliament and Westminster-bridge. The tops of the piles are left above high water mark: on these cross pieces will be placed, and a platform erected, and a number of workshops and sheds built thereon, in order that the whole of the unsightly wooden erections in New Palace-yard and opposite the east or principal entrance to Westminster-Hall may forthwith be removed. The greater portion of the old House of Commons is already pulled down, and on Friday (last week) the demolition of the last remaining portion of the House of Lords, including the entrance thereto, built by George IV., took place.

ROYAL FREEMASONS' FEMALE SCHOOL.—On Thursday a general court of the governors of this charitable institution was held at the school-house, for the purpose of transacting the ordinary business of the establishment, as well as for the election of five children from a list of several candidates. The faith made in the progress of Dr. Murphy, Roman Catholic Bishop of Hyderabad, several clergymen, and a crowded assemblage of the laity.

THE BARONESS VON BECK.—Mr. Bentley has just published a pamphlet, entitled "A refutation of the Charge of Imposition and Fraud recently made at the Police Court of Birmingham, against the Baroness von Beck, based made at the Police Court of Birmingham, against the Baroness von Beck, based upon authentic documentary evidence, collected by Constant Dervs de Moroda." A narrative of the circumstances under which the lady was arrested is given by M. de Moroda, who strongly contends that she was innocent of the charges made against her. He complains that the seizure of her papers by the accusers of the Baroness has removed the most important means of proving her innocence; but he adds that some weighty documentary evidence remains which he considers very important reader that she was no impostor. The narrative concludes by stating that the originals of all the documents printed in the pamphlet have been deposited with Mr. Bentley. The first document is a declaration of Von Beck, who was in Mr. Tyndal's house on the evening of the arrest. He makes it as "a tribute to truth," and he states, that, being a lieutenant in the Hungarian army in 1848, and aide-de-camp to Major Ladislaus von Ujhazy, he took upon himself the complaints that the seizure of her papers by the accusers of the Hungarian chiefs. The second document is a letter, dated Hamburgh, March, 1850, from Count Paul Esterhazy, addressed to the Baroness von Beck, which is followed by several from Sabbas von Vukovics, Minister of Justice in the Hungarian Government; from Thade Iczakowski, colonel of the Polish Legion in Hungary; from Wolfgang von Reuzey, colonel in the Hungarian army, and others, including one from Dr. Gilick to Mr. Bentley. Other documents follow regarding M. de Moroda himself, the object of which is to vindicate his character, and to prove that he has not been abandoned, as alleged, by his family. On the whole, the documents here published appear to be considerable importance if the points in issue; but whether that be so or not, we are sure that those who feel an interest in this singular case will remain imperfectly informed if they overlook the facts and statements contained in the publication just issued by Mr. Bentley.

SALE OF THE OLD HOUSE OF LORDS.—The sale of the materials of the old House of Lords, and the buildings immediately connected with it, was commenced on Wednesday morning, at about 11 o'clock. There was a pretty numerous attendance of builders, anxious to purchase up lots, but the prices fetched will were not so high as was expected. The work of demolition and disposing of the following portion of the old House of Commons, and several portions of the now Palace of Westminster are now seen to greater perfection than they were when the old premises were up.

ROBBERY AT THE GREAT EXHIBITION.—On Saturday information was circulated throughout the City and metropolitan divisions of police, that the case numbered 441, Class 10, in the Great Exhibition, had been forced open and plundered of several gold palates and sets of teeth in gold, the blocks studded with rubies and brilliants in the most cosily manner; they were the property of a gentleman in Burlington-street, and are of great value. On the same day information was received that some valuable thief had escaped in the morning himself of £100 worth of silver plate, crest a falcon's head; and, notwithstanding there is a porter stationed at either end, whom all must pass, got clear away with his booty.

A MR. Paterson, of Seward-street, St. Luke's, has taken up Mr. Hobbs' challenge, offering £200 to any one who will open his lock. He does not think there is any lock impervious to the ingenuity of man.

DEATH OF AN EMINENT OFFICER BY POISON.—On Monday an inquest was held by Mr. WYATT, the Coroner for East Surrey, at Bermondsey, upon Mr. Frederick Rebert Bolton, aged forty-one years, an officer connected with the Inland Revenue, who was accidentally poisoned by taking cyanide of potash. Mr. T. Russell, of No. 12, Parker-street, Horsleydown, surgeon, stated, that on the previous Thursday evening, about six o'clock, two persons brought the deceased into his surgery in a state of great exhaustion. He was perfectly speechless, but cold and pulseless, and stated that he believed he had swallowed about a teaspoonful of the mixture. Witness, knowing that acetone was a deadly poison, then considered the deceased would unquestionably die.—Was a deadly poison, then considered the deceased would unquestionably die.—Coroner: Will you have the goodness to explain the symptoms?—Witness: It will cause convulsions, and the face becomes livid. Coroner: Then one other means of voluntary vomiting, vertigo, and vomiting, with oppressed breathing and purging, but does not deprive persons of utterance.—Coroner: What quantity would produce death.—Witness: I should say from half an ounce to an ounce. It is commonly called "wolfs-bane," and a teaspoon might hold about 120 drops. Deceased must have taken sufficient to kill five persons. Witness gave the deceased ammonia, but he threw it off immediately. Other remedies were adopted, but he became excessively exhausted, and expired shortly afterwards. Witness had since made a *post mortem* examination of the body, the appearance of which he described. The poison usually destroys life in three to five hours.—William Bennett, a porter employed in the Inland Revenue-office, Tower-hill, said that he knew the deceased, whose duty was to gauge casks of spirits as well as medicated preparations, to ascertain their quantity and strength. The same being subject to a bonds duty. On the Thursday witness examined a box at St. Katharine's Wharf, which had been imported from Scotland, the same being accompanied with a permit, which indicated that the contents consisted of medicated spirits. The outer box which indicated that the contents consisted of medicated spirits. The outer box was beside this, containing one-fifth of a gallon. The bottle was wrapped in a paper covering, and was labelled, but the label could not be seen. Witness took the bottle to the office on Tower-hill, and, having drawn the cork, sniffed out a small quantity in a glass. Witness put a wooden pen-holder into the liquid, and then drew it across his lips. At that time Mr. Bolton (the deceased) was sitting in the office, looking towards witness, who said from his opinion as to the nature of the liquid, he should said he believed it was a bitter, and took the bottle out of witness's hand, and afterwards returned it. Witness then conveyed the bottle to Mr. Brain, the principal officer of that department, who directs the duties of the officers. Coroner: Have you no other means of testing these articles than by tasting them?—No, sir, it was the character, and not the strength, we were looking after. Mr. Russell, the surgeon, said the wrapper ought to have been labelled outside. The coroner was of a similar opinion, and added that the permit of the box ought to bear some indication of the contents of such highly dangerous packages. The jury returned the following special verdict:—"That the deceased met his death accidentally; and they (the jury) would suggest to the commissioners of Inland Revenue, that when any article of a poisonous character is imported, the permit should bear the word 'poison,' as well as the nature of the article itself."

BIRTHS AND DEATHS.—The births of 720 boys and 700 girls, in all 1420 children, are registered in the week ending Saturday last, Oct. 4, in the metropolitan districts. The average number is six corresponding weeks of 1845-50 was 1319. The deaths were 1014, in the same corresponding weeks of the years 1841-50 the average number was 980, but if the population in which this mortality occurred had been equal to the present number of inhabitants, the average would probably have been 1078. In the previous week, ending September 27, the deaths were 1014, and compared with which the last week has apparently produced an increase. However, the present return has been unduly augmented by coroners' cases, many of which properly belong to antecedent weeks, but have been accumulating till the end of the quarter, when their registration was ultimately completed. By far the greater proportion of deaths on which coroners hold inquests are produced by violent means, and fall under the general head of "violence" in the table of fatal causes. In last week 70 cases of this description are enumerated, and of these 3 were of poisoning, 1 by opium, 2 by narcotic drugs, 48 by hanging and suffocation, 13 of the result of poison, 5 of burns and scalds, 19 of hanging and suffocation, 13 of the result of poison, 5 of burns and scalds, 19 of drowning and 1 by cutting on a beer-house. The following analysis is presented of the 1014 deaths returned last week. The cause of death was certified in writing by qualified practitioners in 858 cases; returned by coroner's jury in 134 cases; not certified, because the deceased person had not medical attendant, in 13 cases; not certified, and only reported by informant of death, in 21 cases: total, 1014 cases. From the above it appears that the cases in which the disease was described by the medical attendant, together with those returned the disease was described by the medical attendant, together with those returned by the coroner, form a proportion of nearly 97 per cent. of the total number. Of the 1,014 persons in this return, 260, or about a fourth of the whole, were the victims of epidemic diseases; 5 died of cholera, 2 of diarrhœa, 1 of dysentery, 24 of scarlatina, 17 of measles, and 18 of small-pox. The wife of a gardener, who lived in New-street, Deptford, died on the 28th September of small-pox, at the age of 27. Next in fatality to epidemic class is the tubercular, which numbers 167 cases, of which 6 are ascribed to scrofula, 21 to tabes mesenterica, 31 to hydrocephalus, and 119 to phthisis or consumption. Diseases of the brain and nervous system follow in the order of fatality in the present table, and comprise 116 cases, of which 33 are due to apoplexy, and 40 to convulsions. Bronchitis, pneumonia, and other affections of respiratory organs number only 96 at this season.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean height of the barometer this week was 29.389 in. The mean temperature was 52·2 deg., which is slightly below the average of corresponding weeks in ten years. On Friday and Saturday, last week, the mean daily temperatures were 56 deg. and 57 deg., which are respectively 3 and 4 degrees above the average of each day. The wind blew generally from the south; and the amount of horizontal movement of the air in the seven days was 855 miles,

HAVANNAH.—PART OF THE HARBOUR.—FORT OF ATARES, WHERE THE 50 INVADERS WERE SHOT.

THE LATE EXPEDITION AGAINST CUBA.

By the Royal mail steam-ship *Niagara*, arrived at Liverpool on Monday, we have advices from Havannah to the 17th ult. Most of the prisoners, with the exception of the wounded, had been shipped for Spain. Before their departure from Havannah they wrote a letter of thanks to the British Consul-General, to the British Consulate, and to the American and British citizens of Havannah generally, for their kindness and generosity.

A correspondent of the *New York Tribune* describes the prisoners as brought to the city in different lots: as fast as they arrived they were shorn of their hair, chained two together, and placed all in one long saloon in the prison. During the first few days it was exceedingly difficult to obtain permission to visit them. The British Consul, Mr. Joseph T. Crawford, did so on the first day, and, accompanied by his secretary, Mr. W. Sydney Smith, who had never ceased in his exertions on their behalf, gave them the first cheering words. On the next day, Mr. Allen F. Owen, the American Consul, asked for and obtained permission, and, told them that "the President had proclaimed them without the pale of the law, and he could do nothing for them." Mr. Smith continued to visit them twice daily, taking them small comforts and speaking in their behalf, by which means he improved in a very great degree their situation. He took up a subscription among the English residents for the purpose of providing extra clothing for those who were British subjects; and the secretary of the German Society, in consequence of receiving a letter from Captain Schlicht, went to see them, and subsequently provided for the Germans in the same manner as the English Consul had provided for his countrymen.

On Monday morning they had coffee and bread before going on board. Besides what they received from the Government, each man had a pea-jacket, a woollen shirt, a pair of pants, a pair of stockings, and a tin pot; and on board ship were placed for their use 825 lb. of chocolate, 2 boxes of tobacco, 3 barrels of vinegar, and some small stores, and the sum of 735 dollars was placed in the hands of Captain Ortiz, of the *Primeira de Guatemala*, for general distribution on arrival at the port of destination. Besides this, the German Society gave Captain Ortiz 136 dollars for the Germans, and several persons left sums for individuals. They embarked in high spirits and excellent health, all desiring a most affectionate farewell to be sent to their friends, with assurances of their high hopes of a speedy release.

THE GAROTTE.

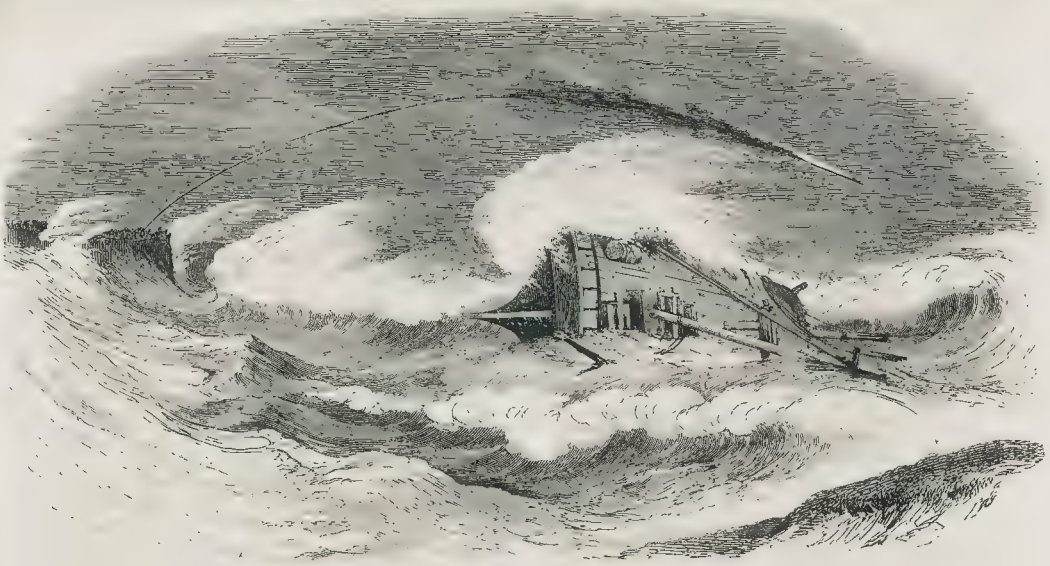
By aid of a Correspondent, we are enabled to illustrate the locality of the execution of the invaders under General Lopez.

In the central distance of the first View is shown the fort of Atares, where the fifty American and other prisoners were shot. To the left is the Prince's Fort, and below is the suburb of Jesus Maria. Part of the harbour of Havannah is shown, and to the right the city of Havannah.

In the second View is shown the entrance to Havannah, from the Prince's Fort, distant about two miles. In the centre is the Moro Castle and Lighthouse. To the right is the Punta, in front of which, facing the harbour, Lopez was executed. Beyond is the fortress of Cabana, one of the strongest in the world. The outward bound schooner, between the Moro and the Punta, shows the entrance to Havannah harbour. Every vessel entering the port is telegraphed by signals; and such houses as do not command a view of the Moro, reflect the signals by means of looking-glasses affixed to some lofty part of the premises.

Between the two Views is shown the *garrote*, the instrument by which Lopez was executed. This Sketch is chiefly given to prove, that, so far from being barbarous, the *garrote*, however degrading, is really the most instantaneous and humane mode of execution that can be devised. A collar is passed round the neck of the culprit, and introduced through a board at the back of the head when a single turn of a screw tightens the collar, so as to produce immediate strangulation.

ENTRANCE TO HAVANNAH FROM THE FUERTE DEL PRINCIPE



WRECK OF THE "MARY GRAY," UPON THE LONGSEAR ROCKS, SEATON CAREW, DURHAM.—FIRING CARTE'S ROCKET.

STORM AND WRECK UPON THE LONGSEAR ROCKS, DURHAM.

On the 26th ult. the north-east coast of England was visited by a violent storm, which has been productive of much damage to the shipping.

Our Engraving represents the wreck of the *Mary Gray*, of Montrose, seven of the crew of the brig *Roseau*, of Dundee, lost at the same time) was again launched, and succeeded in making fast to the wreck. As, however, she thus hung on by a rope and grapnel, her broadside was exposed to the enormous breakers, which extended as far as the eye could reach, and twice it was thought she would have upset. One of these mountain waves struck her with such violence as to throw three of her crew over her gunwale, and one of these had a narrow escape for his life. Though two of Carté's life-preservers were immediately thrown to him, he probably never saw them; and his convulsive efforts to catch at anything within his reach were terrific. A thousand persons watched his struggles in an agony of suspense, without the power to render assistance; and the crew of the life-boat, seeing that their comrade was fast drowning, were obliged to abandon the poor fellows upon the wreck, and succeeded in pulling him into the boat in a nearly exhausted state. He was landed at Seaton Carew, and immediately attended by a surgeon. The gallant attempt of the life-boat being thus rendered abortive, Carté's rockets were next resorted to: and at the fourth discharge the line was sent exactly over the middle of the wreck. The crew were, however, by this time, reduced to such a state of exhaustion as to be unable to haul in the necessary hawser, life-preservers, &c.; and those engaged in attempts to relieve them from their awful situation scarcely knew what steps to take, when it was suggested to warp a large bottle of hot coffee (containing a table spoonful of rum) to the exhausted mariners. Its effect was admirable. It afterwards appeared that they had not tasted food that day. Renewed strength was given them, the hawser was drawn over to the wreck, one of Carté's life-preservers rigged as a chair, and one by one the sailors were safely brought to land, amid the cheers of the crowds upon the neighbouring cliffs, after they had remained exposed to a tremendous sea upon the broadside of their ship for upwards of six hours.

Five of the crew of the *Roseau*, before referred to as wrecked at the same place, were also most gallantly rescued by the life-boat belonging to the Hartlepool West Dock; but not before one of the sailors had died in the rigging, and another been unhappily lost in attempting to board the boat.

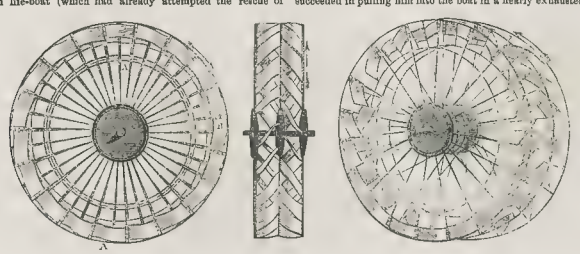
WRECK OF THE BRIGS "MARY" AND "HOPE," AT WHITBY, YORKSHIRE.

upon the Longsear Rocks, near Seaton Carew, in the county of Durham. The unfortunate vessel first struck about 11 A.M., at the distance of about half a mile from the shore; one hour afterwards she capsized, and drifted amid a tremendous sea to within 100 yards of the cliffs. The four men who formed her crew clung to the main shrouds, and were covered with clouds of spray from every sea which struck the wreck.

The Seaton life-boat (which had already attempted the rescue of

STORM AND SHIPWRECK OFF WHITBY, YORKSHIRE.

During the whole of Thursday afternoon and night of the 25th ult., there prevailed along the eastern coast of the island a fearful storm of wind and rain, the disastrous effects of which were felt off the shores of Northumberland, Durham, and Yorkshire, in the destruction of several noble vessels, together with much damage to the smaller craft, consisting mainly of fishing-boats engaged in the herring fishery along the line



THE "COBURG" DOUBLE SCREW PROPELLER.—(SEE NEXT PAGE.)

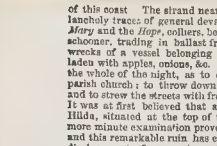
MR. JOSH. SILSBEE, THE YANKEE COMEDIAN, AT THE ADELPHI THEATRE.—(SEE NEXT PAGE.)

of this coast The strand near Whitby, in the latter county, bore melancholy traces of general destruction in the scattered fragments of the *Mary* and the *Hope*, colliers, belonging to the above port; the *Catherine*, schooner, trading in ballast from Arbroath to Newcastle; besides the wrecks of a vessel belonging to the alum trade, and of a French boat laden with apples, onions, &c. The storm raged with such fury during the whole of the night, as to carry away the staff and vane of the old parish church; to throw down a large stack of chimnies in the town, and to strew the streets with fragments of broken tiles and chimney-pots. It was at first believed that a portion of the venerable Abbey of St. Hilda, situated at the top of the cliff, had also been thrown down; but more minute examination proved this report to be fortunately unfounded; and this remarkable ruin has escaped with no further damage than the displacement of one or two of the minor portions of masonry. The strength of the gale was faintly imagined from the circumstance that nearly the half of one large coasting vessel was carried up bodily with the momentum of the waters, and deposited in shattered fragments upon the top of the adjacent pier.

Our Illustration represents the total wreck of the brigs *Mary* and *Hope*, the dismasted hulls of which were so battered and crushed by the waves as to present the appearance from the beach of but one dismantled vessel. The background exhibits a portion of the sea-wall, with the flag-staff and look-out of the Coast Guard service; while in the distance are seen one of the oldest streets of the town, built at the foot of a precipitous cliff, crowned with the ruins of St. Hilda's Abbey, and the scarcely less ancient church of St. Mary, Whitby. It is not yet fully ascertained whether any lives have been sacrificed in the loss of these and other vessel wrecked upon the coast; but, in the case of the *Catherine*, of Arbroath, which came on shore about two o'clock on Friday, the 26th, it was with the utmost difficulty only that the exhausted Captain, James Carlisle, and his crew of four mariners, were saved; indeed, but for the praiseworthy exertions of Lieutenant Hawkey, of the Coast Guard, ably seconded by the men under his command, the loss of these five individuals would have appeared unavoidable. The schooner became a total wreck within an hour of her striking the shore; and we regret to add, that, being uninsured, her unfortunate Captain and proprietors will have to bear the entire loss. By the kind intervention of the minister of St. Mary's, the Rev. James Davidson, a subscription has been set on foot on behalf of the shipwrecked crew of this vessel, from the proceeds of which it is hoped sufficient funds may be obtained to relieve the present distress of these four mariners, and to furnish them with the means of again reaching their distant home.

THE "COBURG" DOUBLE SCREW PROPELLER.

This ingenious Transatlantic invention, in the opinion of some of our leading engineers and men of science, seems calculated to effect as desirable an improvement in the comfort and speed of steamers, as that which the screw propeller has so lately proved practicable in the case of sailing vessels. The inventor, however, in the present instance, Mr. Richard Chatterton, we are pleased to learn, is an Englishman by birth; and though long sojourning abroad, still a British subject; being a resident of the port of Coburg, on lake Ontario, in Upper Canada, where his invention was perfected.



A A. Framework of the propeller, similar in that of a common wheel.
B B. Flats or paddles, of iron plate, or other suitable material, bent to the curve of the periphery, and fastened to the arms by screw bolts in the usual manner

Figures 1, 2, 3, in the Engraving, represent respectively the side, front, and perspective views of the propeller, which it will be perceived is intended to be applied as an ordinary paddle-wheel to the side of a vessel; the distinction being, that whereas in the one case the floats or paddles enter and leave the water horizontally and at intervals, with violent successive concussion and consequent disadvantage of downward pressure, unpleasant vibration and back lift, in the other they pass into and emerge from the sphere of resistance quietly and continuously, as a screw, without disturbing in front or lifting the water behind; at the same time being perfectly balanced at all points, as shown by the shading. Half of each float being precisely opposite a corresponding half on the other side, and forming together, as it were, a succession of wedges in their action upon the water, the pressure on the shaft is quite as square as in the common wheel; while the displacement being the same, with a larger surface of friction exposed to the surrounding water, and the shape of the float being spiral, the propelling effect below is proportionately increased; on the well known principle that a body wedge-shaped offers greater resistance in its transit through water with the point of the wedge foremost, than if it would do if reversed, because it is more easily drawn from than driven against the friction on its sides. Again, the water thrown abaft the wheel, on emerging, falls under the run of the vessel, helping to fill up the vacuum by her forward. The propeller has also, obviously, the further advantage of working much easier for the engine in a heavy sea, particularly a following sea, than the long square float; while in tide-ways or ascending rapid currents, the continuity of its action must prove equally beneficial. Moreover, it requires on wheels of large size a fewer number of arms than the common wheel; the only disadvantage in the appearance of the unboard-of bosses, represented in the model, the difference is in the ratio of 19 to 30, or more. Such are the leading points of improvement claimed by the inventor and patentee, to be at least a mile an hour compared with the old wheel, and with a total absence of vibration. The trial of its powers is easily practicable, as in its construction the framework is precisely the same as in the ordinary wheel: the cost of its application, we should suppose, must be comparatively trifling.

ADELPHI THEATRE.

We this week present our readers with a Portrait of Mr. Silsbee in his character of the Yankee ploughboy The part of Jonathan is a rare one on the English boards, though not entirely novel. Twelve years since, the American comedian, Mr. Hill, appeared in similar *rôles* in London—the Haymarket and Strand theatres furnished the scene of operation; and, subsequently, Mr. Hackett and Joseph Jefferson in Kentucky ohio monstrosities. These two gentlemen were decided actors —both admirable impersonators of comic humour and wit, and the latter a classical performer, capable of embodying Shaksperian genius. After three cases Dan Marble, but he made no impression comparable with that now "established" by Mr. Silsbee.

The performer is not supported by anything in the part or in the play that is of commendable excellence. He simply to spin his yarn, playing his tricks upon travellers, delaying his answers to questions until he can get well fee'd for it, and delivering interminable rolliloquies, full of droll stories, in the Yankee dialect, and with quaint peculiarities, that extort the laughter of a crowded house. No doubt, the engagement will be a profitable one to Mr. Webster. The merit of the individual is probably more apparent from the want of it in the piece. His manner is forbe most part quiet, and there is in his countenance and eye a roguish cast and twinkle that are very effective. His action, too, particularly in the "Cape Cod Reel," is eccentric and extravagant. But much that is characteristic, and sufficient, of course, lacks upon trust. They do not always understand what they applaud; it strikes them as odd, and that is sufficient to ensure the requisite amount of success.

CALENDAR FOR THE WEEK.

SUNDAY, October 12.—Seventeenth Sunday after Trinity.
MONDAY, 13 Fire Insurance Due.
TUESDAY, 14.—W. Penn born, 1644. Battle of Hastings, 1066.
WEDNESDAY, 15 .Murat shot, 1815.
THURSDAY, 16.—Parliament Houses burnt, 1834.
FRIDAY, 17.—Etheldreda. Sir Philip Sydney killed, 1586.
SATURDAY, 18 St. Luke the Evangelist.

TIMES OF HIGH WATER AT LONDON BRIDGE,
FOR THE WEEK ENDING OCT. 18, 1851.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 11, 1851.

THE close of the Exhibition naturally suggests to us the occasion of saying a few words in reference to the Supplements of the ILLUSTRATED LONDON NEWS, which we have published from week to week, with but few exceptions, since May last, in order that we might render our Journal a fitting record of so great an event as the Great Industrial Congress of 1851. Though we were compelled, in consequence of the very great expense of these Supplements—an expense which the reader will understand, when we state that the price of paper alone, without the penny stamp, and without the cost of illustration, or of engraving, or of the composition of a line of type, to say nothing of literary contribution s, was upwards of £600 per week—to charge a double price for our Journal, we are happy and proud to acknowledge that the public cheerfully responded to our efforts. It has possibly happened that here and there we have given some slight dissatisfaction by the extra charge, and that one or two, or at most a dozen, of our old readers and correspondents have expressed their disapprobation; but, when we state that our exertions to illustrate the Great Exhibition almost doubled our ordinary sale in the first week of May, and that now, at the close of the Exhibition, we find that our regular and permanent sale has increased by upwards of 20,000 copies per week—of itself a very large circulation—our old as well as new readers will see that we have every reason to be grateful to the public for their support, and that we are fully justified in the conviction that the extra exertions we made were expected at our hands. During the period that has elapsed since the opening of the Exhibition, we have published in our Supplements no less than 773 Engravings of the articles exhibited, and of scenes in the Crystal Palace. Some of these Engravings, which have been presented gratuitously to our subscribers, in addition to our Supplements, have been of a size unprecedented in wood engraving; while their excellence, of which we need not ourselves speak, has been acknowledged in the most unanimous and cordial manner by our contemporaries, by our readers, and by the public generally. The fine print which we this week present gratuitously with our Supplement, has cost us upwards of £1200; but, in stating these facts, we do not so much desire to take credit for our past efforts as to inform our friends and subscribers, that, on all future occasions of public interest, we shall neither spare labour 'nor expense to make our Journal worthy of the unprecedented and increasing patronage it has received. The Supplement which we shall issue on Saturday next, the 18th, for the twofold reason of her Majesty's visit to the manufacturing districts, and that we may worthily complete the History of the Exhibition by a list of the prizes awarded, and other details which will not be made public in time for our current Number, will be the last of the Exhibition series.

In conclusion, we trust our readers will give us credit for future exertions, whenever needed, commensurate with or superior to those which we have made in time past; and that we shall continue to hold the course which has made the ILLUSTRATED LONDON NEWS the most successful and popular journal in Europe.

THERE is no longer any room to doubt that gold in considerable, if not large, quantities has been discovered on the surface of the ground in the district of Bathurst, in Australia. The first accounts bore an appearance of exaggeration, and of general untrustworthiness, which all subsequent information has tended to remove. Not only have the Australian journals and private letters received in London become more and more precise and emphatic in their details, but the gold itself has arrived, to be seen and touched, and to carry conviction to the minds of the most incredulous. Whether the gold exists in such large quantities as to justify such a rush to the colony as that which has taken place to California, remains to be seen; but in the meantime there is sufficient inducement to lead to the new Dorado a large proportion of the young and adventurous spirits already in the southern hemisphere, and to direct to the charmed spot all the superfluous blackguardism of a region, which, thanks to the penal system of England, is by no means destitute of the commodity. The Australian colonies have long been striving to free themselves from the infliction which we have continued to impose upon them, and imploring the Colonial-office to cease the shower of criminality and vice which it has discharged from month to month upon their unlucky shores for the last quarter of a century. The gold of Bathurst is likely to prove more efficacious for their relief than their remonstrances, however indignant or rebellious; for if thieves and scoundrels of every degree can qualify themselves for transportation, and, in due time, for a course of the Australian diggings, we shall find the home supply of candidates rather too plentiful to be pleasant or convenient. We suppose, therefore, that the first great result of the new discovery will be a lull, or a discontinuance of our transportation system, as far as Australia is concerned. We do not imagine, however, that the diggings of Australia, even if quite as prolific of the precious metal as the latest accounts would seem to indicate, will have much influence upon the commercial dealings of the world, or upon the price of gold as a commodity. All the treasures of California have scarcely had a perceptible effect; and it is to be doubted whether the gold of the Uralian mountains and of California together have much more than replaced the wear and tear of the world's coinage, and the consumption of gold for the domestic purposes of civilised nations. Gold-plating and gilding, and the wants of the bookbinder, the paperhanger, the house decorator, the ornamental carver, and a whole host of other artificers who minister to the luxuries of a population which is rapidly on the increase in all the civilised countries of the Old and the New World, must necessarily employ the ultimate waste, a large quantity of the precious metal; and the day seems to be far distant, even with Australia as a new field of treasure, when the relative values of gold and other commodities necessary to mankind will be seriously disturbed. One thing, however, is tolerably certain—a steady if not a large increase of immigration into Australia, and a consequent impetus to the growing fortunes of that rich and beautiful country. Even without the impetus of the gold fever, Australia was destined, we cannot doubt, to become, in the fullness of time, a new Britain in the southern hemisphere, to rival the fame and the power of the mother country, and to share with ourselves and the United States of America, the empire of the globe.

THE ROYAL PROGRESS FROM THE NORTH.

LIVERPOOL AND THE MANUFACTURING DISTRICTS.

ON Tuesday morning last, at eight o'clock, her Majesty, the Prince, and the Royal family, left Balmoral, on their return to the south. It was a miserably cold, bleak, wet morning, the rain pouring down in torrents; and, as a natural consequence, there were but very few persons, and those from the immediate neighbourhood, in attendance to witness the departure of the Court. The Royal party proceeded by Ballater, Aboyne, and Banchory, to the Stonehaven station of the Aberdeen Railway, where the Royal saloon carriage belonging to the London and North-Western Railway was in waiting for their conveyance to Edinburgh. The Royal party reached Stonehaven about half-past one, where luncheon was provided; and, after a stay of a short time, the Royal train proceeded southward with two engines, and escorted by several of the directors of the Aberdeen Railway.

The Royal train proceeded at a very rapid pace along the line. On reaching Forfar, where the Scottish Midland Line commences, Mr. Stirling, of Kippendavie, and one of the other directors of that company, relieved the directors of the Aberdeen line.

Shortly after leaving this station a casualty befel one of the carriages in the rear, the axle having taken fire from the friction, owing to the rapidity at which the Royal train was proceeding. This was fortunately observed at the very first, and a carriage was procured in its stead. After a delay of a quarter of an hour the train again proceeded on its journey, no stoppage occurring till the Royal party reached Perth, where the directors of the Midland Junction line gave place to those of the directors of the Scottish Central, the Lord Provost of Perth, Provost Sawers of Stirling, and Mr. Ronald.

At the Port City a military guard of honour was in turned out at the railway station; and a large assemblage of citizens was present, who conducted themselves with the greatest decorum. After waiting a few minutes, the Royal train again started, and was again stopped for a short time to take in coal and water. Here also a guard of honour was turned out to salute her Majesty, and a considerable crowd was collected. The Royal train, however, only delayed for a minute or two.

At Polmont, Mr. Blackburn, Mr. Hog of Newliston, and another director of the Edinburgh and Glasgow Railway, were in attendance to receive her Majesty.

The Royal train had hitherto had two engines belonging to the Scottish Central attached to it, but company were changed at Mars travelled over from Stonehaven. Here, however, these were removed, and one of the largest and most powerful of the engines connected with the Edinburgh and Glasgow took their place. From this point everything went smoothly alone, the Royal party proceeding at a dashing rate, till the train reached Broomhouse, about six miles from Edinburgh, where, unfortunately, another casualty befel it. On reaching the place above-named, a noise, as of a slight explosion, was heard, and a dense cloud of smoke was immediately seen rising from the engine, enveloping the carriages in the rear for a minute or two: and the train all at once came to a dead stand. Steps were immediately taken to ascertain the cause of the accident, when it was discovered that the coal-pipe, by which the engine is supplied with water, had given way. No time was lost in communicating the circumstance to her Majesty, and informing her that no person was hurt, and that there was no cause for alarm. Intelligence of the event had been dispatched along the line, and the pilot engine, which had hitherto preceded the Royal train at a short distance, was brought back. After the disabled engine got off the train, the pilot engine was attached to the train in the rear. This involved a delay of three-quarters of an hour, during which time her Majesty kept her place in the saloon carriage. She appeared not the least disconcerted, but good-humouredly remained herself to the inevitable stoppage.

A train being now in from Glasgow a short time after, signals were at once had recourse to, and other steps taken, to apprise those in charge of it of what had happened, and to prevent it coming onwards upon the Royal carriages. We regret to state, that Earl Grey, in coming out of one of the carriages, on being made aware of the accident, slipped his foot, and received a slight sprain.

All things having been put in proper train for proceeding, the Royal party again pursued their journey, and reached Edinburgh at five minutes to eight o'clock an hour and a half behind the time fixed upon.

On alighting at the Queen's station, at St. Margaret's, her Majesty was received by the directors of the North British Railway, and by Mr. Sheriff Gordon, Major-General Riddell, and J. A. Campbell, Esq.

The Royal party appeared in excellent health and spirits, evidently much benefited by their sojourn in the North, and in no way fatigued by the length of the journey.

The Royal *cortège* having formed, and the escort of dragoons taken up their position, the cavalcade proceeded at a smart pace in the direction of Holyrood, amidst the loyal congratulations of the assembled multitude who lined the carriage-way on either side.

On reaching the palace, her Majesty was received by the Lord Provost and (in the absence of the Duke of Hamilton) by Mr. Rutherford, deputy-keeper of Holyrood Palace. The Royal dinner party in the evening consisted of her Majesty, Prince Albert, Lord Panmure, and members of the suite.

DEPARTURE FROM EDINBURGH.

On Wednesday morning, at half-past eight o'clock, her Majesty, Prince Albert, and suite, left Holyrood, proceeding by the Abbey-hill, Regent-road, and Princes-street to the Caledonian Railway terminus at the Lothian-road. The line of street and Regent-road was lined with troops, and a large number of the citizens were assembled to give a parting welcome to her Majesty on her departure for England. The streets were kept by the military and police. Over the entrance to the terminus a fine canopy, beautifully decorated with the royal arms and evergreens, was erected. The Royal party left the station about nine o'clock, amidst the cheering of the assembled thousands. The weather was very favourable.

CARLISLE.

The train arrived at Carlisle at 11.50, and was received with a Royal salute from the castle. On the platform of the station, which was very elegantly decorated, were assembled the Earl of Lonsdale, Lord-lieutenant of the counties of Cumberland and Westmoreland; the Earl of Carlisle, G. Head, Esq., High Sheriff, &c.

The High Sheriff having presented a magnificent bouquet to her Majesty, and the address of the town council having been read, the train proceeded on its way, the Queen not having alighted during her short stay.

LANCASTER.

Her Majesty arrived at Lancaster, the capital of her Duchy, at a quarter to two o'clock in the afternoon. This "good old town" had been in a flutter of excitement ever since her Majesty's intention had been intimated, and preparations on a considerable scale had been made for a fitting reception.

The Castle of Lancaster, which forms the chief object in the Majesty's view, occupies a commanding position on a hill to the west of the town. The towers at present standing are the Dungeon Tower, Adrian's Tower, the Bell Tower, the Gateway Tower, and the large square central citadel, called the Lunguss, to the summit of which her Majesty ascended.

The reception which awaited her Majesty was very gratifying. The route from the railway station to the Castle was lined with spectators, and barriers were erected to preserve strict decorum. The Royal party was met at the station by the High Sheriff, Thomas Percival Heywood, Esq., and by the Mayor of the borough, H. Gregson, Esq. On the Queen's arrival she entered the High Sheriff's carriage, and, preceded by the Mayor, senior Alderman (J. Dockray, Esq.), and the Town-clerk, the Royal *cortège* proceeded up Meeting-house-lane, crossing at the top of Market-street, by Castle-hill, and passing three exceedingly neat triumphal arches composed of evergreens, and decorated with flags, &c.

On the Castle Parade an immense platform was erected, on which were placed about 5000 persons, whose views were exceedingly loyal as the Royal party were in sight.

The Queen was conducted into the Shire-hall by the customary entrance, passing through the Judge's returing-room. On her entrance into the beautiful court-house, the whole company, which comprised the *élite* of the county, received her Majesty by bowing, according to an instruction to that effect. Her Majesty was accompanied by Prince Albert and the Royal children, the Earl of Carlisle, and the usual suite.

Archdeacon Brooke, accompanied by E. G. Hornby, Esq., chairman of the Lancaster sessions; — Foster, Esq., chairman of the Salford sessions; and T. B. Addison, Esq., chairman of the Preston Sessions, were then introduced to her Majesty. When Mr. Brooke read the address of the county magistracy, the whole of her Majesty replied, but in so low a tone that what she said was not heard beyond the circle. The four gentlemen had then the honour of kissing hands.

The Mayor, Alderman Dockray, and Town Clerk were then presented, and the borough address was read by the latter. The Mayor and Alderman Dockray had the honour of kissing hands.

The Royal party then quitted the Hall, amidst the warm and hearty plaudits of the assemblage.

Her Majesty afterwards ascended the Lungess Tower; and, after lunching, she returned to the station, and the train immediately proceeded on its way to Rainhill, where it arrived at half-past four o'clock. The Royal party here alighted, and proceeded to Croxteth Hall, the seat of the Earl of Sefton, arriving at twenty minutes past five o'clock. The weather was exceedingly fine, and large crowds, principally of the surrounding gentry, who had received special invitations, welcomed the Royal visitors on this their Sovereign's first visit to Lancashire. Her Majesty, noble host, the Earl of Sefton, escorted the Queen to the door, followed by Prince Albert and Countess of Sefton. A splendid dinner party had the honour of her Majesty's presence in the evening. [For Engraving and description see page 453.]

LIVERPOOL.

(From our Own Correspondent.)

LIVERPOOL, Thursday Evening.

There is nothing more gratifying than a Royal progress in fine weather—nothing more cheerless in wet—and such was that of to-day. Last night was one of the most brilliant it has ever been our lot to behold—to-day, one of the most dismal, the rain pouring in torrents throughout the day. Last night Liverpool was indeed gay; not a street was there in the Royal route which was not overburdened with stands, gay decorations, and colours. This morning some preparations to do honour to her Majesty were still there, but all was dull and cheerless—flags dangled in the wet, the mottos and decorations in the stands were many of them washed away, and but few persons, even as late as two o'clock, were to be seen in the streets; and we doubt not that the few of the gentler sex who were abroad wished that at least their upper garments were only Bloomer length, whatever may have been their opinion of the other portion of the costume.

Her Majesty and Royal party arrived from Croxteth Hall about half-past ten, and having been received by the High Sheriff of the county, and the Mayor and Corporation, at the West Derby road, were conducted to the George's landing-stage, where the members of the Dock Committee were in readiness to receive her Majesty, within a circular tent, erected by Mr. Benjamin Edgington. Addresses were presented to her Majesty from the Chamber of Commerce and the Dock Committee, which were most graciously received.

On the river, which, under other circumstances, would have been a most splendid sight, everything had been done that was possible to render the pageant worthy of the occasion: the river was lined with a double row of steamers and other vessels, gaily dressed out in the colours of all nations. The stands on both the Lancashire and Cheshire sides of the river had been admirably prepared, but were in a great measure deserted, except at the most prominent points, where a few of umbrellas met the view. At ten o'clock we took our station on board the *Commodore*, one of the finest vessels, the *Tydeus* and *Albany* being in the others, placed at the disposal of the Dock Committee to accompany the Royal steamer, which dropped down the river to its station off the George's landing-place, where her Majesty was to embark about half-past eleven o'clock. Almost immediately afterwards the firing of a Royal salute announced the arrival of her Majesty; and at twenty minutes to twelve the saluting of the Royal standard on board the *Fury*, and the cheering of the crowd, proclaimed that her Majesty had embarked. The course around the river either on the Lancashire or Cheshire side was marked by little naval structure there were small craft, from the steam-tug to the pleasure-yacht, and the number that could, under the circumstances, be done to give her Majesty a hearty reception, and at the Queen's Dock the authorities had drawn out a large number of children connected with the Liverpool schools, to sing the National Anthem, which they endeavoured to do to the best of their infantile ability. About half-past twelve, her Majesty, who only proceeded to New Brighton, and came to George's Dock, landed at the latter place amidst the most cheerful demonstration we had heard during the day, of hurraing, firing of guns, and ringing of bells. During the Royal progress, the *Commodore*, not calling her steamers to a halt, was descried by the captain of the *Commodore*, ran her two-boom into the mizen halyard of the latter vessel, abreast of the Queen's Dock, and carried away her mizen mast, immediately upon her Majesty's arrival, she was conducted to the Town Hall, arriving about 1 o'clock. Her Majesty, with the Royal family, having entered the grand hall-room, which was very elegantly fitted up, the following address was presented to her:—

"TO THE QUEEN'S MOST EXCELLENT MAJESTY.

"May it please your Majesty,—We, your Majesty's faithful subjects, the mayor, aldermen, and burgesses of Liverpool, approach with the most respectful to offer the homage of our devoted loyalty, and to express the universal joy of the inhabitants of this borough, now for the first time gladdened by your Royal presence.

"We welcome with delight a Sovereign who, displaying from the throne a brilliant example of private virtue, so sways the sceptre of public rule as to unite the hearts of her people in firm and dutiful attachment to her person and Government.

"Knowing that your Majesty is ever intent on the welfare of the realm, we view this gracious visit as a mark of Royal regard for the town and trade of Liverpool; and we indulge a hope that your Majesty will have seen with satisfaction the public buildings now in the course of completion, and the arrangements to accommodate the shipping of a seaport remarkable for the rapid progress and extent of its commerce.

"Our joy on this auspicious occasion is enhanced by the presence of the illustrious Prince, your Royal Consort, who to many well-earned claims to our fervid admiration and esteem, as the patron of science and improvement, adds peculiar claims on the gratitude of this community: we rejoice at the great works inaugurated here by his Royal Highness, and which blend his name with our commercial enterprises, are now in full operation, and that the structure which he graciously condescended to found is now completed as a Sailors' Home.

"Thankful for the wise and benign exercise of Royal authority, and for the advantages of constitutional government, we fervently pray that many years of public and private felicity may be added to your Majesty's reign, and that future generations in this kingdom may long enjoy, under your Royal line, such blessings as are now most gratefully acknowledged.

"Given under the Common Seal of the borough of Liverpool, this ninth day of October, one thousand eight hundred and fifty-one."

The following is the Queen's reply:—

"Mr. Mayor and Gentlemen,—I accept with pleasure your loyal address, and I am glad to convey through you to the inhabitants of the borough my warm thanks for the very cordial welcome which I have received from them on the occasion of my visiting, for the first time, this great commercial town, of which I have viewed with just admiration the magnificent docks, warks and buildings."

The Queen, his Royal Highness Prince Albert, and the Royal Children were then conducted to the balcony of the centre window of the hall-room, overlooking the area of the Exchange, in which a large number of parties were assembled, the windows surrounding it being filled with elegantly-dressed ladies. The Royal party were most cordially received, and the cheers of the company for a long time rent the air.

After Her Majesty returning from the balcony, she was conducted to the drawing-room of the Mayor, where a very elegant luncheon was served to the Royal party.

As ten minutes to three the Queen and Royal family were conducted to their carriages, and, having visited St. George's Hall, departed from Liverpool about four o'clock, which, from the weather, for the first time, cleared up.

Her Majesty was most cordially received throughout the whole of her progress.

MANCHESTER.

THURSDAY NIGHT.

Her Majesty arrived at the Patricroft station of the Liverpool and Manchester Railway at half-past four o'clock this afternoon. The Earl of Ellesmere was in attendance to receive her Majesty. The Duke of Wellington, who is among the guests at Worsley, notwithstanding the inclemency of the weather, was also present. His Grace was very warmly greeted by her Majesty.

The Royal party were conducted from the railway station to Lord Ellesmere's state barge, in which her Majesty was conveyed along the Bridgewater Canal to Worsley Hall. The banks of the canal were crowded with spectators, by whom her Majesty was vociferously cheered along the whole route. Her Majesty alighted at the pavilion, in front of the mansion, shortly after five o'clock, and immediately proceeded, in one of the Royal carriages, across the park to the mansion. The rain continued to fall heavily until after nightfall. Happily the day passed off without accident. Manchester is in a state of the greatest excitement to-night; the principal streets present a perfect glare of illuminations, and all business is suspended.

THE COUNT DE CHAMBORD.—Letters from Vienna of the 2d inst. state that the Count and Countess de Chambord arrived in that capital from Linz on the 30th ult., and on the following day returned to Frohsdorf, where they expected shortly to receive the visit of several French personages of distinction.

THE VICTORIA REGIA WATER LILY.—Messrs. Weeks, of King's-road Nursery, Chelsea, have received the Banksian medal of the Horticultural Society, for the 90th blossom of the Royal water lily, which flowered in an open pond.

THE SUBMARINE TELEGRAPH.—The first despatch transmitted by the Submarine Telegraph between Calais and Dover to Calais, and printed by the machine of Mr. Brett, is as follows:—

"Printed by the Submarine Telegraph, for Count D'Orsay.

"M. Léon Faucher has declined, on his own responsibility, to grant permission for the use of the submarine telegraph between Paris and London. The proposition now under consideration of the conference between M. Fay, the director of telegraphs, has been sent for to give an opinion as to the case of charges, in case the permission should be granted. That it should be refused cannot for a moment be assumed to be within the bounds of possibility, but the hesitation and delay is an instance of that hesitating and inconsistency which a check upon all improvements, and to which Girardin so forcibly applied the other day, when he attacked, in the personal exercise of the President, Count d'Orsay, and Mr. Brett, that two wire had ever been allowed to touch the French shore."

St Cloud, le 29me Septembre, 1851. Présidence de la République — Cabinet.

Monsieur—Le Président est fondé à penser que la permission empruntée par vous avec un fil laire part de la première communication du télégraphe électrique entre Douvres et Calais—communication si merveilleuse qu'elle semble supprimer tous les distances entre les deux nations, et en quelque sorte les réunir en un espace. Le Président me charge de l'honneur de vous annoncer, avec ses remercimens les plus félicitations sincères. Agréez, Monsieur, l'assurance de ma considération très distinguée.

Le Chef du Cabinet, MOUQUERIE.

Messieurs les Directeurs de la Compagnie de l'Télégraphe Sous-marin entre Douvres et Calais.

A passenger, at the instance of the directors of the London and Brighton Railway, has been sentenced to six weeks' imprisonment in the Steyning House of Correction for defrauding the company by using a non-transferable ticket issued to another person.

A letter of the 2d inst., from Coblentz, states that the large powder-mills of MM. Meielmack Brothers, near that city, blew up on the previous day with a tremendous explosion, which was heard at a distance of seven miles.

The Chaplain of Richard Swift, Esq., the Roman Catholic Sheriff, is not, as was erroneously described last week, at page 407, Father O'Connor, from Islington," but the Very Rev. Thomas O'Connor, P.P. of Loughgilly, &c., in the county of Roscommon, Ireland.

COURT AND HAUT TON.

HER MAJESTY AT BALMORAL.

The movements of the Royal party since our last publication, up to their departure for the south, have been of a routine nature.

The Marchioness of Douro left Balmoral on Thursday, having been relieved by the Viscountess Canning.

The Duchess of Kent daily joined the party at dinner.

The Prince Consort has been employed each forenoon either in deer-stalking or shooting.

On the evening of Thursday, the 2nd, her Majesty gave a ball to the tenants on Balmoral and the neighbouring estates.

On Tuesday last, her Majesty, the Prince Consort, and suite left Balmoral for the south.

CHURCH, UNIVERSITIES, &c.

OXFORD.

On Wednesday the Rev. Frederick Charles Plumptre, D.D., and Master of University College, having been re-nominated Vice-Chancellor of the University by his Grace the Duke of Wellington, took the oaths of office in full Convocation, and entered upon the duties of the Vice-Chancellorship, for the fourth year, with the accustomed solemnities. The following heads of houses were afterwards nominated by their Vice-Chancellor to act as Pro-Vice-Chancellors during his absence from the University; viz. the Rev. Dr. Wynter, President of St. John's; the Rev Dr. Symonds, Warden of Wadham; the Rev. Dr. Richards, Rector of Exeter; and the Rev. Dr. Cotton, Provost of Worcester.

ETON COLLEGE.—The annual examinations for his Royal Highness Prince Albert's Prizes for the German, French, and Italian languages, commenced on Tuesday, the 23rd ult., and ended on Monday last. Great interest was felt by the candidates as to the result, which was announced this evening in Mr. Hawtrey's house, in the presence of the Provost, Head Master, Vice-Provost, and other members of the College. The following are the names of the successful candidates:—*German* (first prize, Newman; 2nd ditto, Gem (selected in order of merit)—3rd, Mitford; 4th, Wilberforce. Lord Powerscourt; 5th, Paul; 6th, Lambton; 7th, Hayward; 8th, Beauvy, 9th, Wilder. *French* (first prize, Del Bel; 2nd ditto, Newman; 3rd ditto, Gem (selected in order of merit)—4th, Mitford; 5th, Wilberforce. Lord Powerscourt; 6th, Paul, 7th, Lambton; 8th, Hayward; 9th, Beauvy, 10th, Wilder. *French* (first prize, Del Bel; 2nd ditto, Newman at Cribb's Hospital and Merryman at Tailor—the two candidates last prize, Mr. Byng; 2nd ditto, Mr. Dilon. Next in merit (alphabetically arranged) Antrobus, Lambton, Mitford, Paulet, Puxley, Sainburne, Mr. Vernon. *Italian* (Examiner, Signor Tommasi, six candidates) 1st prize, Mr. Byng; 2nd ditto, Puxley. Selected for merit—3rd, Scott, Ma; 4th, Sainburne; 5th, Campbell. Mr. Byng was declared the greatest proficient in two languages.

DIOCESAN SECOND MEETING AT DERBY.—On Wednesday afternoon a meeting of 300 clergy and laity assembled at Derby, under the presidency of the Rev. T. Collins, of Ruanseborough. A report was read and adopted, and the following resolutions were moved, seconded, and supported by the venerable Archdeacon Denison, Captain Mosrsom, J. D. Dickenson, Esq., the Rev. L. Merewether, Canon Trevor, F. Morewether, Esq., and J. Russel, Esq., the Revs.—Cooke, and Mr. Vernon. Resolved—That the Bishop Blomfield Diocesan Board of Education is entitled to the cordial support of the clergy and laity of the diocese, and that the following resolutions be adopted as the basis of its constitution. That the encouragement which the committee have already received from nearly all persons in official situations with whom they have had communication, is an additional motive for their continuing to press upon the minds of churchmen the necessity of diocesan synods, with the same respect and deference for ecclesiastical order and authority, which they have hitherto exhibited. That this meeting request the committee to return thanks to all persons and parties who have generously assisted them in their labours, and to Mr. Caswell and Mr. Pound for papers presented to them, without pledging itself to the statements and opinions contained therein." A finance committee was appointed, and thanks voted to the chairman, committee, and secretaries, and the meeting adjourned to early in February, to London.

PREFERMENTS AND APPOINTMENTS.—The following appointments and preferments have recently been made:—*Chancellorship:* The Rev. C. W. Bagot, rector of Castle Rising, Norfolk, to the office of chancellor of the diocese of Bath and Wells. *Honorary Canonry:* The Rev. T. B. Coney, in the Cathedral of Bristol. *Rectories:* The Rev. H. F. Gurney to Tregony, Cornwall; the Rev. G. H. Marsh to Great Snoring and Thursford, Norfolk.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. Edward Manners, from his tenants on the Goadby Marwood estate, Leicestershire; the Rev. William Mountford Stacey, from the churchwardens, overseers, householders, and heads of families, members of the Established Church, of the parish of Revelstoke, Devon; the Rev. Charles Nutt, from the parishioners of Twerton, in the diocese of Bath and Wells; the Rev. A. D. Bell, from the teachers of St. Mary's Sunday-school, Newtown, near Leeds; the Rev. George Geddes, from the congregation of Skewen, Glamorganshire; the Rev. Evan Lewis, of Llandebie, Carmarvonshire, from the congregation of the Rev. J. P. Murphy, from the minister, teachers, and scholars of St. Bartholomew's, Liverpool.

We regret to learn that the Bishop of Bath and Wells is in a precarious state of health.

It is said, that, in consequence of ill health, the Lord Bishop of Gloucester and Bristol does not intend to hold a visitation this year, but that the Archdeacon of the diocese will act for the Lordship.

The Rev. Henry Short has resigned the perpetual curacy of Admaston, near Lancaster. The living is in the gift of the Rev. James Turner, Rector of Lancaster.

GORHAM *v.* ELPHER.—From a list privately circulated of contributions to the Bampton Lecturer's defraying the expenses incurred by the late Mr. Gorham in his celebrated cause, we learn that the total expenses of the contest were £3604 7s. 8d., and the total contributions £3307 9s. 10d., leaving a balance in the treasurer's hands of £253 2s. 2d. The auditors, in presenting their statement, observe, "We have no hesitation in paying the balance of £253 2s. 2d. into the hands of Mr. Gorham's executors."

The rectorship of St. Giles-in-the-fields is vacant by the decease of the Rev. Dr. Tyler, which took place at his residence, in Bedford-square, on Sunday morning.

ENGLISH CHURCH AT GENEVA.—The ceremony of laying the first stone of the English church at Geneva took place on the 1st. It was performed by the Bishop of Winchester, assisted by his Lordship's chaplain, the chaplain of the English church, and the members of the committee. There was a large number of persons present, consisting of some English families of distinction who are staying at Geneva, and many inhabitants of the town. Two services was read by the Bishop in a most impressive manner. At the close of the ceremony, the Bishop made a feeling and eloquent address to those around him. He said that he felt the most satisfaction at such a ceremony taking place. The ceremony, recollecting that he, personally, some five and thirty years since, had made a request to the Government of Geneva for permission to celebrate an English service in the chapel of the hospital, and he was most happy at having that opportunity of thanking the old Government for the kindness with which it had granted that permission from that time to the present. He was also pleased at being able to thank the new Government, in the person of its President, for having so liberally granted the site on which the church was to be erected, and he trusted that the best and kindest feelings might always exist between his countrymen and the inhabitants of Geneva, and that God would prosper their work; the President of the local Government, M. Moulinié, then requested leave to address a few words in answer to those of the Bishop. He said he was most pleased to have been present at the ceremony; that England had always been a friend to Switzerland; and that, although Geneva was a small country, it was happy to make a present to England that was acceptable. He hoped that the edifice might continue in perpetuity as a place of worship for the English, and that they would even more than ever be inclined to become residents at Geneva.

John C. King, Esq., delegate from the branch of the Australian Anti-Convict League in Victoria, has arrived in town. The subscriptions in Victoria amount to nearly the entire sum of convict transportation to Australia amount to upwards of 6000 guineas.

A number of influential gentlemen, friends of Captain Maconochie, R.N., and admirers of his system of prison discipline, have originated a subscription, with a view to present to him a purse upon his leaving Birmingham, as a testimony of their appreciation of his character; and to express their sympathy with his honour and benevolent views which have led him to labour assiduously for the purpose of carrying out a reformatory system in the management of prisons. The following gentlemen have promised donations of ten guineas each:—M. R. Hill, Esq., Recorder of Birmingham; Capt. F. L. Welch, Esq.; Joseph Sturge, Esq.; R. L. Chances, Esq., and Mr. John Cadbury. The subject will shortly be brought before the public in a more prominent shape.

CROXTETH HALL.

THIS mansion, the family seat of the Earl and Countess of Sefton, was honoured with a visit from her Majesty on Wednesday: the details of the *sejour* will be found in our account of the Royal Progress through Lancashire. The Queen proceeded direct from Lancaster, through Preston, Wigan, and Parkside, to the Rainhill station of the Liverpool and Manchester line, where her Majesty was received by the Earl of Sefton, and conducted through the Earl of Derby's beautiful park of Knowsley, entering the domain by Eccleston Gate, and passing out over the Sefton meadows to Croxteth Hall, where her Majesty slept on Wednesday night.

Croxteth Park adjoins the parish of Huyton, is extra-parochial, and is generally included in the chapelry of West Derby, in the parish of Walton-on-the-Hill: but undeniably it was an appurtenance of Knowsley, and belonged to Robert Fitzsemry, the founder of Burscough, ancestor of the family of Lathom.

In the perambulation of the forests of Lancashire, 12 Henry 3, the knight's jurors say, that "Croxteth was in defence after the coronation of Henry II., the King's grandfather, and it appertains to Knowsleigh

CROXTETH HALL, NEAR LIVERPOOL, THE SEAT OF THE EARL OF SEFTON

belonging to the heirs of Robert Fitzhenry, and ought to be disforested according to the tenor of the charta de Foresta." The heirs of the Lathoms were the Stanleys; but Croxteth Park, as well as other woods and forests in this hundred, came into the possession of Edmund, Earl of Lancaster, son of Henry III., who, probably, resumed possession of it after the perambulation. It remained in the Crown until July 28, 1446, when Henry VI., by letters patent, confirmed in 1459, granted Croxteth to Sir Richard Molyneux and his heirs; and by an original grant in the Duchy of Lancaster Office, bearing date 21 Edward 4, the herbage and agistment of Croxteth Park were given to Thomas Molyneux, Esq., for an annual rent of £100. His family has ever since retained possession. With the exception of the Hall, which is the principal seat of the family of Molyneux, Earls of Sefton, there are not above six dwellings in the park, which contains about 346 statute acres. A branch of the little river Alt flows through the estate, within which is a stone quarry.

The front of the Hall was erected in 1702, of brick, with ornamental stone dressings: before it is a fine terrace, ascended by a broad flight of steps. This view is shown in the accompanying Illustration, sketched by our Artist. The back of the Hall, formerly of wood and plaster, was rebuilt in 1806.

The district of Huyton is almost exclusively agricultural. There are no navigable rivers, nor any canals; but the Liverpool and Manchester Railway passes Huyton-lane about a furlong below the village. The soil for the most part is a strongish loam, with the exception of 200 acres of peat moss, called Knowsley Moss. There is in the parish an excellent slate quarry, east of the village of Huyton, in which township, as well as in those of Tarboch and Knowsley, there is coal.

The present Earl of Sefton has effected very important improvements on the Croxteth estate, which, in point of cultivation, is second to none in the county.

SIR JOHN ROSS' SEARCHING EXPEDITION FOR SIR JOHN FRANKLIN.

In our Journal of last week we described the return of the *Felix* and her gallant crew, all in good health, after passing a winter in the Arctic regions. We now engrave a view of the *Felix* at anchor in Loch Ryan, not far from North-west Castle, at Stranraer, the seat of Sir John Ross. Leftward of the vessel is seen the lighthouse and village of Cavin Ryan, and beyond it Feinecrest Point, and to the extreme right is Cairn Hill. Stranraer is beautifully situated at the head of Loch Ryan, a noble arm of the sea.

The "ancient mariner" who headed this little expedition, appears not much the worse for all he has undergone—a little thinner, perhaps, and perhaps a little more bent, but sturdy as ever in all other respects. Every true Englishman must admire the "pluck" of the old Admiral, who, having passed threescore years and ten, and verging on fourscore, went forth upon a voyage of humanity, necessarily of great hazard, and certainly, it must be admitted, of considerable discomfort. Nor was he altogether a quiet looker-on and passive director of operations; but, on the contrary, himself took an active part, and we believe we are correct in asserting, that he was out with the travelling parties for upwards of 14 days, travelling Cornwallis Island.

That the expedition has not been able to do much, is no fault of those employed upon it. Commander Phillipps was indefatigable throughout, and deserves the highest credit. He continued the journey across from Cornwallis Island and was absent for many weeks; and his conduct throughout appears to have been most exemplary. Happy shall we be if it meets with its reward.

The *Little Mary*, which accompanied the expedition, is, we are told, left behind for any use that she may hereafter be required for.

NORTH-WEST SEARCHING EXPEDITION FOR SIR JOHN FRANKLIN. SIR JOHN ROSS'S YACHT "FELIX" AT ANCHOR IN LOCH RYAN.

SALE OF THE KNOWSLEY MENAGERIE.

YAK.

BARA SINGHA DEER.—MALE AND FEMALE.

ELK.

GNU.

BRAHMIN BULL, COWS, HEIFER, AND CALF, BRED AT KNOWSLEY.—(SEE NEXT PAGE)

THE EARL OF DERBY'S MENAGERIE AT KNOWSLEY.

(See the Illustrations upon the preceding page)

THE group, composed of the Yak (*Poephagus grunniens*, female) and the Bara Singha deer (*Cervus (Axis?) Duvaucelii, Cervus elaphoides*, Hodgson, *Cervus Duvaucelii*, Cuvier, male and female), exhibits species whereof, except a female of the latter in the Zoological Gardens, London, there are no other living specimens in this country. The Knowsley Yak is a native of Thibet. There is at Knowsley a very fine hybrid bull partaking of this species, likewise of the Thibet. It will be remembered, that, among the presents brought for her Majesty by the Nepaulese Ambassador, were several of the *chowry*, or cow-tail fans, an appendage of Royalty in the country he represented. These are furnished by the Yak, whose tail is composed of a bushy tuft of long silky hair. The specimen at Knowsley is the size of a small ox, its length being enhanced by the long hair and bushy tail before mentioned. The yak is the only domesticated species of cattle which has not extended beyond its natural boor dary, being confined to Thibet and the province of Shensee, in Chinese Tartary.

The second Illustration represents the Elk (*Cervus (Alces) palmatus, Cervus alces*, Linnæus, male), from North America, the largest of the deer kind, an animal of peculiarly ungainly appearance and action, but greatly prized for the sport it affords the hunter. In the narrative of Captain Franklin's second journey, it is related that three hunters pursued one of them for four successive days, until the footsteps of the chase were marked with blood, although they had not yet got a view of it. At this period of the pursuit the principal hunter had the misfortune to sprain his ankle, and the two others were tired out, but one of them having rested for twelve hours, set out again and succeeded in killing the animal, after a further pursuit of two days continuance.

The third Illustration consists of a very fine specimen of the Gnu, (*Antilope (Catoblepas) gnu, Antilope gnu*, Auct.—male, and—from South Africa, one of the numerous varieties of the ant-lope species which in menageries of old was exhibited under the *alias* of the "horned horse," from the remarkable re-emblance of its neck, body, and tail to those of the horse. This, and its peculiar gallop, render it difficult for the African hunter to distinguish at a distance this species from the quagga, with whose herds it associates, as well as with the ostrich, on the desert karoos of South Africa. A specimen of a variety of the Gnu called *Baas*, or the master, by the Dutch colonists, is to be seen in the museum of the London Missionary Society, under the title of the "Brindled Gnu" Its former appellation is supposed to refer to the native boldness and impetuosity of the animal.

The fourth Illustration represents a group of the Brahman bull (*Bos taurus*, Linnæus, var. *Indicus*), cows, heifers, and a calf, bred at Knowsley, together with the mother of the stock, a remarkably fine native cow. This species, mixed with some of our own breeds, has produced some valuable hybrid cattle, a variety of which roam at large in the park at Knowsley.

THE SALE.

(From our own Correspondent.)

DURING the past few days Liverpool and its neighbourhood has possessed more than usual interest for the stranger, not only from the visit of her Majesty, but from the fact that the most complete and important private zoological collection in the world has fallen under the manner of the auctioneer, and its contents been distributed amongst a body of purchasers, which insures a large portion of them leaving this country. The sale, which was conducted by Mr. Stevens, of Covent Garden, took place at Knowsley, the seat of the Derby family, about seven miles and a half from Liverpool. As we have previously stated, the ground devoted to the Menagerie and Aviary covers a space of about 100 acres, in addition to between 70 or 80 acres of water for the use of the aquatic birds, in which the collect on was (for we must now speak in the past tense) particularly rich.

The catalogue comprised 64 species of Mammalia, and included 345 individuals, of which 39 species, comprising 207 individuals, were bred at Knowsley. The total number of birds, exclusive of the dome tic poultry in the Aviary, was 1272, belonging to 318 species and of these, 49 species, comprising 943 individuals, were also bred at Knowsley. The whole of the animals and birds in the collection were in the highest state of health; and their appearance reflected the greatest credit on Mr Thompson, who has for many years had the management of the Menagerie and Aviary.

The first day's sale was devoted to the deer, of which the catalogue contained fifteen varieties, comprising 56 individuals, of which 29 were bred at Knowsley. The number offered for sale was 55, the only specimen of the Savannah deer contained in the collection having died.

It was originally intended, that after the company had walked round the Menagerie and paddocks to view the lots of the day, the sale would take place in the yard attached to the stables. This, however, was found to be inconvenient; and it was, therefore, resolved to sell the lots upon the ground, as the company had an opportunity to viewing them and for the purpose of bidding on their value. The auctioneer, in opening the busi ess of the day, stated, that a report having been industriously circulated by means of the newspapers and otherwise, that the collection was about to be offered for sale in addition to the wishes of the late noble owner, he wished directly to contradict it; the fact being, that the deceased Earl had distinctly directed by his will that the collection should be sold after her Majesty and the Zoological Society of London had selected from it any animal or bird they might wish to possess. That selection had been made, the Queen taking but 807, 808, and 809, Tow Impayan pheasants, three of which had been bred at Knowsley, and two of the black-necked swans in lot No. 894; and the Zoological Society, lots 67 to 71, a group of five South African elands or antelopes, one of which was bred in the Menagerie.

The sale commenced with lot 50, a male Java deer, those in this collection being stated to be the only specimens in the country, and thoroughly acclimatised —a remark which, the auctioneer stated, applied to the whole collection, about one-half of it having been bred at Knowsley. The first off r for this lot was £5 5s.; and after a rather spirited bidding, it was knocked down to Lord Hill for £13 13s. Lot 51, another male of the same breed, bred in this country, was also purchased by his Lordship for £11 11s.; the two females, lots 52 and 53, being purchased by Mr. Thompson, it was understood, on commission, for £10 10s. and £8 8s. respectively.

The most important of the other lots sold were Nos. 29 and 30, two Wapiti deer, which fetched £105 from M. Vecchman; No. 36, a Bara Singha, by the same gentleman, for £33; Mr. Thompson obtaining lot 35, also a Bara Singha, but blind, for £5 10s.; Nos. 37 and 38, females Bara Singhas, were knocked down at £10 10s. and £7 7s. Lots 48 and 49, Sambur deer, were purchased by Mr. Jamrach for £17 10s and £16; and lots 31 to 34, four Axis deer, by Mr. Thompson, for £33 12s., the former gentleman also purchasing lot 66, the elk, for £30 9s. The other lots fetched comparatively indifferent prices, M. Prevost, of Paris, becoming the owner of several of them. The total proceeds of the day's sale amounted to £491 14s.

The second day's sale was devoted to the antelopes, some of which fetched very heavy prices. The lots which attracted most attention were 87 and 88 — male and female Gnu. The bidding commenced at £100, and, after a spirited contest, Messrs Edmonds and Bramston, the successors to Mr. Wombwell, whose well-known menagerie is now at Nottingham, became the purchasers for £383 10s. These animals, we are informed, only cost the late Earl £140

Mr. Mitchell, the Secretary of the Zoological Society of London, became the purchaser of several lots—viz., lots 98 and 99, male and female bonte-bok, from South Africa, for £51. 72 and 73, male leucoryx from Abyssinia, and female leucoryx from Nubia, for £112; 78, a female sing-sing, from West Africa, for £35; a male harnessed antelope, South Africa, for £37; and several others. Lord Hill purchased a herd of eight Indian antelopes for £85: these animals were bred at Knowsley, being the only herd ever got together in this country. The other principal purchasers were Lord Ellesmere, M. Vechman, of Antwerp, M. Westerman, of the same place; Mr. Atkins, of the Liverpool Zoological Society, and Mr. Thompson, who, it is stated, holds a commission for an Italian Prince. The total proceeds of the day amounted to £1474.

The third day's sale consisted of cattle, sheep, goats, and llamas, and excited comparatively little interest.

The Turkish Government have determined on establishing a system of electric telegraphs throughout Turkey

A vessel from Philadelphia has brought 35 pockets of hops as part of her cargo.

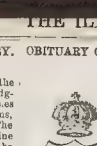
An importation of several packages of eels has just taken place by a vessel arrived from Prince Edward's Island. We are not aware of a previous importation of eels from this distant part of the world.

The total number of foreign passengers who landed in Southampton Docks during September was 5464, showing an increase over the corresponding month of 1850 of 2744. The 5464 passengers brought 10,666 packages of baggage, and comprised 3705 foreigners, of whom 2717 were males, 980 females, and 68 children. The total number of passengers from France (principally from Paris) during the month was 2528

On Friday week, Mr. Bedford, one of the parochial brokers of the St. Pancras vestry, took formal possession of the Kentish station, for about £1000 alleged to be due to the parish by the North-Western Railway Company for poor-rates. The company immediately replevied, and the disputed amount was deposited in the hands of the proper receiver in such cases for the Court of Queen's Bench, in which court it is understood legal proceedings will immediately take place, to try the validity of the seizure and the whole question at issue between the St. Pancras vestry and the company.

On and after Friday (yesterday), three acts of Parliament came into force. All the public acts passed in the late session, numbering 100, are now in operation, with the exception of two. The statutes which took effect on Friday relate to the management of the Woods and Forests, to the paving, &c., of the Crown estates, and to the Railway Commissioners. The two acts not yet in force are in respect to steam navigation and appointments to Government offices.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.



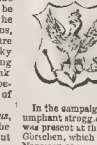
PRINCE WILLIAM, OF PRUSSIA

PRINCE FREDERICK-WILLIAM-CHARLES of Prussia was the son of Frederick William II., the brother of Frederick William III., and the uncle of the present Frederick William IV., all Kings of Prussia. Prince Frederick William Charles, or, as usually called, Prince William, was born at Potsdam, the 3d July, 1783. Having adopted the profession of arms early in life, he became a distinguished leader in those wars which his country maintained so gallantly against Napoleon. He served in the army during the war with Austria, which terminated disastrously at the battle of Jena. In the action at Auerstadt, which preceded that battle, the Prince led an attack of cavalry, and had his horse killed under him. In 1808 he undertook a mission to Paris, to endeavour to procure from Napoleon some diminution of the heavy burdens he had imposed on Prussia by the terms of the treaty of Tilsit.

In the campaigns of 1813 and 1814, the period of Prussia's glorious and triumphant struggle against France, Prince William was incessantly active, and was present at the battles of Katzbach and Leipsic. In the action of Gross-Gorschen, which checked the advance of a French corps on Berlin itself, while Napoleon commanded at Dresden, the Prince, at the head of the Brandenburg Cuirassiers, repulsed a French detachment, and again had a horse shot under him. He afterwards commanded a brigade, then a division under Marshal York, and was at the battle of Laon during the advance of the Allies on Paris, and in the last conflict before the French capitul. At Waterloo he commanded the reserve cavalry of the 4th corps of the Prussians. During the long period of peace that followed 1815, Prince William was three times commandant of the fortress of Mayence; in 1830 he was Governor-General of the Rhine provinces.

Prince William married, the 12th of January, 1826, the Princess Amelia Mary Anna, daughter of the late Louis William, Landgrave of Hesse Homburg, by whom (who died the 14th of April, 1846) he had two sons and two daughters. The daughters are, Mary, the present Queen of Bavaria, and Elizabeth, the consort of Prince Charles of Hesso. One son of Prince William, Prince Adalbert, on y survives. The other son was the gallant and lamented Prince Waldemar, the hope of Prussia, who fought in India in our armies against the Sikhs, and who died in 1849, in the flower of his youth and fame.

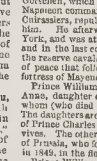
Prince William himself departed this life, at Berlin, on the 29th ult.



CHARLES CECIL COPE JENKINSON, THIRD EARL OF LIVERPOOL, G.C.B.

With this nobleman expire the Earldom of Liverpool and the Barony of Hawkesbury, conferred by King George III. on the Lord Liverpool's father, Charles Jenkinson, the well-known statesman of that Monarch's reign, and rendered still more conspicuous by his half brother, the late Earl, to love the First Lord of the Treasury.

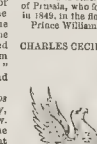
The Peer whose death we have recorded was created Baron Hawkesbury and Earl of Liverpool in Grinstead in Parliament previously to his accession to the family honours; and subsequently was Lord High Steward of the Household from September, 1841, to July, 1846. His Lordship was born 26th May, 1784; and married, 19th July, 1810, Julia Evelyn Bligh, only daughter and heir of Sir George Augustus William Shuckburgh Evelyn, Bart., and by her (who died 8th April, 1814) had issue three daughters. Catherine Julia, married to Colonel Francis Vernon-Harcourt; Selina-Charlotte, married, first, to Viscount Milton, and, secondly, to George Sevile Fuljambe, Esq., of Osberton; and Louisa-Harriet, married to John Colos, Esq., of Woodcote, Shropshire. Lord Liverpool's death, which was awfully sudden, occurred at Buxted Park, on the 31st instant.



GEORGE WILLIAM STAFFORD JERNINGHAM, LORD STAFFORD.

THE LORDSHIP AND VENERABLE Lord Stafford departed on the 4th inst. at Hampton Court. He had completed his 92th year.

His Lordship, the eldest son of Sir William Jerningham, Bart., of Cossy Hall, Norfolk, by Frances his wife, daughter of Sir Henry Arundell, Baron of Wardour, became next in succession to the Baronet at the decease of his father, 14th August, 1809, and succeeded to the ancient barony of Stafford, after the reversal of the fatal attainder of Sir William Howard, Viscount Stafford, the House of Lords resolving (6th July, 1849) that "Sir George Jerningham had made out his claim to the title, dignity, and honour of Baron Stafford, under certain letters patent bearing date 12 Sept., 16 Charles II." The descent came to the Jerninghams through the marriage of Elizabeth, daughter of Sir Henry Stafford, second daughter and heir of Francis Plowden, Esq., by Mary his wife, granddaughter of Sir William Howard, the attainted Viscount. The paternal ancestor of the Jerningham family is stated to have been originally from Scotland. Lord Stafford married, 24th December, 1799, Frances, youngest daughter and co-heir of the late Edward Sulyarde, Esq., of Haughley Park, Suffolk, and had by her (who died 14th November, 1824) six sons and five daughters. Of these, the eldest, Henry Valentine, is now Lord Stafford; and of the latter, the eldest, Charlotte Georgiana, is wife of Lord Lovat. He married, secondly, 29th May, 1836, Elizabeth, daughter of Hugh Gough, Esq., of Maryland, and sister of the Duchess of Leeds and the Marchioness Wellesley.



REAR-ADMIRAL SAMUEL LESLIE.

THE death of this gallant naval officer occurred recently. He was the youngest son of the Venerable Edmund Leslie, Archdeacon of Down, by Eleanor his second wife, daughter of George Parris, Esq., and grandson of the Rev. Peter Leslie, Rector of Aberchill, county Antrim, whose sister Penelope, wife of E. F. Stafford, Esq., was great grandmother of the Duke of Wellington. Peter Leslie, Rector of Aberchill, and the Admiral deceased, were a branch of the noble stock of Rothes.

The long, unwearied, and efficient services of this distinguished seaman range over a very eventful period. O'Byrne, in his "Naval Biography," devotes considerable space to their detail, and to their excellent work we refer for minute particulars. It will suffice for our purpose to state that Samuel Leslie, who was born in 1779, entered the navy in 1793, that he served for many months at the blockade of Brest, that he fought as master's mate in the

Bellerophon, at the battle of the Nile, August, 1798; and that he was subsequently, in the same year, by Lord Nelson, acting lieutenant of the *Success*. While with that vessel, Mr. Leslie took part in the blockade of Malta, assisted at the capture of *La Généreuse*, and was on board when she was herself taken by M. Gantesaume's squadron. He was soon exchanged, and quickly entered on active duty. In 1809, he gained distinction by his daring and judicious conduct in the expedition, conducted by Duncan Wauwerkin and Colonel Lionel Smith, against the pirates of the Persian Gulf. In 1812 he obtained post rank, and, in 1813, was again conspicuous for his gallantry in an attack upon the pirates of Borneo, when he was slightly wounded in each leg. Shortly after, Captain Leslie was appointed, by order of the late George Canning, in the re-establishment of Negor Ordeen on the throne of Pasoor, to the command of the *Tchero*, he became Flag-Captain to Sir Samuel Hood [illegible] 1831, he was Inspecting-Commander in the Coast Guard. His advancement to be Rear-Admiral bears date 1st October, 1846.

Admiral Leslie married, in September, 1837, Martha, only daughter of the late George Vaughan, Esq., the descendant of an ancient Welsh family.

HENRY ST. JOHN FOURTH, VISCOUNT BOLINGBROKE.

THIS nobleman died on the 1st inst., at North College, Elgin, the residence of his daughter, the Hon. Mrs. Shawe. He was born in March, 17—7, and married, 3d June, 1812, Maria, second daughter of the late Sir Henry Paulet St. John Mildmay, Bart., by whom (who died in 1836) he had six children, the eldest of whom being Henry, now Viscount Bolingbroke.

The deceased Peer was son of George Richard, third Viscount, by Charlotte his wife, daughter of the Rev. Thomas Collins, and grandson of Frederick Viscount St. John, who succeeded to the title of Bolingbroke at the decease of his uncle, the celebrated Secretary of State to Queen Anne.

THE COUNT DE REVENTLOW.

FREDERICK DETLES, Count de Reventlow, had been connected with diplomacy from a very early age, and had filled the minor office of *attaché* at some of the leading Continental courts. He was born in the November of 1791, being the younger son of a Danish nobleman of distinction, who for many years was Minister of State in his native country. His mother was also connected with the Danish nobility.

The first important diplomatic appointment which the subject of this notice held was that of representative from the King of Denmark to the Brazilian Court. His next mission was that of Danish representative at the Court of Vienna; from the latter place he was transferred to Lisbon. In 1841, his Excellency was made Danish Envoy and Minister Plenipotentiary to the Court of St James's, and he occupied that position most worthily up to the day of his death.

Count Reventlow married, many years since, a Danish lady of rank, and by her leaves issue a son, the Count Alfred Reventlow, [illegible], and three daughters, viz. the Countesses Hilda Malmborg, [illegible] and Ingeborg.

The Count's unexpected demise—on the 5th inst., at the Star Hotel, Glasgow, while en route to Dunglass, to visit Sir John Hall Bart.—will be most deeply regretted.

NAVAL AND MILITARY INTELLIGENCE.

STAFF APPOINTMENTS ABROAD.—The following officers have recently been appointed to [illegible] Lieut.-Colonel Foot, to be aide-de-camp to the Governor of the Cape of Good Hope; Lieut.-Colonel Reid, R.E., C.B., Lieut. Count Rivarola, 67th Foot, to become fort adjutant at St Lucia. Ensign Gilchrist, her Majesty's 91st Foot, to be aide-de-camp to Major General Sewell, C.B. at Madras. Captain Mowbray, 73rd Foot, has been appointed deputy assistant Adjutant-General at Kaffraria. Captain Founce, 73rd Foot, has become Major of brigade in Kaffraria. Lieut.-Colonel Cole, R.E., has become commandant of Cape Town. Lieut. Hopkins, 45th Regiment, has become one of the aides-de-camp to the Governor of Ceylon. Lieut. Wilson, 3rd West India Regiment, is now fort Adjutant at Sierra Leone.

THE VACANT COLONELCY.—The Colonelcy of the 15th Infantry regiment, which has been vacant since the 31st August, is, we believe, to be given to Lieut.-General Sir Howard Douglas, the present Colonel of the 60th Regiment, and Lieut.-General Sir John Hanbury, K.C.H., is to succeed to the 99th.

THE RECENT ORDER FOR ARMY-SURGEONS TO [illegible]—Our readers will be glad to hear that the recent order for the [illegible] to the effect that any medical officers were themselves to mark deserters with the letter "D," has been suspended by the authorities—a step which, we trust, will lead to the total abrogation of the obnoxious order.

THE CANADIAN REGIMENTS.—It appears, from the evidence before the Committee on Army and Ordnance expenditure, that no less than 12 commissariat chests, with the usual staff of officers, are stationed in Canada. It is considered by the said committee that there is no necessity for so large a number, and that therefore some reduction in some extent should take place.

TROOPS FOR AUSTRALIA.—It is understood that Governor Fitzroy has intimated to Earl Grey the necessity for reinforcement of troops [illegible] of which is to be borne by the colony. The three regiments [illegible] service are the 71st (1st battalion), 58th, and 80th, but we have reason to [illegible] that no relief regiments will be sent, at least until the receipt of further information from the colony.

DESERTION IN THE ARMY.—On Wednesday the new military regulation for the more effectually branding deserters from the army came into effect also, that, as Commodore of the Royal Yacht Squadron, he thought he might be permitted to respect to the roast of "The Navy." He believed that the members of the Royal Yacht Squadron had done a great deal towards improving the naval architecture of the country. By the spirit of competition which they had introduced into the vessels which they had built, they had given a stimulus to shipbuilding in the Royal Dockyards, which, as he had frequently heard from naval men, was greatly needed. The Royal Yacht Squadron possessed 18,000 tons of shipping, and kept 1700 of the best seamen constantly in their employ.

The Cavalry Barracks at Govan have been purchased from the Government by the parochial board of that place, for the purpose of being converted into a workhouse. The price was £8000.

Letters from Cette mention the arrival of Admiral Dundas at that place on the 30th ult., and his departure on board the *Spiteful* to visit Sir W. Parker at Barcelona.

THE ARCTIC EXPEDITION.—The *Resolute*, Captain Austin; the *Assistance*, Captain Ommanney; and the *Intrepid*, Lieutenant-Commander Cator, left the Thames at Woolwich on Monday. The stores of the vessels employed under Captain Austin in the Arctic Expedition were paid off at that port on Thursday.

ANNUAL REPORT OF THE REGISTRAR-GENERAL.

The twelfth annual report of the Registrar-General of Births, Deaths, and Marriages in England was published on Thursday. The general result of the last year may be thus stated:—

The total number of marriages solemnised during the year ended 31st December, 1850, was 141,883; of which 122,182 were according to the rites of the Established Church, and 18,701 of miscellaneous denominations. Whilst marriages have been contracted by 19,556 bachelors, there have been but 12,94[illegible] widows married; these latter appear to have been equally divided between bachelors and widowers, whilst 13,155 widowers were married to spinsters. Of the total number of persons married with *marks*, 64,077 were men, and 55,135 women. The December quarter appears to be most prolific of marriages; next to which is the June quarter, whilst the March quarter is the most unfruitful.

The births for the year comprise 295,168 males, and 283,001 females: total, 578,169. The abstract of illegitimate births shows 20,049 males, and 19,285 females, total 39,334. The registration division, with a population of 2,361,640, contributed 2848; the north-western, or chief manufacturing division, with a population of 2,487,351, furnished 5786; whilst the south-eastern (agricultural) division, having a population of 4,289,893 souls, contributed 3219; and the eastern (agric ltural) division, with a population of 1,171,076, furnished 3043

The registry of deaths shows 221,801 males, and 219,052 females—together, 440,853. Of these the largest number appears in the three months ending on the last day of December, viz. 135,338; whilst the lowest number, 97,054, is in the December quarter.

WILL OF THE LATE EARL OF CLARE.—Probate of the will and two codicils of the Right Hon. John Earl of Clare, of Ireland, and Baron Fitzgibbon of the United Kingdom, has been granted by the Prerogative Court of Canterbury to his sister, the Right Hon. Lady Isabella Fitzgibbon, the executrix for life, and to the Right Hon. Lord Norbury, appointed in large portion of his property, the house at Lowndes-square, and the furniture, together with his carriages and horses, the diamonds which were his late mother's, and an annuity of £1,333 for life upon his estates, canals, and towns in Tipperary and Limerick. The furniture at Mount Shannon to be heirlooms. The last codicil, bearing same date as the will, 7th April, 1851, is entirely in his Lordship's handwriting, leaving legacies to many of his relations and friends. There are annuities and legacies also to his servants.

BEQUESTS.—Miss Anna Sewell, of Beacondale, Norwich, lately deceased, has left to the British and Foreign Bible Society, £50; London Missionary Society, £50; Norwich Dispensary, £50; Norwich Poultry Chapel, London, £50; and to the Chapel in Prince-street, Norwich, also £50. The late Mr. Stocker, Esq., of Fenchurch-street and Streatham, who has lately died possessed of £30,000 personalty, bequeathed the bulk of his property in York, has left £2000 to the poor of the village of Sewton, near Scarborough.

Wills of the following distinguished persons have been lately admitted to proof:—The Lady Anne Hamilton, sister to Sir R. Paterham, General Sir Alexander Haskett, Sir Henry Fletcher, Sir Henry Watson, Sir John Jones, Mr. Hon. Lady Stuart, and John Kidd, Esq., of Oxford, M.D.

HEALTH OF PROFESSOR WILSON.—Our readers will regret to learn that, in consequence of the continued ill health of Professor Wilson, the renowned "Christopher North," he has been obliged to make arrangements for dispensing with the delivery of his lectures on moral philosophy in the University of Edinburgh at the ensuing session. Principal Lee is to undertake the duty of the learned Professor.

ROME AND ANCONA RAILWAY.—The Roman Government has sanctioned a per cent. upon the capital of twenty millions of Roman scudi (four millions of francs) for the Rome and Ancona Railway. The line which is to connect Tuscany with Bologna and the Lombardo-Venetian provinces is also to be commenced without delay.

FRENCH EMIGRANTS TO CALIFORNIA.—A religious service, on the occasion of the approaching departure of the first expedition of French emigrants to California, under the direction and control of the Government, with the funds entrusted to and the lottery of the golden ingots, was celebrated on Sunday, at the church of Notre Dame, at Havre, when prayers were offered for the success of the expedition. The number of emigrants to be taken out in the *Mulhouse* is 165, of whom 80 had arrived at Havre [illegible] to consult their friends or relatives [illegible] spirits. They are [illegible] the care of [illegible] to accompany them [illegible] by his wife, son, and daughter. They are [illegible] and [illegible] the ability of the colony to [illegible] on their arrival in California. They will be [illegible] time to make their arrangements before they quit definitively they will take with them the bedding which had been furnished for their passage, a good stock of clothes, and the tools that they may require for the occupation which they intend to follow. The Prefect of Police has himself paid a visit to Havre, to see that everything necessary had been done for the comfort of the emigrants.

Some workmen, who were lately digging in a sort of bog in New Jersey, came upon the bones of some enormous animal. After much labour they succeeded in exhuming a tusk measuring 16 feet in length, and weighing 65 lb.; some teeth weighing over 7 lb. each, 10 inches long, and 2½ in circumference; and a forelog of shin bone, measuring 3 feet 6 inches from the fetlock joint to the knee. From these specimens we presume the remains to be those of some monster of the Mastodon genus.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The *Thomas Arbuthnot* arrived in the Thames last Sunday night with the first cargo of Australian gold, specimens of which were the next morning exhibited in many of the coffee-houses. The largest lump, 4½ lbs., is consigned to Mr. Dunbar, the shipowner. The actual arrival of the gold is likely to give a greater impulse to transactions with Australia, preparations for which are going on with the greatest activity.

The barque *Cazone*, Captain Waterfield, from City Point, Virginia, with a cargo of tobacco, said to be the most valuable ever shipped in one vessel, struck on Long Pier Sand, on the north coast of the Lizard, at ten o'clock on last Sunday morning, and became a total wreck. The crew were saved by the Liverpool and Margate steamboat.

Mr. Labouchere, according to the latest accounts from Madrid, was at the Escurial. He had been introduced by Lord Howden to Bravo Murillo as a distinguished traveller.

A singular fraud has been discovered in Berlin. A man insured his life for £1000 at the Globe Office, in London, and at an office in Copenhagen for a considerable sum; perhaps also in other places as well. He then came to Berlin to his brother, a tailor, and formed with him a plot for defrauding the insurance companies by feigned death and interment. A medical man was bribed to give false certificates, and the money was claimed and received. But it appears got wind of the affair, and on opening the grave found only stones in the coffin, which had been buried in all form. The pretended deceased is not to be found, but the brother and the doctor have been committed to prison.

Viscount Gough has made a purchase of the beautiful marine seat, St. Helen's, which he has for some time occupied, in the neighbourhood of Maidstone, Dulwich, where his Lordship means to reside a good deal in future.

Mr. Busvargus Toup Nicolas, son of the late distinguished Admiral Toup Nicolas, C.B., has been appointed Consul in the society of Leeward Islands, in the Pacific, to reside at Tahiti.

Mr. John Augustus Longworth has been appointed Consul at Mohastir, in Roumelia.

The Earl of Zetland, as Grand Master Mason of England, laid last week the foundation-stone of the St. George's Hall, Bradford, with imposing Masonic ceremony.

His Excellency Lord Bloomfield, our new Minister at Berlin, accompanied by Lady Bloomfield and suite, arrived in town from the Continent on Saturday. His Lordship shortly proceeds to the Prussian capital, for Hamilton Seymour having replaced him at the British Embassy at St. Petersburgh.

We read in a Madrid letter of the 26th ult.:—"Yesterday, as Queen Isabella was passing through the street of Toledo, she met a procession proceeding with the Host to the house of a sick person. She immediately alighted, and insisted upon the priest entering her carriage. She followed on foot; and, notwithstanding her advanced state of pregnancy, accoided the streets with the priest to the bedside of the dying patient."

The Duchess Dowager of Cleveland has purchased the Earl of Derby's family mansion in Grosvenor-square, which has been for some years occupied by the Hon. Colonel and Mrs. Stanley.

The President of the French Republic has, on the demand of the Minister of Foreign Affairs for Belgium, conferred the Cross of the Legion of Honour on Baron Beguine, who served in the Imperial armies.

Among the papers lately printed by order of the House of Lords, was one giving an account of the number of causes tried on all the circuits of England and Wales at the Spring and Summer Assizes for the last seven years, and also an account of the last Spring Assizes. On the Home Circuit it appears there were, on the last Spring Assizes, 111 causes; on the Midland Circuit, 41; on the Norfolk Circuit, 14; on the Northern Circuit, 75; on the Oxford Circuit, 63; on the Western Circuit, 35; and on the North Wales and Chester Circuit, 19. These returns show a great diminution of business, and on the last Summer Assizes the business was further diminished. As the County Courts have now power to £50, and to any amount by the consent of parties, the business of the circuits, it is expected, in civil matters, will be materially decreased.

A seal, weighing upwards of 12 cwt., was shot last week, near Clare Island, off the coast of Mayo, by a gentleman, named Fair, and exhibited in Castlebar as a great sight.

A pier is forthwith to be commenced at Queenstown, Cork, the consent of the Lords of the Admiralty having been obtained for its construction.

A heavy rate is now being levied off the proclaimed district in and around Lutterkenny, to defray the expense of the increased police force stationed there, in consequence of the murder of Moore, the bailiff, and the outrage perpetrated on Mr. Richards, Esq., whose horse was shot and himself waylaid, robbed, and severely beaten. In some cases the impost now in collection by the constabulary is actually more than double the rent, and thus it is that a whole community is made to suffer by the acts of a gang of reckless ruffians.

An association has been formed by the iron and coal masters of South Staffordshire, for the establishment of annual prizes in the national schools connected with the mining population. The examinations will be conducted by Her Majesty's Inspector of Schools, in the months of February and March each year, at the same time and in the same manner as the examinations for pupil teacherships.

A M. Pilatre, of Paris, lately deceased, has left a legacy of £400 to any person who shall invent the means of guiding balloons in a straight line.

The members of the Stock Exchange have subscribed near £1000 for the widow and family of the unfortunate Mr. Ingle Rudge, whose death by suicide we mentioned last week.

According to a letter from Vienna in the *German Journal of Frankfort*, the Austrian Government, to mark its dissatisfaction at the release of Kossuth and his companions, has determined to demand satisfaction from the Ottoman Porte for the persecution of the Christian population of Bosnia and Herzegovina; and has resolved to enforce the demand by assembling a body of troops on the frontiers of Turkish Croatia and Transylvania.

Information was received by the Commissioners of Police on Saturday last, of a robbery which had been perpetrated on the previous day at Brayden, Wilts, where the dwelling-house of a farmer was broken open during the night, and amongst other property the following money was stolen:—112 £5 bank (Gloucester) notes, 33 old guineas, £7 10s. in gold, £5 in silver, five pounds' worth of old silver coins, a large number of promissory notes, a £50 note of the Devon and Wilts Bank, a large quantity of copper money, and five shillings' worth of farthings. A detective officer has been sent down to investigate the affair

At a recent sale by auction of the narrow strips of land not required by the corporation in making the new street from Cheapside into Market-street (Leeds), the extraordinary price of £17 a yard was obtained. One lot, containing 160 yards, sold for £2650; and another lot, of 141 yards, fetched the sum of £2360. It is mentioned, as a contrast, that, at Great Horton, which is within the borough, and where buildings are much wanted, a quantity of building ground has been sold this week as low as 8d. per yard.

Several gay travellers, in the Pyrenees and north of Spain, are now seeking the fashionable watering-place, Biarritz, near Bayonne; among them are the Marquis and Marchioness of Normanby, Lord and Lady Belhaven, Mr. E. and Lady Charlotte Denison, Mr. Labouchere, Lord and Lady Rodnock and family, Mr. and Mrs. Danners Danners, Mr. and Mrs. H. Ellerton, and Captain and Mrs. Boyle.

The commissioners of Belfast resolved, on Tuesday (last week), that, in future, iron (in pigs), coal, and salt shall be free of export harbour dues in ships or steamers.

Last week, two boats, which together had, we are informed, but a very few years ago, cost their proprietor £1000, were sold by public auction in Horncastle for little more than £50, being at the time of sale in very fair repair. So cheap has been the blow the inland navigation trade has received by railway competition.

The murrain borealis of Monday night last appears to have been observed in many parts of England.

Mr. Thaddeus Wells, of Stamford, whilst angling for perch in a stream near Wansford, on Tuesday last, hooked and landed a pike weighing between five and six pounds, and measuring nearly three feet in length.

Signor Galli, pro-Minister of Finance at Rome, has issued a notification, dated the 26th ult., declaring that the "boni" (paper money) of the late provisional and republican governments, representing no nominal value of 60f. and of 30f. respectively, shall remain in circulation until the 15th instant, after which period they may be exchanged at the treasury until the 25th, at the exhibition of which term they shall be of no value whatever.

At a meeting of the Board of Guardians of the union of Gort, county of Galway, Lord Gort presiding, it was determined on Tuesday, week, to use the Board of Ordnance for penalties under the 11th and 12th Vict., cap. 47, for not having served upon the Poor-law Guardians the notices prescribed by these acts before the eviction of tenants in possession. It appears that, by an order from the Commissioners of the Encumbered Estates Court, 53 evictions took place lately upon some property in the union, lately purchased in that court by the Board of Ordnance, for the purpose of barrack accommodation, and that no notice had been served of those proceedings on the guardians.

A lady in Bloomer attire made her appearance among the crowds of visitors at the Great Exhibition on Friday; and the new costume and the fair wearer of it, as may be imagined, attracted no small share of attention.

The Russian journals state that on the 28th of July last, the day after the eclipse of the sun, a meteor, about a foot and a half in diameter, was observed at Signach, in Transcaucia, that it gave a light equal to that of day, and that sparks resembling fi ing stars fell from it.

The *Bury Post* mentions as somewhat remarkable that the new Lord Mayor of London and the Lord Bishop of London should be natives of the same street in the town of Bury, being so nearly contemporaries, that the Lord Bishop and the Lord Mayor's next brother were born on the same day.

The extensive works for supplying the city of Norwich were last week opened with consid rable ceremony, and the Edinburgh Water Company's great reservoir at Castle-hill for the continuous supply of Edinburgh has just been completed.

A strange accident, attended with fatal consequences, occurred on Monday last at Lanthony-bridge, Gloucester. A young man, named Charles Smith, aged 20, was passing over the bridge, when his attention was attracted by some models of sloops that were being carried along by another person at the time the bridge was being swung open to admit a vessel. The deceased kept walking on, at the same time looking back at the models, and not perceiving the bridge open fell into the water and was drowned.

CHESS.

TO CORRESPONDENTS.

BETA.—If you cannot discover the move when your King was first placed in check, the best way is to begin the game again.

EDINBURGH.—A King is not allowed to castle when he is in check.

MAGUS.—The Salmagundi, and best made Chess-board, we have ever met with, are those called the "Torso Chess-boards," made by Meddle, of Leadenhall-street. They form an elegant drawing-room ornament, and will last a century. The most beautiful folding board is that manufactured by Lonsdale, of Piccadilly, a recent copy the Staunton Chessmen.

M. D.—Quite right.

T. A. HAMILTON.—You are wrong as a reference to the solution we gave of Problem No 401 will convince you.

FARNHAM.—We can take no notice of what is not sent to us for publication.

HIBERNIUS.—The "Analyse Nouvelle" of Philidor, is the very worst one of the most complete and valuable treatises on the game ever published, and most of it false. The analyses are in the hands of Williams, of Birmingham, the foreign lecturers, and we hear are making 10s 6d. for the two volumes. 3 The Illus work by Nicholls is no longer procurable. 3. We must refer you to the "Asiatic Researches"

K. PARR.—The true Number of "La Régence" which has reached us is that for July. We are consequently deficient in the August, September, and October Numbers.

J.—R. H. G—, Paris.—Communications have been forwarded by post

CONSTANCE.—Petroff's entertaining game, to illustrate the last Hungarian campaign and the surrender of Görgey, appears in the present month's number of the *Chess Player's Chronicle*.

C. PARZO JULIO, Buenos Ayres.—We are sorry to say we can see nothing answering to the information you have already gained. The origin of Chess is involved in an impenetrable obscurity

SAPIENS.—It must not enable your King over a square which is attacked by an adverse piece

H. H. CASTLE.—there must be some error in your diagram or solution. You should always give each move as well as his adversary's

PATIENCE.—The match between Mr Löwenthal and Mr Williams is still unreconciled. At the score, we are informed, now stands as follows—Löwenthal, 5; Williams, 4; drawn 1

BETA.—Any old play the real game given in Sarpina No 681. 2. There appears to have been some error in the numbering of the diagram

SOLUTIONS OF PROBLEM No. 402, by St Edmund, Conway, F. G. R. M. P., Mitre, Rev S. L., Rev G. M., Bombardier, Mechanic, A Poor Man, Laverock, Sailor, Furdyen, J. F. C. R., L. D., By Fig. a Jack of Barrowsley, Beath Rosa

SOLUTIONS OF ENIGMAS, by Vida, M. P., Gregorius, Nemo, Aliquis, Rob Roy, Jack of Shrewsbury, Beetle, Beata, are correct. All others are wrong

SOLUTION OF PROBLEM No. 401.

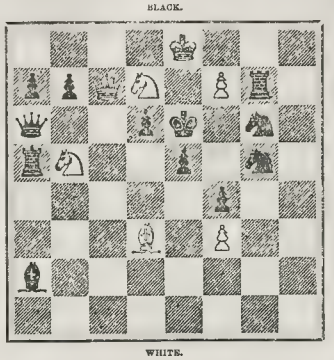
BLACK.	WHITE.	BLACK.	WHITE
1. Kt to K sq (best)	R takes R	3. P to K sth (be-	K to Q 4th (dis
2. P to K 7th (best)	R to Q 8 6th	coming a ch)	ch)

And White must win by Queening his Pawn next move.

PROBLEM No. 403.

By MR. GAMBLE, of York.

BLACK.



WHITE.

White to move, and checkmate in four moves.

GAMES IN THE CHESS TOURNAMENT.

GAME 2.

BETWEEN MR. ANDERSSEN AND MR. WYVILL, M.P.

(Irregular opening.)

BLACK (Mr. W.)	WHITE (Mr. A.)	BLACK (Mr. W.)	WHITE (Mr. A.)
1. P to Q B 4th	P to K 3d	26. K to Q R sq (e)	K R to Q sq
2. P to K 3d	P to Q 4th	27. R to Q 3d	R takes R
3. P to Q 4th	Kt to K B 3d	28. B takes R	R to Q B 6th
4. Kt to Q B 3d	P to Q B 4th	29. B takes Q R P (f)	R takes Q Kt P
5. Kt to K B 3d	Kt to Q B 3d	30. B to his sq	R to K B 6th
6. P to Q R 3d	P to Q R 3d	31. P to K R 4th	R to Kt 7th
7. P to Q Kt 3d	P to Q Kt 3d	32. B to K Kt 2d	B takes B
8. B to K 2d	B to Q Kt 2d	33. K takes B	R to Q Kt 2d
9. Castles	Kt to Q B sq	34. R to Q B 4th (g)	K to B 2d
10. B to Q Kt 2d	P takes Q P	35. R to K R 5th (h)	K to Kt 3d
11. K Kt takes P	Kt takes Kt	36. P to K Kt 4th	P to K 3d
12. Q takes Kt (a)	B to K 2d	37. R to Q R 5th	R to Q B 2d
13. Q R to Q sq	P takes P	38. K to Kt 3d	R to Q Kt 2d
14. Q to K 4th (b)	Q to Q B 2d	39. P to K B 4th	R to Q B 2d
15. B takes P	P to Q Kt 4th	40. R to Q R 6th	K to B 2d
16. B to Q 3d	Kt to K 5th (c)	41. P to Kt 5th	R P takes P
17. Q to K Kt 4th	Kt takes Kt	42. R P takes P	P takes P
18. Q takes K Kt P	R to K B sq	43. P takes P	R to Q B 5th
19. K to Q B sq	P to Q Kt 5th	44. R to Kt 3d	R to Kt 3d
20. P takes P	B takes Q Kt P	45. R to Q R 5th	R to K R 5th
21. B to Q B 4th (d)	P to K B 3d	46. R to K 5th	R to Q R 5th
22. Q takes Q	R takes Q	47. P to K 4th	R to Q B 8th
23. B takes Kt	R to K Kt sq	48. R to Q Kt 5th	R to Q R 2d
24. P to K Kt 3d	R takes B	49. K to B 4th	R to K 2d
25. R takes B	K to his 2d	50. R to Q Kt sq	R to Q R 2d

Drawn Game.

(a) It is usual to take with the Pawn, but Mr. Wyvill's innovation has an advantage in keeping the diagonal free for the range of the Q's Bishop.

(b) Well played.

(c) It comes at first view impossible for Black to avoid the loss of a piece at this crisis; yet Mr W. contrives to escape not only without loss, but with the advantage of position

(d) An excellent combination. If White had chosen to play away the Kt he loses his Queen.

(e) We should rather have taken the K P at this moment. In that case the following is a likely continuation:—

BLACK.	WHITE.	BLACK.
26. B takes K P	R takes K Kt P (ch)	28. B to Q B 4th
27. R P takes R	R takes R	

And Black has not only a Pawn more, but a better position.

(f) This was injudicious. He should have reached the Rook first by playing B to Q B 4th, and then have brought up his King. White's Pawns are so badly supported, that careful play must win, with a think have given Mr Wyvill this game.

(g) Was not this lost time? The great object for Black in this situation, it appears to us, should be to push forward with the King as much as possible.

(h) We cannot see the utility of this play; one move of the King at this juncture is worth two of the Rook

CHESS ENIGMAS.

No. 683.—By W. J. JOHNSON, Augusta, Maine, United States.

White: K at Q B 7th, Q at Q R 3d, Bs at K R 6th and K B 3d; Kt at K R 8th, Ps at K R 7th and Q Kt 5th.

Black: K at K B 3d, Q at K B 7th, Kts at K R 4th and Q Kt 2d, Ps at K Kt 4th and K B 5th.

White to play, and mate in three moves.

No. 684. *La Régence.*

Black: K at K R 5th, Q at K R 4th, Kt at K B 4th, P at K 3d.

White: K at K B 4th.

White, playing first, mates in three moves.

No. 685. *La Régence.*

White: K at K R sq, Q at Q 7th, Kts at K 5th and Q 5th, Ps at K Kt 2d, Q Kt 3d, and Q R 5th.

Black: K at Q B 4th, B at K 5th; Ps at K R 7th, K Kt 6th, and Q Kt 5th.

White to play, and mate in three moves.

The *Princess Royal*, from Glasgow, for Liverpool, when about 35 miles from the Isle of Man, was on Sunday last struck by a heavy sea on the starboard quarter, which carried away the bulwarks, mizenmast, a cuddy, skylight, and deluged the cabins with water, and rendered the rudder unmanageable for a short period. Captain Cumming was severely wounded on the scalp, and had three of his ribs fractured. The other mate and the steersman also sustained serious injury. Site had upwards of 200 passengers on board, all of whom arrived at Liverpool safely

The arrangements for carrying out the new system of protecting the fisheries of the Tweed and its tributaries, lately resolved upon, are now nearly perfected. Mr. Alexander Mitchell, of the London detective force, has been appointed superintendent of the Tweed police force, with six sergeants under him, and an efficient force of constables, with power to call out assistance. The Duke of Roxburgne, at his own expense, provides a riding horse for the superintendent.

THE GREAT EXHIBITION.

TO-DAY the doors of the Crystal Palace close to the public, and the most interesting fact of modern times may be said to be consummated, its last days having been a series of triumphs astounding even to those who confidently expected great things at the conclusion. The events of the past week have effectually proved the capacity of the Building and its fitness for the purpose for which it was erected. Under the pressure, the incessant motion and fluctuations of upwards of 100,000 persons, not a point has been found defective; and those who supposed that 20,000 persons would try its strength severely, have now to consider how it has hap, ened that more than five times that number has had no effect upon its stability. Still more astonishing is the fact, that such numbers as flocked to take a farewell view of the marvels of the industrial kingdom of the nations, or, perhaps, unfortunately for themselves, to see it in bulk for the first and last time, should have passed amidst the various fragile, and, in too many instances, recklessly exposed articles, without any damage but that which might have arisen in the smallest crowd, and that anything in the shape of wilful or even careless destruction has been unknown. The moral beauty of this is greater than that of the marvellous collection which this mass of people has been attracted together to behold, and will be recorded as a dignified assertion of the rights and privileges of the masses, arising out of their fitness to be entrusted, to have admission where it has hitherto been the fashion to exclude them; and nothing has more thoroughly proved the truth of the statement made by the late Sir Robert Peel, that it was not the working classes or the mas es of the people who handled and damaged articles of taste and virtù which they were permitted to visit, but the vulgar rich. The annals of the Crystal Palace will record this fact beyond all doubt.

Much speculation had been rife, as to whether the numbers during the past week would reach the highest point which had been previously attained, 74,000. It was even dared that probably 80,000 might be reached; but, to the astonishment of everybody, the numbers wh poured into the Building on Monday were beyond all former precedent: 107,815 persons entered during that day, and the sum of £5175 10s. was taken at the doors in shillings; and, on the following morning, 15 cwt. of silver was taken to the Bank of England. The only approach to anything like irregularity was during a moment of excitement, when it was discovered that the Duke of Wellington was present; and then, but for a rapid and strenuously sustained movement of the police, evil consequences might have ensued; for though the Duke might have forgotten that he was a great man, the people had not; and, as there was an immense number of provincial visitors present, all anxious to catch a glimpse of him, as a matter of course a rush took place, a barrier was broken down, ladies and children thrown down, the latter being smashed and the former very much alarmed. In a few minutes all was remedied by the tact of the police, and the retreat, for once in his life at least, of the Duke, who quitted the Building amidst the cheers of the people both inside and outside, and mounting his horse at the south entrance, rode away, having previously passed through the crowd within the Building from the east end. This incident created great excitement for the time, and the gratification of hundreds who had an opportunity to see near and see his Grace was evidently immense. The crowds on leaving the Building at the close of the Exhibition at the evening seemed interminable as they passed homewards. During the day much excitement prevailed in the speculative circles of the city; and the electric telegraph was in active operation, announcing the numbers as they were returned by the police, as heavy bets were pending on the gross amount of 100,000 visitors being reached. On Tuesday, however, the total was still greater, and 109,915 entered the Building; the amount received being £5231 10s. Unfortunately, or fortunately, for those who were within the Building, a very heavy rain set in more than an hour during the middle of the day: this prevented the influx after that period, or still more would have been present.

On Wednesday, 109,780 persons visited the interior, £5283 3s. being taken at the door—no disturbing incident occurred to create the excitement which on such occasions is always to be dreaded. This gives 327,190 visitors in three days, with receipts amounting to £15,689 9s., in shillings only!

On Thursday, the very unfavourable state of the weather was a serious drawback, not only to the numbers, but to the enjoyment of those who had the courage to go through the rain, which fell almost incessantly during the day. Some curiosity was excited by the appearance of several persons in the Bloomer costume, and it was feared that a rust of people which had commenced would prove serious; but the police again managed to prevent any evil consequences. The numbers during Thursday amounted to 90,816. And so closed the last shilling day of the great Exhibition.

The officials have all been busily employed issuing tickets to the exhibitors, to authorise their entrance, with their assistants, to remove the articles after the 15th; those which do not require packing-cases being allowed to be taken away on the 16th, 17th, and 18th; packing-cases being admitted on the 20th.

The uncertainty as to the character of the official closing day, gives rise to numerous speculations as to the nature of the proceedings. That something more than commonly interesting will take place, everybody believes; but until the return of her Majesty and the Prince to town, nothing can possibly be settled. This (Saturday), however, the closing day to the public, and it is really to be hoped that "tolling the knell" of the Great Exhibition will be dispensed with, and the noisy bells silenced for once. Whether it may be possible to extemporise an expressive farewell to so much which has tended to enlighten, instruct, and elevate, remains to be seen. Sure.y, the numerous organs may be brought into requisition; and if it should chance that the members of some of the choral societies of the metropolis should accidentally meet in sufficient numbers in the Building about the time of closing, we should not be surprised to find that they join voices, and lead those of the visitors in the performance of the National Anthem or Hymn, or, perhaps, some appropriate air.

On Wednesday next, the 15th, the closing act, whatever it may be, will take place. This much is certain, that there will be a meeting of the Royal Commission, the Executive Commissioners, the Executive Committee, and the Jurors; and all the exhibitors are invited to attend. The jury reports, or at least the reports on awards, will be presented by Lord Canning, as the chairman of the allied Powers, and will read aloud the names, and honourable mentions, will be fairly and distinct.y announced by means of published lists, in which the object rewarded will be succinctly stated, the reasons being afterwards published in the body of the respective reports. The Foreign Commissioners will receive the award made to the countries they represent in duly arranged lists appertaining to their countries, and the results of exertions of no ordinary character in connexion with the jury department will be finally and for all practical purposes made known. It is not likely that any distribution of medals can take place, as the names of all those to whom prizes are awarded will have to be engraved upon the medals to be given to them. This, of course, will occupy a very considerable period; though we understand that the medals devoted to the juries will be nearly, if not quite, ready for delivery, and may possibly be presented in a collective form. The business of the meeting will be rather a formal dissolution of official ties than anything else, the Foreign Commissioners being the representatives of their respective nations.

As stated last week, the tickets which admit the exhibitors personally on Wednesday, also confer the privilege of introducing friends on Thursday and Tuesday, after twelve o'clock; and we anticipate that two highly interesting *réunions* will take place. Town has already shown symptoms of a revival, in the return of many notabilities and fashionables; and on this occasion, those who have done the work out of which this magnificent display has been organised, will receive a somewhat tardy, but certainly not inappropriate acceptable response to their energy and sincerely trust, that those unavoidable rubbings and collisions which have occurred in so enormous and so novel an undertaking will be forgotten in the satisfactory conviction to which this great work has been brought; that the fruits may appear in the most abundance to remunerate and amply satisfy all parties for the trouble, care, cost, and anx ety which was inevitable; but which, two trust, will be looked back upon with satisfaction in years to come; and that all who have been so actively engaged will have the consolation of knowing that they have not toiled in vain. Nationally, we cannot fail but be large gainers; individually, hundreds will receive encouragement and recognition, which no other occasion could have possibly afforded; and, in the end, such a great step has certainly been made towards the realisation of the aspirations of the best and wisest men of all ages and countries—in laying a foundation amongst nations for a better understanding than has ever before existed.

The foundation stone of Mr. Charles Lennox Peel's mansion, Woodcroft, Sussex, was laid on the 6th inst., by his son (great nephew of the late Sir Robert Peel, Bart.), assisted by Mr. Lawrence and Lady Jane Peel, Dowager Lady Templemore, Mr. C. L. and the Hon. Mrs. Peel, and other friends. The building is to be Elizabethan, as designed by Mr. Watson, of London.

NOVEL PRINTING-PRESS.—Attention has recently been directed to a pinting-press of a novel character, called the Economic Press, the inventor of a Mr. Mann. The peculiar principle on which this machine is constructed is brought to bear by means of a series of mechanical combinations, securing great rapidity and precision of action with much economy of power. One person can, with perfect ease, work off 700 impressions in the hour; and by the aid of steam-power, of course, many more. One engine of two-horse power is able to drive four or five of such presses.

MILK AND ITS ADULTERATIONS.—The *Lancet* having directed its attention to the analyses practised in milk, the result of the examination of twenty-six samples is, though bad enough, not so bad as generally reported and believed; for twelve were found to be genuine, two were deficient in cream, and eleven were found to be adulterated, but in every case the adulteration consisted in water only, the proportion of which varied from 10 to 50 per cent. or one half of the article, and in no instance was chalk or whiting, starch, gum, sheeps' brains or any of the substances said to be used in the adulteration of milk, detected. The names of the parties guilty of adulterating their milk are made known, by which means the public may guard themselves against the impositions, but it may be mentioned that these samples were obtained only of "West End" milkmen. Simple and inexpensive means are pointed out, by which, with a little trouble, persons may ascertain for themselves whether they are supplied with a genuine article or not. It was ascertained in the course of these investigations, that the milk of the afternoon is much superior to that of the morning.

GREAT WESTERN EXHIBITION TRAINS.—The trains from Bristol on Wednesday brought 2560 persons, and from Bath 2000, to the Exhibition.

A FEW DAYS IN THE LAKE DISTRICT.—No. III.

Again we invite the tourist to journey with us in the land of beauty—

> Land of brown heath and shaggy wood,
> Land of the mountain and the flood;

but on this, our Third Route, the invalid, as well as the hale and healthy, may be our companions, for we travel the entire distance by coach: yet those stout of limb may at intervals, if they choose, strike into bypaths and view some exquisite and seldom witnessed scenery, by silent *tarns* and brawling torrents, craggy ghylls, and woody glens—may climb the lofty eminence, and look down on smiling valleys and glittering waters; but as we are booked for the coach—that almost obsolete thing a stage-coach, relic of the olden time—we must mount the box, and so make our *début* on the *stage*.

Jehu has fingered the ribbons, and with the slender thong has cut the triumphal 8, the horn is blown, the ostler has let go the leaders, and now we are clattering along Keswick's stony streets.

Now we are on the Threlkeld road, winding the banks of Greta, and at a distance of 1½ miles out, pass near to the Druid's temple of 48 stones, placed on an eminence, commanding fine mountain views, on to the village of Threlkeld.

> And see, beyond the hamlet small,
> The ruined tower of Threlkeld Hall,

Once the residence of Sir Lancelot Threlkeld, a powerful knight in the reign of Henry VII., and stepfather of "Clifford's heir," the "Sheperd Lord." On the left the bold Blencathara, or Saddleback, rears high his noble summit, his rifted sides streaming with torrents—

> On stern Blencathra's perilous height,
> The winds are tyrannous and strong;
> And flashing forth unsteady light
> From stern Blencathra's skiey height,
> How loud the torrents throng!

On leaving Threlkeld, the large conical mountain called Mell Fell is directly in front, rising like a giant pyramid from the plain; turning to the right, the road skirts its base, and leads to Matterdale End and Dockaray, and thence descends to Gowbarrow Park, where Ullswater and its thousand charms greet the eye (see principal View). Look at the magnificent picture; the bold front of Birk Fell overtopped by the darker summit of Place Fell; beyond, in far distance, are the Red Screes, Scandale Head, Dove Crag, &c. Towards the right are the summits of St. Sunday's Crag and Fairfield, Doly Wagon Pike, Hieaberry Fell, Striding Edge, and Herring Pike, while the middle ground is occupied by the islet-studded lake, and behind it Glenridding and the pastoral mountain-locked Patterdale. The coach will now traverse the shore of Ullswater to Patterdale Inn, and return to Pooley Bridge and Penrith; therefore, as we intend returning to Keswick by way of Patterdale, we will during the absence of the coach take a hasty glimpse of Aira Force, Lyulph's Tower, and other beauties of Gowbarrow Park.

The park is extensive, and beautifully varied with wood and crags. Aira Force

AIRA FORCE.

its chief attraction, is by many considered the finest cascade in the Lake district; but we are inclined to award the palm to Dalegarth, or Stanley Force, in Eskdale (most easily approached from Ravenglass). Aira has its peculiar features, and so has Dalegarth: the former, overhung and shaded with trees, possesses a superior stream, which foams through masses of black rocks and stones.

> List ye who pass by Lyulph's Tower
> At eve: how softly then
> Doth Aira Force, that torrent hoarse,
> Speak from the woody glen.

And ye who visit Dalegarth, in the calm noon of a summer day, will not be less delighted with the white water leaping from terraced rocks, beneath stupendous and perpendicular crags, clothed with the feathery larch, and here and there the tapering spruce fir, while the stream, on approaching the falls, is crossed, recrossed, and crossed again by rude wooden bridges. then from the pretty moss-house perched like an eyrie of the rock, look down on an exquisite picture of English festure and Swiss costume.

Lyulph's Tower, a hunting-box, built by a Duke of Norfolk, on an eminence in the park, affords some splendid views, and is itself an object of interest. It is backed by craggy heights; while in front and on either side, noble forest-trees, singly and grouped, display between and beneath them little lawny glades and deep recesses; and browsing there are herds of fallow-deer, which crowd together and gaze with curious eye on the intruder, then, at the least motion or sound of human voice, start in a panic, and wheel through the rustling bracken to a safe distance.

But in the rocky vales of Matterdale, and across the lake in Martindale, are separate herds of red deer, which waft on the close approach of man: it requires no small share of caution to even sight those wildings of the fell, and it needs all the wiles and patience of the experienced deerstalker to bring his rifle up to them at two hundred paces. We have heard, in the baronial hall of Greystoke, old Ben Glossop, deer-keeper of Matterdale, recount his many adventures in stalking the red deer—how he has scowered and crawled, or crept against the wind from crag to crag, now and then gently raising his prospect-glass to scan the valleys; and how, after travelling a mile or two in this fashion, and ready to take aim, the antlered monarch would gravely move away: then an hour or two of anxious doubts and hopes would give him the vantage ground, and click, bang, bang! again and again and again the echo bandied the sound from glen to glen—the quarry would lie pawing the turf in his death-throes; or, if the shot was not immediately fatal, would bound away over hill and through dale, for many a weary mile, till, faint, and reeling with the loss of blood, sink down exhausted; but, recovering a little strength ere the pursuer had reached him, would summon his remaining powers to retaliate his wrongs.

ULLSWATER.

There is, on and around Ullswater, another less dangerous, though quite as exciting, and withal public chase of the red deer. A deer is annually taken, alternately from the herds of Matterdale and Martindale, for the purpose of being turned off at the Inglewood hunt, held during Penrith races. The mode of capture is peculiar, and affords rare sport; a day is fixed; every available boat is in requisition; carriages, cars, carts, and all sorts of vehicles occupy the roads; the hunters in the fells seek to detach a deer from the herd, which being accomplished, he is driven towards the lake by the aid of men stationed at intervals, with each a leash of hounds, who uncouple as he passes; thus he is urged to the water, which he gallantly takes, and then comes "the tug of war" and the tug of oar. A pair of antlers are seen skimming along the water, followed by a string of heads, with here and there a plashing of paws by some impatient puppy wishful to take the lead of his seniors. From every point the boats are cleaving the pure waters. When the foremost boatman has thrown his lasso, and secured the game, loudly and wildly

> Echo awakes in many a glen
> To repeat the mingling sounds,
> Which arise from the thundering cheers of men,
> And the baying of the hounds.

DRUIDIC CIRCLE.

He is towed ashore, and then "cabin'd, cribbed, confined;" his antlers are docked, and, on some appointed day, he is turned off before the hounds; and a fine sight it is to see the noble animal spring from his van, and, after taking a hasty survey of the spectators on either side, dash forward, or capriciously rush through the crowd, and gallop away to the open country, bounding sideways over the loftiest fences. A few minutes' law, and the pack is on his trail; a burst of a few miles brings him to a stand-still, his swollen and protruding tongue preventing respiration; he turns to bay to defend himself with the powerful weapons with which nature has furnished him; and there he will die by the fangs of his merciless pursuers unless rescued by the hunters. But, if he can gain a river or pond, woe to the dog who shall first give him battle. The water revives him—he is again full of vigour; and, after mauling his adversaries awhile, he once more scours the plain, and escapes to his mountain haunts, or is killed, or captured and paddocked for a season, to be again hunted down.

Resuming our journey by the coach returning from Patterdale, we leave Gowbarrow Park, and proceed to Pooley Bridge, following the course of the lake. On leaving the park, Hallin Fell rises boldly on the right, across the lake; and on the left or western

A FEW DAYS IN THE LAKE DISTRICT.—No. III.

THE HIGHEST INHABITED HOUSE IN ENGLAND.

ire Skelley-neb and Halsteads, Mr. Marshall's seat. Below this the nery appears somewhat tame, more especially after viewing the ories of the upper reach.

From Pooley Bridge (a small village near the foot of the lake, on the er Eamont) the tourist may go forward to Penrith, and, if his time will mit, may visit many remarkable places in the neighbourhood—the e ruins of Penrith and Brougham Castles, the Countess's Pillar, erected 1656, by Lady Anne Clifford, as a "memorial of her last parting at t place with her good and pious mother, Margaret, Countess-Dowager Cumberland." Near Eamont Bridge he will see—

—— Red Penrith's table round,
For feats of chivalry renowned.

Maybrough's mound, and stones of power,
By Druids raised, in magic hour.

To the north of Penrith stands "Long Meg and her Daughters," a remarkable piece of antiquity; Greystoke Castle, the seat of the Howards; and Eden Hall, with its curious luck-glass—a crystal goblet, which, according to tradition, was taken from the fairies; and they, to avenge themselves for the loss, pronounced the following ban:—

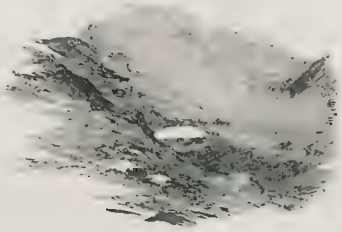
If this cup shall break or fall,
Farewell the luck of Eden Hall.

But, amid all the sights and scenes around Penrith, Lowther Castle stands proudly pre-eminent, whether we regard "the noble pile and its costly contents (its splendid pictures and statuary, its carvings and general decorations), where the utmost skill in every branch of art has been summoned to create a mansion worthy of the matchless site." The park of 800 acres, studded with royal oaks—the mile-long terrace-walk, a mossy carpet of finest pile, the swift and clear Lowther winding below—the distant view of hoary crags and mountain peaks, altogether forming a scene unsurpassed in Britain.

We will now return to Gowbarrow Park, and (as the route from thence has been described) with these commence our description of the scenery through Patterdale to Ambleside. On leaving the park the first object which attracts peculiar attention is Stybarrow Crag, almost overhanging the road; on the left is Glenridding House (Rev. Askew's), beautifully situated at the foot of Place Fell; and, at the extreme head of the lake, cross Glenridding Beck, whose waters have their birth near the summit of Helvelyn, forward to Patterdale. On the right is Patterdale Hall (Marshall's), once the residence of Mounseys Kings of Patterdale, who acquired the title by one of the family having repulsed a body of Scotch moss-troopers foraying Patterdale. Near the hall is the church, remarkable only for its attendant yew tree, girthing 24 feet, but branchless and bare; beyond the church is the small village and excellent inn. Leaving it, we shortly cross Deepdale Beck, and observe on the right St. Sunday's Crag, and immediately afterwards Brothers' Water, a dark and lonely tarn, full of melancholy associations—twice (it is said) two brothers have perished in its dark depths, through trusting to the treacherous ice; yet its situation, beneath mighty mountains, is alone sufficient to inspire the mind with awe. Passing through the hamlet of High Hartsop, we reach the common, and are now toiling up the steep pass of Kirkstone; we are leaving all traces of civilisation far behind; even the wild herbs denote the successive stages by which we leave the habitable world; we have passed the region of flowers ending with the purple heather, we have reached the Bracken zone, and on the very summit of the pass, between the Red Screes and Woundale Head, find (what will not enterprise accomplish) a snug little hotel. This is the highest inhabited house in the kingdom, and, but for the numerous summer tourists who wend this way, the block of stone,

Whose church-like frame
Gives to the savage pass its name,

would have [illegible] the only object (save the retrospect of Patterdale's



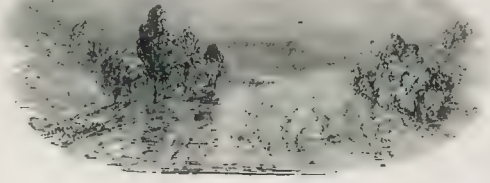
BROTHERS' WATER.

ULLSWATER.

its guardian hills) to relieve the monotony of this alpine scene. A d on the right, near the house, leads to Troutbeck; in front is our d to Ambleside; but we must not leave the pass without noticing t o—a faint, scarcely audible *whero* increases to a loud and s rill atile, like the scream of a locomotive engine, and is heard ringing ugh the valleys far below; perhaps starting the red deer from his among the rocks of Matterdale and Martindale, and awaking the sard falcon from his day-dreams on the precipices of Dove Crag. m the Pass, the road, rapidly descending to Ambleside, exhibits rming views of Windermere, Biethamtarn, and the irion range of mountains. Having reached Amide, we will leave the tourist to the guidance of former descriptions, which comprise the road he now follow to Keswick. J. R.

TOWN TALK AND TABLE TALK.

n usual autumnal repose broods everywhere over land, and our political notabilities, with here and s a rare exception, are as though they were not. There is Lord John Russell?" was the heading of aragraph which lately went the rounds; the qu ing, however, been since answered by a letter fro Premier to those cool gentlemen in Ireland, wh ing had millions of their population saved fro ving by English gifts and English loans, refuse, n the time comes, to make good the borrowed ey, on the exquisite ground that they themselves managed it so grossly, jobbed in it so corruptly, the starving wretches for whom it was intended little or no benefit from the advance—a plea refusal of payment which could have proceeded n no possible part of the world save Ireland. A t the only tokens of popular activity now be n reach us from the rural districts during alving year has brought round the time for



the meeting of the thousand and one agricultural societies which devote their attention to tilled broad acres of England. The country papers are full of the annual gatherings of the bodies in question. Every district of every county has its own, but the reports seldom find their way into the London papers, unless a local M.P. of some sort of note attends, and stirring politics are introduced over the fiery sherry and sloe-soaked port. The proceedings at all these agricultural congresses are tolerably similar. Generally, there is a ploughing match in the morning, at which all the farmers' sons attend to compete for remarkably moderate premiums. A show of "stock" succeeds, of course, upon a very small scale; and, as every local show of stock I ever saw or heard of was pronounced by the judges and the spectators generally to be the very best which the society had ever mustered, we may argue thence a most satisfactory progress in the way of improving our breeds of cattle. The dinner always takes place in the Town-Hall. In nine cases out of ten, in the country, a mouldy old room, with dreary maps of damp chequering the walls, and very often a broken-winded old organ stowed away in a corner. The building itself is tolerably sure to be a gaunt, cold-looking pile, supported upon attenuated pillars above the market-place, where labouring men in smock-frocks lounge all day, staring at the multiplicity of bills and cards announcing sales of cattle, and farms to let; and which, upon Saturday evenings, is peopled with butchers' stalls, oyster tables, lit by flaring paper lanterns, and no end of gingerbread and ginger beer emporiums for the younger classes of the community. After dinner the toasts are mainly local, conducted upon the approved "claw me and I'll claw thee" fashion. The prize exhibitors of stock drink to the health of the unsuccessful competitors, and the unsuccessful competitors ruefully return the compliment. If the proceedings take a more public turn, out come the fine old stock oratorical phrases, thick and threefold, and the British lion is forthwith stirred triumphantly up with the longest and sharpest of poles. The parson of the parish returns thanks for the Church, under which this country has risen to her present unparalleled pitch of greatness; the Chairman proposes British Agriculture, under which this country has, &c.; the Vice-chairman proposes the "British Farmer," under whom this country has, &c.; and some one else probably proposes the Game-laws, under which this country has, &c. Sometimes politics are steered clear of [illegible] confine themselves

local matters, but if anything particularly interesting to the agriculturist be in the political wind, be assured that by hook or by crook it will be speedily lugged in. The orator, after praising the excellent rule by which politics are peremptorily excluded, goes on to say that still he does not, cannot think, that rule will, in the slightest degree, be infringed upon should he take this opportunity of reminding his brother farmers that—anything you please, plumping, or coming into a series of red hot politics. Upon this all the gentlemen disagreeing with the sentiments of the orator roar, "Order, order! Chair, chair! No politics!" to which the gentlemen who do agree with the sentiments in question shout in turn, "Hear, hear! go on! Mr.'s perfectly in order! Fair play! Hear orator!" and the cause is out of ten the politics carry the day, and the party have their saving of them. Thus then, these hundreds of obscure little dinner parties of comfortable farmers are not by any means without their significance and their interest, and I have been watching with some attention the tone this year adopted. Upon the whole, it seems a reasonable one. Disraeli's speech at Buckingham struck the keynote which is being generally responded to, not without sore and unmingled grumblings; while it would seem by many that but true to say that the answering chords are thoroughly in tune with the original note of the leader. Still the tendency is to harmony. The prosperity of the country at large is generally allowed, and the feeling appears to be becoming stronger and stronger amongst the farmers—In the first place, that they must make the best of a bad job; and in the second, that, after rents have been properly adjusted, the job will not be such a very bad one after all. In fact, I think the agricultural sounder is already beginning to cogget with the wheel, that the involution of the fore of Protection is fast becoming weaker and cooler, and that the waggon will be found never to have stuck in free-trade ruts at all, despite the temporary dismay of its driver and the senseless capers of its horses, who had a mortal dread of the collar touching their shoulders.

The visit of the Queen to Manchester and Liverpool has been the great event of the week.

Last week's American mail announces that Mr. Fenimore Cooper is no more. With him a literary light—certainly of an imitative and somewhat radiance, but still a light which shone at intervals with a very brilliant and attractive lustre—is quenched. Cooper was, perhaps, the first novelist to find out the poetry of sea and ships, and make the world recognise it also. Here and there, before him, poets had treated of the theme, but always vaguely, generally, and evidently from hearsay. Cooper rose, and gave the world the phenomena of the vasty deep, and all its living sails, not only like a man who admired what he was talking about, but knew it, and felt it too. That he fell into mannerisms and affectation, and that finding the readers' appetite for details, and for overloading instead of authorship, is unfortunately too true; but, for all that, Cooper has written some of the noblest sea scenes in the English language. The working out from a less shore of the American frigate, in the opening chapters of the "Pilot," is in itself a piece of high art. In character painting about Cooper was woefully unhappy. Long Tom Coffin might have been copied from Mr. T. P. Cooke; while the mystic piratical heroes of the "Red Rover" and the "Waterwitch," are mere spoiled remnants of the old Byronian amiable cut-throats and poetical thieves. Ashore, and so long as his scene was the backwoods, and his personages hunters, trappers, and Indians, the early pioneers of civilisation, Cooper was admirable both in painting nature and character: the latter was, no doubt, tolerably highly coloured, and the whole tone of what I may call the "Last of the Mohicans" style was thoroughly melodramatic; but the melodrama was consummately well managed, brightened here and there by dashes of genius and touches of heartrending pathos, take, for example, the closing scene of the "Trapper," when poor old Hawkeye's faithful dog, believing his master to be dead, that the well-loved creature is still alive; features these which redeem many a page of such dreary dialogue and bootless painting of boors and bores as are to be found in books like "Lionel Lincoln" and the "Pioneers." In his "society" novels, when he discourses social questions, Mr. Cooper was generally, as the Scotch say, sadly "left to himself." But long after his "Eve Effingham" and "Homeward Bound"—the conversational parts of the latter, at least—are forgotten, a grateful world will remember how the "Skimmer of the Seas" ran through the "Hell Gate," and with what artistic complacency old Hawkeye pitched his never-failing bullets into the red bodies of the Mingoes.

A. B. R.

ENCOURAGEMENT OF THE FINE ARTS BY THE FRENCH GOVERNMENT.

The Minister of the Interior has just charged several eminent painters to go to London and make copies of some admirable pictures by Murillo, Raphael, Francia, and other great masters, now in the National Gallery. A long time since it was in contemplation to form in Paris a collection of copies from the great masters, the drafts of which are supposed by the directors and artists were sent to Rome, Naples, Venice, Florence, Madrid, Seville, &c., by whom some very good pictures were made, but unfortunately they have been disseminated in churches and other public places, and are consequently out of study and to the history of the arts. The idea has since been formed of appropriating a suite of rooms in the Louvre to be called the Gallery of Copies. The Museum already possesses a series of admirable copies made by Marillo, Raphael, Francia, and other great masters, now in the National Gallery. A long time since it was in contemplation to form in Paris a collection of copies from the great masters, the drafts of which are supposed by the directors and artists were sent to Rome, Naples, Venice, Florence, Madrid, Seville, &c., by whom some very good pictures were made, but unfortunately they have been disseminated in churches and other public places, and are consequently out of study and to the history of the arts. COUNTRY NEWS.

DGE OF THE LIVERPOOL COUNTY COURT AND THE PRESS.

erpool people have addressed a memorial, which has received several ignatures, to the Earl of Carlisle, respecting Mr. Ramshay's case, in ich the Judge of the County Courts Act, in reference to cases of con-mon-testimonial and illegal, and if it were otherwise, they say that the ected association of audacity, and the temper which he has displayed in g to enforce that authority, plainly demonstrate that he has not the mode-equanimity which are essential to the character of a county court judge. hat the virulent and unprecedented measures resorted to by Mr. Ramshay, ephoding what he calls the dignity of his court, have alienated the ardly of the trading community; so that his court must be a comparative ure, so long as Mr. Ramshay shall be allowed to preside there." rorial concludes with a prayer to Lord Carlisle for an inquiry into Mr. 's conduct—his removal from office, should the allegations against him to be correct; and for the appointment of a Judge "of learning, and moderation" in his stead.

lnesday a deputation from the "Indemnity Committee" proceeded to Earl of Carlisle in Hayward, near Manchester, where Lord Carlisle is at paying, to bring the facts before his Lordship. It is supposed that the rill be immediate, and of the result there can be little doubt.

MODERN LIFE: a POEM. By ALFRED DICON TOOVEY
"'Modern Life' is a Poem of considerable merit."—Morning Post.
"The story is simple and well told; the imagery pure, original, and well marshalled, and the execution of the whole in every way good."—Bell's Weekly Messenger.
"This is a new Edition of a very charming tale of modern life, told with effect, and in so pleasing a manner as to lead us on from beginning to end without once flagging. In fact, we need but say with what interest, with what pleasure, I have read it,' sees the author of the 'Pleasures of Memory,' to justify us in answering that such an examination after a perusal of the poem. The days of just poetry are not past. Song of a higher order than we have, richness of pure poetic feeling, dignity of expression, and graphic description, woven into a tale of deep interest and pure moral The rebellious embroglio of the Fronde is described with repeated are always just and dignified, and the scenes drawn from the life. The death of the Queen Mother is described with the last movements of the virtuous Vicar, in the early part of the tale; and the description of London in the time of the second part, is one of the finest we have read. We strongly recommend the book to all the lovers of good poetry and pure morality."—Weekly Times
Published by ARTHUR HALL and CO., 25, Paternoster-row. Sold by A. D. TOOVEY, 76, Aldermanbury; and all other Booksellers.

By GEORGE FORBES.—POCKET EDITION of CONGREGATIONAL PSALMODY for FOUR VOICES, Organ or Piano, with Words, for Psalms, Bishop of London's Selection, &c. 5s, cloth gilt. Dedicated, by permission, to the Revs Dr Spry, Dale, Baring, Gurney, &c.—" More valuable than many works of higher pretensions."—Atlas.—WRIGHT, Pall-Mall; Hatchard, Rivington, Leader and Cock, and Novello; and may be had of all book and music-sellers.

NEW SONG. "I MET HER in the CRYSTAL HALLS." Price 2s. Post postage free.
"This beautiful song will be published next month to every frequenter of the Crystal Hall with a force and pathos perfectly irresistible. The words are by J E Carpenter, one of our finest ballad writers; and the music, by Stephen Glover, is equal to anything from his long practice. No visitor from the country possessing a pianoforte should return without obtaining this charming souvenir of the World's Show."—Musical Review
London. DUFF and HODGSON, 65, Oxford-street.

NEW SONG.—THE YOUNG LADY'S "NO"—Composed by the Author of "Will you love me then as now?" "The Miss Mary Bells," "The Secret," &c. "I have ventured to love them." &c. Price 2s (sent postage free).—This arch and pleasing ballad, just introduced most successfully by Miss Poole, is likely to become one of the most popular songs of the day: both words and music possess that point which will ensure success.
DUFF and HODGSON, 65, Oxford-street.

BARKER'S Last and Best BALLAD.—New Edition of FRIENDS of MY YOUTH, price 2s. The most pleasing, effective, and popular Ballad yet written by the Composer of the "Rose," "Fairy Bells," &c. Free by post for 24 stamps.—BARKER, 244, New Bond-street.

FERARD HARP.—To be SOLD, a BARGAIN, a very superior and fine-toned DOUBLE-MOVEMENT HARP, by the above eminent maker It is fashionably constructed in satin wood and gold, and though without a blemish, and quite equal to new, will be sold, together with a key, cover, fork, and spanner complete, for 45 Guineas, less than one-third its original cost. To be seen at Messrs Mole's Music Saloon, 140, Tottenham-court-road, and 44, New Oxford-street.

TOLKIEN'S 25-GUINEA ROYAL MINUTO PIANOFORTES, nearly 7 octaves, O G fall. metallic plate, with all late improvements, in mahogany, rose, maple, walnut, or satin-wood cases, with the peculiarity and worth of being more pleasing, that they will stand any climate without injuring the delicacy of their original and distinguishing tone and touch.—TOLKIEN, manufacturer, 28, and 29, King William-street, London-bridge. Drawings post free.

PIANOFORTES for SALE or HIRE, at CHAPPELL'S, 50, New Bond-street. A large Stock of New and Second-hand Pianofortes, by Broadwood, Collard, Cramer, and Co., and other eminent makers, for SALE or HIRE. Instruments by less reputed makers at the lowest prices. Messrs. CHAPPELL'S Plan for hire (less than one year's rent), enables those a purchase by new instrument from the factories of any of the best artists of their own purposes, being more nutritious and is highly agreeable For weekly children and delicate stomachs it is most beneficial. 8d of 7 packets, 1s. 6d and 7s 6d. each, at all chemists and grocers. Semola Siccalis are prepared by RUSTELL and Co. 74, Semola Siccalis, by Farr and Sons.

HARD'S FARINACEOUS FOOD for INFANTS and INVALIDS.—This superior food for the Infant and Invalid is light, nutritious, easy of digestion, and prevents acidity. It is sold by all chemists and druggists, patent medicine vendors, grocers, tea-dealers. Italian warehousemen, and confectioners, in packets of 1s and 2s. 6d. each; also family cases, 7s 6d.—Please to observe, all genuine packets and cases are signed "Jas. Hards," and manufactured at Royal Victoria Mill, Dartford, Kent

WINTER TROUSERS. R. PEAVES, Tailor and Trousers Maker, 313, High Holborn, begs to inform his patrons and the public that the necessary repairs consequent upon the rebuilding of his premises are now completed, and that his WINTER STOCK, consisting solely of the best qualities, is now ready for inspection. R. P. begs to call especial attention to his superior cut of Trousers, to be worn without straps, and that he arranges all others for ease, and not receding from the boot when sitting down. Cloth trousers, 12s to 17s 6d.

CANDLES! CAUTION!
PRICE'S PATENT CANDLE COMPANY beg to caution the public that they have removed their names from the packets of all Candles but the Patent Belmont Sperm, Patent Belmont Wax, and Price's Candle Composite, and that no less done on account of numerous complaints of their lower-priced Composite Candles being sold as the best. They can now supply dealers with their PRICE'S ALBION CANDLES CASH, for burning alittle softer and less in nurseries; and the PATENT ACOLYTE, for preventing candles dripping grease into sacrosanct Belmont. Vauxhall, Surrey

WATCHES and CHAINS. — GEORGE ORDING offers a large assortment of first quality at lowest prices. Silver Watches, 2 to 10 guineas each 18 Ct. Jewelled lever ditto, four, five, and six guineas Gold Hunting cases 18 Ct. Jewelled Watches at £4 10s, £6 6s, and the very best, £8 8s; English Gold Lever Watches, with all the late improvements, and the very highest excellence, sixteen and eighteen guineas. Chains in great variety, from £20. 4s. to £30. Sent free per Railway, or Penny Post.

LORD'S EUREKA SHIRTS.—Gentlemen desirous of obtaining Shirts in the very best manner in which they can be produced, should try LORD'S EUREKA, the most unique and the only perfect fitting Shirt made, price 40s the half dozen, best quality, and the full dress, second quality. Detailed Catalogue, with rules for self-measurement, sent free.—RICHARD FORD, 185, Strand.

THE BABY JUMPER.—This invention has long proved one of the greatest blessings that has ever been discovered for young children. Instead of their being cramped all day in the nursery, or nursery chair, children of three months old and upwards are now enabled to take exercise truly delightful to themselves, and without the possibility of injuring themselves, which at the same time developes the muscles of the limbs, and enables them to walk much earlier. Price 10s, 12s, 15s, 17s, 25s, and 30s. Sold wholesale, retail, and for exportation, at the Invention, H. S. ROGERS and CO., 127, Strand.

SOUVENIR de l'EXPOSITION.—The most appropriate memorial of the GREAT EXHIBITION is the Herculite Drawingroom Table-cover, as purchased by her Majesty. Exhibited at the Great Exhibition, Class 30, No. 1. Very elegant Oxford-street. Drawings of the above will be forwarded by post, on application.

CORK HATS.—GREAT EXHIBITION.—CHRISTY and SON, 125, Class 4, No. 58—CORK HATS of extra light weight, specially constructed for coolness and durability. Weight from 2½ to 3½ ounces. The cool and perfect shape of Cork Hats is also retained for this important article of dress all the decoderata which is the unanimous opinion of the press. 35, Old Bond-street, Piccadilly, 75s 6d to 10s 6d.—GAIMES, SANDERS, and NICOLL, 22, Birchin-lane, Cornhill.

DEANE'S TABLE CUTLERY has, for more than 150 years, received extensive and increasing public patronage. The stock, comprising ivory, bone, stag, buffalo, and other handles, is of the most extensive variety, the prices are the lowest, and the quality of the steel the very best. Deane's Monument Razors are the best extant, and are highly recommended by the trade in preference to any other Their pen and pocket knives, 6d each and upwards, are of the same superior description, are all of the finest quality.—DEANE, DRAY, and CO, Wholesale and Retail Cutlers and Furnishing Ironmongers, 46, London-bridge, London-bridge

PATENT VICTORIA FELT CARPETING. —JOHN MAPLE, 145, 146, and 147, Tottenham Court-road, begs to invite families furnishing, before they purchase Carpets, to inspect his extensive Stock, which is now replete with every description of Carpeting, which surpasses every other in durability, economy, and style, and may be confidently recommended to her Majesty being very economic. In the same Show-Rooms are to be seen every other description of Carpeting, with the largest assortment of modern Household Furniture in the world; one Show-Room alone, in which are Bedsteads and Bedding, being 240 feet long JOHN MAPLE, 145, 146, and 147, Tottenham Court-road, and 4, 5, 6, 7, Tottenham Court-place

THE GREAT EXHIBITION, and its EFFECTS on TRADE.—The great preparations for the London trade this season are such as to command upwards of 20 per cent of goods to be manufactured and introduced beyond any reasonable demand, Regent-street, BEECH and HOLLAND, 63 and 64, Regent-street, have just purchased of two eminent manufacturers the following goods 1200 yards of real French Merinoes, in 11-4d per yard, worth 2s 3d 3246 do. do. 2s 11d do. value, 4s 9d 12900 do. do. 3s 9½d do. worth 5s 11d

In every shade and beauty of colouring
Several thousand yards of ELEGANT and NOVEL SILKS, such as Chine Glacés, Poult de Soies, Brocaded Glacés, Brocaded Checks, Brocaded Taffetas, and Gros Royals, &c.; with about 9000 yards of Striped, Figured, and Plain Silks, at 1s 9d, 2s 6d, 3s 6d, 4s 6d, and 5s 6d per yard. Ladies' Morning and Evening Dresses for the forthcoming season, 7s 9d to 15s 6d the dress

Patterns cut, and sent postage free to all parts of the world
On 3rd Monday morning will be opened a case of splendid Black Silks, Satinette Checks, and Satin de Lyons, at 2s 6d per yard.
Observe "BEECH and BEECH, 63 celebrated Silk Warehouse is 63 and 64, Regent-street, Waterloo-place

DR. LOCOCK'S PULMONIC WAFERS.—From Dr Middleton, 1, West Adam-st., Edinburgh, Dec. 4, 1850. "I have very great pleasure in bearing my testimony in favour of Dr. Locock's Pulmonic Wafers, having recommended them in very many cases."—John Middleton, M.D., M.R.C.S., &c. Dr Locock's Wafers give instant and a rapid cure of asthma, coughs, and all disorders of the breath and lungs. They have a pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all chemists

Printed and Published at the Office, 198, Strand, in the Parish of St Clement Danes in the county of Middlesex, by WILLIAM LITTON, of 198, Strand, aforesaid.—SATURDAY, OCTOBER 11, 1851.

EXHIBITION SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS.

No. 523.—VOL. XIX.] SATURDAY, OCTOBER 11, 1851. { TWO NUMBERS, 1s. WITH LARGE VIEW, GRATIS.

THE GREAT EXHIBITION AND ITS RESULTS.

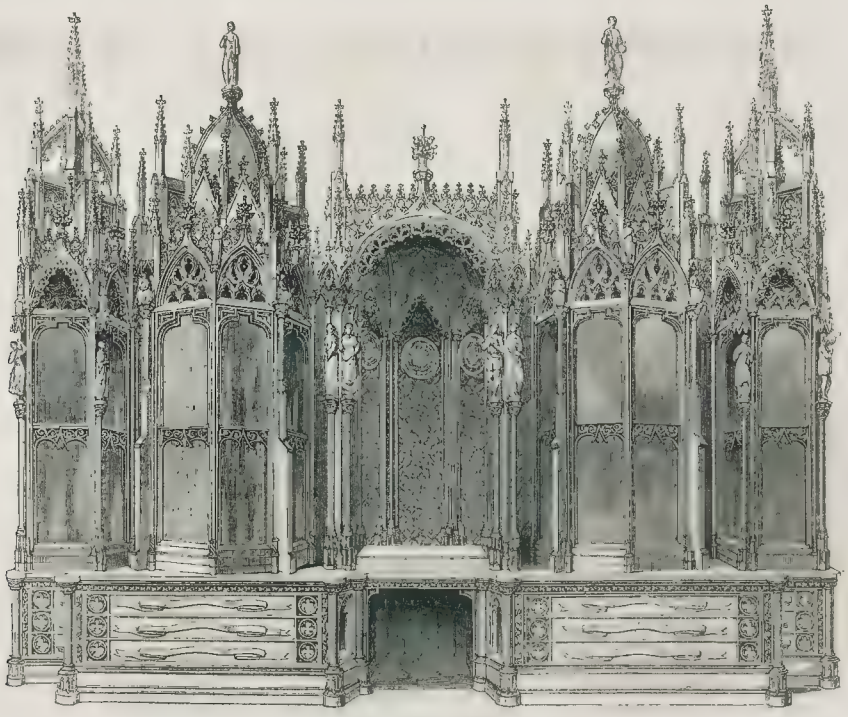
THE Great Exhibition of the Industry of all Nations closes to-day. In the course of a few weeks the most extensive assemblage of valuable products in all branches of manufacture ever brought together under one roof will be scattered and dispersed, and the Great Industrial Congress of 1851 will be numbered with the memorable events of the past.

But its influence will not cease here; it is but the first act of an important social movement, upon which the curtain is about to fall; and who shall say that what is to follow may not go far to realise the profound and philanthropic aspirations of the Prince Consort, the projector and ruling genius of the whole scheme, in the memorable words uttered by him at a banquet given by the Lord Mayor in 1849?

I conceive it to be the duty of every educated person closely to watch and study the time in which he lives; and, as far as in him lies, to add his humble mite of individual exertion to further the accomplishment of what he believes Providence to have ordained. Nobody, however, who has paid any attention to the particular features of our present era, will doubt for a moment that we are living at a period of most wonderful transition, which tends rapidly to the accomplishment of that great end to which, indeed, all history points—the realisation of the unity of mankind. Not an unity which breaks down the limits, and levels the peculiar characteristics of the different nations of the earth, but rather a unity the result and product of those very national varieties and antagonistic qualities. The distances which separated the different nations and parts of the globe are gradually vanishing before the achievements of modern invention, and we can traverse them with incredible ease: the languages of all nations are known, and their acquirements placed within the reach of everybody; thought is communicated with the rapidity and even by the power of lightning. On the other hand, the great principle of division of labour, which may be called the moving power of civilisation, is being extended to all branches of science, industry, and art. Whilst formerly the greatest mental energies strove at universal knowledge, and that knowledge was confined to the few, now they are directed to specialities, and in these again even to the minutest points; but the knowledge acquired becomes at once the property of the community at large. Whilst formerly discovery was wrapt in secrecy, the publicity of the present day causes, that no sooner is a discovery or invention made, than it is already improved upon and surpassed by competing efforts; the products of all quarters of the globe are placed at our disposal, and we have only to choose which is the best and cheapest for our purposes, and the powers of production are intrusted to the stimulus of competition and capital. So man is approaching a more complete fulfilment of that great and sacred mission which he has to perform in this world. His reason being created after the image of God, he has to use it to discover the laws by which the Almighty governs his creation, and, by making these laws his standard of action, to conquer nature to his use—himself a divine instrument. Science discovers these laws of power, motion, and transformation; industry applies them to the raw matter, which the earth yields us in abundance, but which becomes valuable only by knowledge; art teaches us the immutable laws of beauty and symmetry, and gives to our productions forms in accordance with them. Gentlemen, the Exhibition of 1851 is to give us a true test and a living picture of the point of development at which the whole of mankind have arrived in this great task, and a new starting point from which all nations will be able to direct their further exertions.

Looking back upon the experience of the two years since these views were propounded; looking back more particularly upon the six months which have elapsed since the Great Exhibition was completed and thrown open, we are inclined to think there is little if any exaggeration in the hopeful picture of the world's future which is thus shadowed forth, as capable of accomplishment by the right direction of the natural gifts and means at the disposal of the great human family. If no more has been accomplished as yet, the very crowding in of goods from all quarters of the globe, and the thronging in of millions of spectators, interested more or less in the production or uses of those commodities, afford a striking proof of the unanimity which prevails amongst men upon any comprehensive scheme of true usefulness, and their power to carry it into accomplishment.

This great feature also distinguishes the Peace Congress of 1851 from all known political congresses or movements of nations—that whereas, in the one case the gain of one is under almost all circumstances obtained by a concession or sacrifice of interests on the part of some other, and that generally the weaker one; in the other gain is gain to all, the superiority of means or appliance evidenced by each competitor



GOTHIC BOOKCASE.—BY LEISTLER.

This magnificent piece of furniture has been sent over as a present from the Emperor of Austria to her Majesty; the superbly bound books which ornament some of the shelves are also the gift of his Imperial Majesty. The design, which is Gothic, is by Bernardo de Bernardis, an architect of eminence, and J. Krauner, both of Vienna. It is rather too architectural in its arrangement, and the introduction of the statuettes in all directions is not to be approved on the score of taste or propriety. The executive department has been very creditably carried out.

being at once available to the advantage of all the rest. The achievements of human intellect are common property, and only require to be known to be at once applied, in combination with others, to the attainment of still greater achievements.

It cannot be doubted that the success of the Great Exhibition has far exceeded the most sanguine expectations of its projectors; and, but that it was a gathering together for good, they might almost like another Frankenstein, have been terrified at the vast army of observation, of various races and habits, which a beam of concentrating round the wealthiest and least defended capital in the world. It is curious, indeed, to look back at a few of the past circumstances in this great drama, and to see how the anticipations of the directors of it have been disappointed; but two will suffice and we mention them merely as curiosities of history. When, after many struggles, and much canvassing for subscriptions throughout the country, the Royal Commission was formed, and incorporated by charter, its first act was to rescind a contract optionally open to them, with Messrs. Munday, by which all risk or liability upon pecuniary grounds would have been avoided, thus "resting the success of the proposed experiment entirely upon public sympathy." This step probably alarmed the Executive Committee; it seemed at least to them to render the issue problematical, and they immediately, in a body, tendered their resignations. "These resignations," Mr. Cole says, in his Introduction to the Official Catalogue, "were not accepted, and some time elapsed before the executive arrangements were conclusively modified to meet the altered circumstances of the case." Again, when the guarantee fund had been subscribed, and the Crystal Palace was on the eve of completion, Mr. Paxton, doubtless with the assent of others engaged in the anxious undertaking (for the step was not disavowed by them), published a letter to the Prime Minister, urging him to adopt the work on behalf of the public; that is, to pay the expenses out of the Consolidated Fund, and throw the doors open gratuitously, as at the Museum and other public institutions. This proposition was fortunately not acceded to; and nearly half a million of money in voluntary contributions at the doors—the greater part in shillings—has justified the refusal, and given convincing proof of the abundant efficacy of "public sympathy" in a good and useful cause.

The experiment of a gathering of the industry of all nations was a novelty, not only as regards England, but the world generally; for, although there have been many expositions of works and manufactures in France, Belgium, and other countries, and also, in particular districts of England, they have been wholly restricted to the products of the country in which they were held; and when, in 1849, the French Minister of Commerce endeavoured to promote an exposition in France upon a wider basis, comprehending the productions of other nations, the presidence of commercial bodies to whom he communicated his views dissuaded him from carrying out the scheme.

Nor can it be denied, that when the proposal was made in England, and, indeed, long after that proposal was adopted as a fact, the manufacturing and monied interests of the country looked but coldly upon it, and gave it for a long time an unwilling countenance. Our men of Manchester, and Leeds, and Birmingham may have thought—and thought with some shadow of truth on their side—that, in an intercommunication of industrial experience and a comparison of manufacturing processes with all the world combined, they had less to gain than to give; they may even have feared that their best machinery might be copied—their best hands lured from them; they may have thought, besides, that their business was already enough to occupy all their time and attention at home, without making a show of it abroad; and as men of business, and Britons to boot, with something at stake in the land, they may just have shared ever so little in the various predictions of trade and domestic evil which were muttered forth, from time to time, as inevitably attending a large incursion of "disaffected foreigners" from all parts of Europe. As for the agricultural body, they held aloof, because by their political religion they have little sympathy for the restless spirit of industry, which, in their view, has disturbed the harmony and order of our domestic polity, whilst improved methods of tillage, even supposing them to be possible, could only be made the pretence for reducing rents already much too low, and throwing upon the parish agricultural labourers, already much too numerous for the requirements of their respective districts. So little faith had the men of business and the men of land, as yet, in the realisation of "the unity of mankind," in the enlightened and generous spirit propounded by the Prince Consort.

On the other hand there were enthusiasts—travelled men, doubtless,—who took a very different view of the question, and advocated that view very authoritatively in the columns of an influential daily print. They disdained the artificers of England of their supposed superiority; they took the shine out of "the world's few," as the American would say; they told them very plainly that they had much, had everything, to learn from foreign taste; that, although they could make things very strong, they could not make them neat, much less elegant, according to the neatness and elegance of the Continental artificer; that their calicoes were stout, but tawdry; that their chairs would last for ages, but that they were fashioned upon barbarous models of ages long gone by; that their doors and locks were effectual for the purpose of exclusion, but repulsive to the eye—that, in short, all that related to appearance we were centuries behind civilised Europe.

There were those again who took leave to doubt and hesitate as to the authenticity of these uncomfortable assertions. Old John Bull threw himself back in his easy chair, with his feet on his dormant, luxuriant carpet, twiddled his thumbs through his snowy-white lawn shirt-frill, gazed vacantly upon the comfortable crimson flock paper-hangings of his *sanctum sanctorum*, and wondered what people could want more. Young John Bull, who had been his six weeks tour abroad, and had traversed the sandy plains of a Belgian *salon*; had tried his weight upon the uncomfortably shaped rush chair of the French hotel; had admired the mysteries of a German door-handle, all primitive iron, and constructed upon the primitive principle of the first lever—boldly denied it all, and wondered "what they should be told next." And certainly the result of the Great Exhibition has been to disabuse the mind of much of this stupid prejudice, handed down from father to son, and repeated by traveller after traveller, of the infinite superiority in point of taste of the foreign producer. In furniture we certainly have made a very good stand, in respect of appearance alone, to say nothing of solidity; and if in every point we have not equalled the quieter classicism of the French (the classicism of the Louis Quatorze period), we certainly have not been guilty of the excessive and misplaced decoration of the Austrian, nor descended to the crude conceits of the northern Germans artificers. As to our hardware and our machinery, we need hardly say, that we have shown ourselves, as we were always esteemed to be, without a rival. But we will not be led into making comparisons on other points, as this will be better timed when we have to review the awards of the juries in the several departments.

To return to the point from which we set out. What are the great social advantages which we expect to result from the Great Exhibition of 1851, and in what manner will they conduce to that unity of purpose and intercourse amongst men which is so desirable? The advantages which we anticipate are, first, increased knowledge of our own resources, and of the resources of our neighbours, which, whilst it inspires a just confidence in ourselves, will also create a feeling of respect for others; secondly, recognition of the importance of the principles of reciprocal dealing, by which the peculiar advantages of one community may be interchanged for those of another; finally, an enlarged field for commerce, and the infusion of a more liberal spirit into commercial transactions, by which commerce will grow, and with it civilisation and peace be extended as the connecting bond of the whole human family.

(To be continued.)

RAILWAY PLANT.

A large outlay is required annually in providing the plant or furniture of every railway, and for keeping the same in repair, as almost every kind of railway appendage is subject to a considerable amount of friction, and, consequently, daily deterioration in point of value. To illustrate this, we need only call attention to the wheels, the axles, and, indeed, to almost every other part of the engines and carriages used on the "iron way;" added to which, the rapid decay of the sleepers, fences, and other wood-works partially buried in the ground, notwithstanding the kyanising and other supposed preservative applications, as well as the great amount of friction to which, the rails are continually subjected, render it quite necessary that every improved and more durable form of rails, wheels, and other parts of the stationary and rolling-stock respectively, should receive the utmost attention of railway directors, whose especial care it should be to remember continually that the shareholders' half-yearly dividends depend a great deal on this important branch of railway economy.

In addition to the locomotive engines, which we have already described in the Illustrated London News, there are upwards of one hundred contributions in this department, including railway carriages and models, different kinds of permanent way, various patterns of wheels, besides new forms of turntables and traversers, and several new modes of giving signals and applications of the break, besides switches and crossings, lifting-jacks, and locomotive fittings generally.

Railway carriages, with regard to internal arrangements, have undergone but very little change since 1836, for we find, in Whisham's "Analysis of Railways," the following with regard to the carriages at that time employed on railways:—

"The most approved forms of carriages are the first-class on the

CARTON PIERRE AND PAPIER MACHE.

Two distinct classes of decoration employ paper as the substance upon which ornament is placed—one is in relief, or a direct imitation of sculpture, while the other adopts painting as the vehicle by which to attract the eye; this section includes all those goods which ladies undertand by the term *papier maché*, but which have little right to that name, as it properly means paper reduced to a pulp, and then manufactured. At present this is only employed considerably for ornaments in relief, and is pressed in moulds made of metal from plaster models. The lightness of the article is at first sight a proof of the material, but the perfection of a piece is a still better guide. This manufacture appears to be about twenty-five years old, and is exemplified in the Exposition by the fine productions of Mr. C. Bielefield. There is a large quantity of his works affixed to the ceiling, and therefore too high for our consideration of its execution, although evidently well chosen pieces of ornament; but on the wall are placed some of the minutest Gothic detail, and cut and flowers, which are satisfactory. These, with an over-door and a picture or glass frame, exhibit the usual applications of the material, but a new and interesting use is exhibited in a repetition of the celebrated Elgin horse's head, and still more in a bust; the almost perfect infrangibility of this specimen is valuable to those who wish to perpetuate memorials of a beloved friend. There are also two statuettes, after Michael Angelo, which put forward the same claim. In the Nave are two very nice copies of classic capitals, for columns; and on the wall half a dozen consoles and corbels The good taste shown in the selection is praiseworthy; and still better are the two cherubim forming a cartouche, and two other less ornamented works of a similar object. It is with pain that we see the "Flying dragon," executed for the Pavilion at Brighton, and a "Royal arms," both positively bad. This exhibitor's ingenuity in finding new fields for his material is illustrated by a model of Dundee in relief, and by the new patent for rendering it easy to obtain sheets of the *papier maché* of any size and thickness. This, which is at present applied to the partitions of steamers only, is one of those branches of business which it is easy to predict will be found applicable to many other purposes where density, rigidity, and imperviousness to sound, united with exquisite smoothness, are required. We point it out to artists especially, as the bagging of canvass has always a shocking effect; it almost spoilt that beautiful whole-length by Lawrence which was lately exhibited at the British Institution. It is professed that this form of the material is of utility out of doors, and that its rival, "*carton pierre*," is not. This prejudice appears to be tolerably well grounded, as the other manufacture seems to consist of plaster of Paris, with other ingredients mixed therein, poured into moulds, allowed to set, and backed with stout paper, to ensure the adherence of minute portions.

Carton pierre is made in France and Germany to a considerable extent, which is not the case with its rival; but if there be really any paper mixed with the plaster, after the Chinese fashion, it is not in such a quantity as to excuse the use of the word *carton* in its name. The best specimens are supposed to come from France. We may cite those exhibited by Huber, amongst whose works are seen an Italian frieze, a Greco-Raffaellesque vase, and a cinque-cento pilaster, of considerable merit, but totally eclipsed by the beautiful over-door executed for the Société des Mines, and by the superb friezes in the real style of Louis XIV., made for Fontainebleau. His neighbour Hardouin supports the same reputation almost in the works repeated for Versailles, but there is not sufficient relief in this and other examples from the same factory. The whole work by Cruchet, in the Nave, is also partially composed of this material; but, taking into dispassionate consideration the productions of Bielefield and of Jackson, it is surely not too much to say that the Parisians are beaten upon their own ground.

Messrs. Jackson and Sons, besides some forty pieces of ornament in all styles usually employed in England, a ceiling in the Elizabethan manner, and a most noble centre flower, exhibit one of the most superb pieces of church furniture which is quite English in its idea. The fine terminal console or bracket, and specimens of the work executed by them for the new Army and Navy Club. It is difficult to praise most the invention or the execution of these designs, which are appropriate throughout, full of nature or of art in their vicinity; it is not enough to say deficiency of finish. One candelabrum, partly gilt, excites painful sensations: we perceive at once whence many *soi-disant* upholsterers and cabinet-makers derive their materials of decoration, and are led to think that on the prospects of a school of ornamental design which such establishments as these exist, in which, in order to make the necessary profit, one invention must last as long as fashion will bear it, and consequently a few designers must monopolize the attention of the few houses which enjoy the trade of supplying every one with ready-made ornaments. It is certainly a consolation to know that in some provincial cities the human machine can execute similar work at a less price than these factories, but this is not likely long to be the case.

Gropius, of Berlin, contributes specimens of *stein pappe*, which is undersood to be of similar materials with *carton pierre*. There are about fifty pieces, nearly all being statuettes in the modern German taste, half-Greek and half-*renaissance* in style, not particularly good, but certainly pleasing from their detail The ornaments are not so well managed; but there is one noble cove and mirror-frame which is quite English in its idea.

No other specimens of this manufacture abroad have come under observation, which is remarkable, as paper for ornamental work is at least a hundred years old in this country, from specimens which we have seen.

A notice of the exhibition of Messrs. Lincoln and Burnett, being furniture, in the shape of a work-box and table, made of calico; This seems more admirable for the novelty of the idea, than for any practical utility at the present time. The fabric too clearly displays itself, by its lines of the warp and weft, and by the ragged threads; this may be easily remedied, but it is a bad augury.

Somewhat similar are those articles placed to the credit of Mr. G. Hart as inventor, and consisting of two really handsome snuff-boxes, a tea-caddy, and a tobacco-box with mouthpiece, all in papier maché. The chisel must have been used, which argues their being as hard as wood. Some pieces are shown with a grain resembling at first sight that of wood; yet no timber matches these specimens, for the seeming grain is as irregular as marbles generally are. The practical utility of the invention, however, does not yet appear.

The other branch of the present subject includes what, if it were properly named, would be called japanned paper ware, and is chiefly dependent at present upon colour for its attractions.

The minority, or, at least, the most common of these work, are said to be made of paper really *maché*, but the better sort are produced by the simple operation of obtaining the required form from a mould by placing a sheet of paper on or in it, and then fixing sheet upon sheet as the work dries, until the requisite thickness is gained; the lathe, the rasp, or the plane is then employed to give a general finish to the forms produced in this species of millboard or pasteboard, and it is several times varnished, being submitted to so severe a heat as 130 deg.: the inequalities are reduced by scraping and polishing with pumice-stone. Then the design, if any, is put on, and re-varnishing and polishing with rotten-stone is performed, until the final lustre is given by the female palm, as to some sorts of cutlery.

Sometimes mother-of-pearl is employed, but this enters into the manufacture in a slightly different manner. The design being marked upon the mould, thin portions of shell, cut to the necessary forms, are laid upon the pattern, and then the first sheet is applied, and the operations above mentioned are continued. When the requisite thickness is gained, the shell is found bedded in the paper, and the scraping, varnishing, painting, and polishing are completed as before.

There is a large consumption, both at home and abroad, of articles in which the form is almost invariable, such as portfolios, albums, envelope and papeterie cases, paper-knives, card-cases and trays, card-racks, work and knitting, netting, and similar boxes, screens, chessboards, &c; and these rely almost entirely on their pictorial attractions, while beauty of form should be almost an element of an such consideration as the pattern of decoration in tables, chairs, cabinets, desks, *secretaires*, vases, inkstands, tea-caddies and tea-poys, trays, mirror frames, coalscuttles, canterburies, music-stools, and pianos.

Both in taste of ornament and execution, as might be expected, the London houses seem to stand first; then the works from Oxford, Wolverhampton, and Birmingham follow; but for appropriate invention those from Wolverhamptom may be said to bear the palm: it is, however, a matter of great regret, that there is not found one faithful to the very first principles of good taste, and that some seem to seek how far they can sink beneath the standard prescribed by the conventional laws of propriety.

Mr Clay's management of colour is unquestionably the best of all, in our opinion; a cheffonier, with flower-panels, is very fair; a sort of Elizabethan cabinet-furniture deserves the epithet of very fair; their form is very pretty, and two Gothic trays are excellent, as well as a simple round one and a novel chessboard; a moresque writing-case and a cinque-cento writing-desk are very good, as is the frame of a Louis XVI. chair; but, above all, their mode of ensuring a pendent to a set-seat, Louis XVI. tray and card-dish almost unique and excellently showy; there is also a very pretty tea-poy. Of the rest of the articles there need be nothing said but a generally severe criticism

Mr. Dixon's works deserve the epithet of very fair; they form but a small collection, which seems to have been selected by a good judge, and it is only necessary to particularize the centre of flowers in the table: thereon we may consider whether such embellishments are at all appropriate for some of the uses which the articles are to serve. Now it does seem the height of absurdity, when every child even who looks at a picture strives to place it parallel with its face, and when even the exhibitors themselves are compelled to exhibit their wares in the same position, that subjects like the figure, landscape, and flowers in vases, should be chosen for the decoration of articles that are almost always to be seen flat. Mr. Spiers seems to have been conscious of this fact to a great extent, and every visitor to the Exposition must be pleased with those really noble inkstands which are unadorned: yet the most prominent feature of his collection are tables with landscapes; the largest has a very pretty ornament, *à la* Louis XIV., well designed, enclosing a general view of Oxford; and another, with the front of Christchurch, is accompanied by some good tedesche ornament of the succeeding style. The oval table is very nicely designed, and great praise is due to a round one with a landscape of pollards, and an excellent ornament; but the landscapes in these, and about a score of prettily-bordered cake or card-baskets, have no business there. There are five exquisite card-trays and about forty specimens of painting on flat surfaces, as book-covers, &c.; the borders generally are irreproachable, and some birds are very well drawn. Omitting the crochet-boxes, or whatever use they may be put to in Oxford, there are about forty specimens of views upon handscreens; and in this place they are perhaps pardonable. One of the greatest offences against a cultivated taste is a miserable little occasional table. Manufacturers and visitors might take a useful hint from a coat of arms under a cardinal's hat

Mr. Walton exhibits two excellent moresque trays -the best, perhaps, of their sort, for pattern and colouring; and a cabinet, which deserves equally honourable mention; a Gothic tray—perhaps the most unexceptionable of its kind, from its appropriate and chaste design, but the red and blue are not lucky in their contrast, and the green is not of a nice tone; a tazza, whose under side (all that can be seen) is very nice; and two coal-scuttles, good in their ornament. The seven very elegant and appropriately decorated little vases deserve especial commendation; yet with all these meritorious works, there are exhibited others as bad, such as a large vase, which shows fully want of taste in the application of ornaments which have irregular edges upon a flat surface, thus destroying the effect of the very decoration applied; to say nothing of whole sets of tea-trays with such subjects as Goëthe's "Faust," the Thames, Shannon, and Clyde, both sets very prettily touched indeed, but the border not so good in the last-named as in the first; three sea-pieces, which are very effective, though little better than hasty sketches, with a nice border of sea-weed and marine monsters; the tender passion, in a Louis XV. border; and the best of these sets, three seasons, very prettily sketched, in appropriate borders, of which the holly is very effective; and of all faults, an antique subject in sham relief on a tray. His great table is a superb painting of flowers, with too little regard to nature, as the convolvulus is as large or larger than the poppy, lily, or rose, and they are all too much of one tint. These are all in the Nave; but the same house has another exhibition of trays in the Ironmongery (p. 12) which demands consideration. Three are Elizabethan, of which that with the plain black ground is the best; but what can be said of the miserable imitation of mock jewels? There are also two pictures, one of Penshurst Hall, the other of Glammis Castle, both well sketched, but the last the best, yet degraded by mock jewellery; half-a-dozen flower pieces, chiefly well executed, but one with Neptune and Amphitrite beyond criticism. There are also three very good Gothic patterns; but best of all, are a Grecian style tray with pearl, and two similar ones in black and gold, of the same pattern, differently treated; and a plain Elizabethan pattern, of gold lines upon a black ground.

It may seem little interesting to the reader to peruse a catalogue *raisonnée* of such works; but, if the effect of the most showy colouring in the Exposition on the public mind be considered, it will be admitted that these little objects carry with them more influence than the noblest works of art, or of art in their vicinity; it is not enough to say that it is painful, to listen to the observations of most of the gazers at the part of the Nave dedicated to these works.

Messrs. Jennens and Betteridge have sought for assistance from educated men, but they have attached themselves to artists of high rank, from whom it is not fair to expect, without unusual study, a knowledge of the means by which the cabinet-maker produces effect; this is unfortunate, but it is luckily easily to be remedied. The mixture of good and bad taste in the following productions is remarkable. A double inkstand, one with its bottles is very good —the contrast between the pale blue and black is agreeable; so are two writing-desks—one by Elkington, of Pandora and the Hours, while another in black and mother-of-pearl is not so fortunate: a liqueur case adorned with flowers is a notion at least questionable at the present time; while one with a simple mother-of-pearl ornament is very fair. The imitations of old japan are also clever; whilst an Egyptian hand-screen is shocking. The sportsmen of Homer for a writing-case and a crochet-box, both adorned by Elkington, are capital; a hand-screen, after Landseer, is allowable and very fairly painted, but such subjects are not *apropos* to tea-trays. The specimens of this article are not pleasing, though the Pacha's tray, one blaze of gold, is suitable to the Turkish taste. There is an exquisite candelabrum and an excellent plain writing tray and moresque lotus work-basket, by a Oriental chair, of a make not unsuited to the East, is faulty in its detail; but what can be said in excuse of the *causeuse* work-table, but that it is really "Brummagem?" Two Elizabethan, and a *legère* chair, are very fair; and high praise may be given to a writing-desk covered with gold and flowers. There is also a *renaissance* style work-table of exquisite form, and not badly ornamented, by the side of a Raffaellesque piano, stool, and canterbury, all in black, with mother-of-pearl; again inexceptionable in outline, but over showy: here the upholsterer must be at a loss for the means of competition in most cases. M'Carthy's design for an ink and envelope stand is not bad; but the *Victoria regia* cot (in the body moresque and good) is generally in very poor taste—the upholstery work seems to be the best portion of it. A vase with Etruscan ornaments, in imitation of fancy glass, with or moulu mountings, is also excellent in its way, as are most of the book-covers, but exception must be made of those in which the harp and the sunflower are introduced. Two moresque tea-trays, one designed by Redgrave, are very good indeed; and so is a little *portefeuve*. This firm also produces a very nice specimen of flower-painting, and the Chinese pieces, as generally with other houses, are not objectionable The worst taste seems to have been displayed in a tea-tray with shells and flowers, a gem book-cover, and two trays, one with the Royal arms, the other with the tea and coffee plants. The chessboard has a great want of harmony; and the figures, though designed by Bell, have not the finish of the set produced by Fiaxman. But the great work of these exhibitors seems to be a chess, and backgammon-table combined; and, as this is about the largest size made by the process above described, it is clear that the invention of Bielefield must have great weight on such productions in future.

Mr. Ratcliff sends a large moresque tray in pale red and gold, one in gold and colours, and one in the Elizabethan style, which are of the first class. The reader knows already what is to be urged against another with a very well painted group of flowers; and, with regard to the others, nothing need be said, except that a very simple idea is always agreeable in all respects; as is also a dove-coloured writing-case, with flowers very prettily introduced in a good border: two Greek vases deserve condemnation, and we shall dismiss the rest of the articles with the observation intended to apply generally to all the exhibitors, that it is remarkable that a black ground should so constantly be chosen, when no colour can be much worse as a ground for flower-

Messrs. Halbeard and Welling show two writing-cases with mother-of-pearl, which, as well as a *secrétaire*, are excellent, as is a work-table on a black ground; but no excuse can be offered for a cabinet with a distinct mark of the opening of the lid passing through four landscapes

Mr. Davis exhibits a very pretty idea for a work-box, surrounded by portraits of our Sovereigns, but the execution is not so good.

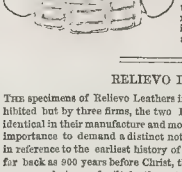
Mr. Turley, besides a specimen thirty years old, sends a screen with eight subjects very nicely painted. Somehow, all the work of this sort is tainted with the fault of pale blue skies charged with foggy clouds. One tray in this collection is actually an interior bounded only by gold line: there is here, also, a triple cabinet which gives a very pretty notion for the top of a sideboard, instead of a glass. Two inkstands are also nice, and here are the only hearth-brooms, one of which is elegant. A subject from the "Book of Beauty" is rendered exceedingly nicely as a book-cover; and there are some excellent bits of flower-painting.

The subject now draws to a close. Except a fire-screen, very nicely ornamented, M'Callum and Hodgson lay before us nothing particularly calling for notice. The prevalence of coloured mother-o'-pearl, and of flower ornament, in general; and the taste is by no means that which arrests our attention. Mr. Lane has one object worthy of our especial notice—an inkstand, in an Elizabethan dish; and another is to be seen in the collection of Fotheraps and Co.: but the general style of the last-named group of exhibitors is so different from that to which the reader's attention was called at the beginning of this notice, that it is no longer a pleasing duty to criticise.

Two remarks may be added, to the effect, that, if the strictest sense were given to the commandment not to make images, the school of ornamentation would have been by this time, as the Arabs have shown, in a far higher position than it is ever likely to attain in this country, where not even public opinion serves to repress some of the absurdities above enumerated; and that it is wonderful that this business has not been embraced abroad. There are some small articles manufactured in this manner in France, but none have been forwarded to the Exposition; and Messrs. Rau and Co., of Goeppingen, in Wurtemburg, seem to be its only representatives on the foreign side. The articles, though few, are in good taste; but the colouring does not seem so good as that on the English side: the ornamental portions are much better worked than ours; and manufacturers may take a good lesson from the japanned tinware of Stobwasser, whose imitations of marbles might, in practised hands, rival the real malachite of Russia.

Of the embossed papers as envelopes, cards, &c., there does not appear to be any striking novelty in the works of Messrs. Dobbs and Co., Delarue, Burke, Mansell, or Meek: the first certainly makes the best show, and is unrivalled in this branch in the Exposition.

LIFE-PRESERVING JACKET. BY J. D. CAULCHER.



This is one of many contrivances for the preservation of life in the event of accidental immersion. The ribs are of cork; and it is so fashioned as to be capable of being worn unobserved under a coat or mantle; and, in consequence of its pliability, can be used without inconvenience whilst rowing a boat. When not required, it can be folded up and stowed away in a small space.

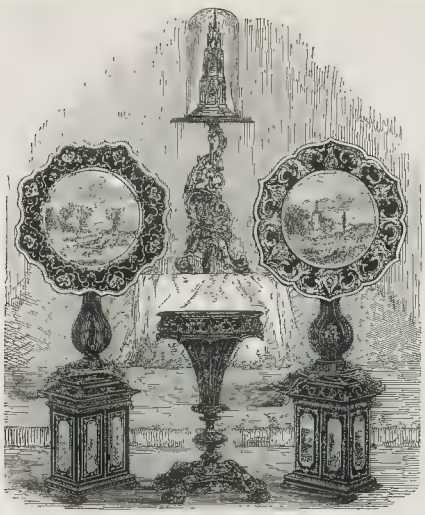
RELIEVO LEATHER.

The specimens of Relievo Leathers in the Crystal Palace, although exhibited but by three firms, the two French and the other English, are identical in their manufacture and mode of treatment, and are of sufficient importance to demand a distinct notice. From all that we can collect in reference to the earliest history of the art, it is clearly to be traced as far back as 900 years before Christ, the British Museum possessing some scraps and pieces of gilt leather straps taken from mummies, upon which are relieved figurements of King Orookon during his gay Bhem, and others of Amoun Ra Harsaphes. Italy, Spain, and Flanders centuries ago were eminent for their relieved leathers, the flat or ground-work of which was usually gilded, silvered, or coloured; and recently Germany, France, and more especially Great Britain, took the lead in this department of art manufacture. An able writer, while dwelling with much gusto upon this subject, says, the distinct relief in which the patterns could be embossed, the brilliancy of colour of which the leather was susceptible, the high burnish which could be given to the gold, the durability, ease of application, and resistance of damp, rendered the material peculiarly fitted for panels and hangings. It was a warm and gorgeous covering for the walls, affording infinite scope for art, taste, workmanship, and heraldic emblazonment, and the exclusiveness of wealth, and was therefore largely used in the decoration of palaces and baronial halls. At Blenheim, Hinchinbrook House, Norwich Palace, Knockton Hall, at Lord Scarborough's, and in many private collections, leather tapestries are still to be found, preserving the utmost brilliancy of colour and gilding. Some of the leather tapestries at Hinchinbrook, it is said, bore the name of Titian. About 1531 or 1532, Henry VIII. built a manor-house near Eastham Church, in Essex, with a high, square tower, that during her sort of year of probation Anne Boleyn might enjoy the prospect of the Royal Park at Greenwich. The tower had hangings of the most gorgeous gold leather, which remained until fifty years since, when the house coming into the hands of a proprietor with no especial love for the memory of the Bluff Harry, nor the sad hauntings of the fate of Anne Boleyn, nor the old art and workmanship of leather decoration, but a clear perception that in so many yards of gilt leather there must be some weight of real gold, had the tapestries torn down, sent to the goldsmith's furnace, and some £60 of pure gold gathered from the ashes.

In the French department, No. 1902, M. Dulud, of Paris, exhibits several pieces of tapestry and ornamental hangings in embossed leather, which appear identical in subject and the method of their preparation with those of Mr. Leake in the Fine Art Court. He likewise shows two elbow-chairs, lined with embossed leather, and other articles of furniture similarly decorated, amongst which a cabinet is the best, and which serves admirably to show the fitness of leather where the appearance of elaborate carving is required. Opposite to these is

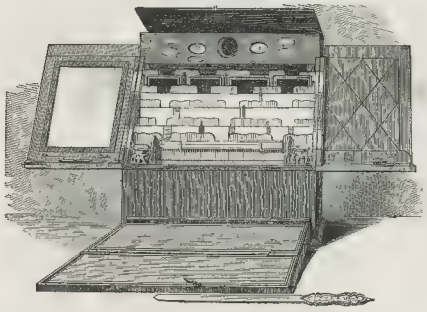
No. 164, A. A. Despreaux, a collection of Venetian leathers of similar pretensions, but differing as widely as possible in their result. The patterns selected as models are well known by us to be very admirably adapted for the purpose; but whether to disguise the original source, or from inefficiency in the operatives, nothing could have been more impotent than the execution, and scarcely anything more execrable in taste than the method in which they are daubed with colour. All drawing, all grace, and all notions of chromatic harmony are cast to the winds. If these in any way resemble the decorated leathers at the period of their decline and ultimate abandonment, we can scarcely wonder at the total extinction of this branch of art manufacture in those countries which were eager to appreciate it in its palmy days.

Mr. Leake's (of Warwick-street, Golden-square) collection is to be found in the Fine Art Court. To this gentleman's unceasing perseverance we are indebted for the revival of this branch of art manufacture in this country; and we do but justice in stating, that the models from which he has hitherto made selections are of the very best and most classic styles. It may be further added, that the leathers relieved by Mr. Leek's process are much more sharp, and of greater boldness, than those of former day, and that they exhibit a degree of *undercutting*, so to speak, which is characteristic of the modern school, and never to be met with in the ancient examples. Leather, as a material, is singularly susceptible of an imitative quality: it can be made to represent almost any kind of wood; and an upright scriptural figure subject, framed, and lying upon the counter, has so close a resemblance to an old copper casting, that it is only by close examination the deception is detected. The architectural examples of the Gothic eras, and the time of Elizabeth, &c., are worthy of all praise.



GROUP OF ARTICLES IN PAPIER MACHE.—BY SPIERS AND SON, OXFORD.

The contributions of Messrs. Spiers and Son, of Oxford, are shown in a semi-octagonal dome-shaped glass case in the Nave, designed by Mr. Owen Jones, and fitted up by Messrs. Robert Henderson. They consist of tables, cabinets, desks, work-boxes, albums, portfolios, waiters, tea-caddies, &c., in *papier maché*, ornamented with views of the colleges, public buildings, college gardens, and other objects of interest in the University and its neighbourhood. We are happy to notice in them endeavours after a truer and less meretricious style of ornamentation. As the taste of the Oxford people seems to run in a contrary direction to that of the usual purchasers of this description of goods, this firm have taken up the ornamentation of *papier maché* in a new style. Instead of adopting the usual subjects of birds, flowers, Chinese landscapes, arabesque or other less pleasing styles, they conceived that picturesque representations of architectural and landscape subjects, treated in an artist-like manner, to which other ornament should be subservient, would be equally interesting to many persons, equally popular, and more conducive to the diffusion of a sound taste. Messrs. Spiers immortalise their native and most learned city in every possible point of view and upon every possible variety of article. We have Oxford from the fields, and Oxford from the river, Oxford in the streets, Oxford colleges, Oxford halls, Oxford staircases, and Oxford seals. These paintings, which are scattered over desks, tables, secrétaires, and work-boxes, are all beautifully executed.



DESPATCH-BOX.—BY MESSRS. WALLER.

The commercial and diplomatic despatch writing-case manufactured and exhibited by Messrs. Waller, is the invention of Mr. F. Whishaw. This new and complete article contains every requisite for an extensive or limited correspondence. The much-approved open paper and envelope rack, and complete shut-up slope desk, being combined so as to form a very useful portable and unique appendage to the writing-table, as well as a useful counting-house companion. It reflects much credit on the manufacturers, as also on the ingenuity of the inventor.

MEDIÆVAL WAX CANDLES. BY TUCKER AND CO.

(*Engraved on page 461.*)

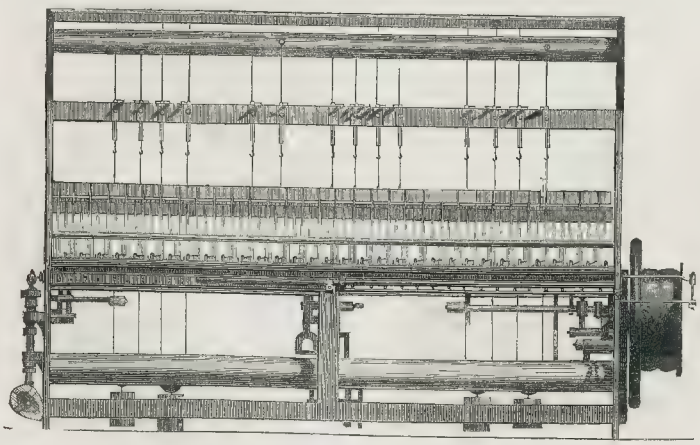
In our notice of the Mediæval Court, we unintentionally omitted to mention that the candles therein exhibited are manufactured by Messrs. Francis Tucker and Co., of Kensington; and as they are remarkable amongst the revivals of the present age, we will give a Sketch of some of them, together with some notes of the rites of the Romish Church, to which they have reference. The large candle, which is called a "Paschal Candle," is pretended to be symbolical of the glory of Christ's resurrection. It is lighted during the offices of the Church from Easter to the Ascension. It is elaborately painted round the base with various inscriptions and devices. The triple candle, which is composed of three equal parts twisted together, is used on Holy Saturday for the "Lumen Christi," in the procession from the church porch. The twisted torch is a revival of those borne on various occasions in the dark ages, especially at funeral processions and entertainments. There are beautiful specimens of twisted wax candles, and the only instances of the kind in the Exhibition. The smaller candles, of which there are several, are painted for altars, &c. The custom of enriching candles for sacred purposes, by painting and gilding, is very ancient; and the same principle was formerly carried out with regard to candles for domestic use in great feasts, these being painted with heraldic devices.

FOLDING SCREEN OF ENCAUSTIC PAINTINGS. BY J. H. EARLE.

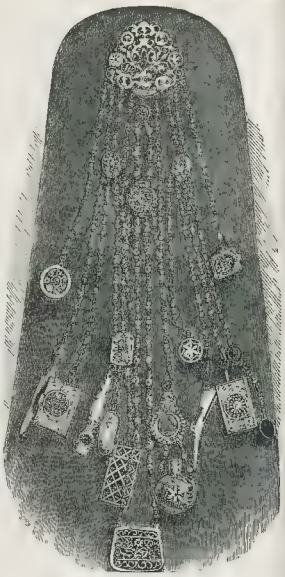
Mr. Earle's contribution being in encaustic, the painting has found admission to the Crystal Palace, as not coming within the rule excluding works of painting in oil, water-colour, and fresco; and it is one of the evidences of the absurdity of that regulation. It is a production of ordinary merit, and is entitled to consideration only in the light of a piece of room decoration. The subjects are in imitation of antique gems, representing the story of Cupid and Psyche. 1. Cupid, stung by a bee, shows his wounded finger to Venus. 2. Psyche contemplating the murder of Cupid. 3. Psyche and Pan. 4. Psyche propitiates Ceres. 5. Psyche giving the soporific cakes. 6. The Eagle giving the vase of black water to Psyche. 7. Psyche receiving the casket of perfumes from Proserpine. 8. Psyche with the casket of perfume received from Proserpine. 9. Psyche presenting the casket to Venus, which appeases her anger and extinguishes her jealousy. 10. Mercury, commanded by Jupiter, bringing Psyche back to Olympus. 11. Psyche transported by Zephyr to a grove, and placed in the arms of Cupid. 12. Cupid and Psyche in the bower. The Engraving of this screen will be found on page 472.

SILVER CUP.—BY FRIES, OF ZURICH, SWITZERLAND.

With the exception of watches, the contributions in the precious metals from Switzerland are rare. The Cup before us, in oxidized silver, with emblems of war, the national cross, &c., is remarkable more for the curiosity of the devices than for its size or beauty of design.



SHUTTLELESS LOOM.—BY T. S. REED AND CO, DERBY. (SEE PAGE 471.)



CHATELAINE. BY THORNHILL, BOND-STREET.

We have here a very complete specimen of this description of ornamental paraphernalia, all the articles being finished with great correctness.

GENTLEMAN'S DRESSING-CASE. BY EDWARDS.

(*Engraved upon the next page.*)

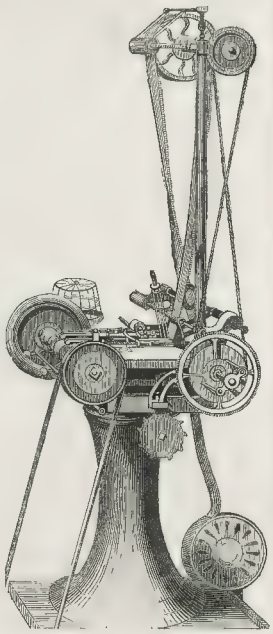
This beautiful piece of workmanship, both tasteful and substantial, does infinite credit to the old-established firm whence it emanates; the fittings up are very elegant. It consists of three distinct departments, either of which can be raised to any convenient elevation, and remain stationary whilst required. The hinge is on a new principle, the invention (patent) of the exhibitors.

GENTLEMAN'S DESPATCH AND WRITING-CASE. BY EDWARDS.

This, also, is an admirable specimen of workmanship; a despatch and writing-case combined, to open on the same principle as the dressing-case. It is covered with purple morocco, and lined with purple velvet. The instruments and fittings are of mother-of-pearl and gold. The ink and light open by the pressure of an extra spring, which obviates the inconvenience of removing them when required for use. An Engraving of this elegant article will be found on the next page.

CARD-SETTING MACHINE. BY SYKES BROTHERS.

This card-setting machine is exhibited by Messrs. Joseph Sykes Brothers, card-manufacturers, Acre-mills, Lindley, near Huddersfield. It is one of the most ingenious and beautiful pieces of machinery in the Exhibition, and produces the complete card from the wire and leather, cloth, or India-rubber.



CARD-SETTING MACHINE.—BY SYKES BROTHERS.

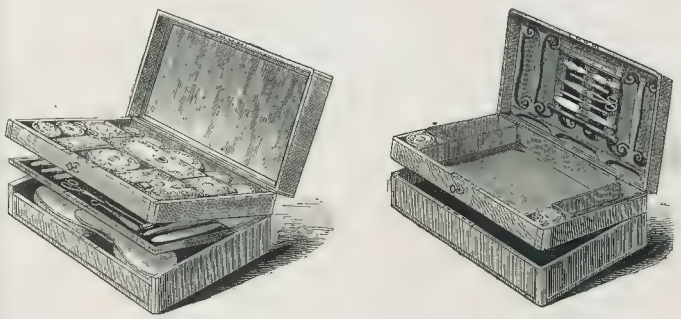
FOUNTAIN.—BY JABEZ JAMES.—(SEE PAGE 464.)

PAXTON FURNITURE. BY FLEISCHMANN, OF SONNENBERG.

Fleischmann, of Sonnenberg, in the Duchy of Saxe-Meiningen, exhibits a variety of decorative subjects, in a style peculiar to many provincial parts of Germany; a style in which lightness of material is combined with great fancifulness of device, and much gaudiness of colouring, gilding, &c. These things would hardly pass muster in busy, business-like London, either as works of utility or ornament; but in the villa residences

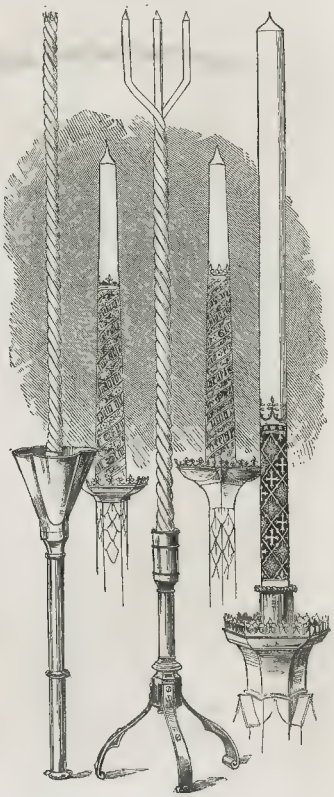
PAXTON FURNITURE.—BY A. FLEISCHMANN, OF SONNENBERG.

in the Rhenish provinces they serve to fill up a vacant corner, and to gratify the eye of a simple-minded people with representations of natural objects, which, though of every-day recurrence, are esteemed as emblems of their nationality: the vine, the chase, the guitar, and a lover, make up the sum of a German's earthly enjoyments. Iron and glass are the chief materials of these articles, and which, in consequence, have been named, in honour of the architect of the Crystal Palace, "Paxton Furniture."



DRESSING-CASE AND WRITING-CASE.—BY EDWARDS, OF KING-STREET.—(SEE PAGE 460.)

GROUP OF CHINA.—BY MESSRS. GOODE.—(SEE PAGE 467.)



MEDIÆVAL CANDLES.—BY TUCKER AND CO.—(SEE PAGE 460.)

MUSICAL INSTRUMENTS.

(FOURTH NOTICE.)

It has often been a question—and one which would be most interesting to solve satisfactorily—whether the flute, so popular among the Greeks and Romans and other nations of antiquity, was the same in form as the German or transverse flute of the present day; there are no correct data on which to form a direct answer to the question. We have no instruments of the kind handed down to us, nor any sculptured representation answering to the description, for the musical instruments, as well as the music of the ancients, are enveloped in almost impenetrable mystery. It is true, that, on some Roman tesselated pavement, there was discovered the representation of a young man playing on an instrument similar to the flute, held transversely to the mouth; and, we have heard, there is an antique statue of a fawn, with a pipe, in the same position; but we have no means of proving this was the flute of the ancient Greeks. When the flute is spoken of by the Greek and Latin authors, it is evident not a single instrument, but a class of instruments is alluded to. If we were, however, to hazard an opinion on the subject, we should be inclined to hold with those who believe that the flute of the ancients was open at both ends, and held perpendicularly when played. We are strengthened in this opinion by the fact of there being right and left-handed flutes, and that they differed in tone, and were employed under various circumstances, according to the character of the music, whether solemn or lively, grave or gay. The right-handed flutes gave the bass, and the left-handed the treble notes: they were often played alternately, and it will at once be perceived, that while it would be perfectly possible to play right and left-handed flutes held perpendicularly, and to change them with facility, it would be exceedingly awkward and difficult to do the same thing with the instrument held transversely. How far this inference helps to decide the question, we must leave to be determined by others; but that the flute was held in the highest estimation by the Greeks and Romans, and that it was their most important musical instrument, there can be no doubt. Prizes were contended for by the most celebrated performers at the Olympian and other games; the professors and teachers of the instrument realised handsome fortunes, and lived in a style of the greatest luxury and extravagance. There were also colleges of flute-players, and bands of fifty and 100 performers. Among the Grecian and Roman ladies there were also several celebrated players, and, like the pianoforte at the present day, it was considered an indispensable accomplishment among the highly educated and fashionable. It was also the principal musical instrument employed in the sacred service of the temples. Even Xenophon thought it not unworthy of him to give his advice to professors; and to a young man who did not meet with the patronage he desired, he recommends "to take a large house and live in great style, that he may be *thought* a first-rate performer." This advice, how to make a reputation, is often enough acted upon in the present day, much to the hurt of the really clever and honest professor; and this branch, at least, of the art, or rather arts, of the musician seems to have undergone little change since the historian of Cyrus.

We must now turn to the flutes in the Great Exhibition; but first we will give a glance at the improvements introduced by Böhm of Munich. M. Böhm produced his first flute in 1832; but it was brought into general notice by the Academy of Sciences at Paris, who, on its being brought before them, with the ready attention to scientific improvement which characterises that distinguished body at once named a commission to inquire into its merits, whose report was unanimously in its favour, and who at once recommended its adoption in the Conservatoire of Paris in preference to the old flute. Had it not been for this favourable report, and the alacrity with which every improvement is received and is taken up on the Continent, we are afraid the flute of Böhm would have been long ere it found its way into general use, and would have had an overwhelming amount of prejudice to contend against, prejudice of the worst kind, namely, that which is founded ignorance.

The improvements in Böhm's first flute consisted in the correct distribution of the holes at equal relative distances, and in making them of equal sizes. This was effected by following out the principle on which a single note is produced, and applying it to the production of others. Our readers will at once understand this, by considering that any tube of a certain given length and diameter will, when sounded, give out a certain note of a certain pitch. Assume that note to be C natural, by cutting off a proportionate quantity of the tube the tone is sharpened, and C sharp can be produced; by again cutting off the same quantity, you get the next note higher, and so on until the octave is completed. Instead, however, of shortening the tube in the flute, and other instruments of the kind, holes are bored at the same distances that the tube would be shortened, which answers the same purpose. Now, supposing the diameter of the tube to be the same throughout, an equal quantity ought to be cut off to produce each note, therefore the holes answering the same purpose ought to be equidistant. We may observe that there may be some slight modification of these principles to answer particular purposes, such as the equal temperament in tuning, &c.

The other improvement in Böhm's first flute is the substitution of open for closed keys, he having discovered that not only was it mechanically easier to keep a key open with a spring which was not required to be so strong to keep it open as to keep it perfectly closed, but also that the closed keys acted as a damper to the next note above, and produced a muffled tone, or what is technically termed a veiled note. This was Böhm's first flute, and how it was appreciated on the Continent we have already shewn. He next found, that, however exactly he placed the holes, some of the notes were still unequal—some being weaker, and not so clear and full as the others. It then occurred to him, that there must be something radically incorrect in the primary construction of the tube: he therefore substituted a perfectly cylindrical in the place of the conical bore, and introduced his parabola head joint, which has the effect of refracting and propelling the sound with greater velocity, and, though not necessary to the production of perfect and equal notes (the correct proportions of the cylinder and the placing the hole effecting this), is of great advantage as an aid to quicker and more facile execution. It was evident that the conical bore in the middle part of the tube was one that could not be so clear and powerful as in the wide, and that, by adopting a perfect cylinder, there would be the same force to every note, and they would consequently be equal.

This was the second improvement of Böhm, and we see that he had entirely to remodel the construction of the instrument. The same principles apply also to other wind instruments.

Seeing how self-evident and simple are the principles upon which these effective improvements have been founded, the wonder is that they were not adopted before; but it must be borne in mind, that the transition from the old flute, A, B, C, to the German flute, and thence to the present keyed flute, was not effected at once: note by note, and key by key, was added to suit the necessities of the performer, or the idea of improvement possessed by the manufacturer. An improved but imperfect instrument had grown up, and while, from time to time, considerable talent and ingenuity was employed in perfecting it, the makers and professors were hardly prepared for an alteration in the very first principles of the construction of the instrument.

M. Böhm, in the Foreign Department, Bavaria (No. 23), exhibits a cylindrical flute, of silver, with the following improvements—correct proportions in the construction of the tube, a new arrangement of the key-mechanism, and a new form of embouchure of gold: *flute d'amour*, in B flat, in German silver; and a model of a patent hautboy, constructed on the same principles. These three instruments are in a small glass case in the Gallery: they are not so remarkable for their high finish in point of workmanship, though in this particular they are excellent, as for the disposition of the keys, which are arranged to come under the fingers in a more natural and regular order. At first sight, the mechanism appears somewhat complicated, and we have heard this brought forward as an argument against Böhm's improved arrangement of the keys. We cannot, however, but consider it an ill-founded prejudice. Any piece of mechanism that has more than a single simple motion, according to this rule, would be complicated; we might with equal reason call the large marine engine, of Bolton and Watt, complicated, as compared with the primitive but interesting model of the early application of steam-power to locomotion by its side. When every piece of mechanism has its proper employment and use, and does not interfere with the action of the other, there can be no complication. The first repetition action applied to the grand pianoforte was called complicated; yet we now see that no instrument of the kind is considered complete without.

We now turn to the French department:—

M. Clair Godfroy, Sen., of Paris (No. 454), exhibits wood and silver flutes of fine workmanship and high finish in every particular.

M. Tulon (398) exhibits improved flutes, with a new disposition of the keys, and hautboy, of first-class construction and make.

M. Bouffet, Jun. (442), exhibits clarionets on a new plan, flutes, oboes, and bassoons, for military bands, of excellent construction.

M. Tribert (1510) exhibits flutes and clarionets, highly finished, and a clarionet in tortoiseshell and silver. M. Breton (No. 1555) crystal and wooden flutes, on Böhm's principle, and clarionet, also on Böhm's principle, of very excellent make, but we cannot see the beauty or utility of the crystal flutes. The other exhibitors in this department are M. Besson (424) and M. Roth (393).

In the Austrian department, M. Uhlmann, of Vienna (No. 155), exhibits hautboys and clarionets elegantly mounted and of fine workmanship. In the Belgian department, M. Mahillon, of Brussels, exhibits clarionets, &c. From Denmark, M. Silboe, of Copenhagen (No. 31), exhibits an ebony flute, with eleven silver keys, and an archimedean bore; clarionet, in B. flat, with two mouth-pieces, on J. Van Müller's construction, and also hautboy, on the older Dresden pattern.

We have also flutes and other wind instruments of wood from the Zollverein, Saxony, and other parts of Germany; and in the American department, M. Eisenbrandt (461), of New York, exhibits some highly finished flutes, with jewelled keys. In the English department, Messrs. Rudall and Rose (No. 630) exhibit Böhm's patent flute, Carte's patent flutes in silver and wood, and the improved ordinary flute: these instruments are of the highest possible finish, and in Carte's patent flutes the keys are arranged to give superior facilities for execution. Before the improvements of Böhm, Messrs. Rudall and Rose had arrived at the greatest attainable perfection in the manufacture of their flutes on the old system, not having the good fortune to light on the same improvements as Böhm: they, however, knew how to appreciate them, and at once made arrangements with him which secured to them the sole right of manufacturing flutes on his principle in England.

Mr. Card (546) exhibits silver, gold, and electro-silvered and other flutes, of excellent make. Mr. Slocanis (539) exhibits specimens of his diatonic flutes; and Mr. Potter (538), Clinton's flutes, with the old fingering throughout. Messrs. Paske and Koenig also exhibit flutes.

Before leaving the subject of flutes, let us suggest to the manufacturers and professors of the instrument the propriety and necessity of combining together, and deciding on the adoption of one perfect system of fingering and disposition of the keys. At present there are no less than six or seven systems; and great as have been the improvements on the instrument, and beautiful as it may be in tone and perfect in intonation, it can never become really popular or do otherwise than decline, as undoubtedly it has, so long as this defect exists, and the learner, who imagines he has acquired the art of flute-playing, finds to his mortification, that he has only learnt the system, perhaps erroneous, of a particular master or manufacturer. Who would not, when this is the case, abandon the instrument in disgust?

Our limits would not allow us to enter into the history of the violin, and to trace its progressive improvement would be a difficult matter. The violin, unlike all other musical instruments, has remained stationary, and has undergone little or no improvement since the days of the Amati's, Stainer, Guarnarius, and Straduarius; and in the hands of these inimitable masters the instrument seems to have reached its greatest perfection. Differing, again, from other musical instruments, the violin improves by age, and hence the instruments of the old masters fetch immense prices, and those by Amati and Straduarius have realised as much as from £70 to 300 guineas for a perfect instrument in fine preservation, and £70 to £80, or £100 would be considered cheap for a good Amati. Straduarius, at the present moment, is in much request, and fetches the highest price.

Commencing with the violins exhibited in the French department by Villaume of Paris (736), the style and workmanship of the famous Italian makers of Cremona—Amati, Straduarius, Joseph Guarnarius—are imitated with surprising truthfulness and beauty, and the appearance of age and wear is given to them with remarkable exactness. Those who are aware that the varnish is one of the principal tools employed in the construction of the violin, and that thence the cut and form of the scroll and sound-holes peculiar to each maker, is almost as well known and distinguishable as the style of a person's handwriting, will appreciate the cleverness and beauty of these imitations. The varnish of these instruments, however, seems deficient in richness and brilliancy. Mr. Villaume, also, exhibits a violoncello and bass of excellent model, and a gigantic double bass with machine head and stops; also bows made by machinery patented.

M. Bonnardel (421) exhibits some well-made violins.

M. Jacquot (547) exhibits violins and violoncellos, and

MM. Husson and Buthios (838), among other instruments, violins of very good workmanship.

In the Austrian department we have also some beautiful models.

C. Enrico, of Cremona (147), exhibits a violin of great elegance and beauty, remarkable also for the brilliancy of its varnish.

M. Bittner (149), of Vienna, exhibits violins, tenor and violoncello, exceedingly good, and worthy of notice.

M. Rossell (145), of Turnan, Bohemia, violoncello, inlaid with mother-o'-pearl; and M. Herzlieb, of Grätz, Styria, violins, tenor and violoncello, of excellent workmanship.

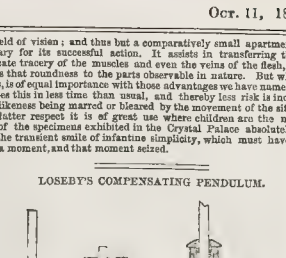
We have also in this department some fine specimens of Italian strings, from Padua and Venice. There are also a considerable number of violins, tenor violoncellos, and double basses, exhibited in their different departments, from various parts of Germany; but, however good they may be in tone, they display neither the elegance of form or finish of the violins in the Italian model. There is also a small violin in the Russian department, the upper part made of fir, the sides, back, &c., of plane-wood, by H. Ruderd, of Warsaw; like everything else in this department, it is of excellent workmanship. In the English department, Class 10 (537), there are violins and violas, violoncellos, violoncellos, and a double bass, in which, without servilely copying the old Cremona makers, they have succeeded in producing very beautiful models. In these instruments they have not attempted any artificial seasoning or darkening of the wood by baking it, and varnishing it in lime, to cause effects which only age should give, but have produced new instruments on as perfect a model as possible, in which the wood is in no way weakened or impaired, but left in its natural state and appearance. The varnish used by the old Cremona makers; had they done otherwise, their instruments would never have preserved their freshness and strength, matured by age, for a period of upwards of 200 years. Messrs. Purday and Flindt have also employed a varnish which they say is equal to the old Italian brilliancy and durability the celebrated varnish used by the old Italian makers, the preparation and application of which is a secret supposed to be lost. It seems to answer very well, but we think climate has much to do with it, and that will not answer so well in the damp atmosphere of this country, and that the excellence of the old varnish is a great measure attributable to the warm dry climate of southern Italy, and which no artificial heat can equal; the same causes are in operation in America at the present moment. The cabinet-makers of New York employ a copal varnish for their furniture, pianofortes, &c., greatly surpassing in brilliancy and durability our French polish, but which the moist atmosphere of our own climate makes it impossible to apply in the same perfection as in their dry and pure air.

Messrs. Betts (519) exhibit two violins, correctly modelled and finished with great care. Mr. Foster (509) exhibits a violin and violoncello made after the models of his grandfather, well known as "Old Foster," whose instruments are still much esteemed for their clean workmanship and excellent tone.

DAGUERREOTYPE ACCELERATOR.

It is generally known that the faithful pourtrayal of either animate or inanimate objects by the Daguerréotype depends very materially upon the volume of light at that period existing, and that, in such respect, those climates which are the brightest and clearest are necessarily the best for the development of this wonderful power. In winter and in twilight, or upon a dull day, all efforts to obtain a sharp and correct likeness are next to impossible; and those circumstances are often subjects of great disappointment both to the sitter and to the operator. Any means by which such obstacles could be got rid of must be of interest; and, without dwelling upon the length of time and patient perseverance which it has cost the discoverer before he brought his invention to perfection, we may briefly introduce the apparatus of Mr. Beauford, of Hastings, to the notice of those most interested. By it well-defined likenesses are taken, equal to those of the strongest sunlight, in an æthal medium many degrees less in luminous power. It has the advantage of giving to the ordinary apparatus an enlarged scope or field of vision; and thus but a comparatively small apartment is necessary for its successful action. It assists in transferring the most delicate tracery of the muscles and even the veins of the flesh, and imparts that roundness to the parts observable in nature. But what, perhaps, is of equal importance with those advantages we have named, is that it does this in less time than usual, and thereby less risk is incurred of the likeness being marred or bleared by the movement of the sitter. In the latter respect it is of great use where children are the models—one of the specimens exhibited in the Crystal Palace absolutely showing the transient smile of infantine simplicity, which must have lasted but a moment, and that moment seized.

LOSEBY'S COMPENSATING PENDULUM.



The above is a new form of compensating mercurial pendulum, invented by Loseby, of Islington. It exhibits several important modifications of the usual form of pendulum, and is a very beautiful piece of mechanism. We shall recur to this, and some others of Mr. Loseby's productions in the Horological department, in a future notice.

SCOTLAND.—THE LOWLANDS.

Having given a considerable portion of our columns to the consideration of the Highland stand in the Exhibition, we feel we must not overlook the Lowland stand of James Locke (Class 12, No. 18), in which we find a select variety of general Scotch goods, and a full assortment of the real Scotch wool make, and beautiful heather and stone colours, arranged in a picturesque group. These mixtures are considered to be among the best goods manufactured of our home wool. A fleece from a Cheviot weddar is also shown, together with the various processes by which it is prepared for the loom. We understand that the Albert grey tweed was first suggested to Mr. Locke when fishing near Roxburgh Castle, by the grey moss or growth which covered the bark of the trees. It so happened that Prince Albert had a dress of this very kind on his first visit to Scotland for deer-stalking.

Mr. Locke was one of the first, if not the first, who introduced Scotch goods into the London markets, more particularly the maud, in respect to which a few particulars may not be inappropriate at the present time of year.

The railroads have done much for this article; exposure to the wet and the inclemency of the weather being much less in that mode of travelling than on the coach, they are now fast superseding the cape and macintosh in the opinion of many gentlemen very competent, from their experience, to judge of the superiority of the one or the other. The genial warmth of the maud, when wrapped across the chest or round the body in its different folds, is now felt to be more comfortable than the cold waterproofs; in fact, it is only known by those who have worn the same stuff in trousers, viz. "shepherd's plaid," that it is both warm and cold, for, singular as it may appear, it is cool in summer, and it is warm in winter! The maud, being made of the same material, partakes of both these rare qualities. In the carriage they are now recommended by several of the faculty to invalids as light and warm, allowing the perspiration to escape freely, and possessing an easiness of wear which is very delightful, when worn either about the body or wrapped around the legs. Gentlemen find them a very comfortable companion when travelling abroad, either as a defence from rain during the day or as a counterpane on their bed during the night; many sleep in them as a talisman against a damp bed; and it is a well-known fact that, when you get wet in any woollen article, you are less likely to catch cold than in any other material, such as cotton or linen. It is a common custom among the shepherds of the present day to wet their mauds to keep out the cold; nor does this singular mode of defence from the inclemency of the weather, to which they by their occupation are often subjected, appear to be a modern discovery, for Birt, who resided among the Highlanders and wrote in the year 1725, says:—"The Highlanders were so accustomed to sleep in the open air, that the want of shelter was of little consequence to them. It was usual before they lay down to dip their plaids in water, by which the cloth was less pervious to the wind." It will be found on trial, that, in travelling, as the maud gets saturated with rain it gets warmer; and many gentlemen have said, that in ten or twelve hours' rain (say from Edinburgh to Carlisle) they have managed to keep themselves dry with one of ordinary size.

The maud, then, may be said to be a long scarf, from 3 yards to 4½ yards long, generally 1½ yard wide, and sometimes 2 yards. The most common colour is the check of six threads of black and six of white, known technically as a six-and-six check, called the Lowland or Border check; and in the counties of Northumberland, Cumberland, Roxburgh, and Dumfries, when a shepherd-boy first goes "to service out amang the farmers roun," the "gudewife" cuts a "whang," of about three or four yards length, from her home-spun plaiden web, to keep him warm when herding the sheep on the hills. As the youth grows and gets bigger, the maud which has been thus homely made is, of course, increased in size.

The plaid, as worn in the Highland costume, is fastened with a brooch on the left shoulder, and is, doubtless, of very ancient origin. King Robert the Bruce's brooch was presented by the Hon. Fox Maule to Prince Albert, on the occasion of her Majesty's visit to Scotland. The Lowlanders, on the contrary, use the right shoulder. (See Sir Walter Scott's monument at Glasgow.)

The Highland regiments wear the plaid in full dress: the 42nd use the Campbell, the 71st the Mackenzie (or M'Leod), the 72nd wear the Prince Charlie, the 74th have adopted the Forbes, the 78th a smaller set of Mackenzie, the 79th (what is called) the Cameron or M'Donald with yellow stripe, the 92nd have the Gordon with single stripe of yellow, and the 93rd the large Campbell, generally called the Sutherland.

These are all worn open at the ends, and about 3½ yards in length, in fine woollen, or a coarser kind for undress, the silk poplin being much out of use since the woollen plaids are made in such fine material.

The maud, on the contrary, is generally shut or sewed up at one end. When worn by the shepherds or drovers, who often carry provisions and other articles of use in it—sometimes a young lamb!—it is called a "pock" or "neuke;" and the old adage, "to live on your ain pock neuke," may come from this very thing. But, as it has been observed before, for usefulness generally, and for covering a bed, those with both ends open and fringed are the best. When sewn up at one end no tie [illegible] is required, as the left elbow is generally poked into it and acts as a [illegible] to wrap one's self tightly in it.

CARPETS, TAPESTRY, AND FLOOR-CLOTHS.

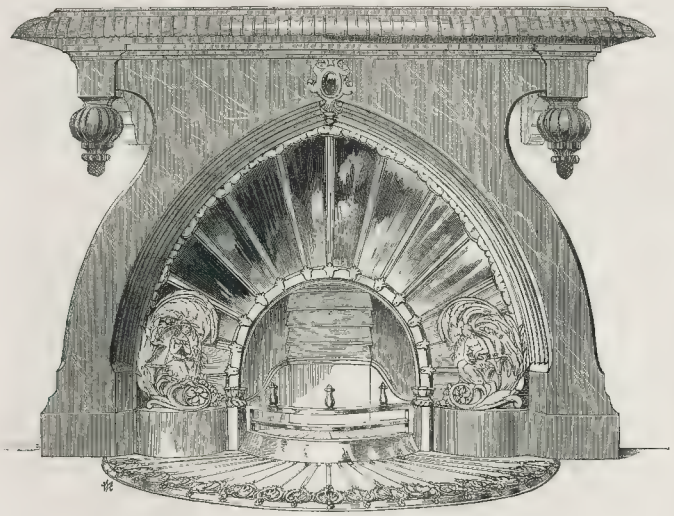
e display of carpets, although very unfavourably arranged for examion, is, without question, the finest that has ever before been gathered ether under one roof; and if we were asked to point out the section the Exhibition which most distinctly proves the advantage of comring our own progress with that of other countries, we should select e specimens of carpet manufacture. The English specimens are ar ranged, by the Catalogue, in Class 19, suspended round the north and rth galleries; the foreign carpets in the limits assigned to their re ve countries.

a number and variety of manufacture Great Britain takes the lead, ught be expected, considering that we use more carpets and export re carpets than all the rest of the world put together; but the honoura competition of other countries has enriched our Crystal Museum th specimens of extraordinary beauty in materials and workmanship, ch as we can scarcely expect to see produced again as matters of com ercial speculation. England, Scotland, and Ireland claim upwards of irty manufacturer exhibitors; that is to say, from London, Kidder nster (whence about twenty date), Wilton, Leeds, Halifax, Durham, ndal, and Stourport, in England; from Glasgow, Kilmarnock, Bannockburn, and Lasswade, in Scotland; and from Dublin: and, in addi n to these manufacturers, there are several enterprising firms, who dis ay goods prepared by their direct orders for sale in London, in various rts of England and Scotland, and even in Turkey and India, not to ention France.

Seven exhibitors are French, two Algerian, five Belgian, three Dutch, o Austrian, and eight of the Zollverein; two are Swiss, one Danish, e Portuguese, two Tunisian. The East India Company display veral splendid specimens of Oriental workmanship; among others, a lk carpet of incalculable value from Cashmere. The United States has ntributed only one carpet; and yet, as we shall presently explain, a tizen of the United States might have carried off the great medal r a new and valuable improvement in the manufacture of carpets, if e had chosen to have sent specimens of the manufacture, which he has recently commenced on an extensive scale.

The convenience of the arrangement by which lace, embroidery, and ther still more incongruous objects, are mixed up together, and by which o further increase the confusion in the Catalogue, each manufacturer has nly one number indiscriminately affixed to Brussels, Scotch, and velvet arpets, renders a critical notice of fabrics which can only be seen at a istance, and not felt, extremely difficult.

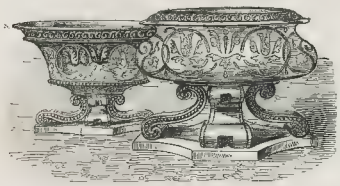
In considering the subject, a distinction must be drawn between commercial carpets, and carpets made without regard to ost, as a matter of state luxury, or a means of improving the taste f the particular nation at whose expense the work is carried n. Almost every European state, with the exception of our own, as a Royal or National manufactory of some kind, in which, at national expense, very magnificent things are produced, to be presented as presents to Royal or noble personages, and to be sold to he few who can afford to pay fabulous prices for hand labour combined with high artistic excellence. The Gobelins was one of the earliest of these state manufactories. It was founded by the great Colbert, in the reign of Louis XIV., on the site of dye-works which had been carried on by brothers of that name from the time of Francis I. Colbert attached to the Gobelins a school for instruction in art and science, and in connexion with manufactures, at the head of which he placed the celebrated painter Le Brun (whose battles of Alexander still form favourite stock pieces in Gobelins tapestry); and from that establishment and the one at Beauvais the tapestry and carpet manufacture



STOVE.—BY STUART AND SMITH, OF SHEFFIELD.

HUNTER AND TIGRESS. BY JERICHAU, OF COPENHAGEN.

This plaster group evinces wonderful spirit, and is extremely correct in execution. The hunter has snatched away one of the tigress's cubs, and she rushes wildly upon him to recover it, or revenge its loss. The attitude of the hunter, who aims a blow in self-defence, is full of energy and truth.



SALT-CELLARS.—BY LIAS AND SON.

These salt-cellars are of a very pretty pattern, rather old-fashioned perhaps, but beautifully executed and tastefully engraved.

THE ELDON GROUP. BY MARSHALL.

The portrait group of the late Lords Eldon and Stowell is remarkable for the accuracy of the likenesses, and the calm dignity of the attitudes. It, however, wants poetic character, and the effect is heavy.

GRATES. BY STUART AND SMITH.

Our Illustration is taken from a grate on Sylvester's patent, with rolling hearths executed in bright steel and or molu, manufactured and exhibited by Messrs. Stuart and Smith, of Sheffield. It is of fan-shaped pattern, and is set in a massive black and gold veined English marble. Messrs. Stuart and Smith are distinguished as manufacturers for the high degree of scientific skill and artistic taste they have brought to bear upon the Englishman's fireside. One of the partners (Mr. Jobson Smith) was instrumental in founding, and has always taken a very active part in supporting, the School of Design in Sheffield, an institution which has already produced a sensible effect on the taste of the Sheffield manufacturers. The collection of grates, stoves, and fenders exhibited by this firm comprises works rich enough for a palace and cheap enough for a cottage. Indeed, one stove in the Alhambra style has, we understand, been purchased by her Majesty. The castings in or molu of the one before us are of remarkable fineness and sharpness, and the workmanship throughout is first-rate. Sylvester's patent is one of the greatest modern improvements in the economy of household fires, by which the fuel is restored to its original position on a hearth of metal with open bars, which, extending fan-like, forms a fender, and, by radiation and reflection, distributes the heat through the apartment. This arrangement is directly the contrary of that by which, the grate being perched high up, one half of the heat flew up the chimney with the smoke, while the other half was employed in consuming a volume of cold air from the floor part of the apartment. By a further improvement, the hearth fender rolls on wheels; the ashes, falling between a few bars, disappear, and may be removed once a day, thus avoiding the use of a hearth-brush, which always occasions more or less of a nuisance.

FOUNTAIN. BY JABEZ JAMES.

This little fountain, studded with dolphins and sea-monsters, and crowned with a figure of old Neptune himself, is cast in bronze, and is supplied with water by a small engine. It is well adapted for the decoration of a summer-house or a cottage verandah.

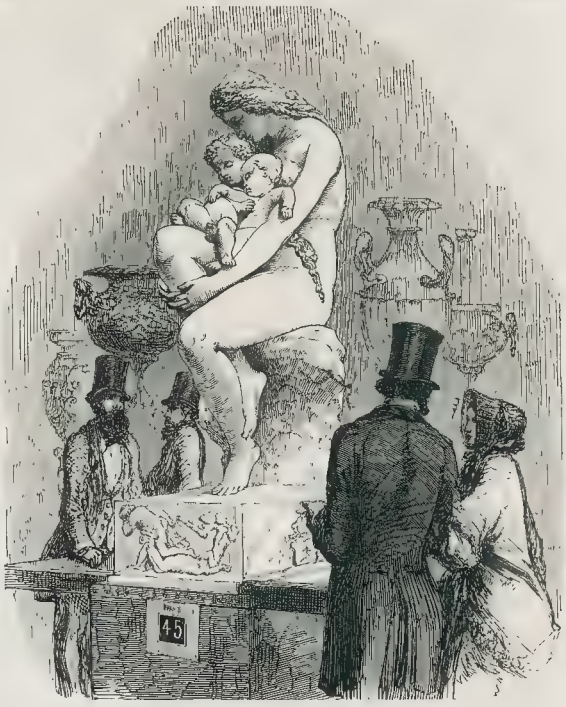
TAPESTRY PATTERN.—BY W. CROSSLEY, HALIFAX.

Messrs. Crossley, of Halifax, exhibit some very beautiful tapestry-work, one of which we engrave. The design and colouring are alike lively and agreeable; and the texture of the surface is of the richest quality, bidding fair for successful rivalry with the productions of Gobelins and Aubusson.

THE ELDON GROUP.—BY MARSHALL.

THE HUNTER AND TIGRESS.—BY JERICHAU, OF DENMARK.

"ANDROMEDA."—BY BELL.



EVE."—BY DEBAY.

AXMINSTER CARPET, DESIGNED FOR WINDSOR CASTLE. EXHIBITED BY WATSON AND BELL.

The carpet represented on page 468 attracts general attention, from its immense size (the extreme length being 62 feet, the width 38 feet), and from the brilliant, yet not gaudy colouring. The design was made by L. Gruner, Esq., expressly to the order of Prince Albert, for the drawingroom of Windsor Castle. The fabric (the best description made) is entirely worked by hand, every stitch (64 in a square inch) being tied through the back, so as to secure greater durability than in any other description of carpets. The work, which required the greatest attention to the working pattern and the selection of the various shades, was executed at Wilton, by Blackmore Brothers, for Watson and Bell, of Bond-street, on whom the responsibility of success devolved. Watson, Bell, and Co. exhibit three specimens of the same quality with that which they have made for Windsor Castle. It appears that these carpets have been produced to show that there is no necessity for resorting to France or Belgium for these first-class carpets, as those exhibited can be sold for less than two-thirds of the price asked by foreign manufacturers for the same quality. Indeed, we might supply France and Belgium largely with these articles, but for the duty on importation, which may be pronounced as prohibitory, being at the rate of from 250 to 500 francs per 100 kilogrammes on entering France, in other words, upwards of 60 per cent. on the average.

INLAID TABLE-TOPS. BY WOODRUFFE.

Woodruffe works in Derbyshire marbles are very beautiful. The tables which we engrave are very handsomely inlaid, after designs by L. Gruner, and made to the order of Prince Albert. The Royal initials will be observed in the border of one of them.

EVE. BY DEBAY.

We have already, in our concluding article on sculpture, favourably noticed the very masterly group of Eve, with the infant Cain and Abel in her lap, exhibited in the Gobelins room, by M. Debay. The idea is poetical and picturesque, and is ably carried out. The First Mother appears to be lost in a reverie as to the future destinies of her offspring, the principal incidents of which are foreshadowed to the spectator in the bas-relief sculpturings on the pedestal. All things considered, we should be inclined to pronounce this to be one of the finest works of sculpture in the Exhibition. Some people have given it the fanciful title of the "First Cradle," or "Nature's Cradle;" but as that does not do justice to the poetic mystery involved in the conception, we prefer the simpler title by which we have denoted it.

"ANDROMEDA." BY J. BELL.

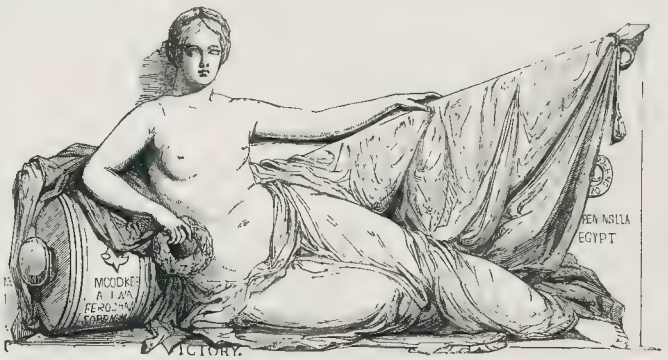
This is certainly one of the most graceful and pleasing of Mr. Bell's numerous productions, and it has been most satisfactorily cast in bronze by the Coalbrook Dale Company. Since its location in the Crystal Palace, it has been purchased by her Majesty.

PARIAN FIGURES, &c. BY GOODE AND CO.

Messrs. Goode have been at great pains and expense in the production of their China lace and Parian lace figures, which exhibit great beauty, colour, surface, and finish, even in the most intricate details. The three figures in the group given represent Repentance, Faith, Religion, &c.; the grapes and flowers on the vases are done in very bold projection, but, being so *vraisemblable* in form, call out for a little colour to mark.

ROYAL FAN. BY DUVELLEROY.

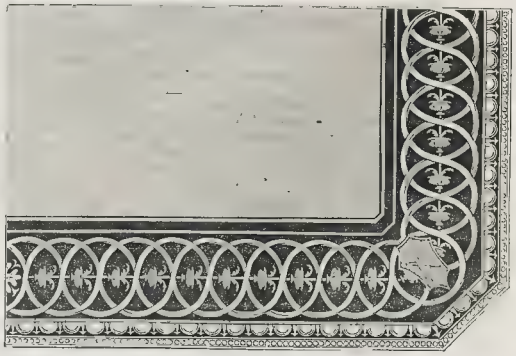
Duvelleroy has made a *spécialité* of fans, in the production of which he is perhaps without a rival. His fame extends not only over Europe, but has made its way to remote quarters of the globe. Even the Chinese, so famous for their fans, so unwilling to learn, and jealous of change, have copied his designs. It would be rather difficult to describe the truly gorgeous fan which this celebrated artist has made for the Emperor of Morocco. It is a fan of wonderful magnificence, and, to say nothing of the painting and general enrichment, the diamonds and the jewels alone have cost more than £1000. He exhibits also a set of fans illustrating the stories of the "Arabian Nights," which have been made to order for the Sultan of Turkey. But our present business is with the *evantail royal*, the subject of our engraving on page 472. In this little work of art her Majesty and Prince Albert are represented sitting in the drawingroom at Buckingham Palace, surrounded by their Royal children, after a picture by Winterhalter. The handle is of mother-of-pearl, and the medallions in carved gold. In the centre of the handle are the Royal arms of England, carved in *alto relievo*, in the thickness of the mother-of-pearl: the lion and unicorn support the 'scutcheon; and the two mottoes, "Honi soit qui mal y pense," and "Dieu et mon droit," appear in letters of mother-of-pearl on a ground of gold. Each of the radiating branches is terminated by a Royal crown, and the two principal branches bear, chiselled in the mother-of-pearl and richly gilded, portraits of the Queen and her Royal Consort. We understand that M. Duvelleroy employs upwards of 2000 men. This is easily accounted for, when we state that he makes fans as low as a halfpenny each, and that even these have, every one of them, to pass through the hands of fifteen workmen.



"VICTORY." BY NELSON.

VICTORY. BY G. NELSON.

This is a piece of sculpture intended to commemorate the services of the officers and men of the 50th Regiment who fell on the banks of the Sutlej.



INLAID TABLE-TOPS, DESIGNED BY GRUNER.—BY WOODRUFFE, OF BAKEWELL, DERBYSHIRE.

FRINGE, &c.

It appears that the custom of appending fringe as a decoration to costume and furniture, of even the rudest dwellings, is to be traced to the very earliest ages of man. The graphic records of past times, either in sculpture or otherwise, furnish ample evidence of its adoption in those periods of which we have the unquestionable vouchers. All nations have likewise been accustomed to its use, however barbarous or uncivilised the state of the people; and the dresses of the savages and aborigines of Africa and elsewhere testify to the existing fondness for such a means of decoration and display. Indeed, amidst the apparently confused jumble of paraphernalia worn by the Indians are mostly to be found portions of native manufactured fringe, displaying great art and facility in design, and elaborate neatness and order in their execution. Few of these specimens of embroidery are to be met with of late unadorned with beads, these latter introductions of European traffic taking the place of small pebbles, shells, &c. In this respect there exists but little, if any difference, between these productions of so called savage life, and the results of our best manufactures, with all the accessory aid and attributes of science and art. As a somewhat parallel corroboration of this view, we would, *en passant*, instance an apron of crochet work, remarkable for the beauty of the pattern and execution, in avenue 1, area 20 (Ionian Islands), and showing that what has but recently appeared in England as an accomplishment, has been for ages the common needlework of the Ionian peasant girls. Doubtless many of the first notions of fringe were obtained by the leaving uncut the ends of the material used in making nets, the fraying of fabrics, and the consequent necessity of stopping its extension by knots, the addition of small weights to keep down drapery at the entrance to tents, &c.

There are some splendid specimens of fringe of early English and Flemish manufacture to be found in various noble mansions throughout England, and which have been eagerly sought after and as eagerly copied by the British manufacturer who in this branch of trade closely competes with, if he does not excel, every other. Indeed, the specimens of our own fringe in the Exhibition fairly outvie all that has been contributed from any foreign source, if we except colour, in the essential requisites of taste, material, and finish. Ere we commence our detailed description, we may allude to a room at Dotesio's hotel, at Slough, entirely fitted up in needlework and embroidery of the time of Louis Quatorze, and in which is to be found some of the most magnificent fringe of that gorgeous period. The beautiful little gossamer-like tassels which hang in clusters to the beds, the chairs, and the ottomans, are of the most pure and exquisite design, and, what is still more remarkable, there are, as we believe, no two alike. We were forcibly reminded of these elegant appendages while examining—

No. 56, in class 13, contributed by Elizabeth Onion, of Birmingham. Here are several *fac similes* of the fairy-like tassels we alluded to, but they are not used as independent objects, but made to dangle at intervals around some burly bell-handle, or attend in clusters upon their more weighty, but less elegant, connexions. This display of Mrs. Onion's is a very handsome one, with which we have neither inclination nor excuse for finding fault: very elaborate work has been utilised: but such elaboration, as in the tassels made mention of, has been qualified by breadth of parts and a sufficiency of repose insured to sustain a desirable harmony of composition. Most of the tassels embrace in portions the forms of regal crowns, but they outlines are sufficiently disguised to remove any obvious mechanical effect, while enough is evolved to induce the reminiscence of a preconceived notion of grandeur.

No. 69, Ann Arthur, Mortimer-street, although next to the last-mentioned, is very far removed from great taste. The objects are poor and unmeaning, the imitations of flowers being execrable. Some of the tassels, and those of the more simple kinds, are good, but whenever an attempt to improve has been made, failure appears to have followed.

No. 68. Foot and Son, Spital-square. Fringe formed by a combination of velvet and brocade. This appears to be a very happy mixture of materials, but we can readily conceive, with such appliances, much more could be done than has been here effected. In some of the specimens the appearance is dingy and unprepossessing. The silk fringe in the centre of the compartment of blue and white, and that of salmon colour, is very neat and pretty.

No. 71. Danby and Co., No. 43, Bond-street, have several imitations of rose flowers and leaves, which are more curious than enticing. They have an old-maidenish stamp. The cords and tassels are of considerable elegance, and singular lightness of appearance.

No. 72. C. W. Bradbee and Son, Newgate-street, have a few of the most charming silk tassels it is possible to conceive. They are very simple in their form and construction, and are clearly copied from Oriental originals. The fringes for sacred edifices are more quaint than tasteful.

Evans and Co., Watling-street, have cornice, silk, bullion, and ornamental fringe, of an exceedingly useful and solid, but by no means *recherché*, character. The bell-pulls and curtain-holders are remarkable for an excellent arrangement of parts: comparatively ancient examples have been carefully studied and judiciously made use of, a correct balancing of the various figures being observable. The silk cord for the ornamentation of curtains is likewise deserving of mention, and the whole of this selection has clearly been placed under the supervision of an artistically educated eye. The large curtain holder in the centre of the case has a well-balanced tassel, but the cross-piece above it is somewhat out of harmony.

No. 394. Bennoch, Twentyman, and Rigg, 77, Wood-street, have two cases containing a greater variety of produce than any of those adjoining, from which we gather that the commercial operations of this firm embrace a wider area than those whose goods of a similar class are exhibited in the same gallery. While under one number we find specimens of sewing silk and twist, in another the same articles with shoe ribbons added, and in others excellent specimens of upholstery fringes, gimps, or dress trimmings, here we find a concentration of them all. There are a few skeins of purse silk, or netting twist, representing a production of three or four hundred pounds weight per week; a few balls of twist used for button-holes, of which a like quantity is made, and a few skeins of sewing silk of a peculiar dye called *raven*, or it may be jet, standing for a business of 2000 lb. weight per month, or equal to 26,000 lb. weight per annum. Here, too, are boot-laces, from 8d. to 9d. per gross of 144 laces, tagged with tin or brass at each end: one would imagine, that, to cut the cords, tag them and afterwards, tie them in bundles, would be barely paid by the money. The little boys of seven to twelve years of age employed in this trade (and there are hundreds) will, in the rooms where such goods are made, trot from twenty to thirty miles per day, or equal to half the circumference of the globe every year. Here is a box with a few rings of wire enveloped in cotton, or covered with silk, used to stiffen or keep in shape the bonnets of the ladies; and when we learn that at least 30 tons of iron, with a proportionate quantity of cotton and silk, are consumed in the fabrication of this apparently simple article, how it seems to enlarge our views in relation to commerce! Let no man pronounce this insignificant, or that anything is insignificance in the arrangements of nature, and as little in the harmonies of commerce. Things which at first sight appear unworthy a moment's thought, on being explained, expand before our vision, and we picture to ourselves the tens of thousands of pulsing hearts and humble homes rendered happy and comfortable from the enterprise of the manufacturer who points a pin, as well as from the titanic power that forges the anchor. Here, also, are reels of twist, looking like silk, but in reality two-thirds cotton—the cotton being plated with a thin coating of silk. This material is used for embroidering lace at Nottingham, or woven into fringes for mantles at Coventry. We believe it was mainly through the encouragement of the head of this firm, that a principle was discovered by which such articles could be produced by machinery, instead of by hand, as formerly. Many months of study had been devoted to the subject, and it was about to be given up in despair, when Mr. W. Unsworth, of Derby, hit upon the process. The effect was instantly felt; goods that were only sold at a shilling were reduced to threepence. Articles confined to the comparatively wealthy, were brought within the reach of the comparatively poor. Germany, Holland, and Belgium were supplied by our manufacturers with goods they had previously produced for us; while America and the cities on the shores of the Mediterranean became important customers. Several thousands of persons were occupied in Warwickshire and Derbyshire in fabricating guimps, fringes, and other fancy articles. The trade was established, and a new branch of manufacture added to the industry of England. such details are so interesting, that we have been led to dwell longer upon them than was the intention of our first design: we may add, however, that along with the articles already enumerated are excellent specimens of coloured ribbons from Coventry; blond ribbons, braids, cords, and fancy silks from Derby; handkerchiefs and ferrets from Macclesfield; sewing silks from Leek; various galloons, &c., from Manchester; and numerous combinations of lace with ribbon guimp, &c. from Nottingham, all worthy of inspection. As these notices are for the encouragement of those whose labour and capital are embarked in commerce, as well as for the information of those who wonderingly look on, it is cheering to learn that such firms as those whose productions are before us give direct employment to two or three thousand persons, and incidentally provide for three or four times that number. Who can calculate the amount of good they do? To all such we would say, go on and prosper, reaping the reward your enterprise so justly merits.

Robert Burgh has a very large display of fringe, amongst which there is much to admire, but as much to show us that the results have been as equally produced by ill-directed fancy as good judgment. For instance, the tassels are mostly more grotesque in embellishment than elegant in shape; and where an approach to something deserving of admiration is just about to be arrived at, it is stopped short by the intrusion of some false quantity either in colour or form.

No. 76. Barrett and Corney. A rich collection of gold and silver cord and fringe: some of the cord made with either gold or silver is interlaced with coloured silk, and is peculiarly chaste in style. In this case is a ruby jewel hole through which the gold wire is drawn, and which is supposed to be the finest hole ever pierced. "The wire drawn by its means runs 2820 yards per ounce troy, and the gold actually measures at the ratio of 338,400 yards, or 192½ miles per ounce troy!" Here is evidently some error, but we give it as we find it.

No. 57. Burke, 6 Bull's Head-court, Newgate-street, has several examples of embossed trimmings of great beauty and design. This embossing is done very readily on any kind of silk, linen, paper, &c., and although in regard to dresses is will, of course, wash or iron out, we can readily conceive that at the cost of a little time and expense the best examples of decoration might be renewed with much success. The cut-through patterns have not this objection, and are equally remarkable for their quiet, lady-like appearance. We think this an application which is within the reach of most persons, and capable, in gifted hands, of being carried into a very wide field of decorative usefulness.

No. 80. W. and H. Browett, Coventry. The trimmings of these gentlemen enlist attention, from their great beauty and the variety of the assortment.

The fringe on Messrs. Fauvell and Phillips' grand state bed, of which we recently gave a detailed description, is bold, artistic, and massive, and altogether in excellent keeping with the *tout ensemble*. A second inspection of this gorgeous affair serves to impress us still higher with the notion of the elevated taste which must have presided over its production.

No. 206. T. Wheeler and Co., of Abbey Mills, Leicester, has an endless variety of fringe, all more or less creditable to the capabilities of Leicester.

In the Austrian department we have C. F. Muehlenderien exhibiting gimps, fringes, &c., all of a very common, not to say inferior, description; and Oehmig and Schmidt, fringe in worsted of a heavy character and tawdry effect.

Posamenter, of Breslau, at the entrance to the South Gallery, exhibits pieces of carriage and furniture fringe of a superior description; next to which is Heinrich Zelsig, of Breslau, whose carriage fringe is likewise commendable, but whose bell-handles are conceived in the worst notions of that requirement.

In the French department we have nothing that approaches to the British groups, if we except some very broad and elaborately wrought fringe made for Messrs. Jay, of Regent-street, in which a cut jet bead (not the common bugle) is introduced with admirable effect. This fringe, in some instances, is ten or twelve inches broad, and in the closer portions arabesque and other patterns are introduced with great correctness of outline and exquisite finish. It is of a most expensive description, being intended for mantles for our English aristocracy and more wealthy classes. For brilliancy and richness of colour there is no one in this department can vie with Guillemet Brothers, who have contrived, by the simple aid in each specimen of two or three shades, to produce a most striking and gorgeous effect of chromatic harmony; and they have been equally fortunate in this essential requisite in their carriage and furniture fringe, in the latter of which they have made a bold and successful attempt to imitate precious stones set in gold.

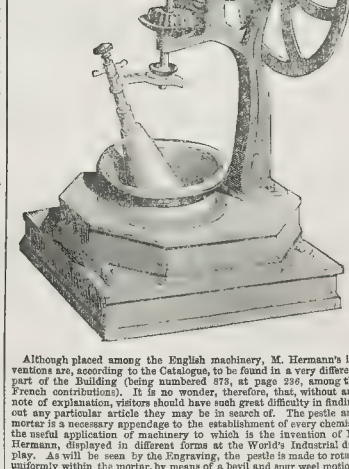
No. 1424. Pugin, Paris, contribute carriage and furniture fringes, which, while they do not approach the last mentioned for the exalted gift of colour, are good from a certain care and attention to arrangement and form. Jullien, of Tours; J. Mormieux, of Paris; Repiquet, of Lyons; and F. M Roux, of St. Chamoud, show severally specimens of fringes which for all be placed under the same category of tolerably well manufactured.

No. 50. Behr and Schubert, of Frankenberg, Saxony, have a flag of double satin with fringe.

No. 152, Hessel Brothers, 155, Uhligo (Annaberg), 158, Bach and Son, and 160, Hillman, all of Saxony, exhibit various fringes, tassels for curtains, sewing and ball fringes, half silk bullion, which are principally exhibited for cheapness and execution, but which, while they possess much merit, are almost destitute of novelty.

The only other examples of fringe which we could find are in the Portugal and Madeira department, 1155 to 1157, bell-ropes and tassels, which did not repay us for the search.

HERMANN'S DRUG-GRINDING MACHINE.



Although placed among the English machinery, M. Hermann's inventions are, according to the Catalogue, to be found in a very different part of the Building (being numbered 873, at page 236, among the French contributions). It is no wonder, therefore, that, without any note of explanation, visitors should have such great difficulty in finding out any particular article they may be in search of. The pestle and mortar is a necessary appendage to the establishment of every chemist, the useful application of machinery to which is the invention of M. Hermann, displayed in different forms at the World's Industrial display. As will be seen by the Engraving, the pestle is made to rotate uniformly within the mortar, by means of a bevil and spur weel motion, effected by the application of the hand to a fly-wheel at the back of the machine. Thus the grinding is performed more perfectly than by the ordinary hand-pounding process. There are two modifications of this invention. In the one which is illustrated in the present Number, the mortar is made of china, while in the other the mortar is of granite, and the framework of the machine is somewhat different. Either of these machines, however, would be far more useful in the laboratory than the old pestle and mortar.

The same exhibitor also shows chocolate-grinders and other machines on the same principle; but, instead of being worked by hand, they are driven by machinery in connexion with a steam-engine, in the present instance on the oscillating principle, constructed by Messrs. R. and W. Hawthorn, of Newcastle, and mentioned more particularly in our notice of "Machinery in Motion."

BUTTONS.

The principal display of Buttons, at the Great Exhibition, on the south side of the English department, under the head of "Hardware."

The oldest of the Birmingham buttons seem to have been a plain flat button, of the waistcoat size, which, a hundred years ago, was sold at 4s. 6d. a gross, and which is still manufactured at 1s. 6d. a gross. Then came a very large button, of the size of half a crown, with ornamental devices on it; but this was done. It was the gilt and plated button, introduced between 1797 and 1805, which made the great "hit" in the trade. This button became immediately fashionable, and continued so for a quarter of a century. Everybody must remember the days when the blue coat, with its seemly array of glittering brass buttons, was the not unbecoming garb of a gentleman. At the end of twenty-five years, it was pushed from its popularity by the covered, or Florentine button; but a dashing attempt was made to revive its glories by means of a deputation which the trade despatched to London. We do not learn that they committed a similar inadventure to that of the poor wig-makers, who went up to petition the throne, some years before, against the practice of wearing one's own hair, but, going in their own natural hair, so scandalised the mob by their inconsistency, that they had it all cut off for them by the rabble. Armed with sets of beautiful bright buttons, the discomfited makers forced their way to the foot of the Throne, and, tendering their article, besought Royalty to pity their misfortunes. They represented that the old button was very handsome, and that thousands had been reduced to poverty by the introduction of the new one; and they therefore entreated the King (George IV.) to encourage the metal button trade by wearing that article. The same appeal was made to other influential persons; and not only the King, but the Duke of Clarence, several of the Ministers, many members of the nobility, the Lord Mayor, and other notables, accepted the proffered buttons, and promised to wear them. The experiment was successful, a reaction took place, and the dark button, as we well remember, went aside, for a few seasons. Again we all came out glittering—

"To midnight dances and the public show."

But the triumph was not long, and that it was not longer, was the fault of the Birmingham people themselves. Some manufacturer invented or introduced a cheap method of gilding the buttons. The trade called it French gilding, the workmen named it "slap dash." It made the buttons look remarkably brilliant for a very little while, but they tarnished almost immediately, even before the retailers could sell them; and if placed in all their brightness on a new coat, they looked shabby in a fortnight. This discovery—perhaps it is refining too much to suppose that it was introduced by a friend to the Florentine button—fatally and finally damaged the metallic cause, by casting discredit upon the whole manufacture: people left off ordering brass buttons, and by 1840 the trade was again ruined. A second attempt at obtaining illustrious intervention made: Prince Albert was assailed by a deputation, and the sympathies of the press were invoked by the metal-buttonist. But the charm would not work twice, and you never see a gilt button now except upon the terribly high-collared coat of some terribly devoted adherent to old fashions, who may be observed nestling in the corner of the stage box on first nights, and who, if he speaks to you, is sure to growl out the unreasonable intimation, that "You ought to have seen old Joey Munden, sir, in a character like this. Munden, sir, *was* an actor."

Except the buttons required for the military and naval services, and for "Jeames," the metal article is out of date, and covered buttons have it all their own way. The Florentine or covered button was first introduced into Birmingham in 1809, and derives its name from the Florentine cloth with which it is covered. It is composed of five pieces: first, the cover of Florentine, or silk; second, a disc of metal which gives the shape to the button; third, a somewhat smaller disc of brown pasteboard or wadding; fourth, a disc of coarse black linen or calico; and fifth, a disc of metal from which an inner circle has been punched out, so that the cloth or calico above may slightly protrude, and form the shank of the button. Young girls cut the various discs with a punching machine, and the last operation is to place the five pieces in regular order in a small machine constructed to hold them—the arrangement carried out by a number of little children under a woman's superintendence; and then this machine, which has been compared to a dice-box, is brought under a press, which with a touch fastens the whole bottom together with a neatness and a completeness to which any one who will examine his coat-button can be witness.

Horn buttons are made from the hoofs of horned cattle: those of horses are not available for the purpose. The hoofs are boiled until soft, and cut into bars, then "blanks" are punched out. The blanks are placed in vats containing a strong dye, red, green, or black, and the shank is next fixed in. The button is then placed in a mould, where the under surface is stamped with the maker's name. A dozen moulds are put into an iron box, and heated over an oven until the horn is as soft as wax, and then an upper mould with the pattern for the top of the button is pressed down, fitting close to the lower mould. The moulds having been placed in the press, and submitted to its action, the buttons are complete, except that the rough edges require paring. Brushes, worked by steam, then run over and polish the buttons, and they are ready for the sorter. There are numerous beautiful specimens of these buttons in the cases to which we shall presently refer.

There are still many other kinds of buttons to be noted. The pearl button gives employment to two thousand people in Birmingham alone.

We must not forget glass buttons, with which it was lately the pleasure of admiring mothers to sprinkle their little boys very profusely, and which are also much in demand for exportation to the African chiefs, who have the true barbarian love of glitter. There are two sorts, the round and the knob-shaped. The former are made of sheet-glass, of various colours, and coated with lead, which is cut by hand into small squares, the corners of which are rounded with scissors, and the edges are ground on a wheel. The shank is then fastened; it is joined to a round piece of zinc, the size of the button, and soldered to it. The knob buttons are made in a mould; a long rod of glass being softened in a furnace and clasped in the mould, in which the shank has previously been fitted. The black glass buttons, for coat-links, are made at a lathe. Agate, carnelian, and stone buttons are imported from Bohemia, and shanked and finished in Birmingham.

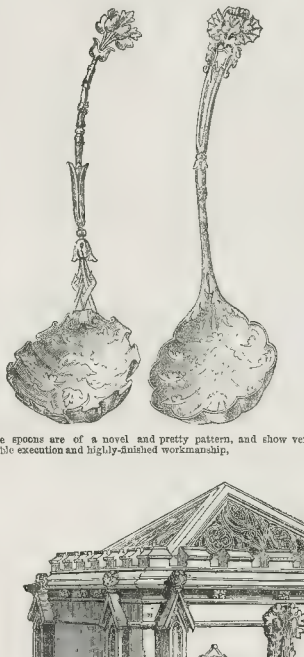
There are several other kinds of buttons, specimens of which are in the Exhibition, as the iron and brass buttons with four holes used for trowsers, steel buttons for ladies' dresses, wooden buttons and bone buttons for under clothing. The former are punched by one press, rendered concave by another, and pierced by a third, and then a hand-piercer is introduced from the opposite side to that which receives the blow, in order to smooth the edges of the holes. Having been cleaned, the buttons receive a white coating, by means of a chemical process. The steel buttons are made by the steel toy manufacturers. The wood buttons are made by wood turners; and the bone buttons are chiefly made by the horn button-makers.

Having thus enumerated the principal forms of button, we will pass to the Exhibition itself, in which these articles make a very good show, and we will indicate the best side of specimens of the art. Messrs. Twigg (278, General Hardware) have some very handsome specimens of the "Jeames" button, and some boldly embossed naval buttons, with appropriate ornament. Some of their cut-glass buttons in metal are effective. Messrs. Pigott (282) bronze buttons, with sporting subjects, are among the best we have ever seen: and Messrs. Hammond (282) have some particularly bold and well-executed device buttons—a set which we noticed, as made for a "Curling Club," being very characteristic. Messrs. Aston (285) not only show a handsome assortment of all kinds, especially of the Florentine class, but they introduce a series designed to illustrate their manufacture, a course which is very much in conformity with the spirit of the Exhibition, and one which we could wish had been adopted wherever it was conveniently practicable. Messrs. Inman (284) have also some bold and well executed buttons, some of them honoured with the episcopal *insignia*, and others for the servants of the London Docks. Some of the prettiest cut glass buttons in the Exhibition are in the case of Messrs. Neal and Tonks (285); and Messrs. Chatwin's case

(286) contains as highly finished specimen as any assortment around them. In connexion with Mr. Banks's buttons (287) are some large and fine specimens of the shells used in the manufacture of pearl buttons, above described, and these shells are from the Gulf of Persia and from the Sooloo isles. A very small, but pretty contribution is made by Mr. Knowles (289), consisting of gold plated and enamelled buttons—there are, we think, about a dozen only. Mr. Wells (290) exhibits some horn buttons of considerable merit. The case (295) contributed by Messrs. Smith, Kemp, and Wright shows as a very brilliant assortment. The sporting buttons, representing the neck-and-neck end of a race, the hunter clearing a hedge, the sportsman bringing down his partridge, with other varieties of amusement, are very cleverly designed. There is a good St. George and the Dragon, and indeed a very rich multiplicity of devices, enamels, crests, buildings, military and naval buttons, a capital lion, and other designs for ornamental buttons. We noted this in the Catalogue as a "very fine tray of specimens." Messrs. Allen and Moore (300), among many choice and beautiful articles in hardware, exhibit metal buttons of fine finish; and Mr. Aston (30) shows velvet buttons, which we marked as very rich in their effect. We have spoken of the manufacture of pearl buttons, and Messrs. Elliott (302) exhibit some with metallic rims—an arrangement which conveys the desirable idea of exceeding care in the finish. Messrs. Ingram (304) illustrate very fully the horn button in its history and varieties. Messrs. Hosley also (305) have some metal articles amid their beautiful hardware. Mr. Nash (310), a die-sinker, shows the dies by which the metal buttons are stamped. In a case (364), exhibited by Mr. Bickrabb, are specimens of the mother-of-pearl button, and among them of the black pearl.

The general characteristics of the specimens of button manufacture must, of course, be, to a great extent, similar, the contributions being chiefly sent by first-rate producers, who, in running an honourable race with their rivals, all strain the point of excellence which leaves little room for diversity. In some of the cases there is more artistic taste, as regards the designs of ornament, than in others; but the mechanical finish of the whole array defies censure. The button manufacture of England is obviously and decidedly creditable to the country.

SUGAR-SPOONS. BY LIAS.



These spoons are of a novel and pretty pattern, and show very admirable execution and highly-finished workmanship,

GARDEN FURNITURE.

The two great troubles of amateur gardeners, especially ladies, are blistered hands and aching backs. The first of these may be considerably lessened by wearing gloves, where the nature of the operation will admit of it; but, for the pains induced by incessant stooping we see no remedy, and can only look for relief by the invention of tools which, by their peculiar construction, shall render frequent stooping unnecessary, beyond a certain "graceful bend"—at least, with regard to the operations of digging, hoeing, raking, weeding, drilling, dibbling, watering, sticking peas, sowing seeds, transplanting shrubs, cleaning garden rollers, &c. How far the various inventions intending to lighten and facilitate these garden operations will accomplish so desirable a result, it would be temeritous to affirm, without first obtaining some special experience; suffice it to say, that, in several cases, the promise has a very feasible look, and, in a few instances, we feel no doubt of the advantages to be derived from the use of such tools or implements.

One of the first things that attracted our attention in the department of Agricultural and Garden Implements in the Great Exposition was Boyd's patent double-action or self-adjusting scythe. It was not merely the scythe that caught our admiring eye, but the ingenious device of a little figure of Saturn, or Father Time, with *two* scythes, one of these being the old original scythe, which was carried over his shoulder, the edge of the blade being so close to his neck as to suggest that if he happened to stumble it would cut his head off, while in his right hand he holds Boyd's scythe, carefully shut up like a long clasp-knife, and so safe as to be incapable of doing injury either to the bearer or to anybody passing near him. This is evidently a great improvement. It is so much better than leaving such a dangerous instrument at all times open to do mischief, or else bundled round clumsily with whisps of hay or straw. Mr. E. James also exhibits a patent self-adjusting scythe, which can be put together without any assistance from a blacksmith, and shuts up like a knife.

Benjamin Ebbs offers a very remarkable garden implement for the use of ladies. It comprises a hoe, spud, and rake, all in one tool, and is very light to handle. It is proposed, by means of this, to enable a lady to root up weeds growing round strawberries, or other plants, hoe the earth round them, and rake it clear and smooth, and all this without any necessity for stooping down or changing the tools.

Henton's garden roller is a very ingenious and excellent invention for lightening the weight of the draught. Every amateur gardener has felt how hard a labour it is to drag a garden roller for any length of time, especially after rain or over heavy ground. On the usual plan, you have the full weight of the roller to drag; but in the present invention of Mr. Henton it is cleverly contrived that the weight of the roller shall contribute to its own motion, and, in fact, assist in rolling itself over. The inventor informs the world, on a scrap of written paper, appended to his roller, that it is the greatest invention in the whole Exposition, which is to be regretted and smiled at, and, we hope, pardoned.

We must call attention to Dean, Dray, and Co.'s stock of ladies' garden tools, such as hoes, rakes, and spades. They also present to our notice the "fruit-gatherer" (a staff or pole, with an apparatus at the top for cutting a stalk, and a little net bag, like an angler's landing-net, underneath, to catch the fruit that falls); and the "averuncator," which is an instrument for pruning the higher portions of fruit trees, plants, and shrubs, without the need of mounting steps or ladders. It is a pole, with a cutting-instrument at the top, like a bending forefinger, or a pair of semi-circular scissors, and seems quite likely to perform its office to admiration, provided its machinery does not get entangled in the boughs. But why call it by so pedantic a name as the "averuncstor?" The "pruning pole" would be worth a thousand of it.

Clayton's spades for gravel, or clayey soils, and adapted to different works of a laborious kind, or in a confined space, seem to be valuable additions to our stock of agricultural implements.

Dr. Spurgus's hoes are of very novel formation, presenting a shape not unlike that of a sharp ace of clubs, the tops of Gothic windows, or like some of the apertures and ornaments in Gothic architecture. One of them rather resembles a bird standing upright, with his head cut off. They are light, curious, and we are disposed to believe they may be turned to excellent use in garden work.

The cast-iron garden-seats, tables, and chairs of W. Dray and Co. have a very handsome bronze-like appearance; they are strong, yet of elegant design, and are not expensive.

Mr. Francis Parkes exhibits a variety of spades and forks, the chief peculiarity of which seems to be their thinness, sharpness, and lightness. One of the spades, for instance, is so thin, that we should fancy the act of digging would very quickly be brought to a stand-still by the pain it would cause the foot, if it did not shortly cut through the boot; but perhaps the tool is not intended for digging so much as to be used as a shovel.

A refinement, amounting, we think, to dandyism, has of late made its appearance among our garden furniture, in the shape of delicate white porcelain labels for flowers and plants. There are likewise metallic labels for garden, and conservatories, which are very good; and we especially commend Mr. Restell's invention of flexible pegs, props, and wall-holders. The pegs we have found very useful indeed, during the present season, in pegging down verbenas, petunias, &c.

Toby and Son exhibit the model of a green-house, with potting-shed and fruit-room attached, and showing the boiler and hot-water pipes, with improvements in ventilation. This is a very good model indeed, and conveys a complete idea of what is intended. Their horticultural implements are likewise deserving of attention.

The ornamental ironworks of Edward Upfill are articles of great importance in garden furniture. We much admire the beauty and durability of their garden-seats, arches, entrances, alcoves, and general trellis-work for the training of roses, honeysuckles, clematis, and other creeping plants.

Thomas Smith's strawberry pan is an excellent invention. It is in form something like an inverted hat with the crown knocked out, and the broad brim turned down, or rounded over. Two or three strawberry plants being enclosed in the hat, their leaves and fruit will rise and roll over the broad brim, receiving heat from the surface they lie upon, which also protects them from the dust and dirt, and from being spoiled by lying in the damp after rain.

The sticking of peas is often found to be a fatiguing operation to amateurs; and, besides blistering the hands, the whole row is not unlikely to give way with the first good windy gust that sweeps across the garden, if not strongly fixed in the ground. To obviate this, Mr. W. Stent has invented a new pea supporter, which we command to all amateur gardeners, more especially the ladies. Henceforth, so far as the growth of peas is concerned, they may consider themselves quite independent of the help of man.

For a "single seed planter" and a "single seed dibbler" we are indebted to Mr. T. Revis, of Stockwell.

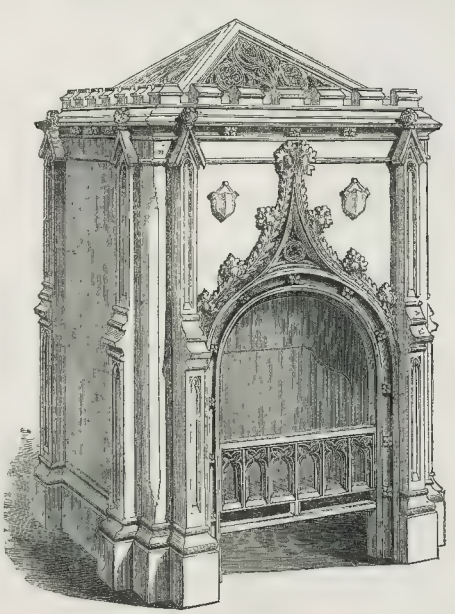
Everybody who has ever engaged in the delights and toils of a garden of any dimensions must know what it costs to transplant large shrubs and good-sized trees. But here again the Great Exposition offers us a helping hand, under the auspices of Mr. W. Seaward, of Oulton, Wakefield, who has designed a tree remover, "for transplanting large shrubs and trees." He also offers a "conifera supporter," to prevent cypresses, *arbor vitæ*, &c., from being broken down by the weight of the snow, which, from the form and position of the foliage of these and other trees of the kind, often loads them to excess, and, breaking off a large bough, frequently destroys the symmetry of the tree for ever.

To all those who have lawns, we beg to suggest that the invention of Mr. J. Watt, of Scotland, deserves attention. It consists of a machine on an improved principle for "broad-cart sowing," and is intended for grain and for all grass seeds. Nothing looks worse on a lawn than a number of bald patches. Here there is the remedy.

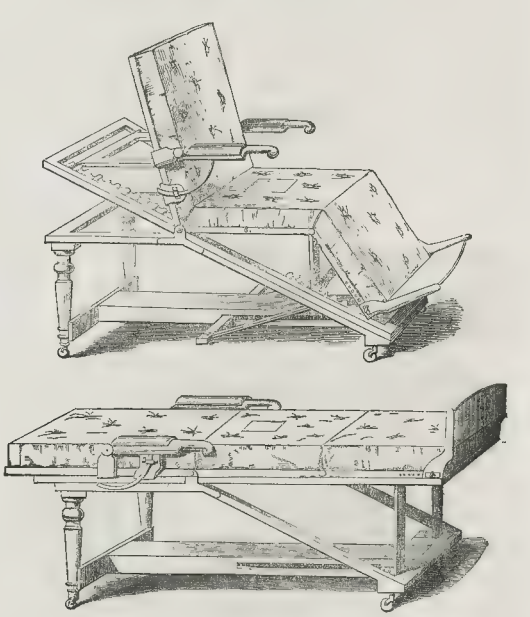
Mr. P. Green, of Leeds, exhibits an aviary and a garden seat made of wire. The light and airy appearance of them will probably render them favourites to those who once possess them. Garden seats and plant-stands are also exhibited by Mr. J. Holmes, of Newcastle-on-Tyne.

Aphides, caterpillars, and other insects, are dreadful pests of flowers and foliage, as every one who has a garden, or even a few plants, but too well knows. Behold, then, remedy in Mr. D. Brown's patent instruments for fumigating, intoxicating, and rendering all those insects either utterly helpless and at your mercy (such as it may be), or reduced to so many little dead dry specks upon the leaves, according to the strength of the dose. Mr. Epps, of Maidstone, likewise offers us his "sulphurator," an instrument for throwing flower of sulphur in a diffused state upon grapes, hops, peas, roses, &c., for the purpose of destroying mould or mildew, two antagonists who are sometimes as voracious and fatal as the worst insects.

But who shall evade digging? Who that "gardens" shall ever escape the labour of the spade, with hot and blistered hands, and a breaking back? Who shall ever be able to shirk his spade? Why, everybody may do so now, since Mr. J. Parsons, of Stamford-hill, has invented a "digging machine." It is clear that we shall soon have the means of escaping from all manual labour, of every sort, in our gardens. We may sit in our seat of ornamental wire, or Gothic carving, or of rustic logs and branches, and see Mr. Parsons' machine dig; Mr. G. Fleming's machine destroy weeds, moss, lichens, &c., on our gravel walks; Mr. W. Keene's machine prepare seeds for sowing; Mr. W. Padwick's drills and dibbles make the earth ready to receive them; Mr. J. Watt's machine sow them for us; and the garden engines of Mr. Crump, of Derby, or Dr. Kennedy, of Dublin, water them after they have been covered over by the various patent spades and rakes of numerous other meritorious exhibitors.



HALL-STOVE.—BY PIERCE, JERMYN-STREET.



INVALID CHAIR AND BED.—BY MINTON.

HALL STOVE. BY PIERCE.

This is one of Pierce's registered pyro-pneumatic warming and ventilating stove grates, suitable for the entrance-hall or staircase of a gentleman's mansion: the outer coating being of cast iron, ground, polished, and bronzed; the interior is of prepared fire-clay, moulded in various pieces.

MINTON'S INVALID CHAIR AND BED.

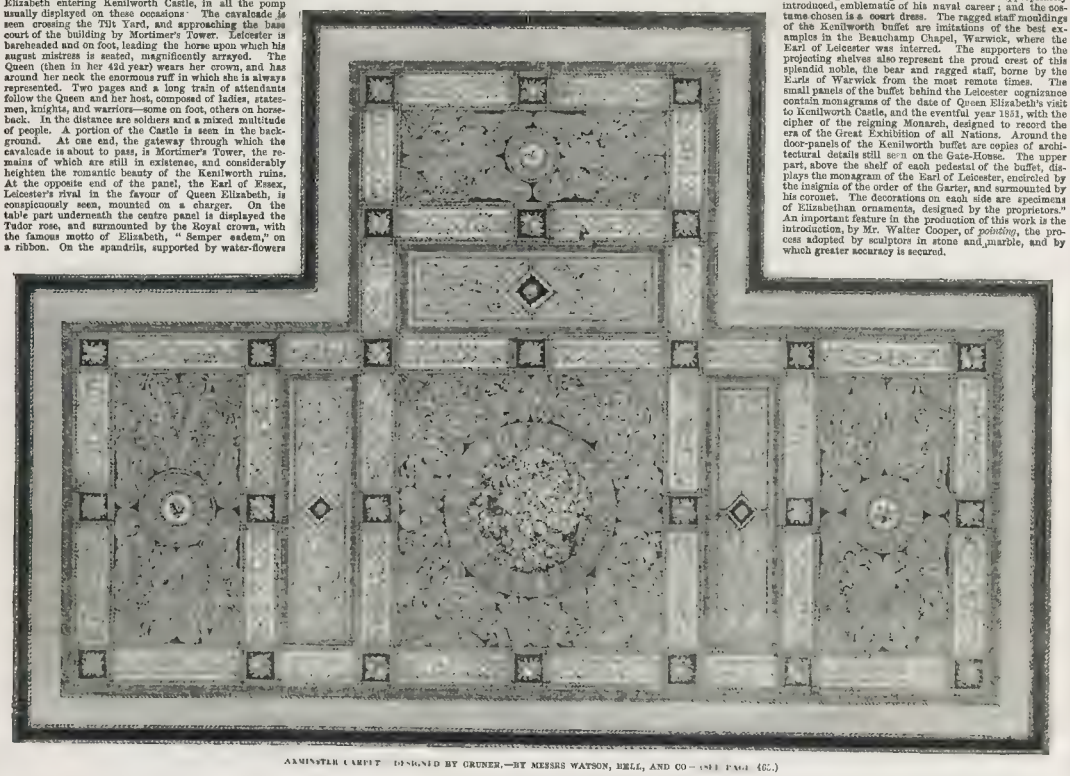
The Society of Arts have from time to time rewarded several persons for invalid beds and other humane contrivances for the mitigation of the sufferings of those afflicted with various painful complaints which "flesh is heir to." Minton's invalid chair, which is represented in our present Number, has very much the appearance of the class of inventions to which we have allluded. The chair consists of four parts—the back, the seat, the fore part, and the foot-board, all of which are so jointed as to be placed at pleasure at any inclination required; the chair may also be moved higher or lower, by means of rack-work attached to a long frame, which is moveable on pivots. The whole may be moved from one part of a room to another by four castors attached to the feet of the stand. We have thus far described it as an invalid chair; but it will be seen by the second Illustration, that the whole is convertible, without any additional apparatus, into a bed, and thus a two-fold object is attained, which, in many a sick-room with circumscribed space, is indeed a most valuable piece of furniture. For hospitals, also, such a contrivance will be found most desirable.

THE KENILWORTH BUFFET.—BY MESSRS. COOKES.

THE KENILWORTH BUFFET. BY COOKES, OF WARWICK.

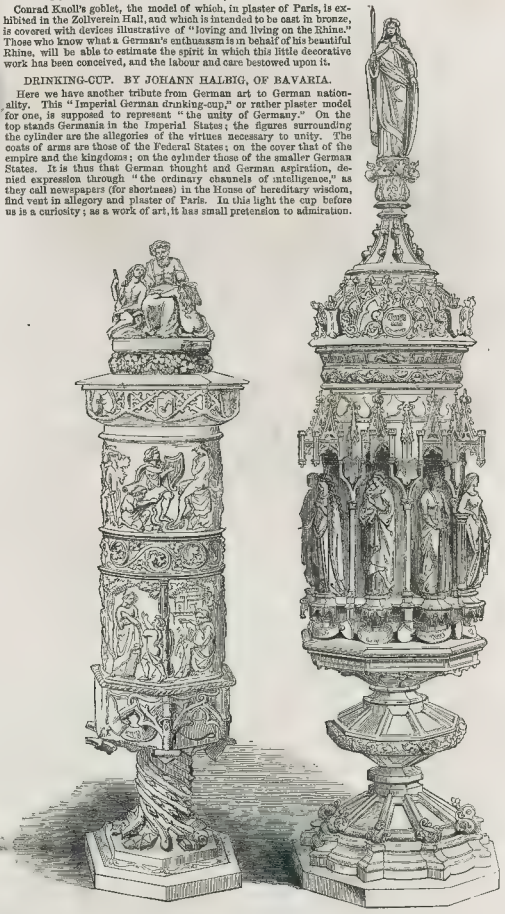
Of this very carefully studied and ambitious work, which has been one of the chief lions on the British side of the Crystal Palace, we prefer giving, in an abridged form, the description of the makers

The wood of which this buffet was made was obtained from a colossal oak tree, which grew near Kenilworth Castle, in Warwickshire, measuring 10 feet in diameter, and containing about 600 cubic feet of wood, which was levelled in 1849, and afterwards purchased by the exhibitors. The subject of the design is the Kenilworth Pageant of 1575, in honour of Queen Elizabeth's visit to the Earl of Leicester, described by Laneham and Gascoigne, two attendants on the Queen in this "Royal progress," and vividly reproduced by Scott. The design of the centre panel, carved out of one solid block of oak, represents Queen Elizabeth entering Kenilworth Castle, in all the pomp usually displayed on these occasions. The cavalcade is seen crossing the Tilt Yard, and approaching the base court of the building by Mortimer's Tower. Leicester is bareheaded and on foot, leading the horse upon which his august mistress is seated, magnificently arrayed. The Queen (then in her 42d year) wears her crown, and has around her neck the enormous ruff in which she is always represented. Two pages and a long train of attendants follow the Queen and her host, composed of ladies, statesmen, knights, and warriors—some on foot, others on horseback. In the distance are soldiers and a mixed multitude of people. A portion of the Castle is seen in the background. At one end, the gateway through which the cavalcade is about to pass, is Mortimer's Tower, the remains of which are still in existence, and considerably heighten the romantic beauty of the Kenilworth ruins. At the opposite end of the panel, the Earl of Essex, Leicester's rival in the favour of Queen Elizabeth, is conspicuously seen, mounted on a charger. On the table part underneath the centre panel is displayed the Tudor rose, and surmounted by the Royal crown, with the famous motto of Elizabeth, "Semper eadem," on a ribbon. On the spandrils, supported by water-flowers and rock-work pendentives, are marine subjects taken from the "Pageant," namely, a Triton on the Mermaid, and Arion on the Dolphin, connected with Mike Lambourne's mishap, in the novel of "Kenilworth." The panel on the right or dexter side of the buffet recalls the scene in the same work when Queen Elizabeth meets Amy Robsart in the grotto, in the grounds of the Castle. The subject of the left panel of the buffet represents the interview of Queen Elizabeth and Leicester, after the exposure of the deceit practised upon her by the latter, and his marriage with Amy Robsart. Leicester is shown in a kneeling position, with one hand on his breast, and the other extends towards Elizabeth, as if appealing to her sensibility. The four statuettes at the corners are emblematic of the reign of Elizabeth. At the extreme corner of the right is Sir Philip Sydney, the nephew of the Earl of Leicester, whose character combined all the qualities of a great poet, warrior, and statesman. He died in 1586. The shape of Sir Philip's sword (which is still preserved at Penshurst) is singular, the handle being about sixteen inches long. On the opposite side of the same pedestal will be recognised Sir Walter Raleigh, who attained eminence in almost every branch of science and literature. He is arrayed in a courtier's dress, and the figure represents him in a thoughtful attitude, with a scroll and pen in his hand. Raleigh was beheaded on a charge of high treason, in 1618. On the left pedestal at the inner side of the buffet is a figure of Shakspeare, who is shown in reflective mood. The last figure is that of Sir Francis Drake, the first Englishman who circumnavigated the globe. An anchor is appropriately introduced, emblematic of his naval career; and the costume chosen is a court dress. The ragged staff mouldings of the Kenilworth buffet are imitations of the best examples in the Beauchamp Chapel, Warwick, where the Earl of Leicester was interred. The supporters to the projecting shelves also represent the proud crest of this splendid noble, the bear and ragged staff, borne by the Earls of Warwick from the most remote times. The small panels of the buffet behind the Leicester cognizance contain monograms of the date of Queen Elizabeth's visit to Kenilworth Castle, and the eventful year 1851, with the cipher of the reigning Monarch, designed to record the era of the Great Exhibition of all Nations. Around the door-panels of the Kenilworth buffet are copies of architectural details still seen on the Gate-House. The upper part, above the shelf of each pedestal of the buffet, displays the monogram of the Earl of Leicester, encircled by the insignia of the order of the Garter, and surmounted by his coronet. The decorations on each side are specimens of Elizabethan ornaments, designed by the proprietors." An important feature in the production of this work is the introduction, by Mr. Walter Cooper, of *pointing*, the process adopted by sculptors in stone and marble, and by which greater accuracy is secured.



AXMINSTER CARPET, DESIGNED BY GRUNER.—BY MESSRS WATSON, BELL, AND CO.—(SEE PAGE 465.)

CABINET AND GLASS.—BY HANSON AND SONS.



GOBLET.—BY CONRAD KNOLL. DRINKING-CUP.—BY JOHANN HALBIG, OF BAVARIA.

We should be sorry to detract unjustly from the fame already earned by the producers of this work, but we must say, that, considering the labour which has been bestowed upon it, and the historical and romantic interest of the incidents it proposes to embody, we are somewhat disappointed with the result. We cannot help thinking that more might have been achieved if less had been attempted. The work, in short, is over-crowded with details, some of which have little or no necessary connexion with the principal subject. Sidney, Raleigh, Drake, and Shakspeare, four worthies in four very different lines of business, have certainly no right to be forced into service as dumb waiters upon the scenes enacted between Queen Elizabeth, Leicester, and Amy Robsart; and, in an artistic point of view, they are *de trop*. The workmanship has been very carefully executed; but the wood is as yet raw, and would be the better for polishing.

CARVED CABINET AND GLASS. BY HANSON AND SONS.

Amongst the choice and beautiful specimens of carving produced by British skill, we notice, as especially calling for praise, a very elegant commode or cabinet, by Hanson and Sons In form it is well adapted both for utility and ornament, with considerable originality of outline. The carvings on the cabinet represent a wild boar hunt, which reminds one of the fire and energy of Snyders. On the frame of the glass are a number of birds, very naturally designed: the wary hawk securing his prey, the chattering jay, the cunning magpie, the twittering wren, the swift martin, the welcome cuckoo, the warbling blackbird, the lonely bittern, and the light and graceful egret, are all wrought with great accuracy of character and most delicate detail.

GOBLET. BY CONRAD KNOLL, OF BAVARIA.

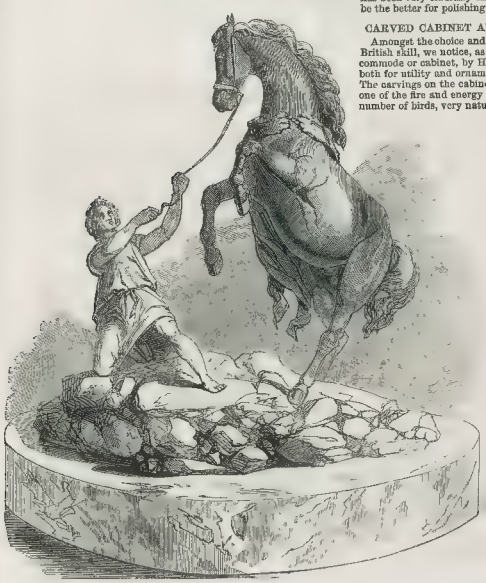
Conrad Knoll's goblet, the model of which, in plaster of Paris, is exhibited in the Zollverein Hall, and which is intended to be cast in bronze, is covered with devices illustrative of "loving and living on the Rhine." Those who know what a German's enthusiasm is in behalf of his beautiful Rhine, will be able to estimate the spirit in which this little decorative work has been conceived, and the labour and care bestowed upon it.

DRINKING-CUP. BY JOHANN HALBIG, OF BAVARIA.

Here we have another tribute from German art to German nationality. This "Imperial German drinking-cup," or rather plaster model for one, is supposed to represent "the unity of Germany." On the top stands Germania in the Imperial States; the figures surrounding the cylinder are the allegories of the virtues necessary to unity. The coats of arms are those of the Federal States; on the cover that of the empire and the kingdoms; on the cylinder those of the smaller German States. It is thus that German thought and German aspiration, denied expression through "the ordinary channels of intelligence," as they call newspapers (for shortness) in the House of hereditary wisdom, find vent in allegory and plaster of Paris. In this light the cup before us is a curiosity; as a work of art, it has small pretension to admiration.

HORSE GROUPS IN THE RUSSIAN DEPARTMENT.

These little horse groups, which stand under the glass case in the Russian department, are remarkably spirited. They are in bronze gilt, and are admirably executed.



HORSE GROUPS IN THE RUSSIAN DEPARTMENT.—FROM A DAGUERREOTYPE BY CLAUDET.

ABBOTT'S LANGLEY CHURCH.

CASHIOBURY.

A RAMBLE IN HERTFORDSHIRE.

CASHIOBURY; THE GROVE; LOUDWATER; MOOR PARK.

THERE is no county in England of its size so rich in associations, and in stately seats of noblemen and gentlemen, as the small inland county of Hertfordshire. York, and Kent, and Surrey, and other counties, are only richer from their greater size. It is true that Herts has no cathedral; but she has St. Albans Abbey, one of the oldest and most instructive of all our mediæval buildings: then she has Verulam, with its rich store of Roman remains; Gorhambury, sacred to the shade of the great Lord Bacon; Hatfield, rich in the wisdom of the Cecils, and its collection of unpublished MSS., containing, it is thought, notices of moment about Shakspeare and his contemporaries; Panshanger with its noble old oaks and picture gallery, second to none in Italian art in England; Cashiobury, with its Vandyck, its Wilkie, its Landseer, its Lely's, and its woods and waters; the Grove, with its noble gallery of portraits formed by the great Lord Chancellor Clarendon; Knebworth, with its Lytton associations and its Bulwer interests; Moor Park, with its trees not to be surpassed in England; Bayfordbury, with its collection of Kit-Kat portraits, formed by that aristocrat of booksellers, old Jacob Tonson; Ware, and its great bed; and, not to run out of breath in a sentence with a further enumeration of choice spots, over which old Fuller would have dwelt delighted, let us sum up Herts with its sweet sylvan scenes and its trout-streams, the Colne and the Chess (hereafter, perhaps, to be conveyed to London), now sacred to Dryden, Sir Humphry Davy, and Sir Francis Chantrey.

To see the west side of Hertfordshire easily and "aright," get out at the Watford station of the North-Western Railway—an easy and cheap excursion; and if you have time, diverge a little to the right of the rail to see the church (St. Laurence) at Abbot's Langley, with its seated figure of Lord Chief Justice Raymond (d. 1732), executed at a time (early in the last century) when sitting statues were rare in monumental sculpture. Do not forget, however, while at Abbot's Langley, that Pope Adrian IV. (d. 1159) was Nicholas de Camera, a native of Breakspears, in Abbot's Langley parish, and that the house of the great stationer, Mr. John Dickinson, of the Old Bailey, stands pleasantly and invitingly on your right, while at its foot may be seen the "Booksellers' Provident Retreat," built chiefly by the exertions of Mr. Dickinson, and in itself an asylum to which many a goodly author (in reputation rather than in pocket) would be glad to find his way.

LOUDWATER MILL.

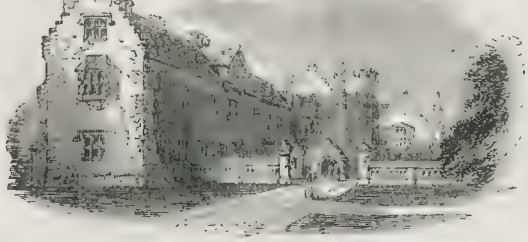
Leaving the Watford station, and skirting the town of Watford with its interesting church and Morrison and Capel Chapel attached, in which, by the way, the Earl of Essex, who was found with his throat cut in the Tower of London, lies buried, without a monument; pass on afoot, if you please, to Cashiobury, the noble residence of Capel Coningsby, Earl of Essex, lineally descended from the Lord Capel who lost his life for Charles I., and from his son, the Earl of Essex, who lost his (oddly enough) through Charles II. Cashiobury was so called, antiquarians tell us, from the residence there of Cassivelaunus, chief of the Cassii, from which the Hundred of Cashio, in Herts, derives its name. In Doomsday Book it is written *Caisson*. The manor belonged to the Abbot and Convent of St. Albans, and at the dissolution of religious houses was given to Sir Richard Morrison, the friend of Ascham. From the Morrison family it passed, by marriage, to Arthur Lord Capel, to whom we have already referred as dying for Charles I., and no earlier description of the house is known to exist than that in Evelyn. It was rebuilt by the first Earl of Essex of the Capel family, the same Earl who died in the Tower.

The Morrison house was pulled down (as Evelyn states) by May, and the house built by May was destroyed by the late Earl of Essex, who married Miss Stephens, the charming singer. The vaulting of the old Morrison house remains, with a very fine ceiling of May's building. The late Earl's architect was James Wyatt, who has rebuilt his house in his so-called "Gothic"—that is, very bad Gothic indeed, but picturesque and well-proportioned withal.

The grounds should be seen; they are very beautiful (witness in print Mr. Britton's "Cassobury"), and the present Earl with great liberality allows strangers to see them with every necessary freedom. The private gardens are especially beautiful. In the house, to see which an introduction is required, the stranger will find some good and some remarkable portraits.

Leaving Cashiobury, and stepping northwards through the park, if you know your way, and it is a most charming walk, you reach the "Grove," the seat of the Earl of Clarendon—a plain red and grey brick-built house, without any architectural pretensions. It was the seat or domain of the Heydons, founders of the Morrison Chapel, on the south side of the chancel of Watford Church. From the Heydons it passed to the Grevilles, and was bought, in 1758, by the Hon. Thomas Villiers (second and youngest son of William, second Earl of Jersey), the first Earl of Clarendon of the new creation (died 1786). The grounds join Cashiobury on one side, and Langley-Bury on the other, and, though flat, afford a few pleasant walks.

Among the pictures (all portraits) are some of that valuable series o



THE MANOR-HOUSE, CHENIES.

MOOR PARK.

heads of eminent men formed by the great Lord Chancellor Clarendon, and which are described by Evelyn in a letter to Pepys.

THE GROVE.

To see the collection at the "Grove," it is necessary, as at Cashiobury, to have a letter of introduction.

The pedestrian who knows his way, loves withal a pleasant walk, and can climb a fence or two, will find a charming way of his own (as we have done) to Loudwater, and that rich streamlet, in trout, the Chess. At Loudwater Mill is made much of the paper on which the ILLUSTRATED LONDON NEWS is printed; and in its neighbourhood may be seen Chorley Common, one of the healthiest retreats in any midland county of England, and the cedars at Chorley Wood (see our Illustrations in both instances), not to be surpassed, unless, perhaps, at Painshill, in Surrey. Of the manner in which paper is made at Loudwater Mill, we may have occasion to speak in a future Number.

CEDARS, AT CHORLEY WOOD HOUSE.

Leaving Loudwater, the tourist will find a still pleasant walk continued to Chenies and Latimers. At Chenies, property Isenhampstead or Iselhampstead, but deriving its present name from the ancient family of Cheyne, may be seen the chapel (attached to the church) of the Russells, Earls and Dukes of Bedford. Thomas Cheyne, the first of the family who settled at this place, was shield-bearer to Edward III., and in such capacity carried before that King in France the decayed shield and sword still to be seen near the King's tomb in Westminster Abbey. From the Chenies the place passed to the Sapcote family, and from the Sapcotes, by marriage, to the Russells. Leland, our earliest English antiquary of any name, visited the place in the reign of Henry VIII., and thus describes it:—

The old house of the Cheynies is so translated by my Lords Russell, that hath that house in the right of his wife, that little or nothing of it in a manner remaineth untranslated: and a great deale of the house is even newly set up, made of brike and timber: and fair loggings be now erected in the garden

The house is within diverse places richely painted with antique workes of white and black.

And there be about the house two parkes, as I remember. The maner place standeth at the west ende of the paroche chirche.

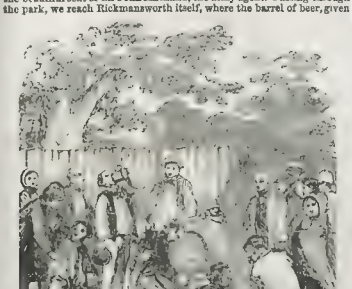
In the paroche (church), on the northe side of it, as in a chapelle, be two tumbes of the Cheynes Lordes of the Manor ther, and the small village bearing their name.—*Leland*, i. 117.

In this chapel are buried William Lord Russell, beheaded in the reign of Charles II., and "that sweet saint" his wife, Lady Rachel Russell, who sat by his side during his trial, and took notes for his defence. Here also were married that madcap nobleman, Philip Earl of Pembroke and Montgomery, to that magnanimous lady, Anne Pembroke Dorset and Montgomery, who made so noble an answer to the electioneering secretary of Charles II. Here, too, is buried the first wife of Lord John Russell; and here the Premier himself—

All heads must come to the tomb—

will some day be buried. The Francis Earl of Bedford whose stately monument adorns this chapel, was the godfather of the famous Sir Francis Drake. The old manor-house, described by Leland, will be found (see our Engraving) to retain many of its pristine beauties.

We would willingly carry our readers on to Latimers (a lovely spot), but we must now retrace our steps till we reach Rickmansworth Park, the beautiful seat of Sir John Kirkland, the army agent. Passing through the park, we reach Rickmansworth itself, where the barrel of beer, given



DRINKING THE BARREL OF BEER AT RICKMANSWORTH.

every day by [illegible] has, we fear, run to its last dregs. Still there is hope that we have time to reach the last tree, unately, the demon of rebuilding [illegible] orth Church but the plain tablet [illegible] mouth, the same Robert Carey [illegible] en Elizabeth's death to King Jam[illegible] the King for his pains and great e[illegible] memoirs of his own life as so[illegible] on of Lord Hunsdon, cousin-german [illegible] are (if so happened), a near relative to go.

Crossing the Colne, and refle[illegible] endeavours have been made from Edward Fords[illegible] our time, to convey the waters of the Colne to London, [illegible] park, the seat of Lord Robert Grosvenor, M.P., brother of the [illegible] of Westminster.

Moor Park and house was purchased, and a former house built, perhaps on the same site as the present, by George Neville, Archbishop of York. Edward IV. had promised to make that prelate a visit there, and while he was making preparations to receive his Royal master he was summoned to Windsor, and arrested for high treason. The King seized at the Moor all his rich stuff and plate, to the value of £20,000, keeping the Archbishop prisoner at Calais and Hammes. There was a survey of the house in 1568, by which it appears the mansion was of brick, the chief buildings forming a square court, entered by a gatehouse with towers. The whole was moated. It was then in a dilapidated state. At the Restoration, if not earlier, it was purchased by Sir John Franklyn, whose son sold it to Thomas Earl of Ossory, son to the Duke of Ormond, who also sold both the seat and park to the unfortunate Duke of Monmouth. The Duchess of Monmouth, into whom it was settled by marriage, sold it in 1720 to Benjamin Hoskins Styles, who built a south front of stone, with colonnades, by which an opening was made through the hill towards Uxbridge. A north front was also erected, and another hill cut through towards Watford at the same time for a vista.

The trees are some of the finest in England, many of them lying with their lowest branches to the ground in the richest luxuriance. The Duchess of Monmouth is said to have pollarded all the oaks, in remembrance of her husband's execution. But this, Mr. Paxton informs us, —a deservedly great authority in such a matters—could not have been the case. The present house was built by Leoni and Sir James Thornhill, and the terrace front affords a charming view of Watford Church in the distance. The pictures are few in number and poor; but the park richly deserves to be seen, as it will be remembered from the praises of Sir William Temple, and the reputation it has obtained for its apricots and lettuces. [illegible]ricots " were planted by Lord Anson; the " Moor-par[illegible] know not whom.

But it is time [illegible]atford; and ere we reach the station it is dark, with little to see [illegible]he broad sky line of the trees skirting Cashiobury-park.

SITE OF THE CRYSTAL PALACE.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

In your Journal of the 27th inst. I read a resolution passed by the local committee of Bolton, that, in the event of the removal of the Crystal Palace, four monolithic blocks of granite be erected, at each corner, to mark its site and dimensions; and the resolution further suggests, that these four blocks be made ornamental, as the bases of statues emblematic of the four great divisions of the Exhibition, or of the four Continents which had contributed to it; and also, that a statue of Prince Albert be erected, either in the centre of the space now occupied by the Crystal Palace, or in some other suitable situation. It seems to me that these suggestions are excellent in themselves, and deserve careful consideration; but I would venture to suggest some additions, which I cannot but think are improvements. I think that four monoliths are not sufficient to distinctly mark out the vast dimensions of the Crystal Palace with that accuracy which its admirers would look for; and four monoliths, moreover, erected on a plain and unbroken surface, would fail to convey to succeeding generations an adequate notion of the great length of that marvellous Building; for, as nothing would intervene from pillar to pillar, the eye would have nothing by which to measure the distance. To obviate these objections, I prefix the following additions to the plan:—

That the site of the Building be marked by two broad gravel walks, intersecting at right angles; and the extreme angles of the Nave and Transept denoted by eight monoliths, inscribed in the way suggested by the Bolton committee. That in the centre of the intersection of the two broad walks (which would be the spot now occupied by Osler's fountain), a colossal statue of Prince Albert be erected.

That four statues of large dimensions, "emblematic of the great divisions of the Exhibition, or of the four Continents which have contributed to it," be erected at the four points where the Transept meets the Nave.

And that, further to mark the peculiarities of the place, four avenues of trees be planted along the two broad walks. These, besides being in themselves a great natural ornament, would furnish measurement, as it were, by which the size of the Building might be easily estimated.

The two great broad walks might be called the "Great Exhibition Avenue" and the "Paxton Avenue," or by other names commemorative of the Crystal Palace.

If the Crystal Palace is removed, there will remain what Dickens says of it in his *Household Words*, "the dirtiest, most unmeaning, and least inviting part of Hyde Park;" but the plan I have suggested would, I think, convert it into a most delightful Avenue, affording opportunities not only of the great metropolis, but also of that Great Exhibition, the dimensions of whose extraordinary Building it would thus accurately preserve. The Transept walk might be continued to Rotten-row, and separated from it by close stone pillars, similar to those in Trafalgar-square.

I remain, sir, yours truly,

DELTA.

TEMPERATURE OF THE GREAT EXHIBITION.

The 1st of May promised many experiments at the Great Exhibition Perhaps not the least extraordinary was to be the collecting, day after day, 50,000 or 60,000 persons, and putting them under one huge glass cover in comfort for several hours together. The Executive had the thermometer all their own way throughout the month of May and for half the month of June. Severe weather very kindly set in on the 25th April, from which day the mean temperatures continued below their average values for the same period for the preceding ten years as much as 4 degrees Fahrenheit up to the 19th of June, after which the open air gave 3 degrees daily in excess of the averages. On this day things took a desperate turn; and Mr. Bennett, F.R.A.S., of 65, Cheapside, who had fixed twenty of his standard thermometers at different points of the Building, above and below, found a sudden rise in the mean temperature of the day, amounting to 10 deg; the 19th showing 64·8 deg., and the 18th, 74·8 deg. This was a chilling day, with 63,863 visitors. If this weather continued, it was clear something must be done; and finding matters grow worse till the 26th, when the thermometer rose to 2 deg. above summer heat, viz. 78·6 (30 deg. "Reaumur," 10 deg. being "temperate"), the climax was reached. On this day the mean was the highest that has been felt during the Exhibition. At four P.M. the thermometer No. 5, placed on the north-east corner of the gallery, among the wax flowers, registered 57 deg. The public could not stand this, even to witness the grandest sight that man could produce; and, after serious consultation, the glass ends of the Building at the entrance were removed on the 2nd of July, upon which down came the thermometer from 73·4 deg. to 66·6 deg., since this alteration, 73·4 deg. has been the maximum, with one solitary exception.

Still difficulty of breathing was felt in the upper regions. The rarified air caused by the exhalations of the people below pushed up through the galleries, where the heat averaged 4 degrees above that of the main avenue, and frequently higher still during the crowded hours of the day. July 7, glazed arches at various parts in the galleries were removed. After this the temperature in the galleries and the ground-floor became more uniform.

Fifty thousand pairs of lungs enjoyed daily the constant current of fresh air. This kept the multitude below the grumbling point till the 19th July, when Saturday, with its 5s. admission, brought a thin attendance (9326). The first sudden transition from heat to cold was instantly felt throughout the Building. Down went Fahrenheit to 56 degrees, and, therefore, called for measures in an opposite direction, and accordingly up went the louvres and ventilators, till the temperature was again adjusted.

Thus man has made nature, to a great extent, obedient to his will, in the very difficult matter of ventilation, in a building 1850 feet long. And thus, by strictly observing the indications of a very sensitive and delicate instrument, an amount of comfort has been preserved, under trying and extraordinary circumstances.

COLT'S REVOLVER.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

In a late Number you speak of the American revolving pistol as possessing this distinguishing feature, that it has only one barrel:—a fixture—the compound breaching being made to revolve. In common with many of the visitors to the Exhibition, I had greatly admired the very neat contrivance used in the construction of these pistols. On visiting Paris, however, a short time ago, I observed among the collection of ancient armour exhibited in the Hôtel de Cluny, Rue des Mathurins, a musket of the date of Louis XIII. or XIV., apparently constructed upon the same principle. I was not permitted, of course, to examine the piece in question, and, therefore, I cannot speak with certainty of the mechanism by which the compound breech was made to revolve; but there were the distinctive characteristics of Colt's Revolver—the single fixed barrel, and the compound breech holding six or eight charges. Perhaps some of your readers, better acquainted with the subject, or more favoured with opportunities of examining the collection, may throw light upon this coincidence. It seemed to me that the American invention had been anticipated by some 200 years. The musket will be seen close to a large two-handed sword. I forget the precise number in the catalogue, but I think it is near 1450.

Your most obedient servant,

A CONSTANT READER.

TAXIDERMY.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—If the public had been duly informed that specimens of taxidermy in the Crystal Palace were deposited there for admiration only, I should not venture to trouble you with these few lines.

Under the delusion that man's opinion is always considered free in public exhibitions, I now find, by the communication of the Rev. Mr. J. B. P. Daniels to you on the 8th, that I have been in error; and that I ought not to have sent you the remarks which you kindly admitted into your columns of August the 2nd. I crave pardon for the mistake: "*Humanum est errare.*"

As that gentleman (by having used the word "perhaps" in his late communication) seems to doubt that I will allow his stuffed peacock to be good enough for presentation to the British Museum, I beg to ask him softly, if he were quite wide awake when he placed that peacock in the Crystal Palace. His "real principle of taxidermy" ought to have suggested to him, that much time, very much time and labour, are to be spent upon the legs and toes of large birds, especially, in order to make these parts retain their pristine form and beauty. On viewing the shrivelled legs and toes of the Rev. Mr. Dennis's peacock, we feel dissatisfied; and we are at a loss to determine whether inability or neglect has been the cause of such a lamentable deformity to his bird. When, your reverend correspondent shall have cleared up this little matter satisfactorily, I will then invade the upper regions of his peacock. At present, it were useless to inspect the garret, when the foundation itself is seen to be defective.—I have the honour to be, Sir, your obedient servant,

Walton Hall, Sept. 27, 1851. CHARLES WATZTON.

TO CORRESPONDENTS.

A VERY OLD SUBSCRIBER.—The colours of a coat of arms are strictly to be adhered to in the blazonry. A gentleman, entitled to quarter his mother's arms, impales with his quartered shield the coat of his wife's family. There is no peculiar meaning in the order of the chain

A SUBSCRIBER.—It does not follow that persons of the same name have the same arms. Arms attach to the family

H. B.—We apprehend that the hair is the only sea named

HONORARIUS.—The boars' heads are the family bearing: the other devices are quarterings

AAdge.—*Arms* of Warren: "Chequy or and az. on a canton gu. a lion rampant arg. *Crest:* On a chapeau gu. turned up erm. a wyvern arg. wings expanded, chequy or and az."

Z Z Z.—The child of an heiress is entitled to quarter his mother's arms, but not to use her family crest. Unless by specific grant, or by the adoption of an additional surname, one crest only can be borne. Lord Willoughby d'Eresby, having two surnames, bears two crests

B——g the shoulder or body of the roebuck

L. C. Attorney at [illegible] "Ryder" is the correct orthography, though [illegible]

PATENT SHUTTLELESS POWER-LOOM. T. S. REED AND CO., DERBY.—CLASS VI., No. 85.

The ordinary loom for weaving ribbons and other narrow fabrics requires, for the perfect play of the shuttle, a space three or four times greater than is occupied by the web. In all looms hitherto constructed, the shuttle has been an indispensable necessity. To overcome this, and economise space, and, consequently, greatly to reduce the cost of production, has been the aim of the invention of T. S. Reed and Co., of Derby, the patentees of the loom we are now describing. The principle is original, yet simple, and may introduce many improvements in the art of weaving. The loom is now filled with a fringe about 2½ inches wide, of which it produces 34 breadths at once, while the ordinary loom, with the same length of beam, could not produce more than 12 or 14 breadths. Under the beam there runs a cam shaft, giving motion to the various parts of the loom. Attached to the breast beam there are levers or fingers that turn on a hinge horizontally; at the end of the fingers there is a small eye; or hole, through which the shute runs. As the warp opens to receive the shute, the finger moves and carries the thread across. At the same instant a needle rises and catches the loop of the returning thread, and holds it tight until the finger has returned and the batten advanced, when another change in the warp thread takes place; then the needle, which is flattened at the upper part and sharpened like the blade of a knife, by a downward motion cuts the loop, and the fringe is complete. This process is repeated very rapidly, and is very interesting. In addition to the economy of space, it is clear, that where there are no shuttles there are no pirns or quills to fill, and no stoppage of machinery while the change of quill is being made. The silk, being wound on large bobbins behind the harness, is supplied with facility, and when the loom is once started, it need not stop until the warp is finished.

It may be interesting to record that the first time that, when the Queen and Prince Albert made their progress through the various departments of the Crystal Palace, and summoned the exhibitors to attend to explain the peculiarity of their inventions, few, if any of the machines, received greater attention or excited deeper interest than the Patent Loom, which the Mr. Bennoch, of the firm of Bennoch, Twentyman, and Rigg, Wood-street, London—one of the proprietors—had the pleasure of explaining. The peculiar neatness of the movement, and the showy effect produced by the variety of colours made at once, seemed to delight the Royal children; for several mornings they attended regularly, asking questions, and at last, through one of the attendants, requested a piece of the work, which, of course, was given with much pleasure by the weaver, who will not readily forget his mornings with the younger branches of the Royal family.

THE DEVONIA BEDSTEAD. BY JOHN LEE, OF BIDEFORD.

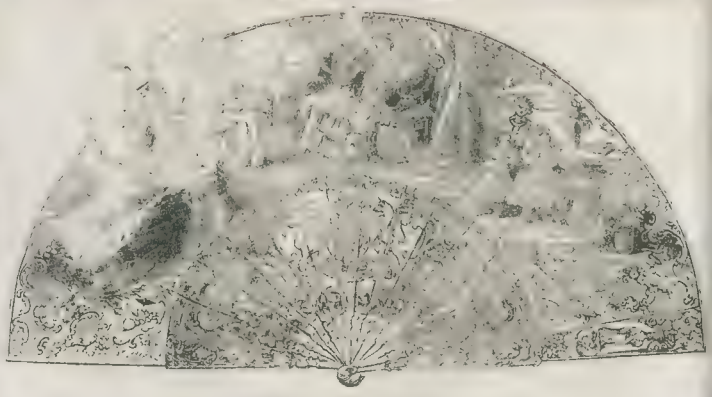
This invention, which is intended for the use of invalids, consists, in addition to the ordinary bedstead, of a steel quadrangular frame, over which is spread a soft felt or web. This web covers the bed. By means of a screw, the frame, with the web and invalid, may be raised to any height, so that the attendant can make up the bed, and change the clothes, without moving or in any way disturbing the invalid. The frame is divided into three parts by joints, and by means of another

DEVONIA BEDSTEAD.—BY LEE.

screw the upper part of the body, with the bed, is raised to any required position; and by a third screw the knees and feet may be elevated, and the ham-strings flexed, which will be a great convenience in case of fractured limbs.

LIBERATION OF CARACTACUS. BY PANORMO.

This, though somewhat roughly modelled, is one of the most expressive and well-studied pieces of sculpture on the British side of the Exhibition. It is by a young artist of the name of Panormo, a student of the Royal Irish Academy. The incident represented is well known to all readers of our country's history. Caractacus, after nine years unequal combat with the Romans, is subdued and taken captive, along with others, to Rome. Whilst being paraded through the magnificent streets of that city, he exclaims, in a tone of sublime melancholy, "How is it possible that a people who are possessed of such magnificence at home, should envy me a poor cottage in Britain!" The Emperor Claudius was so affected by the homely truth of these few words, which he overheard, and the noble and interesting bearing of his Royal



FAN.—BY DUVELLEROY.—(SEE PAGE 465.)

captive, that he immediately ordered him to be set at liberty, together with the rest of the prisoners. The artist has [illegible] the moment when a Roman soldier is knocking the rivets [illegible] Briton's chains, who still bears himself with a calm dignity [illegible] vicissitudes of fortune.

THE ROSE WATCH. BY [illegible] ND.

Mr. [illegible] e under which [illegible] a very beautifully [illegible] watch, the decoration of which is intended to be suggestive throughout. On one half of the margin around the back is engraved, on blue enamel, "Man cometh forth as a flower, and is cut down." On the surface of the richly-engraved gold back is a Maltese cross, in white enamel; and on its four limbs are depicted the four seasons of life, in the bud, blossom, decay, and death of a rose. On the other half of the margin is engraved, "It is sown in dishonour, it is raised in glory." In the centre of the cross is a celestial crown of diamonds, on a blue enamel ground, surrounded by an Olympic wreath of pearls, with rays of glory in enamel, radiating between the limbs of the cross. The dial represents, in enamel colours, the rose window of Westminster Abbey. On the twelve compartments indicating the twelve hours are the names of the twelve Apostles. On the bezel that holds the glass is engraved, in blue enamel, "He that taketh not his cross *daily* is not worthy of me."—(*The "Rose of Sharon."*)

RUSTIC FURNITURE. FROM THE NETHERLANDS.

In the Netherlands department we observed a great variety of rustic furniture, constructed of reeds and light woods, which, with great lightness, appear to combine durability. The forms are agreeable, and adapted to that great English essential, for which there is no word in the French vocabulary—"comfort."

QUEEN VICTORIA'S VISIT TO LANCASHIRE.

SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS.

o. 524.—VOL. XIX.] SATURDAY, OCTOBER 18, 1851. { TWO NUMBERS, 1s. WITH HALF-SHEET SUPPLEMENT, GRATIS.

R MAJESTY'S VISIT TO THE COUNTY PALATINE OF LANCASTER.

eturn of the Court from their annual residence among the ains of Aberdeenshire, has been this year marked by features to the lovers of history might recal the glorious days of Elizabeth, t not for the curiously distinctive marks which give to the present journey an individual character, and render it, in an eminent sense, rkable sign of the times. It was not merely to lordly halls and of high birth that, on this occasion, the visit of a Queen and her sus Consort were directed; it was to the merchant princes of a ade by themselves the "Queen of the Seas," from the arctic to the tic pole—the modern Tyre, towards which tends the commercial rise of all the world: it was to nobility which had taken commerce hand and led her from the ocean, smiling, into the bosom of the it was to a city whose men, by a singular union of solid character enius, had given a vital soul and life-like energy to inanimate matnd, by their well-directed industry, had raised the working power gland from three millions of men to three hundred millions.

great commercial capital of the North was the first honoured with tion, whence her Majesty proceeded to Manchester, as the traveller journey from the shores of some great lake up to the fountains of vers whence it drew its wealth of waters. And if fortune smiled on nore than another—if the sun shone on Manchester which was d at Liverpool, there can be no jealousy between them as regards nshine of Royal favour, which beamed with equal brightness on and conferred equal honour on each in the person of its chief trate. Of Liverpool, all must acknowledge, even under the most ourable circumstances, all its greatness, its enterprise, and its superiant, ever reproducing wealth were to the full displayed. But if pool was great, Manchester was grand and wonderful. It was a very hive of industry, pouring forth a full demonstration of its long-stored riches. Nor should Salford be omitted, whose Peel Park—that most excellent testimony of a people's gratitude—and that one great spectacle of 82,000 children collected in the Royal honour, can never be forgotten.

With these few preliminary remarks, we proceed to describe in detail the interesting incidents which marked her Majesty's progress from her mountain home to the glades of Windsor Park.

HER MAJESTY'S DEPARTURE FROM BALMORAL.

The Queen and his Royal Highness Prince Albert, with the Prince of Wales, and the other youthful members of the Royal family who had accompanied their illustrious parents to Scotland, left Balmoral on their return to the south, on Tuesday, the 7th instant. The weather was very unfavourable, the rain falling heavily. Notwithstanding this circumstance, a number of residents in the neighbourhood, and all the dependents upon the Royal demesne, assembled to witness the departure of her Majesty. At the appointed hour, the Queen's carriage, containing her Majesty, the Prince Consort, the Princess Royal, and the Prince of Wales, drove down the avenue, followed by a carriage in which rode the other Royal children and the Ladies-in-Waiting; and then came the Earl Grey, Colonel the Hon. C. B. Phipps, Colonel the Hon. A. Gordon, Sir James Clark, and Mr. Birch in a *char-à-banc*. Two carriages, with the household servants, had been sent on before.

The route traversed by the Royal party, in order to reach the railway, was by the banks of the Dee to Banchory, and thence across the lower range of Grampians to Stonehaven, about 15 miles from Aberdeen. Leaving Abergeldie on the left, a fine old mansion, long the property of a branch of the ancient family of Gordon, and now possessed by the Duchess of Kent, the Royal *cortège* passed Prince Albert's property of Birkhall, crossed from the south to the north side of the Dee, and ended the first stage of their journey at the village of Ballater. Here a large concourse of people had assembled to testify their loyalty to the Queen, and a detachment of the 42d Regiment, the *depôt* of which is now at Aberdeen, was in attendance as a guard of honour. Leaving Ballater, and driving down the north side of the Dee, the Royal party arrived at Aboyne, where her Majesty was again greeted by the cheers of a loyal and attached people. On leaving Banchory, which was their next stage, the Royal *cortège* passed across the romantic bridge of Teugh, and then, turning eastward, crossed the Grampian Chain, at a place called the Slug, whence for seven miles the drive was as cheerless, barren, and wild as can well be imagined. On emerging from the Slug the Queen drove on by Ury, the seat of Captain Barclay, towards the railway station at Stonehaven, where the Royal carriage drew up at half-past one o'clock, amid the acclamations of a crowd of spectators who had assembled at that place. Her Majesty and Prince Albert, the Princess Royal and the Prince of Wales, on alighting from their carriage, were received by Lord James Hay, chairman of the Aberdeen Railway, Mr. Alexander Firie, vice-chairman, Mr. Keith, secretary, Major Christie, Mr. Birnie, of Ashgrove, and Mr. Wallace, of Perth, directors. Her Majesty and the Prince acknowledged the attention of these gentlemen, and walked to the private apartments, where luncheon was laid out for the Royal party.

THE ROYAL PROGRESS FROM STONEHAVEN TO EDINBURGH.

The weather, which had been stormy up to this point, now cleared up, and at five minutes to two o'clock her Majesty entered the Royal saloon carriage belonging to the London and North-Western Railway, which, with five or six other first-class carriages, had been sent to Scotland under charge of Mr. Wright, of the carriage department, for the Royal accommodation. At two o'clock the pilot engine started, and was soon

THE ROYAL PROCESSION AT THE ENTRANCE TO PEEL PARK, SALFORD.

followed by the Royal train, drawn by two of the most powerful of the Scottish Central and Aberdeen engines, under charge of Mr. George Harrison, superintendent of the locomotives on these lines. The course of the railway from Stonehaven to Perth is through the fertile vale of Strathmore, the scenery of which is highly picturesque. The train stopped to take water at Forfar, where a great number of people had assembled. Soon after leaving this place it was found that one of the axles of a truck carriage had become "fired," which occasioned some delay, while the carriage was taken off at Coupar-Angus, and made the train 16 minutes late in arriving at Perth. At this city there was a fresh display of loyal feeling and enthusiasm. The landing platform was lined by two companies of the 79th Highlanders, under the command of Captain Taylor, and as the Royal train drew up, the piper of the regiment played a Highland welcome. The Provost and magistrates of the city paid their dutiful obedience to the Queen, and were very cordially received; and Lady Richardson presented bouquets of flowers and a basket of fruit to the Royal family, which her Majesty was pleased to accept. On leaving Perth, the multitude cheered the Royal train heartily. The train now sped its course up Strathearn; and as it approached Stirling, a Royal salute was fired from the Castle heights. The engine having to take water at this station, great preparation was made to do honour to the Queen. The 79th, whose head-quarters are at Stirling, were drawn up. Flags were flying on all the public buildings, and hundreds of people occupied every point from which a glance of the Queen could be obtained. The Provost and the other magistrates of the city had the honour of being acknowledged by her Majesty, and both the Queen and the Prince seemed greatly pleased with the cordiality of their reception. At the Larbert Junction, where the train entered on the Edinburgh and Glasgow Railway, the two engines of the Scottish Central were removed, and a single engine of the Edinburgh and Glasgow Railway was attached. The Royal party left the junction shortly before 6 o'clock, and were proceeding at the rate of about 35 miles an hour, when all at once the train became enveloped in steam, and the engine gradually lost power and came to a dead stand in a cut and curve at Kirkliston, about eight miles from Edinburgh. It was soon ascertained that one of the feeding pipes had burst, and that no further progress could be made until another engine was got from Edinburgh. As the 5.30 train from Glasgow was nearly due, danger signals were despatched down the line, and every precaution was taken to prevent accident. The Queen, on being made aware of the cause of the delay, evinced her usual self-possession and considerate composure, leaving the direction of the railway, that she had the fullest confidence in their judgment and discretion. The pilot engine, which preceded the Royal train, ran on to Edinburgh without any knowledge of the accident. The absence of the Royal train after the arrival of the pilot occasioned considerable uneasiness, and eventually an engine was sent back in order to render assistance if necessary. The cause of the detention was now soon discovered, and the fresh engine propelled the Royal train into Edinburgh, where her Majesty arrived shortly before eight o'clock, the delay occasioned by the accident having exceeded one hour.

Her Majesty drove from the St. Margaret's station through the Queen's Park to her ancient palace of Holyrood, amidst the most vociferous greetings of the multitude lining the Dukes Walk, &c. Blue lights and other pyrotechnic displays took place at St. Anthony's Chapel and other points of Arthur's Seat, while the road to the Palace was lighted by flambeaux. The Royal carriage was accompanied by a detachment of of the Enniskillen Dragoons, and the band of that regiment played the National Anthem as the Queen alighted at the Palace.

The Royal dinner party was confined to the members of the suite. The Prince of Parma and the Countess of Dunmore visited the Queen and Prince Albert at the Palace during the evening. The Lord Provost of Glasgow was also honoured with an interview to consult as to the Royal wishes in regard to the statue of the Queen proposed to be erected in that city.

DEPARTURE OF HER MAJESTY FROM EDINBURGH.

The dawn of morning on Wednesday indicated a brilliant day. Upon Arthur's Seat and along Salisbury Crags there was a slight covering of hoar frost, and over the Pentlands hung a few hazy clouds; but the eastern sky was clear, and by half-past seven o'clock the sun shone forth with unclouded splendour. From an early hour the inhabitants were astir, placing themselves at convenient points of observation along the route which her Majesty was to take from the Palace to the station of the Caledonian Railway in the Lothian-road. The Queen left the Palace at half-past eight o'clock, and was loudly cheered on her progress to the station, where her Majesty was received by Mr. John Duncan, chairman, and Captain Galloway, manager of the Caledonian Railway, Sheriff Gordon, the Lord Provost, and the other magistrates of the city. The Royal train left Edinburgh at nine o'clock precisely, under charge of Mr. Sinclair, the locomotive superintendent of the line. The first few miles of the Caledonian Railway lie through new to the Queen traversing a rich and fertile country, studded for some distance with gentlemen's villas and well stocked homesteads. From Carstairs Junction the Royal train passed on to Abington, where the train stopped that the engines might take water. From this point the railway runs into a hilly country, rising gradually until it reaches the summit level of Beattock, where the Clyde takes its rise, and runs towards the north, Evan Water falling towards the south. From Beattock the line is on a gentle decline all the way to Carlisle. At Moffat there was a numerous gathering of people, who cheered heartily as they caught a glance of her Majesty while passing at the rate of 35 miles an hour. The scenery here is singularly picturesque. The vale of Moffat is highly cultivated. Hill and dale alternate for many miles, and then the sod becomes light, and the country gets more and more barren as the Border is approached, the scene being occasionally relieved by a sylvan scene and a glimpse of the Solway Frith. From Abington to Carlisle there was no stoppage; and so well conducted was this part of the journey, that time was kept to a minute throughout. The train arrived at Carlisle at 11.50, and was received by a Royal salute from the Castle. Here great preparations had been made to receive her Majesty. The station, which is one of the finest in the kingdom, was specially decorated with evergreens, and there were assembled at different points of the roof the Royal standard floating over the northern entrance. At the station a select party had assembled; among whom were the Earl of Lonsdale, Lord Lieutenant of Cumberland and Westmoreland, Mr. G. Head, the High Sheriff of the County, the Mayor of Carlisle, the Hon. C. Howard, M.P., the Bishop of Carlisle, Sir J. Grant, Sir J. Graham and Miss Graham, Mr. P. H. Howard, M.P., Colonel Wyndham, Colonel Musgrave, &c. The platform in front of the Royal carriage was occupied by the more distinguished party, and the other parts of the station by the principal inhabitants of the city and county. A detachment of the 21st regiment was present, and, with the special constabulary, mustered excellent order. The High Sheriff, member of the Society of Friends, was not disposed to bow to her Majesty by Earl Grey. The Mayor of the city had also the honour of an introduction, and presented to her Majesty an address from the corporation and inhabitants of the city. The directors of the Caledonian Railway here took leave, and were succeeded by Mr. E. W. Hassell, the chairman, Mr. Bolden, the secretary, and other directors of the Lancaster and Carlisle Company, under whose direction the train was brought on to Lancaster. The speed of the train was slackened at Penrith, Shap, and Oxenholm, where large crowds of spectators were assembled to greet the Sovereign's progress.

ARRIVAL AT THE ROYAL BOROUGH OF LANCASTER.

The inhabitants of this ancient and interesting place appear to have been fully alive to the honour conferred upon them by her Majesty's graciously expressed intention of halting in her progress southwards, for the purpose of visiting the Castle, and receiving loyal addresses from the magistrates of the county palatine of Lancaster, and the Mayor and corporation of the borough. Lancaster Castle stands at the head of the town, and the railway station reposes directly under its shadow. The Royal progress did not, therefore, involve passing through many of the streets of the borough; but the interest felt by her Majesty's loyal lieges enclosed within strong barricades, the centre being reserved for the Royal carriage, and the space on either side being occupied by the townspeople who came out in great numbers to welcome their Sovereign. There were triumphal arches at various commanding points, festooned with laurels and evergreens, and adorned with flags and heraldic trophies, among which the red rose and other devices of Lancastrian history made a conspicuous figure. Flags were also displayed from great numbers of houses, festoons thrown across the streets, and, in short, everything that could be accomplished was done to testify the delight and loyalty of the inhabitants on this occasion of her Majesty's visit to the ancient stronghold of her ancestors.

The High Sheriff of the county, Mr. T. Perceval Haywood, arrived from Claremont, in his state chariot, at 12 o'clock, and was soon joined by the county magistrates, with the venerable Archdeacon Brooks, chairman of the court of sessions, at their head.

The Mayor of Lancaster, Mr. Henry Gregson, met the corporation of the borough at the Town-hall at half-past eleven o'clock, and the whole body came from thence in procession to the railway station, where a temporary platform, surmounted by an awning and covered with crimson cloth, had been thrown up for the Royal accommodation. In front of this platform were ranged, first, a body of the High Sheriff's javelin-men, in full state liveries; then a troop of the gallant 16th Lancers, their breasts glistening with medals won by their valour in the recent Indian campaigns; and, thirdly, by a guard of honour composed of a company of the 46th Foot; the whole of the military being from Preston, and under the command of Colonel Garrett.

At 20 minutes to 2 o'clock a special engine arrived from Carlisle, bearing intelligence of her Majesty's approach; and in a very few minutes afterwards, the Royal train drew up beyond the platform. Her Majesty's arrival was greeted with the most enthusiastic cheering from the spectators assembled. The Queen, having alighted from the Royal saloon, was conducted by the High Sheriff to his state carriage, which, drawn by four beautiful grey horses, was in attendance in the station yard. Its progress of the Royal party to the Castle was one continued ovation. Her Majesty appeared greatly pleased with the reception which greeted her on every side; and it was remarked, that, as the ancient fortress came in sight, the Queen observed its massive walls with especial interest, and pointed out to the Prince of Wales the most remarkable features of the edifice. When her Majesty arrived opposite the entrance of John o'Gaunt's Tower, Mr. John Hutton, of Hulton, the hereditary Constable of the Castle, had the honour of presenting the keys of the fortress, said to be the same in use when John o'Gaunt called the castle his own. The Queen graciously returned the keys to the constable's keeping. The Royal *cortège* then passed round the Castle parade, and entered the building by a temporary staircase running up to the Shire Hall.

Her Majesty entered the hall at ten minutes past two o'clock, and was received by the spectators with respectful silence. The High Sheriff preceded her Majesty, bearing his wand of office.

The Venerable Archdeacon Brooks then approached the throne, and read, in a firm voice, the following loyal address:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please your Majesty,—We, your Majesty's dutiful and loyal subjects, the justices of the peace for your Majesty's County Palatine of Lancaster, beg to approach your Majesty with the expression of our devoted attachment to your Majesty's person, and our deep obligations to your Majesty for the honour conferred upon our county by your Majesty's presence.

From the means of observation afforded us in the discharge of those duties graciously entrusted to us by your Majesty, we are enabled to assure your Majesty that our universal feeling of sincere and ardent loyalty animates the vast population of this great county.

It is an additional gratification to us, that your Majesty should, upon this occasion, be accompanied by the illustrious Prince who has contributed so much to your Majesty's domestic happiness, and has secured for himself, not less by his private virtues than by his public conduct, the unvarying esteem and attachment of all your Majesty's loyal subjects.

That your Majesty may live long to diffuse over our land the blessings of the mild and constitutional sway which has ever characterised your Majesty's illustrious reign, is the heartfelt and fervent prayer of your Majesty's most humble, loyal, and devoted subjects

Signed on behalf of the Magistrates,

JONATHAN BROOKS,

Chairman of the Court of General Session of the Peace for the County Palatine of Lancaster

Her Majesty, bowing very graciously, expressed in gentle tones the satisfaction she felt in receiving so gratifying an assurance of the loyalty of her Lancastrian subjects.

The Ven. Archdeacon was then introduced, and had the honour of delivering back a purse which was shared by two of his brother Justices, viz. Mr. Forster, chairman of the Salford Quarter Sessions, and Mr. Hornby, chairman of the Lancaster Quarter Session.

The Mayor of Lancaster was next introduced to her Majesty, to have the honour of presenting the Corporation address, which the town clerk (Mr. Dunn), in the absence of the Recorder, read as follows:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please your Majesty,—We, your Majesty's loyal subjects, the Mayor, aldermen, and burgesses of your ancient borough of Lancaster, beg to approach your Majesty with the expression of our sincere attachment to your Majesty's person, and of devoted attachment to the throne on which, by the blessing of God, your Majesty is so happily seated.

We crave permission further to express the grateful sense we entertain of your Majesty's condescension in honouring us with your gracious presence, and to assure your Majesty that the impression which so marked a token of Royal favour has made upon ourselves and fellow-townsmen is such as neither time nor circumstances can efface.

It is yet further our bounden duty to thank your Majesty for benefits previously bestowed—for your Majesty's bounty in recently extending to one of our most populous charities, by an act of Parliament, and for your Majesty's condescension in conferring upon our ancient grammar school the dignity of Royal patronage, we beg to offer our heartfelt ashe obligements.

May we humbly avail ourselves of the opportunity now offered by your Majesty's goodness, to advert to the peculiar circumstances that impart to your Majesty's sojourn within these walls a more than ordinary interest. It is with feelings of cherished pride we reflect that from this highly-favoured locality is derived the second title of your Majesty's illustrious house, and, carrying our thoughts back to the records of ages long passed away, we call to mind that the time-honoured spot upon which we are permitted by your Majesty's gracious favour to present to your Majesty this humble tribute of duty and affection, as the same whereon centuries ago similar homage has been paid to one of the most mighty of your Majesty's ancestors, whose name is identified with the palmiest days of England's chivalry, and whose memory is endeared to us by its intimate association with the day spring of religious freedom within these favoured realms.

We humbly trust, this passing allusion to the reflected honours which your ancient borough and castle of Lancaster have the privilege of enjoying will be deemed by your Majesty's pardonable indulgence, and that your Majesty will accept the explanation of our humbleness gratitude for allowing us, by Majesty's visit, to add to our Lancaster annals one other Royal reminiscence—and that one the dearest and most memorable.

We hereby tender to your Majesty our humble offering of gratitude and obedience.

And we shall ever pray that it will please Almighty God to shower its choicest blessings upon your gracious Majesty, upon the Prince Consort, the royal family, and those illustrious members of your Majesty's family, and that they may please Him, in His great mercy, to grant that your Majesty may long reign in unmurmured happiness over a loyal and affectionate people.

At the conclusion of the address, the various points in which were acknowledged by her Majesty in a very significant and gracious manner, the Queen repeated her expressions of satisfaction at the loyalty and affection evinced by her subjects resident in Lancaster. The Mayor and town council then made their obeisance, and the High Sheriff, together with her Majesty, retired from the hall, the multitude restrained loyalty of the spectators now bursting forth in enthusiastic cheering from all sides of the court. Among those present in the hall were about two hundred of the leading residents in the town and its neighbourhood. The Earl of Carlisle, as Chancellor of the Duchy of Lancaster, was present in the Shire Hall during the ceremony. Mr. Brotherton, M.P., Hon. Charles Howard, M.P., Mr. Glyn, M.P., and Mr. Kershaw, M.P., were among the members of Parliament present.

The Queen, on retiring from the hall, was invited to ascend to the summit of the Castle-keep, an invitation which her Majesty very graciously accepted. The passage to the summit of the tower had been made comparatively easy by a series of platforms connected with common deal. Her Majesty was conducted by Mr. Hulton, the constable of the fortress, and attended by the High Sheriff of the county, the Mayor of Lancaster, and some few other officials. Upon arriving at the ancient keep, it became necessary to ascend for several feet a narrow stone staircase—the very contemplation of which would have alarmed many of her Majesty's gentler subjects. The Queen, however, nothing daunted, ascended with a light step, and at length came to the summit of the highest tower, known as John O'Gaunt's cloth. Here her Majesty and the Prince Consort paused for some moments to enjoy the magnificent prospect around, the beauty of which was exquisitely displayed by a bright sun, which still continued to shed its cheering influence on the scene, bringing out into strong contrast the dark outlines of the distant mountains of Cumberland and Westmoreland, and lighting up with a peculiar brilliancy the beautiful bay and valley of Morecambe.

Her Majesty returned to the railway station in the order of her arrival, ten minutes to three o'clock.

The directors of the London and North-Western Railway, with Mr. Glyn, M.P., at their head, were here in attendance to conduct her Majesty southwards; and the Royal party having taken their seats, the train moved rapidly on towards Preston.

After the departure of the Queen, the Mayor and corporation proceeded to the Castle Park, where the Mayor planted an oak sapling in commemoration of her Majesty's visit.

[We shall, next week, give an Illustration of the interior of the very beautiful Shire Hall as it appeared during the presentation of the address to her Majesty.]

Just before the Queen alighted at Lancaster, two London thieves were detected by Inspector Langley, of the London detective force, in abstracting a valuable gold watch from the pocket of an anxious spectator. The rascals were speedily consigned to safe custody.

THE QUEEN AT CROXTETH HALL.

The Royal progress from Lancaster to Rainhill, the station at which her Majesty was to leave the railway, and proceed to Croxteth Hall, the seat of the Earl and Countess of Sefton, was marked by no incident calling for special observation. The train ran through without stopping; and upon its arrival at Rainhill, at twenty minutes to five, her Majesty was received by the Earl of Sefton, who preceded the Royal *cortège* on horseback to Croxteth. The Royal party, after passing through Prescot, entered the demesne of the Earl of Derby, who, with his Countess, was in attendance in an open barouche at the Eccleston Gate. A drive of five miles through some of the finest park scenery in England brought her Majesty to the confines of the Croxteth estate, where Lord Sefton's tenantry were drawn out to receive the Queen. Her Majesty arrived at Croxteth Hall, at twenty-five minutes after five o'clock, where the Countess of Sefton in attendance upon the terrace in front of the mansion to receive her Majesty. Among the members of the family present were Mr. and Lady Caroline Townley, Mr. and Lady Louisa Oswald, Mr. Greenfield, M.P., and the Misses Greenfield; the Misses Blackburne, of Hiting; Mr. and Mrs. John Townley, Viscount Anson, Captain and Mrs. Molyneux, Major Herbert Byng Hall, &c. The Croxteth tenantry mustered in large numbers, and received her Majesty as she alighted with shouts of welcome. A short time after the arrival of the Royal party, the Prince Consort accompanied Lord Sefton over the home farm, and drove through the park. The Queen and the Royal children appeared at the windows in front of the mansion about the same period, and were received with enthusiastic cheers

A suite of six rooms was set apart for the Royal visitors, consisting of a library, drawing-room, bed-room, and delightfully appointed boudoir, and a dressing-room for her Majesty. The whole of the apartments were superbly furnished and decorated for the occasion.

Her Majesty dined with a select party of guests, at eight o'clock. The circle, exclusive of the Royal personages and suite, consisted of the Earl and Countess of Sefton, the Earl and Countess of Derby and Lady Eleanor Hopwood, Viscount Anson, Mr. and Lady Caroline Townley, Mr. and Lady Louisa Oswald, the Bishop of Chester, Mr. John Bent, Mayor of Liverpool, Mr. W. Brown, M.P., Sir Thomas Bich, Bart., M.P., Mr. J. Perceval Heywood, High Sheriff of the county, and Mr. Hardman Earle. Covers were laid for 23. After dinner the party was increased by the addition of from twenty to thirty other guests, among whom were the Earl Talbot and Lady Henrietta Fermor, Mrs. Wilbraham, and the Misses Wilbraham, &c.

Before her Majesty's arrival, there were endless festivities in the grounds of Croxteth. Several hundred of the gentry from the neighbourhood were entertained by the Earl of Sefton at lunch, laid out in a huge marquée erected by Mr. Benjamin Edgington; and the tenantry, constituting a still larger and even more festive party, enjoyed in another direction the prodigal hospitality of the noble and popular landlord. At West Derby, Prescot, and other places, there was similar loyal excitement, and kindred development of it in unrelaxed eating and drinking

HER MAJESTY'S ARRIVAL AT LIVERPOOL.

The State visit of her Majesty to this, the largest and most important commercial port of the empire, is an event of no ordinary interest, not only to the inhabitants of the borough itself, but also to the public generally. Nothing could be more graceful, more appropriate, or more gratifying at the close of the Great Exhibition, than the desire expressed by her Majesty to view those vast receptacles of the wealth, the industry, and the enterprise of the world, which the docks and warehouses of Liverpool disclose; and the cordiality and enthusiasm with which the announcement of the intended honour was received by all classes of the inhabitants, sufficiently indicates their high appreciation of the gratifying condescension of her Majesty, and of the evidence she has thus afforded of the deep interest she takes in the welfare, happiness, and prosperity of all classes of her subjects. The last occasion of a Royal visit to Liverpool was in the reign of William III., upwards of 160 years ago, but the visit was then paid under very different circumstances. It was then the reluctance of the vanquered to the conqueror. It is now the homage of a loyal and attached people to a constitutional Sovereign, who has on all occasions evinced her desire to conciliate the affections and promote the comforts and foster the commercial and manufacturing progress of her people. It would be very difficult to convey an adequate idea of the state of Liverpool on Wednesday night. In the first place, the whole population seemed to be out of doors, giving a marked indication of what might be expected on the morrow. The principal streets were so crowded as to be almost impassable; and more particularly at and of a line from the Exchange to the same dense, but happy and good-humoured crowd, consisting principally of hard-working artisans, who, after the labours of the day, had brought out their stout buxom wives, each with a train of children at their heels, to witness the preparations, and criticise the doings of the corporation and the tradespeople. Exclusive of the very judicious precautions adopted by the municipal authorities for the prevention of accidents or inconvenience during a route extending nearly five miles through the town, there was a general display of trifling display of decorative emblems, flags, triumphal arches, and those other ordinary out-of-door indications of festive rejoicing. The evening closed clear and frosty, with the wind in the north. The morning brought a sad and disastrous change. Instead of the bright and cheering weather of the previous day, the early risers on Wednesday morning were dismayingly regaled to find the rain falling, not in smart and rattling showers, which might promise to compensate for their severity by their shortness, but in small, searching sleet, without a single opening in the thick, dense clouds overhanging the town, to hold out a promise of improvement as the day should proceed. The flags and streamers drooped mournfully, wet, and draggled in the rain; the platforms and stages for the accommodation of visitors were saturated with water; and even the illuminations, which were to display their splendour in the evening, were doomed to be quenched in the general gloom. In this depressing state of things it may be supposed that the people were in no hurry to take up their positions on the platforms, or even to parade the streets. By nine o'clock, which in other circumstances would have found all the houses in Liverpool emptied of their inhabitants, there were few or no persons to be seen; here and there men were hurrying past, or a female, more than usually adventurous, tripped along with a shawl drawn over her head, but in general the streets were deserted, while the platforms, which had been erected at such great expense, looked as if no man would venture upon them. The sound of lamentation and mourning was general over Liverpool; everybody regretted the unfortunate state of the weather, and, to do them justice, everybody seemed more concerned for her Majesty and for the misfortune to the town, in not being seen to advantage by Royalty, than for any inconvenience which they themselves were put to by reason of the untimely rain. Such a state of things was exceedingly unfortunate for the gala show on land. It was ten times worse for the excursion which had been arranged for all that wonderful amount of commerce, which, in the course of little more than a century, has transformed Liverpool from a fishing village to a great and mighty city. Had the day been favourable, a sight such as probably no other spot in the world could present, would have been afforded to the Royal view. As it was, the sinking rain, and the thick black clouds which hung over the prospect, rendering it difficult to discern the one shore of the Mersey from the other, obscured much of this prospect; but no amount of rain or fog could wholly obliterate the magnificent scenery of this noble estuary, with its countless craft, from the ocean steamer to the tiny fishing-boat that seemed to dance like a cockle-shell on the crashing waves. The elements might have appalled many a stout heart; many ladies, who had been invited on board the attendant steam-tugs, and some gentlemen too, at heart when they saw the unpropitious weather; but they were not to be baulked of the pleasure she had promised herself in a run up of the Mersey, and the voyage, in all its integrity, was carried out, as if clear skies and brilliant sunshine had marked this first advent of Royalty on the broad estuary of the Mersey.

Her Majesty, ever punctual, left Croxteth shortly before ten o'clock, and proceeded through Lord Sefton's park to West Derby, *en route* to Liverpool. The *cortège* consisted of the Queen's own carriage and those of her suite. The Earl of Sefton, with his Countess and beautiful daughter, Lady Emma Molyneux, accompanied her Majesty in their own carriage. The drenching morning destroyed the gaiety which the preparations to greet her Majesty would undoubtedly have produced under more favourable circumstances. But the loyalty of the people was in no degree affected by this circumstance. The road for some distance was thronged with spectators, many of whom preferred to remain exposed to the rain for hours, rather than risk the possibility of not obtaining a view of her Majesty and her Royal consort. The village of West Derby, through which her Majesty passed to Liverpool, is the most ancient place in this part of England. It gives name to the hundred of West Derby. King Edward the Confessor had a castle here, which was granted, after the Norman Conquest, to Roger of Poictou, along with all the lands between the river Ribble and the Mersey. These lands, including the sites on which Liverpool, Manchester, and all the other great towns of South Lancashire stand, were then of the value of only £215 a year of present money. They are now of the value of upwards of £1,000,000 a year. The manor of Sefton, and other portions of the estates of the ancient family of Molyneux, were granted to an ancestor of the Earl of Sefton, by Roger of Poictou, immediately after the Conquest.

It was proposed that her Majesty should be formally met at the boundary of the borough by the Mayor, who, accompanied by the town clerk, was in waiting in his state carriage; but, owing to the inclement weather, her Majesty, after graciously bowing a recognition to his Worship, proceeded onwards, and the ceremonies which had been set forth were dispensed with.

The Queen passed Newsham House, the boundary of the borough, at half-past ten o'clock, and was hailed by the cheers of the multitude in 10,000 voices; but, as the rain still continued, her Majesty could only acknowledge the loyalty of the people by bowing from the windows of her carriage. The display along the line of procession was exceedingly grand. Platforms were erected at the entrance on West Derby-road, Brunswick-road, and Moss-street, where thousands of people cheerfully paid half-a-crown for a sitting, and sheltered themselves with their umbrellas from the rain. Along the pavements, and by the side of the barriers between which the procession passed, the people were thickly planted, and cheered heartily as the Queen was observed. As the Royal *cortège* moved on towards the more crowded parts of the town, the display of banners, decorations, mottoes, &c., became more and more effective, the principal route being crossed by flags of all nations suspended in line, and the cross streets showing, as far down as the eye could reach, many tokens of loyal and affectionate regard. In many instances appeals of a peculiar and characteristic —one especially, with the Gaelic motto of "Long life and happiness to the Queen," over a view of Balmoral Castle, supported by a stalwart Highlander playing the bagpipes, attracting much attention. At every point the Royal *cortège* was greeted with the most enthusiastic cheering, and the Queen's progress through Liverpool will long be remembered by all who witnessed it, as one of the most gratifying scenes of loyalty on record in the history of her Majesty's unexampled reign.

At this time the aspect of affairs at the "landing-stage" was extremely melancholy. The long ranges of seats were only partially filled; and the ladies who were daring enough to endure the torrents of rain that came down, were enveloped in muffings of all sorts, and shrouded in a canopy of umbrellas. A thick damp mist hung over the river, entirely shutting out all view of the Cheshire shores, and even those on the Liverpool side. There was not a breath of air, and the flags and streamers hung lank and dripping from their staves, and the whole aspect of the point of embarkation was wet, gloomy, and uncomfortable, as the most thorough Liverpudlian could desire. A guard of honour, composed of the 23d Royal Welch Fusiliers, arrived on the pier at 10 o'clock from Chester, in great-coats and heavy marching order. They were accompanied by their celebrated regimental goat, a present from her Majesty. The animal is of the white Cashmere species, and bears on its forehead a massive silver plate recording its presentation to the regiment by her Majesty. The Earl Cathcart, General commanding the district, with Colonel Torrens and a brilliant staff of officers, came about the same time to await her Majesty's arrival.

The Queen reached the water side at half-past eleven precisely, amidst the most deafening acclamations and the thunder of the guns stationed at intervals along the river front. The rain still continued to fall heavily.

Upon the Queen's alighting from the Royal carriage she was conducted under a circular marquée at the end of the corridor leading to the north stage, where her Majesty was received by the Mayor of Liverpool, the High Sheriff of Lancashire, General Earl Cathcart, the Earl of Carlisle, Lord Greenock, Colonel Wood, and Colonel York, and others. The members of the Dock Committee and of the Liverpool Chamber of Commerce were also in attendance. There were no seats of any kind in the marquée. Her Majesty and the Prince Consort, with the Royal Princes and Princesses, took up their position on one side of the tent, the deputations forming a semicircle around.

Mr. Charles Turner, the chairman of the Dock Committee, was first presented to her Majesty by Earl Grey, and had the honour of presenting the loyal address from the important commercial body over which he presides:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please your Majesty,—We, the corporation of the trustees of the Liverpool docks, beg leave, with profound respect, to express our devoted loyalty to your Majesty's person and Crown, and our grateful sense of the honour conferred upon us by the inspection which your Majesty has now been pleased to make to the port of Liverpool, and of the docks, and other very extensive maritime works thereto, under our management and control.

In common with all our fellow-subjects, inhabitants of this town and neighbourhood, we have hailed with the liveliest satisfaction and thankfulness your Majesty's determination, accompanied by his Royal Highness the Prince of Wales, and other members of your Royal family, to visit this great commercial emporium of your dominions; and we entertain most respectfully the hope, that the acquaintance which your Majesty has now formed with that site of enterprise and industry, which, in their manifold operations, contribute so largely to the power and prosperity of this kingdom, as well as the loyalty and delight inspired your Majesty's presence, and manifested alike afloat and on shore, and with heartfelt enthusiasm by all classes, and every person present at the humble pageant which your Majesty has condescended to accept and grace, will not have proved altogether uninteresting to your Majesty.

This auspicious visit is the first which circumstances have permitted your Majesty to honour us with; but we cannot but thankfully remember that the illustrious Prince Consort, has before been graciously pleased to extend to us his sanction to, and permitted to be associated with his name, a great work—portion of the Liverpool Dock Estate, now in principle at that time here, but now in most successful operation; as well as to afford very seasonable encouragement and support to an institution for the benefit of our seamen, which his Royal Highness will hear with pleasure is largely fulfilling the useful objects which as its founder he was pleased to predicate.

That your Majesty may, on some future occasion, be induced to repeat, and with increasing interest, the favour which we now so gratefully acknowledge, and that every year of your Majesty's reign may be rich in such and all other proofs of the happiness, prosperity, and affectionate loyalty of your people, is our most earnest and devoted prayer.

Given under the common seal, this ninth day of October, one thousand eight hundred and fifty-one.

Mr. Horsfall, the President of the Liverpool Chamber of Commerce, was next introduced to the Queen by Lord Grey. This gentleman had also the honour of presenting an address from the members of the chamber of which he is the head. This address was as follows:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please your Majesty,—Your Majesty's most dutiful and loyal subjects, the president, vice-president, the council, and members of the Liverpool Chamber of Commerce, beg, with all humility and respect, to approach your Majesty with feelings of devoted loyalty to your Majesty's throne and person, and with the tender of our sincere and heartfelt congratulations on your Majesty's arrival in this town, accompanied by your Royal consort, and the other members of the Royal family. And while we feel assured of the deep and lively interest which your Majesty at all times takes in the welfare of every portion of the British empire, we cannot but look upon your present visit as an evidence of the special interest which your Majesty has been pleased to take in the prosperity of the town of Liverpool, and in the promotion of that commercial enterprise which is conducive at once to the peace and prosperity of the country. The happy events of seeing in the midst of us that gracious Sovereign, who, in the providence of God, has, for a period of fourteen years, so happily ruled over this country, will, we feel assured, be the means, if possible, of increasing the great loyalty which has ever characterised the people of this land, and of cementing more closely the union and affection which ought always to subsist between a sovereign and a people.

That Almighty God may shower down his richest blessings upon your Majesty, your consort, and your Royal children, and that you may long continue to enjoy, over a happy and contented people, is the fervent prayer of your Majesty's most dutiful and loyal subjects, the president, vice-president, council, and members of the Liverpool Chamber of Commerce.

The Queen received the address very graciously, and bowing to the members of the deputation, handed the document to the Secretary of State. Mr. William Brown and Sir Thomas Birch, the members for the county, were present during this ceremony. Mr. Cardwell, M.P. for the borough, Mr. Robert Rankin, Mr. John Aikin, and Mr. F. Shand were also among the deputation. It was remarked, that, notwithstanding the want of accommodation in the tent, and the fact that it was in some measure exposed to the weather, her Majesty exhibited no discomfort, but rather appeared to encourage, by her gracious demeanour, the somewhat depressed spirits of the deputation.

Her Majesty walked down the closed corridor to the landing-stage, resting on the arm of the Prince Consort. The Royal children followed, the Prince of Wales walking with the Princess Royal, and Prince Alfred with the Princess Alice. Her Majesty was preceded by the chairman and members of the Dock Committee and the equerries in attendance; and following upon the Royal party were the ladies in waiting, the Earl Grey, the Earl of Carlisle, the Earl and Countess of Sefton, and the members of their youthful family. As soon as the Queen emerged from the corridor, and passed under the awning, a shout of welcome was raised by all the spectators on the platforms running along the landing-stage. For the moment each appeared to forget the pitiless warring of the elements, and hats were raised and handkerchiefs waved in every direction. Her Majesty very kindly and graciously acknowledged the loyal reception which greeted her on this place, and passed slowly on to the *Fairy* Royal yacht, on board of which she was conducted by Captain Lord Adolphus Fitzclarence. The engines were presently in motion, and the *Fairy* moved off in a southern direction.

THE ROYAL CRUISE ON THE MERSEY.

Her Majesty and the Prince Consort, with the Royal children, having taken their places in the round-house upon the deck, beneath the shelter of which they were protected from the rain, the graceful little yacht moved forward with this Royal freight amidst a salute of artillery from the docks and shipping, and steamed slowly up the river, followed by the giant-looking steamers chartered by the corporation, the *Commodore*, the *Trafalgar*, the *Eblana*, and the *City of Dublin*, all of which were crowded with passengers.

The George's Dock, in front of which the Royal party embarked, is one of the oldest and largest of the vast range of basins which commercial enterprise has created along the banks of the Mersey. Behind it stands the Goree Piazza, with its immense pile of warehouses rising to a height of five tiers, and filled with the most valuable merchandize. Some idea of the wealth here deposited may be formed, when we state, that, when the whole pile was burnt, in 1802, upwards of a million sterling in value of property was consumed. On the opposite side of the river the coast is studded with populous villages and fashionable places, including Birkenhead and Woodside, Seacombe and Egremont, New Brighton, Rock Ferry, and New Ferry, all of which were now hidden in the haze and gloom that enshrouded everything. The great interest of the scene, however, was not the animate or inanimate objects on the opposite shore, but the long chain of docks—including the Clarence, the Trafalgar, the Victoria, the Waterloo, the Prince's, the George's, the Canning, the Salt-House, the Albert, Manchester, Duke's, King's, Queen's, Union, Coburg, Harrington, and Herculaneum—extending in a long unbroken series, a distance little short of four miles, covering an area of upwards of a hundred acres, and presenting a quay surface of about fifteen miles, almost wholly formed of hewn masonry, and involving an expenditure of almost incredible amount. It was impossible for any one to contemplate these vast works, which, for solidity and extent, are unrivalled in the world, and which enable the Liverpool merchants to afford accommodation to the countless vessels that congregate in their port, without feeling deeply impressed with the vast wealth and resources and indomitable energy and enterprise of the nation by whom they have been planned and executed. Her Majesty was accompanied on board the yacht by the Mayor, Mr. Charles Turner, the Chairman of the Dock Committee, and Mr. Hartley, as dock engineer. The escort was purposely limited to these officials, their function being to supply the Royal party with every desirable information in respect to the docks, works, and river. As the *Fairy*, with its Royal freight and attendant steamers proceeded slowly up and down the river, the unrivalled local situation of the town, to which it is mainly indebted for its commercial position, became fully apparent. Placed just within the mouth of the Mersey, and protected from the force of the Irish Sea by the projecting headland of the opposite Cheshire coast, affording safe anchorage to vessels of any size, Liverpool was admirably adapted, even before the formation of its numerous docks, to attract the coasting trade of the north-west coast. It now concentrates within itself the foreign trade of inland districts not only vast in extent, but abounding above all others in mineral wealth, manufacturing skill, and the elements of national prosperity. Thus, as far back as the year 1709 the first ship entered the first of the Liverpool docks; and, after the lapse of a century and a half, her Majesty, in her leisurely sail along the river, saw the docks now occupying the entire frontage of the river. The minute division and judicious arrangement of business which the unparallelled extent of the shipping business transacted in Liverpool has occasioned, were explained to the Queen by Mr. Turner, to whose information her Majesty listened with evident interest. The Clarence, which occupies nearly 50,000 square yards of area, and has a mile of quay space, is devoted exclusively to the reception of steam-vessels plying between Liverpool and the other ports of the United Kingdom. The vast Prince's Dock, which occupied ten years in the building and formation, possesses peculiar interest, being destined for the reception of the largest vessels employed in the India, China, and American trade; and here many of the magnificent "liners," which have done so much to facilitate intercourse between this country and the United States, were to be seen. The King's Dock is the resort of all vessels in the tobacco trade; and in the vast pile of warehouses behind, hundreds of thousands of hogsheads are stored. The Queen's Dock, which stands next to this, is appropriated to the Dutch, the Baltic, and the West Indian trade. The Brunswick, one of the largest of its class, is appropriated to the timber trade; and grouped around it are some of the most extensive building and timber yards of the port. All this extent of accommodation has been provided for a trade which, in the course of a single year, amounts to about 26,000 vessels and a tonnage of 4,000,000. Lord Erskine's vivid sketch, although probably a little highly coloured, has enough of truth and verity to justify our quoting it as a bird's-eye view of the brilliant and striking scene which her Majesty witnessed for the first time to-day:—"After passing a distant ferry and ascending a hill, I was told by my guide—'All you see spread out beneath you—the immense docks, which stands like another Venice upon the waters—which is intersected by those numerous docks—which glitters with those numerous and cheerful habitations—which is the busy seat of trade, the gay scene of elegant amusements, growing out of its prosperity, where there is most cheerful face of industry, overflowing riches, and everything that can delight a man that wishes to see the prosperity of a great community and a great empire—all this has been created by the industry and with the disciplined management of a handful of men since you were a boy'—and certainly, of all the marvels with which the "City of the Waters" teems, its rapid and unexampled rise is not the least extraordinary. In the interval which elapsed between the beginning of the 18th century and the commencement of the reign of George III. (1760), the shipping had increased from 300 to 15,000, and the town then possessed only two docks. There may now be found any day nearly 1000 vessels in its capacious docks; and the vastness of its commerce with the West Indies, the United States, the colonies of British America, South America, India, and China, exceeds that of any port in the world.

Meantime, while we have been glancing at the past history and present position of this vast maritime emporium, the little *Fairy* has been steaming up the river, the faint shouts of the spectators on the docksheads indicating the thinned ranks which it was at one time conjectured would have overflowed from all parts of the town and district, beyond all possible means of accommodation. Having reached the Dingle, or southern extremity of the line of docks, the *Fairy* wore round to the westward; and, after crossing the Channel, proceeded along the Cheshire shore towards the entrance to the Mersey. The steam ferry-boats running to Tranmere, Birkenhead, Woodside, Seacombe, and Egremont, were anchored in line opposite the several places to which they ply, most of them being profusely decorated with flags, and literally crowded with spectators, who cheered the Royal party enthusiastically. The yacht, after proceeding to the Rock Lighthouse, crossed, opposite Bootle, to the Lancashire shore, returning up the Liverpool side to the landing-place. The trip did not occupy more than an hour. The Royal party landed at half-past twelve. The disembarkation was conducted in the order observed when the Royal party embarked, but, instead of returning by the north side, her Majesty walked along the corresponding avenue on the south side of the landing-stage, and when in the tent at the entrance, the Queen expressed her approbation of the conduct of the dock authorities by bowing to the chairman and others who were present.

PRESENTATION OF THE ADDRESS IN THE TOWN-HALL.

The procession now formed and proceeded in the same order as before, passing along the Goree, into Strand-street, round the south front of the Custom-house, the Sailors' Home, thence up South Castle-street, along Lord street, Church-street, Parker-street, and Lime-street, to the east front of St. George's Hall, and, without pausing, thence down St. John's-lane, up Manchester-street and Dale-street to the Town-Hall. The rain continuing to fall thickly, and crowds of pedestrians, as well as hundreds of cabs, having followed the Queen to the quay, the streets were dirty, and the spectators much bespattered with mud. But nothing could damp the ardour and enthusiasm of the people, who cheered the Queen and suite joyously as if the sun had been pouring down on the multitude a flood of golden light. The ladies in the windows waved their handkerchiefs, and children gathered at different points had their happy "Hurrah!"

The Town-Hall is a very handsome building, well situated at the north end of Castle-street. It contains, besides offices for the transaction of municipal business, a suite of rooms, which, in point of elegance and chasteness of decoration, might be placed in not unfavourable comparison with state apartments in the civic palaces of the metropolis. The principal entrance, on the south side of the building, opens to the grand staircase, on the first landing of which is placed a beautiful marble statue of George Canning, by Chantrey, regarded by that celebrated sculptor as one of his *chefs d'œuvre*. This staircase leads to a suite of drawing-rooms, consisting of three, which were reserved exclusively for the use of her Majesty, the members of the Royal family by whom she was accompanied, and the Royal suite. The eastern drawing-room opens into the small ball-room, in which four rows of seats were erected on each side, affording accommodation to 250 ladies, an ample space being reserved in the centre for the passage of the Royal party and their suite. The small ball-room again opens into the large ball-room, which is on the north side of the building, and was the scene of the public proceedings on Thursday. This is a hall of elegant proportions, on the south side of which two chairs of state were placed on a slightly-raised daïs for the Queen and Prince Albert. There were seats also on either side for the Royal children. Opposite to the throne, the central window overlooking the Exchange area had been removed, and a balcony projected, to enable her Majesty to step out and overlook the quadrangle, where a large number of spectators had assembled to greet the Royal presence. Around the apartment seats were arranged, in an amphitheatrical form, affording accommodation for nearly 600 persons. These were chiefly filled by the wives and daughters of the leading merchants of Liverpool. Among the gentry present we observed the Bishop of Chester and Mrs. Graham, the Lord-Lieutenant of the county and the Countess of Sefton, the Earl and Countess of Carlisle, the High-Sheriff and Miss Heywood, the Earl Cathcart, Mr. W. Brown, M.P., Sir Edward and Lady Oust, &c. The members of the corporation were the last who entered the room, and they formed a line in front of the seated spectators. In consequence of the gloomy and stormy state of the atmosphere, the three large chandeliers suspended from the ceiling were lighted, a proceeding which had the good effect of displaying to better advantage the very gorgeous and appropriate decorations of the magnificent saloon.

The Queen alighted at the grand entrances of the Town-Hall at ten minutes after one o'clock. As soon as her Majesty was announced, all the company rose, but there was, of course, no demonstration of applause. The Queen and the Prince, with the Royal children, having ascended the daïs, the Mayor, with the Recorder, and the members of the corporation, advanced to the foot of the throne.

The Recorder (Mr. Henderson) then read the following address:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please your Majesty,—We, your Majesty's faithful subjects, the Mayor, aldermen, and burgesses of Liverpool, approach, with profound respect, to offer the homage of our devoted loyalty, and to express the universal joy of the inhabitants of this borough, now for the first time gladdened by your Royal presence.

We welcome with delight a Sovereign, who, displaying from the throne a brilliant example of private virtue, so sways the sceptre of public rule as to unite the hearts of her people in firm and dutiful attachment to her person and government.

Knowing that your Majesty is ever intent on the welfare of the realm, we view this gracious visit as a mark of Royal regard for the town and trade of Liverpool; and we indulge a hope that your Majesty will have seen with satisfaction the public buildings now in the course of completion, and the arrangements to accommodate the shipping of a seaport remarkable for the rapid progress and extent of its commerce.

Our joy on this auspicious occasion is enhanced by the presence of the illustrious Prince, your Royal Consort, who, to many well-earned titles to national admiration and esteem, as the patron of science and improvement, adds peculiar claims on the gratitude of the community: we rejoice that the great works inaugurated here by his Royal Highness, and which blend his name with our enterprises and industry, are now in full operation, and that the structure which he graciously condescended to found is now completed as a sailors' home.

Thankful for the wise and benign exercise of Royal authority, and for the advantages of constitutional government, we fervently pray that many years of public and private felicity may be added to your Majesty's reign, and that future generations in this kingdom may long enjoy, under your Royal line, such blessings as we now most gratefully acknowledge.

Given under the common seal of the borough of Liverpool, this ninth day of October, one thousand eight hundred and fifty-one.

The address was received by her Majesty very graciously, and handed to the Secretary of State, who placed it in the Queen's basket. The following reply, which her Majesty read in a beautiful, modulated tone of voice, rendering every syllable distinctly audible.

Her Majesty said:—

Mr. Mayor and Gentlemen,—I accept with pleasure your loyal address, and I am glad to convey, through you, to the inhabitants of this borough, my best thanks for the very cordial welcome which I have received from them on the occasion of my visiting, for the first time, this great commercial town, of which I have viewed, with just admiration, the magnificent public works and buildings.

The Mayor, with Mr. John Holme and Mr. Hugh Hornby, the mover and seconder of the address, were then presented to her Majesty by Earl Grey, and had the honour to kiss hands.

Her Majesty then signified her pleasure that the Mayor should again approach the daïs; and Colonel Gordon having handed his sword to the Queen, her Majesty placed it successively on the left and right shoulders of his Worship, conferring the honour of Knighthood in the usual form. This proceeding excited the liveliest interest among the company

Her Majesty and Prince Albert then crossed the room to the balcony overlooking the quadrangle, and looked out upon the crowd of spectators filling that spacious area. The moment the Queen came in sight of the vast crowd, there rose a cheer that was maintained as long as her Majesty remained in the balcony. In a few moments the Royal party retraced their steps through the drawing-rooms into the Mayor's private apartments, where a luncheon was prepared for them. After the Queen left the ball-room, the assembled company gave three times three hearty and inspiriting cheers for her Majesty, the ladies waving their handkerchiefs, and the vast apartment exhibiting a very unusual scene of enthusiasm and excitement.

At ten minutes to three the Royal party were re-conducted to their carriages, and proceeded by way of Dale-street, Manchester-street, and St. John's-lane, to the north end of St. George's Hall. Her Majesty, throughout her progress, was most enthusiastically cheered, and the weather being now, for the first time since the morning, cleared up in a slight degree, the streets assumed a less gloomy appearance.

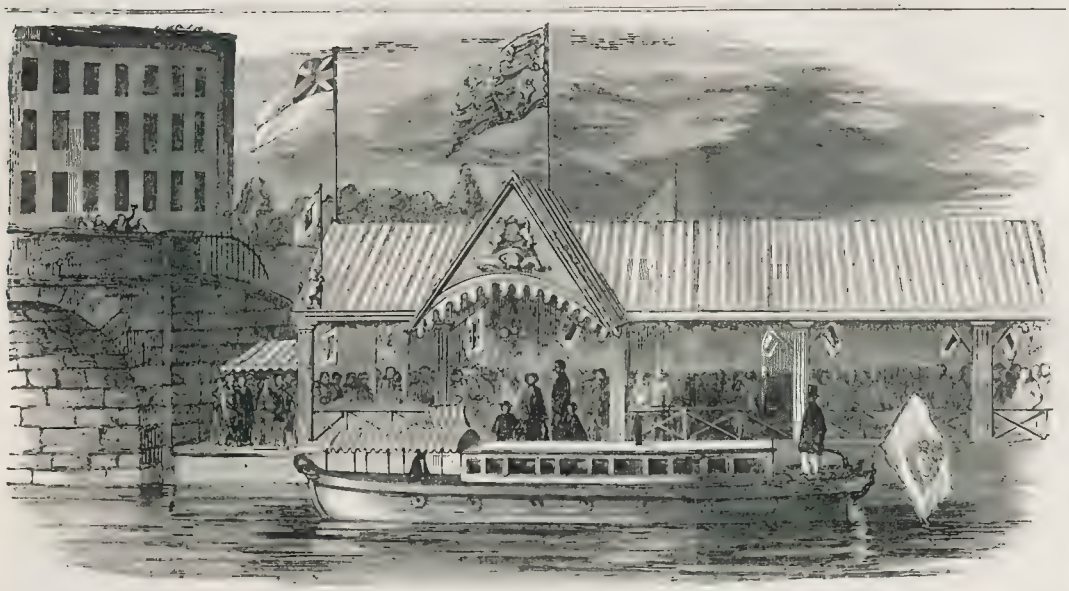
At St. George's Hall the Queen was received by the chairman and deputy-chairman, and the members of the Law Courts Committee, by whom her Majesty was conducted through the building. In the course of her tour of inspection, the Queen and the Prince made their appearance at the southern front, and were immediately recognised by the crowd of spectators outside with a shout of acclamation the heartiest, perhaps, which had been given during the day.

Her Majesty left the hall at twenty minutes to four o'clock, and, crossing over to the railway station, travelled by special train to Patricroft.

THE ROYAL PROGRESS ON THE BRIDGEWATER CANAL.

The progress of her Majesty from the Patricroft station of the London and North-Western Railway to Worsley, along the Bridgewater Canal, was probably one of the most interesting features of her Majesty's journey. The directors had made very extensive preparations for the Royal accommodation at Patricroft: the station had been fitted up with red, pink, and white draperies, and tastefully ornamented with dahlias and evergreens. The platforms were covered with crimson cloth, and the exterior was entirely clothed in evergreens, giving to the structure the appearance of a large rustic harbour. The corridor from the station down to the canal, 120 yards in length, was decorated in a similar manner, and brilliantly lighted with gas. Over the place of embarkation was a canopy of white cloth, supported on fluted pillars with gilded capitals; and over the centre of the canopy the Royal arms, in high relief, surmounted by the Royal standard. On either side were the Ellesmere crest and banners. The floor of the platform where her Majesty was to embark, and of the corridor, was covered with an elegant carpet.

About a quarter-past four o'clock, Lord Ellesmere's state barge, in which her Majesty was to be conveyed to Worsley, and the attendant boat,



ARRIVAL OF HER MAJESTY AT THE PATRICROFT STATION.

belonging to Mr. Loch, arrived, having left Worsley at four o'clock. The passengers were the Duke of Wellington, the Countess of Ellesmere, the Earl and Countess of Wilton, the Marquis and Marchioness of Westminster, the Countess of Derby, Viscountess Brackley, and Lady Alice and Lady Blanche Egerton, daughters of the Earl of Ellesmere, and Captain the Hon. Frank Egerton, one of his Lordship's sons. The Earl of Ellesmere and the Earl of Derby were not at the station, in consequence of indisposition, both suffering from attacks of gout; and Lord Brackley was not sufficiently well to venture out on so inclement a day. The appearance of the Duke of Wellington at the station, with the Countess of Ellesmere leaning on his arm, was the signal for loud cheering by the persons assembled. The gallant Duke, while at the station, observing an old policeman, Zachariah Drakeley, in the service of the London and North-Western Company, whose breast was decorated with a Peninsular medal, inquired into the service he had seen, and the regiment in which he served, and, we believe, presented the honest fellow with a sovereign.

The guard of honour in attendance was furnished by the 28th Regiment, and consisted of Lieutenant-Colonel Messiter, Captain Butler, Lieutenant Codd, Lieutenant Dubbings, and 100 rank and file. The band of the regiment was also in attendance.

The approach of her Majesty was signalled by a pilot engine at 17 minutes to four. The Royal train came in sight of the station at 20 minutes past four o'clock—25 minutes earlier than was expected. The distinguished party mentioned, together with the Mayor of Manchester and the directors of the railway company, were on the platform to receive her Majesty. The spectators cheered vociferously as the Queen descended from the carriage, and the band of the 28th struck up the National Anthem. Her Majesty, who appeared to be in excellent health and spirits, graciously acknowledged the cheers of the spectators, and after warmly greeting the Countess of Ellesmere and other members of the party assembled upon the platform, proceeded down the corridor to the place of embarkation, where the Royal barge was moored underneath the canopy. When her Majesty and the Prince appeared on the platform, they were received with deafening cheers from the people assembled on the opposite bank of the canal. The Queen stepped into the barge first, and took her seat in the chair of state in the centre of the saloon. Her Majesty was followed by Prince Albert, the Prince of Wales, and the other Royal children. Her Majesty invited the Countess of Ellesmere to accompany her on board, and the rest of the party having embarked in the attendant barges, the horses were put to their paces by trained postillions, and the flotilla moved off at a gentle pace, amid the cheers of the assembled spectators. The boats belonging to the members of the Manchester and Salford Regatta Club were in attendance, and brought up the rear of the procession. The banks of the canal from Patricroft to Worsley, a distance of about two miles, were crowded with masses of people, who had assembled in every situation where they were likely to obtain a good view of the Royal progress. At Monton-bridge, the boundary of the Earl of Ellesmere's property, was erected a very pretty triumphal arch adorned with flowers and evergreens. Soon after passing under this arch, and about three-quarters of a mile from Particroft, the procession came in view of the village of Worsley, situated on the right bank of the canal. The spire of Worsley Church, recently erected by the Earl on some rising ground above the village, was here a conspicuous and attractive object, and further on rose the lofty turrets of Worsley Hall. From the roofs of the extensive canal works belonging to the Earl, which occupy several acres of land on the right bank at

THE ARCH AT VICTORIA BRIDGE OVER THE IRWELL.

Worsley, floated a great number of banners. Every part of the works was crowded with colliers and men employed on the Ellesmere estates, 4000 or 5000 in number, with their families. The honest outburst of joy which greeted her Majesty at this point was absolutely deafening. The Queen appeared greatly interested with the scene presented on the banks of the canal; and, notwithstanding the inclemency of the evening, and the fatigue she had undergone during the day, her Majesty several times left the saloon and walked upon the deck of the barge, where, protected by an awning, a better opportunity of viewing the preparations made for the Royal reception was obtained. After passing through the Worsley works the Royal barge entered Lord Ellesmere's park. A neatly-designed Gothic building, admirably adapted for a landing-stage, had been erected here, the main portion forming a canopy across a road parallel with the canal, beneath which stood her Majesty's private carriage; whilst in front was an awning stretching over the water, under which the barge drew up. Her Majesty was received by an escort of yeomanry cavalry, and by the Worsley school children, headed by a juvenile band of fifes and drums, the performers being children in the schools. A small and select circle of visitors only had the *entrée* to the private grounds on this side the canal; but to the open park on the other side, behind the towing path, the public were freely admitted.

The Countess of Ellesmere first alighted from the barge, followed by the Duke of Wellington, who stepped on shore before the boat came to rest, and tripped up the grassy slope from the canal with wonderful vigour. His Royal Highness Prince Albert then handed out the Royal children, and, following them, assisted her Majesty, whose appearance was hailed by the assembled spectators with enthusiastic cheer. Her

Majesty appeared in good health, and was in excellent spirits, considering the fatigues she had undergone in the early part of the day.

The scene presented by the Royal debarkation was strikingly picturesque. An extensive lawn stretches down, from the rising ground on which the hall stands, to the water's edge. The carriage drive from the landing-stage skirts this lawn to the right, forming nearly a semi-circle. On either side of the drive, which is about a third of a mile in length, were stationed the Worsley troop of the Lancashire Yeomanry Cavalry, under the command of Major Gerard, drawn up in open files, with horses facing inwards. Midway up the drive was a handsome new triumphal arch, designed by Mr. Edward Blore, F.R.S., from which, as well as from the summit of the pavilion, handsome banners floated. The carriages awaiting the Royal party were five in number, but

evidently with considerable interest, the interior of the building, which presented, at this instant, a magnificent scene.

The Mayor having been introduced to Her Majesty by Earl Grey, [illegible] advanced, and presented the loyal address of the inhabitants of the borough, which was read by the Recorder (Mr. Armstrong, M.P., Q.C.), as follows:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please your Majesty, We, your Majesty's loyal and faithful subjects, the Mayor, Aldermen, and Burgesses of the borough of Manchester, humbly approach your Majesty's throne to express our sincere congratulations on the happy return of the Prince of Wales from his recent tour, and to offer our dutiful and affectionate congratulations on the auspicious event.

We also beg to express our heartfelt gratification at the safe return of your Majesty to your dominions, after your visit to your Majesty's ancient country of Scotland, and to offer our humble

THE NATIONAL ANTHEM IN PEEL PARK, ON THE QUEEN'S ARRIVAL.

lowed by Prince Albert leading the Countess of Ellesmere, the Royal children, and suite. Her Majesty was received on the platform of the railway station by Lieutenant-General Earl Cathcart, K.C.B., commanding the northern district, and his staff, including Lieutenant-Colonel York, Lieutenant-Colonel Barnard, and the Hon. A. M. Cathcart. Mr. G. C Glyn, M.P., chairman of the North-Western Railway Company, with Captain Huish, the general manager, and several other officers of the company, were also in attendance.

Among the company on the platform were the Countess Cathcart, Lady Trafford, Mrs. Lee (the wife of the Bishop of Manchester), the Dean of Manchester, Sir J. Potter (Mayor of Manchester), and the Rev. W. Marsden, vicar of Crewe. Her Majesty was received with every mark of enthusiastic affection. A guard of honour of the 28th Regiment, consisting of 100 men, under the command of Lieut.-Colonel Master, with the regimental band, was stationed on the platform, and received her Majesty with the usual military honours.

The Queen, Prince Albert, the Prince of Wales, and the Princess Royal immediately entered the state carriage, Prince Alfred and the Princess Alice being placed under the charge of the ladies of the Royal suite (Viscountess Canning and the Hon. Miss Byng) in another carriage The train consisted of seven carriages—the state carriage, four first-class carriages for the Royal suite and servants, and two luggage vans. Among the passengers were Earl Grey, the Earl Granville, Sir James Clark, Mr. Glyn, M.P., and Captain Huish.

At twelve o'clock precisely, the Queen having taken leave of Lord and Lady Ellesmere, and the other noble and distinguished persons present, the train moved off at a rapid rate towards Manchester.

HER MAJESTY'S PROGRESS FROM LANCASHIRE TO WINDSOR CASTLE.

The train reached Manchester in about ten minutes, and passed round the town by the new line of the Warrington and South Junction Railway to the point where the Manchester and Birmingham is joined. Large masses of the inhabitants had turned out to see the Queen pass. The town was still decorated with flags, and had not put off its holiday attire; the sir was clear, and the place looked well in the bright sunshine. From Manchester to Stockport, and for some miles beyond, the Royal route lay through an almost continuous district of mills, warehouses, and other vast manufacturing and trading establishments; and as it happened that this part of the journey took place during the dinner hour, when the working classes got their brief respite from toil, the whole population lined the railroad, and the Royal party travelled the first hour of their journey within hearing of ceaseless cheers. The heighten ed ovation was perhaps a more genuine compliment to her Majesty, than the more formal demonstration of the preceding day. The chance of getting a glimpse of the Royal person as the train passed was very slight, and the object of the people was evidently to please her Majesty by parting shouts of affectionate farewell. The lengthened panorama thus presented must have been very gratifying to her Majesty; and even without attaching to it a meaning, the picture would have b een striking for its grouping. At Stockport the sight was a wonderful one. The scene was observed by the royal party from the magnificent viaduct which spans the town. Every roof of every building, walls, windows, pailings, carts, trucks, and every imaginable place, were crowded with men, women, and children. The train went over the viaduct very slowly, and thus every particular of this marvellous picture could be thoroughly appreciated.

The Royal train reached Crewe at eight minutes after one o'clock. Here the workmen in the employ of the London and North-Western Railway Company, with wives and families, were assembled to greet her Majesty, which they did right loyally. The Royal party remained here for a few moments to allow of a change of engine, the train henceforward to Rugby, being under the direction of Mr. Trevethick, the locomotive superintendent of the northern division of the London and North-Western Railway. From Crewe, the railway having an incline of fourteen miles, two engines were attached. At Whitmore the necessity for this assistance ceased, and the train ran merrily on to Stafford, where it arrived at seven minutes after two o'clock. Here the Mayor and corporation of the borough were on the platform in their official robes. A large concourse of people had assembled at the station, and the Marquis of Anglesey, the Earl of Harrowby, Earl Talbot, and many of the neighbouring gentry were present. The Lord-Lieutenant, the Marquis of Anglesey, introduced the Mayor to her Majesty, who was graciously pleased to touch the mace of the ancient and loyal borough of Stafford. Leaving Stafford, the train proceeded by the Trent Valley through Shugborough, the beautiful estate of the Earl of Lichfield, and over a district of country famous for its fine parks. At Lichfield the hopes of a very large number of ladies who had assembled to see the Queen were grievously disappointed, the train running through the station without any perceptible slackening of the speed.

At Rugby, where the train arrived at 30 minutes past 3, a great crowd were assembled, conspicuous among whom were the boys of the Rugby school, headed by their masters in their robes. While the train stopped to change engines, an attempt was made to present an address to her Majesty by the school boys, praying a week's holiday. Unfortunately, an informality in the document prevented its presentation.

Mr. M'Connell, the locomotive superintendent of the southern division of the London and North-Western Railway, took charge of the engine at Rugby, and brought her Majesty on to Watford. The journey over this portion of the line was performed with admirable precision. A few minutes lost at Rugby would have been made up before reaching Watford, but for the partial failure of one of the feed pipes between Weedon and Wolverton, which rendered a change of engines, not contemplated, necessary at the latter place. As it was, the Royal train arrived at Watford at three minutes after five o'clock, without the occurrence of a single casualty; the whole journey of 178 miles, including stoppages, having been performed in 5 hours.

Her Majesty and the Prince Consort, on alighting from the Royal train, expressed to Mr. Glyn their high satisfaction at the manner in which the journey had been performed. The Prince Consort also conversed for some minutes with Captain Huish.

Lord Robert Grosvenor, Lord Eckeby, and the Hon. Misses Montagu were among the nobility resident in the neighbourhood, who had assembled to meet her Majesty. Mr. Stewart, the Secretary of the London and North Western Railway, was also in attendance.

The arrangements at the Watford station, at which point the Royal party left the railway and proceeded by road to Windsor, were very generally admired, the active and intelligent station-master at this place (Mr. Stubbs) having completed such preparations as were necessary for the comfort of the Royal party.

Her Majesty left the station at twenty minutes after five o'clock in one of the Royal carriages, and proceeded to Rickmansworth, under escort of a company of the 16th Hussars. Her Majesty arrived at this pretty village at a quarter to six. A triumphal arch (of which a Sketch is given in another column) was erected by the inhabitants of this place in honour of her Majesty. From Rickmansworth, a company of the Uxbridge Yeomanry, under the command of Captain Cox, had the honour of forming the escort to Uxbridge, where her Majesty arrived at twenty minutes past six, and was received by a guard of honour of the Uxbridge Yeomanry, commanded by Captain De Burgh, the Commandant, the band of the corps playing the National Anthem. It being Uxbridge fair, the town presented a most animated appearance; and the hearty cheers which greeted her Majesty and the Prince on their arrival afforded a pleasant evidence of the loyalty of the agricultural population of Middlesex and Buckinghamshire. From Uxbridge, Captain De Burgh, with Lieuts. Maunsell and Hall, relief party of the yeomanry, formed the Royal escort to Black Park, at which point they were relieved by the Royal Horse Guards, who accompanied her Majesty to Windsor Castle, where the Royal party arrived about half-past seven o'clock.

The following letter, expressive of her Majesty's entire satisfaction with the arrangements made for her reception on Friday week, was received by Sir John Potter on Saturday morning:—

Worsley, Oct. 10th, 1851.

Sir,—I have much pleasure in acquainting you that I have received the Queen's commands to express to you her Majesty's entire satisfaction with the arrangements made on the occasion of her visit this day to Manchester. Her Majesty was highly gratified by the proceedings of the day, and by the manner in which she was received. I have the honour to be, sir, your very obedient servant, GREY.

Sir John Potter, Knight, Mayor of Manchester.

A similar communication was addressed to the Mayor of Salford, and also to the Mayors of Lancaster and Liverpool.

THE ILLUSTRATIONS.

LIVERPOOL.

ST. GEORGE'S HALL.

THIS, the most splendid architectural feature in Liverpool, will, when completed, be one of the finest public buildings in the kingdom. From its position, immediately opposite the Lime-street station of the London and North-Western Railway, its great extent and architectural beauty, it cannot fail to attract the attention of every visitor to Liverpool. The want of a large hall for concerts, public meetings, &c., and of suitable assize courts for this town, had long been felt; and after much consideration it was determined to erect two buildings for the required purposes contiguous to each other, upon a piece of ground presented to the town by the corporation. Upon this premises were cleared for the best designs of the intended structures, both of which were awarded to the late Mr. H. Lonsdale Elmes, there being seventy-five plans sent in for the hall, and eighty-six for the assize courts. As, according to the original plans adopted, one of the buildings would necessarily have interfered with the other, Mr. Elmes was called upon to remodel them, which he did by uniting them so as to form but one building. Mr. Elmes' new plan having been finally approved by the town council in May, 1841, the building was almost immediately commenced. The whole cost of the hall, when completed, will be about £200,000, which comes out of the corporation funds. Owing to the death of the architect, and other causes to which it is not necessary here to allude, the progress of the building towards completion was for some time suspended; but the works are now being rapidly carried with under the direction of Mr. Weightman, the surveyor of the corporation, assisted by Mr. W. H. Wordley, who has himself designed several portions of the interior, the plans of which were in an unfinished state at the decease of Mr Elmes. The building is of the Corinthian order of architecture, arranged throughout so as to produce a rich polystyle composition of more than usual variety and contrast. The eastern *façade* is no less than 425 feet in length, the columns being 46 feet high, and 4 feet 6 inches in diameter. The south front, owing to the great fall of the ground at the end of the site—nearly 16 feet has the appearance of being raised upon a terrace, which gives it a noble and picturesque effect. This front chiefly consists of an octostyle, with a monostyle portico recessed within so as to give it a depth of 24 feet. The columns of this front are raised upon a stylobate 10 feet high, and continued along the other fronts; and the height from the ground line to the apex of the pediment is 86 feet. Notwithstanding the beauty of this front, it is only subordinate in the general design to the eastern *façade*, which clearly expresses the nature of the internal arrangements of the building. The advanced colonnade in the centre is 200 feet in length, and being recessed forms a sheltered promenade 25 feet deep. This corresponds with the extent of St. George's Hall, which stands between the two assize courts, and is externally defined by being carried up higher than the rest of the building. This division of the front contains fifteen intercolumns, and the one on either side five more. There are also square pilars placed here, between which an ornamental screen is carried up below the upper parts of the shaft being insulated, and producing a very novel and pleasing contrast. The north front is composed of a projecting hemistyle, the architectural order being continued in antæched columns. By this arrangement considerable variety is produced in the appearance of the building, the north-east view of which differs considerably from that of the south-east. The principal entrance will be at the south portico, the entablature of which is filled with emblematical figures in bas relief. The entrance-hall at this end of the building is as yet unfinished; but, during the last week, in time to do honour to her Majesty's visit, a beautiful marble statue of the late George Stephenson, who may be fairly designated the father of the railway system, from which Liverpool has derived such benefit, by Mr. John Gibson, has been placed within it. The entire length of the building from north to south, including the steps leading to the southern portico, is about 500 feet. The extent of the interior may be judged of from the fact, that it comprises a spacious hall capable of accommodating from 1200 to 1400 persons, two commodious assize courts, a sheriff's court, jury rooms, and several smaller apartments for public use, in addition to kitchens, and numerous rooms for officers and servants. The northern entrance leads to the Nisi Prius Courts, and the southern entrance to the Crown Court, both courts being of the same size—60 feet by 40 feet, and 45 feet high. These rooms are beautifully proportioned, and have highly enriched arched panelled ceilings, supported by 22 columns of Aberdeen granite, with bronzed Corinthian capitals. These courts, which are lighted from above, are surrounded with the great hall by colonnades, which it is intended to fill in with glazed bronze gates, ornamented with heraldic designs. The courts are so nearly completed, that they are expected to be opened for business at the approaching winter assizes. St. George's Hall, as it has already started forms the centre of the building, is 175 feet long by 75 feet wide, and 74 feet high; and along the upper part of its sides it is extended by a series of recesses 15 feet deep, which appear to be obta ned out of the thickness of the walls, whereas they are merely carried from running over the corridor surrounding this part of the interior, and which both separates from and connects the Hall with the law courts. It is intended that the flooring of the Hall shall be of marble. The vaulted ceiling, of 68 feet span, is formed of hollow bricks; they not only being much lighter than the common bricks, but possessing great advantages in point of ventilation. These bricks are of the same description as those used in Prince Albert's model cottages, Hyde-park, and are the invention of Mr. Rawlinson, C.E. The weight of the ceiling if ordinary bricks had been used would have been 1000 tons, whereas it is now only 400 tons. The ceiling of this Hall is supported by 24 red granite pillars, 21 feet high, with bronzed Corinthian capitals, standing on a stylobate of granite 5 feet 6 inches high. The Hall is lighted on the west side laterally through the windows in the recesses, and on the opposite side by small domes, one of which is placed in each recess, in addition to two large semicircular windows, one at each end of the Hall. The concert-room, at the north end of the building, is semicircular in form, measuring 75 feet from east to west, and the same length from north to south. The Hall, during the assizes, will be open to the public as approaches to the courts; and, at other times, appropriated to public meetings, public dinners, or other purposes, as the council may decide.

THE LANDING STAGE, ST. GEORGE'S PIER.

This pier, which is a most gigantic work of art, was launched from the dock in which it was built on the 31st of May, 1847, and towed to its present moorings by seven steamers. The figure of the upper surface of the stage very nearly represents a ship's deck, with a bow at each end. The flooring consists of five-inch planks of the best pitch pine, the same as used in first-rate line of battle ships. These planks are secured together by compressed treenails, and are made tight by caulking. In order to prevent the lodgment of water, the surface is sloped gently towards the edge. The flooring rests upon a double tier of balks firmly strapped together, making the entire depth of the stage 24½ feet. Underneath, running transversely with this platform, are 39 iron pontoons, flat on the upper surface on which the timbers rest, and cylindrical on the lower, so as to offer the smallest amount of obstruction to the flow beneath. The length of the pontoons corresponds with the breadth of the flooring; except where the latter tapers off towards the ends, where they are 80 feet long by 10 in width, and 6 in depth. These pontoons are connected with the woodwork by iron straps, and they can be entered by man-hole doors, when necessary to be examined or repaired. The connexion between the stage and the pier is by means of two iron bridges, each weighing 90 tons, and being 17 feet in width by 150 feet long, the north bridge being used by carriages for descending, and the southern bridge for ascending from the stage. Accommodation is provided for pedestrians at both bridges, and the roadway is divided by a separate footpath for the arrival and embarkation of passengers. The pontoons are always in deep water, so that steamers can come alongside to any state of the tide. The area of the deck is about 4600 square yards, or nearly an acre. The nominal carpenters' measurement is 16,000 tons; upon the centre area of the deck there is standing room for 40,000 persons. The draught of water is about 3 feet. A large Burmese bell, nearly a ton in weight, has lately been placed in the centre of the deck adjoining the shed, for the purpose of being rung in foggy weather as a signal of loonlity to the numerous steamers plying to and fro. The cost of the stage was upwards of £50,000, and the working of it amounts to £1500 per annum, irrespective of repairs. In addition to the other accommodations of the stage, a large shed was erected at the close of 1849, and opened to the public in January, 1850, to afford shelter whilst waiting for the steamers in bad weather. Commodious waiting and refreshment-rooms have also been established. In front of this shed, and high above it, a very extensive stand was erected upon this occasion, to enable about 2000 of her Majesty's huge subjects to view the embarkation, tickets for which were granted by the Corporation and Dock Committee. The whole of this stand was lavishly decorated with flags, and had a very pleasing effect. In order the better to accommodate the Royal party, the services of Mr. Benjamin Edgington, of Duke-street, Southwark, had been secured by the Dock Committee for the decoration of the landing place and the approaches. The floor of the Dock-house in the stage were covered with rich matting, and over the matting on the bridges crimson baize was laid. The bridges were canopied with an awning 163 feet in length and 10 feet in width, the exterior being of canvass, and the interior of scarlet and white drapery. The circular centre, 26 ft in diameter, had been placed on the piers at the entrance to each bridge. They were surmounted by flag staffs, &c. A smaller octagonal tent was placed on the landing-stage, immediately opposite the point of embarkation and debarkation. An awning was spread from the extremities of the bridge to the tent, beneath which the Queen was to pass. At the entrance to one bridge of the landing-stage was suspended the shield containing the Royal arms, with flags pendent from each side; and at the other bridge the shield of the Dock Committee, suitably accompanied, was placed. The Royal standard floated over each of the tents, and from the centre of the stage numerous other flags were appropriately distributed.

THE EMBARKATION.

The Queen and Prince Albert embarked from the landing-stage on board the *Fairy* about half-past eleven o'clock, followed by the Princess Royal and Prince of Wales, and Princess Alice and Prince Alfred, the Royal children walking hand in hand. These were immediately followed by the ladies and gentlemen composing the Royal suite. The Queen and Royal family were received by Captain Lord Adolphus Fitzclarence, and conducted to the round-house on the deck of the *Fairy*, which, being covered in, protected the Royal party from the weather, whilst they could obtain through the large plate-glass windows an excellent view of all that was taking place on the river and its shores

THE WATER PROCESSION.

The whole length of the centre of the river from Dingle Point to Bootle Bay was lined with a double row of steamers, at distances of 150 yards apart, the intervals being filled up with gentlemen's yachts, rowboats, and pilot boats, all dressed out with colours of different nations. In sailing round the coast her Majesty also passed round this double line of steamers and other boats, the company on board of which warmly cheered her, as did the assembled thousands on the shore. The procession was led by the *Vernon*, a very fast and handsome Birkenhead ferry-boat, under the charge of Mr. Jones, the Assistant Marine-Surveyor of Liverpool, to act as pilot to her Majesty. The *Fairy* immediately followed the *Vernon*, and the rear was brought up by two vessels belonging to the City of Dublin Mail Steam-packet Company, the *Eblana* and *Trefalgar*, and the *Commodore*, belonging to Messrs. M'Iver and Co., which were handsomely placed at the disposal of the Dock Committee, for the accommodation of themselves and friends, it having been arranged that no other vessels should be allowed to follow in the wake of the Royal yacht.

THE AREA OF THE EXCHANGE.

The Exchange buildings form three sides of a square, and have as many interior *façades*. Those on the east and west sides are surmounted by a range of columns, with Corinthian capitals, supporting a massive cornice and balustrade, and covering arched piazzas of fifteen feet in length, extending along each *façade*. The north side of the Exchange presents a projecting centre, with a portico of insulated columns, through which the road passes out of the quadrangle into the adjoining street. The columns are surmounted by an entablature, supporting four sculptured figures of the elements, corresponding with emblematic figures relieved from the principal front over the north end of the Town-Hall, which forms the south side of the square. In the centre of the extensive area formed by these buildings is placed a handsome monument to the memory of Lord Nelson. This statue was erected in 1813, at an expense of £9000, raised by public subscription. Our illustration is taken from the north side of the area of the Exchange, and exhibits the northern end of the Town-Hall and south side of the square at the moment when her Majesty and the Royal family presented themselves on the balcony of the centre window of the large ball-room after receiving the address from the corporation. A crimson canopy was erected over the balcony for the occasion, and served to protect her Majesty from the falling rain.

THE PRESENTATION OF THE ADDRESS.

The Address to her Majesty from the corporation of Liverpool was presented in the grand ball-room of the Town-Hall. This room, which is 95 feet long by 40 wide, was handsomely fitted up for the occasion, and covered with crimson cloth. In the centre of the south side was a raised dais, upon which were placed beautifully carved chairs for her Majesty and the members of the Royal family, accommodation being provided at the sides for the members of her Majesty's suite. Around the dais a large open space was reserved for the Mayor and members of the corporation; and the other sides of the room, with the exception of a passage leading to the centre window, which was reserved for her Majesty's approach to the balcony, were fitted up with raised seats, covered with crimson cloth, to which about 500 ladies and gentlemen connected with the corporation were admitted to view the ceremony. The scene, which was extremely striking, was much enlivened by the three large chandeliers in the ball-room being lighted.

ARRIVAL OF HER MAJESTY AT THE TOWN HALL.

The Royal party arrived at the Town Hall, from the excursion on the water, shortly before one o'clock, and were received at the principal or south entrance by his worship the Mayor. The Town Hall is a magnificent structure, advantageously situated at the extremity of Dale-street, immediately facing Castle-street, one of the main thoroughfares of the town. The foundation-stone was laid in 1748, and the building erected from the design of the late Mr. Wood, of Bath. The principal front is on the south side, and the entrance consists of an arched portico, over which there is a balcony, surmounted by an entablature, supported by noble Corinthian pillars. From the centre of the building rises a stately dome, which is also supported by Corinthian columns, and surrounded by an open gallery, from which a most extensive panoramic view of the town is obtained. The whole is surmounted by a colossal figure of Britannia. The front of the Town Hall was splendidly illuminated on the evening of the Royal visit.

THE CUSTOM-HOUSE AND SAILORS' HOME.

The Custom-House, comprising also the Post-office and other revenue offices, occupies the site of the old dock, the first work of the kind constructed, not only in Liverpool, but in the kingdom. The town principally owes the preliminary of this magnificent building to the united influence of Canning and Huskisson, who pointed out to the Government the necessity of it, and the inconvenience of the revenue buildings then existing. It was ultimately arranged that the corporation of Liverpool should give the land, valued at £60,000, and undertake the erection of the building, and, at the end of twenty years, cede the whole to Government, the latter paying for it £156,000, in annual payments of £25,000 each. The foundation-stone of the building was laid on the 26th of August, 1828. The architecture is Ionic, and its chasteness has been much admired. Lofty porticos, supported by eight Ionic pillars, adorn the centre and east and west fronts, and the centre of the building is surmounted by a magnificent dome, lighted by sixteen windows, and ornamented by pilasters. The grand front of the building is opposite to South Castle-street, along which the Royal *cortege* proceeded. A little to the east of the Custom-House, looking from South Castle-street, stands the Sailors'-Home, where seamen frequenting Liverpool are provided with board, lodging, and medical attendance, at a moderate charge. The foundation-stone of the Home was laid on the 31st of July, 1846, by H.R.H. Prince Albert, when he visited Liverpool for the first time. The style of architecture is Elizabethan, and, being six stories high, the building forms a curious contrast to the Custom-House. The Royal party had an excellent view of these buildings as the procession returned from the Docks towards the Town-hall, as it proceeded round the front of the Custom-House, and turned up South Castle-street

PATRICROFT.

ARRIVAL OF HER MAJESTY AT THE RAILWAY STATION.

The Patricroft station, on the Liverpool and Manchester section of the London and North-Western Railway, is situated on the north side of the line, about miles from Manchester, and miles from Liverpool. The station is an open one, but preliminary to the arrival of her Majesty a pavilion was erected, spanning the area in front of the station by three arches, the principal front being in the direction of the train arriving from Liverpool. It consisted of a large arch in the centre, extending across the line proper, with a smaller arch on each side—one covering the platform, and the other an equal space on the opposite side. Each

arch was surmounted by a high pitched gable, with a flag unfurled above. The height of the centre arch was about 25 feet, and of the side arches 15 feet. The Royal arms were emblazoned over the main arch, and the pillars were entwined with evergreens. Over the pediment was a large gilt crown, five feet wide and eight feet high, with flags floating above. In length, parallel with the station, the erection extended about 60 feet, and rested on a series of pillars. The whole was covered above, and lined within with calicoes of various colours. On the south side, about four yards behind, the path was appointed for the Royal visitors to alight from the carriages, there was a platform raised about two feet above the level of the line, for the convenience of the directors, and for other parties privileged to witness the reception. The entire number of pilasters supporting the three arches was 28, being arranged in four rows of seven, and these were entwined with evergreens, and otherwise decorated, the whole forming an agreeable contrast to the previously rather plain-looking station. When the line was originally constructed, a narrow path was made on its southern side, leading to the Bridgewater Canal, for the convenience of the Earl of Ellesmere. With the consent of the company, this path has been extended to nine feet in width, at the cost of his Lordship; and the path was converted into a covered avenue, through which to approach the embarkation stage. The corridor through which her Majesty had to pass to the Royal barge, on leaving the station, was 270 feet long and 9 feet wide. The walls were formed into panels of pompeian cloth, relieved with suitable mouldings, &c. The roof was so arranged as to present the appearance of a richly-grained ceiling, supported by ornamental arches, which rested upon thirty-eight square pillars, and seven circular ones. The whole of these pillars were covered with fluted cambric, the capitals and bases richly ornamented and finished in white and gold. At each extremity of the corridor was a lion rampant, boldly carved in wood, supporting a silk banner, upon which the Ellesmere arms were richly emblazoned. It was lighted on its southern side by fourteen windows. At the point where the avenue approached the canal, it described a curve, and terminated in a more lofty erection—the embarkation stage, ranging 20 yards along the side of the canal, having an arched projection over the water of eight feet. The interior ornamentation of this portion corresponded generally with the corridor. The whole was covered with canvas, both at the top and sides, several thousand of yards being required for the purpose. Along the ridge of the roof, and at various angles, a great number of flag-staffs were erected, from which a profusion of flags were waving. Our illustration of the arrangements at Patricroft station represents the principal front of the pavilion, as described above, as it appeared immediately after her Majesty's arrival.

WORSLEY.

ARRIVAL OF HER MAJESTY.

At five o'clock her Majesty and the Royal party arrived at the landing-stage on the canal, on which an elegantly-decorated pavilion, somewhat similar to that at the Patricroft Railway station, had been erected for their reception. Lady Ellesmere was the first to disembark, and was followed by the Duke of Wellington. Lady Brackley and Prince Albert next alighted—the Prince proceeding at once to lift the Royal children from the barge. Her Majesty was next handed from the barge by his Royal Highness; and the rest of the Royal party having landed, the whole of them proceeded in six carriages, each drawn by four horses, to Worsley Hall, under escort of the Worsley division of Lancashire Yeomanry Cavalry, commanded by Captain Nicholson.

WORSLEY HALL.

This is a compact lively modern building, having been erected by the noble owner, the Earl of Ellesmere, only seven or eight years since, near the site of the former family residence, built in the middle of the last century. The mansion, which was designed by Mr. Hoyd, is in the Admiralty style, and, standing upon an eminence, commands a view of no less than seven counties.

SALFORD.

THE ARCH AT WINDSOR-BRIDGE.

This arch was erected at the point where the Salford corporation received her Majesty upon her progress from Worsley to Manchester. It was 80 feet high and 60 feet wide: the basement consisted of a series of archways, the central arch was 16 feet wide and 30 feet high. On each side of this was a small rustic arch, 6 feet wide and 17 feet high. Beyond these a space of 13 feet 6 inches was occupied by a series of Ionic colonnades and pilasters, 15 feet high, resting upon a deep base; and, still further receding from these, a rustic archway, 8 feet wide and 18 feet deep, extending over the causeways for the use of pedestrians. The basement was surmounted by a bold cornice and handsome balustrade. Over the principal gateway was a beautiful arch, 30 feet deep, supported by a Corinthian column and pilaster on either side 17 feet deep. On each of these was a deep carved cornice, supporting a handsome ornamental pediment. Over the upper arch was the Royal shield, inclosing the Garter, and surrounded by palm branches. The top of the arch was ornamented by a Regal crown, over which floated the Royal standard. In the centre of the upper arch was placed a colossal figure of Britannia. The cornice over each of the extreme side arches supported the lion and unicorn, of colossal dimensions; and the pediment between these extremities and the Corinthian columns of the upper end was adorned with vases and flags. Beneath the main and central arches rustic piers and alcoves were also introduced. The finishing of the arch was in various-coloured marbles; the bases and capitals and many of the mouldings being ornamented with gilding. The columns between the two side arches were of jasper, and the whole had a very pleasing and harmonious effect.

THE ENTRANCE TO PEEL PARK.

Peel Park was a source of great attraction to the public, it having been arranged that not only should the corporation of Salford present their address within it to her Majesty, but that upwards of 50,000 children belonging to the schools of Manchester and Salford should be gathered together to sing the National Anthem. Peel Park was formerly the property of Mr. W. Garrett, from whom it was purchased by the corporation of Salford to convert into a park. The mansion, containing many fine and spacious rooms, is now used as a museum, library, and reading and refreshment rooms. The area of the park, which is beautifully undulating, contains 32 acres of ground, laid out with extensive flower-beds, shrubberies, lawns, and walks. It was first opened to the public on the 22d of August, 1846. The main entrance from the Salford road was upon this occasion completely re-modelled, a deep coved arch being raised 20 feet high, surmounted by a neat cornice. The gateway was 10 feet 6 inches wide, but, from the formation of the cove, it had the appearance of being of much greater breadth. Two wings extended from this arch, occupying a total frontage of about 80 feet. The finishing was generally in stone, the coved part being filled in with evergreens and flowers, and the principal arch surmounted by the Royal standard. On either side of this entrance extensive stands had been erected for the accommodation of the public.

THE PAVILION IN PEEL PARK.—PRESENTATION OF THE SALFORD ADDRESSES.

The pavilion was erected for the especial purpose of presenting within it the addresses from the corporation of Salford to her Majesty and his Royal Highness Prince Albert. It was 140 feet in length, with its back to the Walness end of the Park, towards which there were raised seats capable of accommodating 250 persons, who were admitted by tickets from the corporation. In the front was a platform, one foot from the ground, for the accommodation of the Mayor and corporation while presenting the addresses to her Majesty and the Prince in the Royal carriages. The side of the edifice facing up the Park towards the Museum consisted of five open arches, supported by three pilasters and a pilar at each angle. The three middle arches were 26 feet 4 inches span, and the two end ones about 18 feet clear of the pilasters. Above the arcade was a lofty pediment, the tympanum of which was adorned with the Royal arms. The columns were fluted in drapery, and spirally wreathed with flowers, the capitals being ornamented in the Corinthian order, and gold. The end of the structure entered by the Royal carriages had an ornamental front, composed of a large Moorish arch, and two smaller ones on the side enclosing the platform. On the entablature over these arches were emblazoned the arms of the borough of Salford, and those of the duchy of Lancaster. Over the arches at the opposite end were ornamented the initials "V." and "A." The frieze and architrave had a crimson ground, with silver stars, ornamented with festoons and flowers. The centre ceiling was divided into three panels, from the centre of each of which radiated lines of fluted glazed calico, intermingling the colours of amber, blue, white, and pink, with strings of artificial flowers and ornamental wreaths. In the centre arch (over the place where the Royal carriage rested) was a canopy, in gold and scarlet cloth, bordered with a rich gold fringe.

SINGING THE NATIONAL ANTHEM.

It having been decided that, upon the visit of her Majesty to the Peel Park, she should be welcomed by the children of the various schools of all denominations in Manchester and Salford singing the National Anthem, platforms were erected near the centre of the Park for their accommodation. The principal platform extended across the Park, having the front describing a slight segment towards the Flowery Field. Two smaller platforms of the same lineal extent, but of less depth, ranged parallel with the front one, the carriage-drive being between them. The principal platform was 200 yards long and 27 yards wide, rising 4 yards 6 inches. Its area was 5400 superficial yards, and formed part of an amphitheatre struck from a radius of 400 yards. The two minor platforms were constructed upon the same principle as the larger, being 13 yards wide, and rising 3 feet 6 inches high. These platforms were separated in the centre by an opening 12 yards wide, in the middle of which a carriage-drive, 8 feet, was levelled and added. There was also a large space in the centre between the foot of the platform and the carriage drive, 9 yards wide, gradually diminishing to 6 yards at each end, which was boarded over for a portion of the children to stand upon. The quantity of wood used in the erection of the platforms was 9000 cubic feet of American timber, and 182,000 feet of three-inch planking. The platforms were calculated to hold 62,000 persons, and the level boarded space 20,000 more. Every inch was densely crowded with children and their teachers, each school being distinguished by a small banner; and, as the Royal procession, after her Majesty and Prince Albert had received the corporation addresses, drove along the carriage-way between the platforms, a most extraordinary *coup d'œil* presented itself to the spectator, which was materially enhanced by the thrilling notes of the children singing the National Anthem, the time in which was remarkably well kept.

MANCHESTER.

THE ARCH AT VICTORIA BRIDGE.

Her Majesty was met at Victoria-bridge by the Mayor of Manchester—the bridge crossing the Irwell, and thereby uniting Salford with Manchester. It was first opened to the public on the 10th of March, 1839, the anniversary of her Majesty's accession, having been built, at a cost of £21,000, on the site of the Salford old bridge, which was built in 1356. At this spot, a very handsome arch, or rather arched passage, 54 feet in length, was erected, with gateways at each end, presenting to the view a central arch 15 feet wide and 28 feet 9 inches high. On each side of this arch was a smaller one, 23 feet 6 inches high and 6 feet wide. The two gateways were painted to represent white marble, and each had two towers at the angles, the four faces of the lower part of which were open, but allegorical figures, each 7 feet 6 inches high, were placed on pedestals at the bases. Above each centre arch stood a large circular pediment with a central apex, in the architrave of which were placed the Royal arms in high relief; the spandrils being filled with roses, thistles, and shamrocks interwoven. An enrichment, consisting of the leaves of the acanthus, composed the outline of the pediment. On the architrave of one of the side arches, below the cornice, was the word "Vivat," in large capitals, and on that of the other "Regina." Corinthian pedestals, 10 feet high, surmounted the towers outside the smaller arches of the gateways, and on each of the pedestals was a statue in burnished armour, holding in the right hand the British flag, and in the left a shield. In the openings in the sides of the towers facing Manchester were displayed the arms of the borough, and at the Salford end the arms of that borough were emblazoned. Connecting the two gateways, and occupying the intervening space, 54 feet in length, was a light arcade, consisting on each side of five circular headed arcades. The piers between were ornamented with panels, and were filled with trellis-work—the roof consisting of ribs covered with evergreens and flowers, and having open spaces between them. In the intervals between the pillars of the arcade stood vases filled with flowers, and over each pillar floated a flag. The effect of the whole structure was extremely unique and pleasing. This arch was erected at the expense of the corporation of Manchester.

INTERIOR OF THE EXCHANGE.—PRESENTATION OF THE MANCHESTER ADDRESSES.

The interior of the Exchange was re-modelled and furnished in a most costly style for the reception of her Majesty and the Prince Royal and noble visitors. The grand entrance at the semicircular end of the Exchange, in Market-street, which had of late been blocked up, and converted into a window, was re-opened. On either side of the entrance were retiring-rooms—the one on the right for the use of her Majesty, and that on the left for his Royal Highness Prince Albert. Her Majesty's room was 14 feet 6 inches in length by 11 feet 6 inches wide. The walls were tastefully hung with Darien or rose colour and silver, with white and silver draped and disposed alternately in graceful folds. The plate glass and furniture were in keeping with the—the prevailing colours in the latter being blue and gold—and profusely decorated with regal ornaments. His Royal Highness's room was fitted up with equal magnificence, the principal variation consisting in the Prince's armorial bearings and initials in the ornaments being substituted for those of her Majesty. The principal reception-room, which our Artist has chosen for illustration at the moment when her Majesty and the Prince Consort were about to receive the corporation addresses, was also fitted up in a style of the greatest splendour. Four columns, which used to support a low flat ceiling and separate the old or semicircular part of the Exchange from the new, had been removed and replaced by a broad band of vaulted ceiling in panels corresponding with the belts separating the domes; and by thus uniting the old part of the hall with the new, a most harmonious and noble effect was produced. This room was also elegantly draped and decorated, and nothing could exceed the magnificence and beauty it displayed during the presentation of the address, when the elegance of the decorations was set off by the presence of nearly 2500 ladies and gentlemen, the dresses and beauty of the former vieing in magnificence with, and offering a pleasing contrast to, the surrounding draperies. The throne, a most superb structure, was placed at the end of the room farthest from the entrance door; but, as it is separately illustrated, we need not describe it under this head. The avenue between the seats of the company, up which her Majesty had to proceed to the throne, was covered by a most elegant carpet of rich velvet pile, with a blue ground, and a rosette pattern of gold, orange, and crimson, the bordering being of the same colours. The interior of the Exchange was also most profusely decorated with flags, banners, and floral ornaments.

THE THRONE.

The framework and canopy of the throne placed in the Exchange, were designed and executed by Mr. George Jackson, of Ducie-street, and the draperies and upholstery-work, by Mr. John Wilson, of King-street, Manchester. The exterior drapery of the throne consisted of a superb Regal vallance of the finest crimson Genoa velvet, relieved with trimmings of rich London gold. The centre of the drapery was formed into an heraldic mantle, upon which was introduced the Royal arms, encircled by the Garter, and surmounted by the star of Brunswick, shedding effulgent rays, supported by branches of palm and laurel. The whole of these decorations were embroidered by hand. The lining of this drapery was of Royal blue satin, relieved by gold silk tassels, drapery cords, fringe, and rosettes. The background or screen panel was of rich satin damask, upon a beautiful French white ground, the pattern being worked in London gold, and the trimming composed of silk wire fringe, relieved with silk floss. A portion of this screen was suspended curtains composed of crimson and gold satin damask, with a satin border of corresponding colours, and lined with white corded silk. The whole of the curtains and draperies connected with the throne were designed expressly for it, and were decorated with the national emblems of the Union—the rose, shamrock, and thistle. The trimmings of these curtains were very elegant, terminating with a gold silk bullion fringe, twelve inches in depth. The loops or curtain supporters were made of fine London gold silk. The lining was formed into panels of trellis-work, the ground of which was of French white corded silk, relieved with London gold silk drapery rope, of which the trellis-work was composed. The trellis was ornamented at the corners with eighty-one gold silk bullion balls, or rosettes, and terminated by a highly-finished gold moulding cornice. The interior drapery of the throne was of Royal blue satin, and consisted of a centre draped mantle drawn into graceful folds, at each side of which was suspended a side drapery bearing the Royal crown, worked in gold. The trimmings were similar to those of the exterior drapery. The carpet was of velvet pile, and was very elaborate in design. The ground was of snow-white, upon which the pattern displayed the rose worked in bright chintz colours. Around this was a splendid border, exhibiting the rose, shamrock, and thistle; the whole terminating with a deep bullion fringe falling over the front of the dais. The top step next the dais was covered with purple velvet pile carpet, forming a rich contrast to the carpet on the dais. The framework and canopy was finished in white and gold, the whole having a gorgeous and magnificent effect.

Upon the dais of the throne were three chairs in the style of Louis XIV. that in the centre, intended for her Majesty, being a few inches higher than the other two. The chairs were all richly carved, and the arms, legs, rails, &c. being gilt in burnished and mat gold; and the backs and seats upholstered with rich crimson Genoa velvet. The panel of the upholstered back of her Majesty's chair was enriched with embroidery in silk, displaying the Royal arms, surrounded by the collar of the garter with its motto, "Honi soit qui mal y pense." This rested upon a base formed of laurel and palm-leaves. Over the arms was the star of Brunswick; and, surmounting the central apex of the frame of the chair was the regal crown, richly carved and gilt. The other two chairs were somewhat similarly decorated, though not to the same extent. That for his Royal Highness Prince Albert had embroidered upon the back, enclosed within the garter, the paternal arms of the Prince quartered with the Royal arms of England, surmounted by the star of Brunswick; and that for the Prince of Wales bore within the garter, instead of the heraldic arms, the Prince of Wales's plume, with the motto, "Ich Dien," the star of Brunswick in this, as in the other chairs, surmounting the garter. Her Majesty's chair was draperied from the seat to the ground with gold silk bullion fringe; and those of Prince Albert and the Prince of Wales with an equally deep fringe of crimson silk.

THE ALBERT BRIDGE.

This bridge, like the Victoria, unites Manchester and Salford, and was upon the present occasion chosen for the exit point of her Majesty from the corporation, on her return to Worsley. It stands on the site of an old bridge, called the New Bailey Bridge, which was replaced by the present structure in 1844. Here a triumphal arch was erected, at the joint expense of the corporations of the two boroughs, in the Italian style. It consisted of a circular-headed arch, and two square side entrances. The principal archway was 27 feet wide and 35 feet high, the length of the structure from the Manchester to the Salford *façade* being 17 feet. The side entrances were 25 feet high and 9 feet wide. Over the keystone of the arch in each *façade* was an architectural shield, enclosing an oval medallion, upon which was blazoned on one side the arms of Manchester, and on the other those of Salford. A pedimental centre on one side exhibited the name of "Victoria," and on the other that of "Albert." The soffit of the arch, 17 feet in length, was richly panelled, and in the centre was a circular medallion, with the initials "V. R." surrounded by a glorie. The pediment was surmounted by the Royal arms and standard, and the whole structure decorated with garlands, festoons of flowers, and other ornaments. This bridge was not completed half an hour before the Royal *cortège* passed through it.

THE INFIRMARY.

Her Majesty, in the course of her progress, on reaching the bottom of Oldham-street, obtained a fine view of this noble building, situated in Piccadilly, and forming one of the chief ornaments of Manchester. The institution was founded in 1752, and formerly consisted of a plain brick building, but it is now faced with stone, and the front and sides ornamented with porticoes of four-fluted Ionic pillars. In front of the building is a reservoir of water, which, from the condition in which it was kept, had long been a nuisance to the inhabitants and visitors of Manchester; but the occasion of the Royal visit has been taken advantage of to improve it and render it an ornament to the town. The reservoir, or pond, is 688 feet long; being at one end 90 feet wide, and at the other, 62 feet. In the pond a series of ornamental fountains is displaced, which, when playing—as they were throughout the period of the Royal visit, and several days previously—had a very pleasing and graceful effect. The principal fountain, in the centre of the reservoir, consists of a pipe two inches in diameter, the orifice covered with a cone jet, containing 61 perforations. On each side was a smaller jet, with 41 perforations; and around it were 36 small jets, formed in an oval, 44 ft. by 30 ft.; the whole of which projected the water so as to fall in one common centre, forming a kind of dome, over which the three centre jets played their water to a height of 40 or 50 feet. At each end of the reservoir was a smaller fountain upon a similar construction, the principal pipe being an inch and a quarter in diameter, surrounded by 24 smaller jets in a belt of 20 feet by 15 feet. Between the central fountain and those at the ends of the reservoir were placed, at equal intervals, a couple of other jets—the whole forming a *coup d'œil* such as few towns can boast of. The designer of these fountains was Mr. Roe, of the Strand, one of the exhibitors in the Crystal Palace.

RICKMANSWORTH.

Upon the return of her Majesty from the North, the Royal party, *en route* from the Watford station of the London and North-Western Railway to Windsor Castle, passed through that portion of Hertfordshire of which a plan and view of several illustration in our Supplement of last week, including the pretty little village of Rickmansworth, the inhabitants of which, to do fitting honour to her Majesty, had erected an extremely elegant triumphal arch over the road, which we have illustrated in its proper place.

We shall next week continue our illustrations of the Royal progress by giving Views of Lancaster Castle, the presentation of the address to the Queen by the children of the schools at Worsley, and several others relative to Manchester and other places, which, notwithstanding our enlarged space, we cannot find room for to-day.

THE QUEEN IN LANCASHIRE.

In addition to the more prominent places and objects visited and inspected by her Majesty in her progress through Lancashire, it may be interesting to sketch some of those which would be seen but casually, or seen only on a map, yet which could hardly fail to engage the reflective intellectuality of the Royal travellers

At Lancaster, the Castle on the bold eminence, with the river Lune winding at the base, the narrow streets crowded on the steep acclivities, would suggest the time when the towns existed only by protection of the Castle of Lancaster, her predecessors in that honour and estate of which she is now the hereditary Duchess. The suburbs beyond the river, with their steam-engines and factories giving forth signs of industrial animation, though of small extent compared with the newer towns further south, would remind them that this is not the Lancashire of John of Gaunt, nor even of the Queen's grandfather, George III. Looking to the east, would be seen that bleak range of hills, the main line of the shires of Lancaster and York, upon which the armies of the Norman Conqueror, William I., halted in their progress to the north, as they saw in the plains and dales below forests and morasses, occupied only by wild beasts, diversified only by the swampy waters of the Irwell, Mersey, Ribble, and Lune, terminated westward by a shipless, boundless sea, which had no shore of which they knew, but the eternal darkness beyond the setting sun." Looking to the west, our Queen would behold that sea now the greatest of her island empire, to open which to the trade of all nations has been the chiefest glory in her reign. She has traveled southward, with map in hand, as doubtless she would, places of historic interest would be found in all abundance. Coming direct from the Braes of Mar, where the last Royal Stuart raised his standard on his march to London, to dethrone her great-great-grandfather, George II., Queen Victoria would see, at Preston, where now stands one of the greatest railway stations of the kingdom, the spot of ground where the cause of the Stuarts was finally and irrecoverably lost. She would pass near Lathom, where Charlotte, Countess of Derby, maintained that heroic defence of her house which so long baffled the zeal and heroism of the Parliamentary army in the civil wars with Charles I. At Liverpool the positions would be shown which were occupied by Prince Rupert, when, in the same wars, he besieged that town, executing to "drive the inhabitants into their pool like ducks," but finding that "they resisted him and the King's army like devils." Warrington, Manchester, and Bolton each has its battle-field. The castle of Liverpool was governed four hundred years by the Molyneux family, with whom her Majesty lodged at Croxteth Hall. Out of the woods in that park, and that of the Earl of Derby, at Knowsley, adjoining, and from the Cheshire side of the Mersey, were cut those pike-staffs, bows, and bill-handles so famous at Flodden Field, when—

"Charge, Chester, charge! on Stanley, on!"
Were the last words of Marmion."

But Lancashire is less famous for its fields of chivalry than some other counties. When war came in the way of its people they fought, but,

THE ROYAL PROCESSION PASSING THE INFIRMARY AT MANCHESTER.

except to keep the Scotch at a distance, judging it was better to meet them in Cumberland or Northumberland than in Lancashire, they were not accustomed to go in search of strife by free consent. The infertility, coldness, and excessive moisture of their soil and climate, were not favourable to their country being selected as the camp ground of contending armies. But its excessive moisture gave birth to streams, which, running from the hills, offered water power in great abundance; while its treasures of coal, and proximity to the sea, with the habits of frugality and energy which came by nature to a people inhabiting an infertile soil, led to results on both the Lancashire and Yorkshire side of the hills, which no other space of ground of equal extent has yet been marked with—the triumphs of industry!—is not Lancashire covered with their fame? Yet, as no guide-book exists, and no map has the fields of the conquests of science marked on it, while the generations which witnessed the earlier triumphs of the grandfathers of Lancashire are fast passing away, it is improbable that her Majesty would have her attention directed to all the places of memorable existence.

To the left of the railway, coming out of Preston, there is a place called Bamber-bridge. There, about 1763, some persons named Clayton first attempted calico printing in Lancashire. Near a place called Knuydon-brook, about two miles east of Blackburn, a tall, robust man, wearing a woollen cloth apron, a calf-skin waistcoat, wooden-soled clogs, whose hair was a grizley reddish colour, who owned forty acres of poor grass land, bearing eight or ten head of stock, and whose three eldest sons worked each at a loom in the dwelling-house, was seen by the father of a person still living (the informant of the present writer), standing behind a stone wall, watching the country weavers' return from Blackburn-market, to ask them the news on market days, when he had not been there himself: that man, about 1765, went to Bamber-bridge to the Claytons, with a piece of cloth made of cotton and linen thread, by one of his son, which was spoiled in the weaving, and, therefore, unsaleable. He asked to have it printed in a pattern for kerchiefs, which was done, and the articles worn by the family. The high price charged for the printing of that piece caused him to attempt the art himself, which he did in a concealed apartment of his house, now used as a dairy room, at Peel Fold, by the present tenant of these forty acres of land. That man was Robert Peel, father of the first Sir Robert Peel, the great calico printer of Bury, in Lancashire, and of Fazely, in Staffordshire. Such was the beginning of calico printing and the fortunes of the Peels. The females of the family covered the pieces of cloth in the same secret room, to prevent any prying person—like James Hargreaves, of Stanhill Moor (their nearest neighbour)—from seeing what they did. But that Robert Peel did more. He was the first to supersede the hand carding of cotton wool, by using cards, one fixed in a block of wood, the other slung from hooks fixed in a beam. These remained in the beams over the kitchen at Peel Fold in 1850, as the present writer witnessed. His carding machines were broken by a mob of persons from Blackburn, at Peel Fold, and afterwards at Altham. He was at last driven out of the county by the violence of his neighbours, and took refuge at Burton-on-Trent, in Staffordshire.

James Hargreaves, of Stanhill Moor, just named, was a weaver. He saw a hand-wheel with a single spindle, then used for spinning cotton wool, overturned. When it fell on its side, the spindle, which was before horizontal, was vertical; and, continuing to revolve; he drew the roving of wool towards him into a thread. The thought seemed at once plausible, that, if something could be applied to hold the rovings at the finger and thumb did, and that something to travel backwards on wheels, six or eight, or even twelve threads, from as many spindles, might be spun at once. This was done. The machine was called the spinning-jenny, and, combined with the roller spinning machine claimed by Arkwright as his invention, has been brought to that perfection seen at the Exhibition in Hyde-park. Hargreaves, like the first Robert Peel, was expelled from Lancashire partly by the mobs, but also by the magistrates and local gentry, who, fearing that the machines would throw the workpeople on the poor-rates, encouraged the mobs to violence. He went to Nottingham, and, giving the Strutts a property in his jenny, laid the foundation of the opulence of that eminent family of manufacturers

At Leigh, about half way between Manchester and Liverpool, north of the railway a few miles, lived a man named Thomas Highs. He claimed to be the inventor of spinning by a pair of rollers revolving fast, drawing the rovings through a pair which revolved slowly. Preston was the birthplace of Richard Arkwright, and Bolton (in a house still standing) the place where he carried on the business of hair-dyer and peruke-maker. In travelling the country to collect hair, he found a wife at Leigh, and, visiting that place frequently, he, it has been alleged, wormed the secret of the roller spinning out of Thomas Highs This might be so; but, if not, the inventor, Arkwright, was still the practical improver of those machines; and the places where he contended with poverty, difficulty, and the combined opposition of every class of men in Lancashire, even of those who used his machines, cannot be looked upon without present interest. Coming by the railway from Preston, a branch is seen leading to Chorley and Bolton. Chorley was the scene of Arkwright's contention with his unkind neighbours, and Birkacre the name of the place where his first mill was attacked, sacked, and burned to the ground. A tall, thin building, too narrow for the machinery now in use, and now used as a store for cotton waste, is seen on the left hand, passing over the inky river Irk, at Manchester, by Ducie Bridge: this was Arkwright's next mill. But his fortune was chiefly made in Derbyshire, about twenty miles from Manchester, where the workpeople hailed him as a benefactor, not as an enemy, and where water power was found to drive his wheels without limit

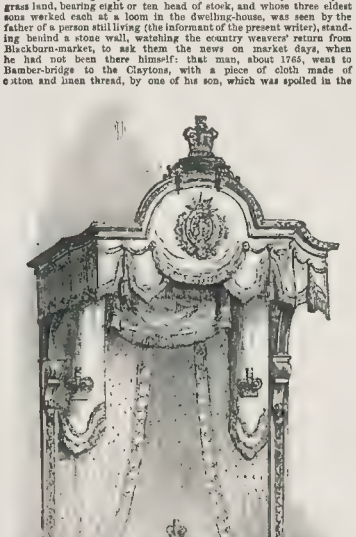
At Bury, where the first Sir Robert Peel established his print-works, and where the late statesman, his son, was born, the fly-shuttle was invented by two brothers named Kay. At Stockport the power-loom was first used. Between Bury and Bolton, a farmer named Samuel Crompton, resident at Hall-i'-the-wood, was mowing hay with others one day, and suddenly throwing down his scythe, went home and left them. He shut himself into an upper apartment, and was not seen out of the house for some days. The neighbours took a ladder, and ascending to the window, saw him making a machine for spinning. This, when completed, was the "mule," which combined the roller principal of Arkwright and the "jenny" of Hargreaves.

At a place called Mosney, near Preston, one Alexander Bell, employed by the firm of Livsey, Hargreaves, Hall, and Co., was the first, about 1783, to introduce calico-printing by rollers. The effect of this invention and its improvements has been incalculable.

Coming through Kendal from the north, the Royal visitors to Lancashire passed the place where a humble schoolmaster, named John Dalton, lived about the year 1760. In the grand procession through Manchester, they passed the end of a new street cut through a thicket of old lanes, which has been named "John Dalton-street," in honour of that man, and it is but a small homage paid to his memory in comparison with the commercial benefits derived from his scientific researches. He discovered and taught the theory, now amply verified, that all matter exists in atoms, which in weight bear an exact mathematical proportion to each other; that in chemical combinations these proportions are absolutely observed; and that, consequently, the dyer and calico-printer can only make "fast colours" by using the mathematical proportions ruled by this law of atoms. This much in brief; but it is an imperfect outline of that discovery of Dalton, so momentous to all chemists, and particularly to the bleachers, dyers, and printers. The economy in labour, material, and time, the extension of the trade, and the higher excellence of their productions, are such, that the value of this truth in chemistry, expressed in millions sterling, if known, would startle us, alike in writing and reading its sum.

Though these be some of the more prominent incidents which mark the memorable spots in Lancashire, they are but few, a very few of the whole, which have reared up that matchless productive power of machinery, which, at the date of six centuries after the Norman conquest, found Lancashire, though not a wilderness, still a comparative waste, thinly peopled, which has since covered the surface with human life and wealth; which, gathering together the rude products of that clime, diffuses them as comforts and elegancies to every race—the material for a printed calico worn by the ploughman's wife at 6d. a yard being cotton from America, indigo from Asia, madder from Europe, and gum from Africa; a power of production which attracts, by the abundance of the merchandize it creates, the luxuries of all the world in exchange, which in Lancashire and elsewhere in the kingdom gives an ability to bear taxation that in turn confers on Britain a military and naval strength that withstood the most successful commander that ever led armies to battle, his armies sustained by the plunder of all Europe; a power of production and financial strength which endorsed the bills of nearly every European nation opposed to France, and gave them subsidies in addition, from British taxes, to induce them to rise against their invader, when prostrate at his feet; a power which, more recently, when the nations were shaken by revolution, gave firmness to Britain, as it this day enables our Queen to move among a free people with a sense of safety and joyousness of welcome unknown to any other Sovereign. Such are the triumphs of industry, the conquests of science, whose fields of success are found through all Britain, but in greater number in Lancashire than elsewhere—such the high services to civilisation which industry and science have rendered.

A. S.



ROYAL THRONE IN THE EXCHANGE AT MANCHESTER.

THE MAYOR OF MANCHESTER.

This gentleman, upon whom her Majesty has just conferred the honour of knighthood, is the eldest son of the late Sir Thomas Potter, an extensive Manchester merchant and philanthropist. Sir Thomas Potter was the first mayor elected after the grant of the charter of incorporation, in November, 1838 9, and was called upon to fill the chair a second time during the year 1839-40, when he received a similar distinction to that which his son has just now obtained at the hands of the Sovereign, during his year of office. Immediately upon the death of his father, Sir John Potter was unanimously elected to fill the vacated office of alderman, rather as a mark of respect to the memory of the father than from anything which had then been accomplished by his son. Sir John not having, up to this time, taken any very active part in public business. In November, 1848 (although one of the youngest members of the corporation), Sir John Potter was elected Mayor; and in the following November he was unanimously requested to allow himself to be a second time nominated and elected to the same office. During the whole period, Sir John Potter has given the greatest satisfaction to his fellow-towns-

ARCH OF WELCOME AT BIRKENSHAGH.

ARRIVAL OF HER MAJESTY AT WORSLEY.

r he way in which he has discharged his public duties. In addition
, his hospitality has been unbounded. All classes and parties in
n and politics have been assembled around his table, and the best
e feeling has been, by these pleasing and judicious associations,
d throughout the borough, in which there has, probably, never
existed so little party asperity as at the present time. The pre-
ayor took a most active part in the promotion of the Prince
rt's proposition of the Exhibition of all Nations. As vice-chairman
local committee in Manchester, he devoted much time and labour in
ng its success. A large portion of the amount subscribed was obtained
exertions, and he w llingly put down his name as one of the gua-
es for any possible deficiency. Sir John Potter has also entitled
f to the gratitude of all parties by his successful exertions to se-
the establishment of a free library in Manchester. Sir John Potter
been the means, directly or indirectly, of obtaining subscriptions for
£9000, and a handsome new building has already been erected,
, it is anticipated, will be formally opened and presented to the
ation before the expiration of the present year. The estima-
n which Sir John Potter is deservedly held for his public ser-
was more satisfactorily demonstrated by his having been elected
the office of Mayor for the third time, during the present year. It

R. JOHN POTTER, MAYOR OF MANCHESTER.—FROM A PHOTO-GRAPH BY MR. AKERS, OF MANCHESTER.

ever be a source of satisfaction to his fellow-citizens, that, by the
election, the honour which the Queen has been pleased to confer
the chief magistrate and representative of Manchester, has devolved
one by whom it has been well earned by his great sacrifices for the
ic service.

ATE PRESENTED TO THE MAYOR OF MANCHESTER

a magnificent Testimonial originated with a number of gentlemen of
achester, who were desirous, before Mr. Potter should clear his third
r's mayoralty, to present him with some mark of respect and esteem,
a grateful memorial of his public services. A subscription was
ed for this purpose, to which 590 subscribers contributed about
50; and the Mayor's wishes being consulted, an order was given for
rge and handsome service of plate.

he service, or rather services, of plate—for there are both dinner
tea services—have been supplied by Messrs. Hunt and Roskell
e Storr, Mortimer, and Hunt), of London and Manchester,
ersmiths to the Queen, &c. It is wholly new, from designs made
ressly for this purpose, by their able artist, Alfred Brown. Exclu-
of spoons and forks, the services include nearly fifty pieces. Of the
ner-service, five piece may be regarded as ornamental standards on
table—a centre candelabrum, of seven lights; two smaller candela-
a, of five lights each; and two *surtouts montices*, or stands for
t, &c. The ce tral candelabrum stands 36 inches high, and from
it to light is about 20 inches across. It has a triangular base or
ood, the feet of which are formed to resemble that beautiful shell, the
dian olam. Springing from these shells are bold and elegant scrolls,
rnished and frosted silver, and richly chased. These terminate
wards in acanthus leaves, palm branches, and what resemble the
ves and blossoms of the lily of the valley, which form a graceful
order for the upper surface or plateau of the tripod. On the three sides of the triangular base are as many scroll-bordered shields or tablets, of which the one in front is filled by the following inscription, neatly engraved:—

Presented, with a service of plate, of the value of a thousand guineas, to John Potter, Esq., Mayor of Manchester, in the third year of his Mayoralty, by 590 of the nobility, clergy, bankers, merchants, and other inhabitants of the borough and neighbourhood, as an expression of their high sense of the valuable and efficient public services rendered during his extended term of office.—22nd September, 1851.

The shields on the other two faces will both be filled up, one with the corporate arms of Manchester, with the motto "Concilio et labore;" the other with the arms of the Mayor. At the base are two stags and a stately tree, with scrolls instead of branches; seven scrolls terminate in a broad leaf in a tulip-cut form, and seven branches are for l ghts: beneath the lowest curve of each branch is a pendant cluster of grapes, with vine leaves and tendrils, the upper portion of this centre-piece being removable for an épergne dish.

COLLARS AND JEWEL OF THE MAYOR OF MANCHESTER.

PART OF A SERVICE OF PLATE PRESENTED TO THE MAYOR OF MANCHESTER.

The two smaller candelabra are each 26 inches in height, the lights are 15 inches across, and each piece is for five lights. These, in design and style, are similar in almost every respect to the centre-piece, wanting only the two deer and the inscription, though, like the larger piece, they have three shields on the tripod, for armorial bearings, &c. The two *cassettes montées*, which stand 22 inches high, and measure 12 inches across, are a species of épergne, without glass, and having the largest receptacle at the foot instead of the top—a silver basket, of open trellis-work, resting upon three scroll feet. In the centre of the basket is a small grassy mound, in frosted and chased work, from which springs the stem of a vine, gracefully and naturally curled and twisted, with tendrils. At various points of the stem are branches, in cup-like forms, for holding fruit; clusters of grapes in burnished silver hanging from the supports. The whole is richly frosted and chased.

The more solid and useful portions of the service are of elegant form; the prevailing ornamentation throughout consisting of a graceful and effective combination of scrolls, with acanthus leaves, and borders of what are called "the reed and band" pattern. A bundle of reeds is tied round and across by a band; presenting a modification of the bundle of rods or fasces, similarly bound, which used to be borne by the Roman lictors of old, with an axe in the midst. Of two elegantly-shaped oval soup tureens, the handles consist of these reeds and bands (springing from acanthus leaves), and the same ornaments border the edge of the tureens, where the lid fits; and an arched handle, by which to raise the lid, is also thus formed. Four silver sauce-boats, of elegant shape, have scroll feet and handles, with banded reed borders. The bread-basket is of large size, with swivel handle of light scrolls; the border in ten swells of banded reeds. Two ten-inch silver waiters are curved octagons, with banded reed borders, the plateau being engraved in elegant scrollwork. Eight salt-cellars are irregular hexagons, having three large and three small curved sides: they have the reed-bound border. A 23-inch oval meat dish has a similar border in four curves; and so have one 20-inch and two 18-inch oval dishes of the same kind. For these four dishes covers are furnished, the two larger double domed, and the two smaller fluted; each having the Mayor's crest engraved on the side. A cruet-frame with eight glasses, the sides perforated in an arabesque trellis-work; and a pair of silver grape scissors, complete this service.

The breakfast or tea service is the first piece resembling some of the bottle-gourds; the design, pattern, or style is a sort of arabesque or moresque, in "dotted engraving." The four principal pieces are divided longitudinally into broad bands, decorated alternately, one with a sort of arabesque trellis-work, the other with a Moorish pattern.

Of the execution of this superb Testimonial, we need only say that the artistic design has been admirably rendered throughout. The plate was shown to the subscribers and the public previous to the presentation, which took place at a banquet given in the Music Saloon of the Albion Hotel, on September 22: James Aspinall Turner, Esq., in the chair. The act of presentation took place at the close of the chairman's speech proposing the health of the Mayor of Manchester, when the curtains which had concealed the beauffet full of plate were drawn aside, and the elegant service, relieved by a background of purple velvet, were seen in full splendour.

THE MAYORALTY INSIGNIA.

The collar is an inch and a quarter wide, with the arms of Manchester in enamel, the rose of Lancaster alternating with the "S," and a fine, knot device, and in the centre a beautiful scroll, with medallion, in relief, of Commerce. From this is suspended a badge, bearing in the centre the arms of Manchester in high relief, and enamelled on a crimson ground, with a ribbon of purple enamel, and the motto "Concilio et labore," formed in diamonds. A rich gold border in the cinque-cento style, with diamondwerks of the rose, thistle, and shamrock around. This ornament can be worn without the collar, attached by a small ribbon, in the same way as a military order. These elegant insignia have been manufactured by Mr. John Hall, King-street, Manchester.

THE QUEEN'S LODGING-PLACES IN LANCASHIRE.—CROXTETH AND WORSLEY.

BY ALEXANDER SOMERVILLE.

CROXTETH HALL, the seat of the Earl of Sefton, is four miles east of Liverpool. Of it or of the Molyneux family, who have been connected with the estate for nearly seven hundred years, there is not much to be said which is of present interest. The name of Molyneux is said to express, in the Norman dialect (now obsolete), the original occupation of the family—that of a miller. They were people of note in their first appearance in England, but for some three hundred years they added to the profession of chivalry and the governance of Liverpool Castle, the useful service of grinding the corn of Liverpool, not without a considerable multocage, which always accompanied the office.

Croxteth, now in part the most densely peopled district of Liverpool, but in part re-cued as a park of recreation by Mr. Yates, a retired merchant, was occupied by the Molyneux family, as sub tenants of the "honour of Lancaster," when King John purchased their interest to make a hunting station of it. They then got Croxteth, or part of it, in ex hange. Two hundred and fifty years afterwards they again acquired Toxte.h, and still hold some of it at a great profit in ground-rents.

Liverpool Heath, upon which now stands St. George's Hall, the Railway Station, and busy streets adjoining, was often invaded by this powerful family, and would have been alienated as private property from the corporation of Liverpool, to whom its enormous ground-rents now belong, had not the more powerful family of the Stanleys given their support to the corporation. In the reign of Charles II. a lawsuit was raised between the Molyneux and the town as to the right to the port dues and rates; this was decided for the town, and cut off that family domination which had disturbed and oppressed Liverpool for four centuries. From that time the wise management and interest of the port being in the hands of the townspeople, and other circumstances being favourable, the trade and town began to rise. Since that day of separation, also, the two interests of Croxteth and Liverpool have been friendly and reciprocal.

A walk, or drive, or ride to Croxteth, about four miles, is a common and delightful excursion from Liverpool. In summer there are walks and paths among trees and meadows; and in winter, the meadows being laid under water, there is much skating, curling, and other ice games, as is, probably, seen nowhere else in England.

WORSLEY AND THE BRIDGEWATER ESTATE.

Worsley, which lodged her Majesty after she left Croxteth, is situated about five miles west of Manchester, and is a place of surpassing interest, as the centre of the famous Bridgewater estate: that canal upon which the Queen passed from Patricroft Railway station to Worsley Hall, is a part of the "Bridgewater navigation." Travellers at the spot are reminded of it by seeing prominently before them the words "Bridgewater Foundry," the great works of Naysmyth, Gaskell, and Co. But many persons walk by the side of that dull water, or cross it by the thundering train, or are drawn upon it in the packet-boats, who do not know it has a history—who do not know it is itself the head line of the opening chapter of the greatest epoch of the world's history, the epoch of the conquests of science. Nor do they know, as they see Worsley, with princely front, looking south upon Chat Moss and Cheshire, and down upon them, and over to the blue hills of seven counties, that underneath those green sloped spinnies, the mansion, the gardens, and property about Bolton, obtained only with a view to coals, have, in recent times, given the Worsley family a political influence at Bolton, which not even the achievements of the Anti-Corn Law League in the registration courts could overturn. At all the contests for the county, which enlisted Worsley on one side and Manchester on the other, the polling district of Bolton gave a majority for the Manchester.

It has been said by a writer in the *Quarterly Review* (whom we shall hardly mistake in saying he is the Earl of Ellesmere, such are the particulars of the family related by him), that when the Duke of Bridgewater sadly left the Worsley property of London and the horse ring of Newmarket, those with whom he had associated doubted his sanity when they heard his only companions at Worsley in Lancashire were a land agent (Mr. Gilbert) and a millwright (Mr. Brindley). In carrying out the great canal scheme, the Duke was reduced to pecuniary straits. The writer just referred to relates, that "It is well known that at one period the Duke's credit was so low that his bill for £500 could scarcely be cashed in Liverpool. Under such difficulties Gilbert was employed to ride round the neighbouring districts of Cheshire, and borrow from farmers such small sums as could be collected from such a source. On one of these occasions he was joined by a horseman, and after some conversation the meeting ended in an exchange of their respective horses. On alighting afterwards at a lonely inn, which he had not before frequented, Gilbert was surprised to be greeted with evident and mysterious marks of recognition by the landlord, and still more so when the latter expressed a hope that his journey had been successful, and that his saddle-bags were well filled. He was unable to account for the apparent acquaintance of a total stranger with the business and object of his expedition. The mystery was solved by the discovery that he had exchanged horses with a highwayman who had infested that part of Cheshire, until that horse had become so well known, that its owner had found it convenient to take the first opportunity of procuring one less notorious."

The workings underground at Worsley are on four levels, with canals through them: the main line 9 feet high and 9 feet wide; the water 6 feet deep. Two levels are respectively 86 yards and 33 yards below the main line; the fourth level is 57 yards above that.

Two of these levels were united by an inclined plane by Mr. Gilbert (who was more intimately connected with the Bridgewater canals than he has obtained fame or credit for), some years after the death of Mr. Brindley, the Duke's first and famous engineer. This was in 1795. Brindley was bred a millwright, and while yet an apprentice showed his skill in improving the silk mill at Congleton, Cheshire. When he first took employment under the Duke, he required only half-a-crown a day; and contracted, or rather offered to contract, for three years at a guinea a week. When any difficulty occurred which he could not easily overcome, he was accustomed to take to his bed and remain without interruption until he had devised means to accomplish the object designed.

Before the canals to Salford and Manchester, crossing the river Irwell by the Barton-bridge Aqueduct, were completed, a much greater scheme was planned by the Duke, which, by the incurrence of some privation on his part, at least the observance of a severe personal economy, was carried out in five years. This was a canal running through Cheshire, parallel to the river Mersey as far as Runcorn, to meet the tidal water from Liverpool. It is on a level all the way, nearly thirty miles; is carried over the river by aqueduct, and descends into the navigable Mersey by locks at Runcorn. The water carriage between Liverpool and Manchester, in rivalry with the imperfect navigation of the Irwell and Mersey. When the Duke began this, the price of carriage by the river navigation was 12s. a ton between the two towns, while that of land carriage was 40s.; the usual charge for 6s. a ton.

In 1774 he started two packet-boats, which were towed daily from Manchester to Warrington (about half-way to Liverpool) and back again; the larger carrying 120, the other 80 passengers, at the easy rate of 1s., 6d., and 2s. 6d. each for the passage, according to the class of cabins occupied. These packets were esteemed to be a great public convenience. This may be estimated now by reference to the other conditions of travelling between Manchester and Liverpool at that time. In 1773, the "Diligence" set out from Manchester, at six o'clock in the morning, passengers breakfasting at Irlam, dining at Warrington, taking tea at Prescot, and arriving at nightfall in Liverpool. This journey now occupies from one to two hours by railway.

It may be imagined that the railway between Liverpool and Manchester, opened in 1830, was unsupported by the Bridgewater Trust-interest. The opposition was overcome by allotting 1000 shares to the Trust, and the nomination of three directors to the board. This done, the Marquis of Stafford, principal trustee, facilitated the passage of the bill through Parliament by all his great influence, without which it could hardly have passed.

About half-way between Liverpool and Manchester, this railway passes the insignificant town of Newton-in-the-Willows, at that time the family borough of the Blackburns, giving two members to Parliament. Mr. Prentice, of Manchester, in his "Historical Recollections," recently published, says, "I recollect, when passing over it (the railway) for the first time, I said to a friend, 'Parliamentary reform must follow soon after the opening of this road. A million of persons will pass over it this year, and see that hitherto unseen little village of Newton; and they must be convinced of the absurdity of its sending two members to Parliament, while Manchester sends none.'"

But Newton, though a family borough of the Leglis and Blackburns, returned at one time a sturdy opponent of Government, for the long period of thirty-seven years—Mr. Shippen, the Joseph Hume of Parliament, so famous in Sir Robert Walpole's time. An anecdote of this gentlemen was circulated a century ago, shamelessly of the frugal habits of nearly all the Lancashire gentlemen of that time. Sir Robert Walpole having said, from experience, that "every man had his price," endeavoured to discover what the price of Mr. Shippen might be. Calling at his lodgings, with the design of discovering his domestic style of life, and intending to be generous, he found that Mr. Shippen was not within, but would be home to dinner. "What have you got for dinner?" asked the Prime Minister. "Do you think I may take the liberty to wait to share it with Shippen?" "A shoulder of mutton was the reply." "What will you have to-morrow?" "The mutton cold." "And what next day?" "The remainder of the mutton made into broth." "And what after the mutton is done?" "The broth and jannock." (Lancashire bread made of oatmeal.) Sir Robert turned away, and, meeting a confidential friend, said it was hopeless to make terms with a Lancashire Jacobite who lived on broth and jannock!

The great Duke of Bridgewater did not interfere much in politics; his relation, the Marquis of Stafford, held his proxy, and it was generally used in favour of the Whigs previous to the war with France. In Lancashire, his political influence weighted the scale of the Earl of Derby's family.

JAMES WAVE, *Registrar.*

BRITISH AND FOREIGN COMMISSIONERS OF THE GREAT EXHIBITION.

THE EARL OF ROSSE, LL.D., K.P.,

PRESIDENT OF THE ROYAL SOCIETY, ROYAL COMMISSIONER.

WILLIAM PARSONS, third Earl of Rosse, born at Birr Castle, King's County, Ireland, in July of 1800 was educated by private tutor; entered Trinity College, Dublin, in 1818, and continued a student of the university for two years, during which he passed every examination and obtained premiums and certificates both in science and classics. He was then passed by *ad eundem* to Magdalene College, Oxford, where he took his first class in mathematics in 1822. In 1831 he was elected member of Parliament for the King's County, for which he sat until 1841; but his time was chiefly devoted to mathematics, astronomy, and the physical sciences. In 1826 he first turned his attention to mechanics, and constructed an engine in which compressed air was made to serve in the stead of steam. About the same time he built his foundries, &c., and began to direct his attention to the improvement of telescopes. His first large reflector was set up in his lawn in 1831. The speculum for the largest telescope was cast in April, 1842, which at the time we gave a full description. The progress of discovery with this magnificent instrument has been annually recorded in the "Transactions" of the Royal Society, and at the annual meetings of the British Association.

His Lordship succeeded his father in 1841, was elected a representative Peer in 1845, and President of the Royal Society, on the retirement of the Marquis of Northampton, in 1849.

In 1836 his Lordship married the eldest daughter of the late J. Palmer Field, of Heston Hall, Yorkshire, and has by her a son, Lawrence Lord Oxmantown, and several other children.

Our Portrait is from a Daguerréotype by Claudet.

THOMAS BAZLEY, ESQ.,

PRESIDENT OF THE MANCHESTER CHAMBER OF COMMERCE. ROYAL COMMISSIONER.

THE President of the Manchester Chamber of Commerce, eldest son of Thomas Bazley, was born at Gilow, near Bolton, in the May of 1797, educated at Bolton Grammar School, of which the Rev. Dr. Wilson was then headmaster, and when about fifteen years of age was apprenticed to learn cotton spinning in the factory of Ainsworth and Co., previously to Sir Robert Peel and Co., when the father of the late Baronet was head of the firm.

At the age of twenty-one Mr. Bazley began business on his own account at Bolton, and in 1832 removed to Manchester.

The firm of Gardiner and Bazley, of which he is now the leading member, have two mills in Manchester spinning fine cotton yarn, and two others at Halliwell, near Bolton, employed, one in same yarn spinning, and one in doubling into lace, Lisle, and sewing thread the products of the other three. They have upwards of 160,000 spinning and doubling spindles, employ 1400 hands, and may be said to have dependant upon them about 4000 persons. They have established in connexion with their factories schools and a lecture and reading-room.

Mr. Bazley was director of the Chamber of Commerce, in the December of 1838, when Mr. J. B. Smith, now M.P. for the Stirling Burghs, brought forward his motion for the total and immediate repeal of the Corn Laws, and, on the resignation of the directors, was the only one of the old who had a place on the new direction. He was one of the earliest members of the Manchester Anti-Corn Law Association and of the council of the League; and in 1839 went with Richard Cobden and the late John Brooks, whose earnestness and liberality in the cause of the enfranchisement of commerce were unsurpassed, to Liverpool, to open there the Free Trade campaign. The meeting was held in the Music Hall, and on that occasion Mr. Bazley made his first public speech.

Having held previously the office of Vice-president, he was elected President of the Chamber of Commerce in 1845, and in that capacity received and issued a remarkable letter from the late Sir Robert Peel, stating his satisfaction at the cessation of agitation in the manufacturing districts, and expressing the hope that, now Free Trade was accomplished, all classes of industry would become united in harmonious efforts for the prosperity of all; and at one of the first meetings of the Royal Commissioners, in 1850, Sir Robert Peel speaking of the beneficial results of Free Trade, Mr. Bazley stated that he had never known the working people of Lancashire and Yorkshire so well employed, prosperous, and contented, and in the enjoyment of so many of the comforts of life. Sir Robert's reply is worthy of note: "he was glad to be pleased to hear it, and he hoped the people would keep what they had got."

In 1838, Mr. Bazley married Eliza, daughter of Sebastian Nash, Esq., and has by her a son, who is now at Trinity College, Cambridge, and in short'y to enter upon business with his father.

SIR STAFFORD NORTHCOTE, BART.

THE subject of our memoir, eldest grandson of the late Baronet, and son of Henry S. Northcote, Esq., formerly member for Haytesbury, by Agnes, daughter and heiress of Thomas Cockburn of the East India Company's service, was born at Exeter, May 27, 1818, was sent to Eton in 1831, and was a pupil there of the Rev. Edward Coleridge. In 1836, he entered Baliol College, Oxford; was elected to a scholarship in the same year, and in 1839 took first class in classics, and the degree of B.A. He entered the Inner Temple in 1840, and was called to the Bar, but never practised. In 1842 he was appointed secretary to Mr. Gladstone, then Vice-President, and afterwards, in May, 1843, President of the Board of Trade. In February 1845, on Mr. Gladstone's retirement from the Government, on the Maynooth Grant question, Mr. Northcote was appointed private assistant to the Board of Trade. Mr. Gladstone again taking office as Colonial Secretary in December, 1845, Mr. Northcote once more became his secretary, and, on the resignation of the Peel Ministry, in 1846, resumed his duties at the Board of Trade, in which he continued until the summer of 1850, acting also as one of the committee of management of the School of Design, on which he was placed in 1847.

On the issue of the Royal Commission, Mr. Northcote was appointed joint secretary with Mr. Scott Russell.

In 1849, a short review of the history of the Navigation Laws, published during the progress of the Government measure through Parliament, and which abounded with important facts in favour of free seas, was attributed to Mr. Northcote.

In the summer of 1850, Mr. Northcote resigned his office at the Board of Trade.

In the March of 1851, Mr. Northcote succeeded to the title.

In August, 1843, the hon. Bart. married Cecilia, eldest daughter of the late Thomas Farrer, Esq., of Lincoln's Inn-fields, and has by her three sons and a daughter. At Christmas, 1850, he was appointed to the commission of the peace for the county of Devon.

CHARLES WENTWORTH DILKE, ESQ

MR. DILKE, only son of C. W. Dilke, Esq., by Maria Dover, daughter of Edward Walker, Esq., of the East India Company's service, was born in London, in February, 1810; at nine years of age Mr. W. Dilke was sent to Westminster school, and when about sixteen had reached the sixth or highest form. Being too young for the University, Mr. W. Dilke went with his father to Italy, where he remained at Florence, under the care of an English Literary friend, for eighteen months. On his return to England, in 1826, he entered Trinity Hall, Cambridge, and in 1834 took his degree of B.C.L. in the year 1840. Mr. Dilke married Mary, the only child of Captain William Chatfield. Mr. and Mrs. Dilke have, we believe, two children, Charles Wentworth and Ashton Wentworth.

In 1831 Mr. Dilke's father became proprietor of the *Athenæum*; and the subject of our memoir, from the time of his leaving the University until the retirement of Mr. Dilke, sen., from the active duties of editor, gave his attention to the Journal.

In 1844, Mr. Dilke became a member of the Society of Arts, and in the first year of his membership was elected upon the council, on which he continued until the autumn of 1850, finding his time was too fully occupied by the *Athenæum*, he retired.

In 1844 he was one of the ten or twelve members of the Society of Arts who subscribed ten guineas each for the purpose of ascertaining the feeling throughout the country with regard to a Great Exhibition of British manufactures; and, amongst other gentlemen who came forward on that occasion, the names of Robert Stephenson and Mr. Fothergill Cooke deserve particular mention. The former offered the loan of £1000, the latter of £500, towards the accomplishment of the then prospective Exhibition. In 1849 Mr. Dilke was again elected a member of the council of the Society of Arts, and shortly afterwards one of the Executive Committee of the Great Exhibition, his constant engagements upon which again obliged him to resign his seat at the council of the society.

HENRY COLE, ESQ.

THE subject of our memoir, eldest son of Captain Cole, was born at Bath, on the 15th of July, 1808, and in right of the estates which his ancestor, Thomas Lockington, treasurer in the early part of the seventeenth century, had bequeathed to Christ's Hospital, was educated at that institution, where he obtained the rank of Deputy Grecian, and was therefore next in distinction to being passed on to the university, in which case he would have entered the Church. At the age of fifteen, however, he left the school, and entered the public service as a clerk in the Record Commission, under Sir Francis Palgrave, present Deputy Keeper of the Public Records.

With Mr. Charles Buller, he was active in promoting the reform of the Record Commission; and, upon the re-organisation of the system of keeping o r public records, he was appointed an Assistant Keeper, on the recommendation of the late Lord Langdale, an office which he at present holds without salary. During the inquiries into the Record Commission in 1836, he published a pamphlet pointing out the defective mode of taking evidence by committees, and suggested remedies which the late Sir Robert Peel brought before the House of Commons, and which were adopted. Subsequently Mr. Cole wrote an article in the *Westminster Review*, showing the defects inherent in committees consisting of large numbers, and the result of this paper was to cause election committees to be reduced to five, and the number on other committees limited to eleven.

In 1837, jointly with Mr. Charles Buller, Mr. Cole attempted to establish a threepenny weekly newspaper, "The Guide;" but was compelled to abandon the project after an effort of three months.

In 1838, he was requested by a committee of merchants (of which Mr. Joshua Bates was chairman, and Mr. George Moffatt treasurer, and which was organised for the purpose of carrying the Penny Postage measure) to act as their secretary, and for two years he served in that capacity; and on the success of the measure, and after having been awarded one of the four prizes of £100 for suggesting cheap postage stamps, &c. offered by the Government, was appointed by the Treasury to assist Mr. Rowland Hill, at the Treasury, in the practical introduction of the system. He was the author of several pamphlets and reviews on the postage question.

In 1833, Mr. Cole published King Henry VIII.'s Scheme of Bishoprics, with notices of the state of education at the period of the Reformation; and in the same year, he wrote an article in the *Westminster Review* on "Wood-engraving," in which he pointed out that occupation as one suitable for women. The suggestion was soon afterwards adopted at the Government School of Design, at Somerset House, where a wood-engraving class for girls was established. This circumstance served to fix the attention of Mr. Cole on the School of Design and its practical importance to manufactures, and afterwards led him to endeavour to connect the best artists with the best manufacturers, who jointly produced a series of works known as "Summerly's Art manufactures." The name, however, took its rise in connexion with a handbook on Hampton Court, in 1841, which was followed by similar handbooks on Westminster Abbey, Rochester, Canterbury, and other places, the illustrations for which were entirely engraved by ladies. Mr. Cole also published several handbooks on the National Gallery—one at the price of a penny, in order to test Mr. Joseph Hume's assertion and the Government doubts, whether a cheap catalogue were possible; and the result of this competition with the official shilling catalogue was the production of a far more correct and enlarged official account at fourpence. An extensive series of charts to the Metropolitan railways were published by him as "Felix Summerly."

In 1846 Mr. Cole became a member of the Society of Arts, which had begun to revive from its lowest point, owing to the exertions of Mr. Scott Russell. The number of contributing members then on the books scarcely exceeded 500. Mr. Cole submitted various suggestions to the council for increasing the efficiency of the Society, especially in the direction of manufacturing art; and generally to promote the combination of improved art with manufactures. In 1847 Mr. Cole became a member of the council of the Society; and, amidst much indifference, he essentially aided in reviving the exhibition of manufactures which took place in that year, and which was the first in the Society in which manufactures, as distinguished from machinery, were the chief feature.

In the autumn of 1848 Mr. Cole was commissioned by the Board of Trade to report on the best means of increasing the efficiency of the schools of design; but, after presenting these reports, found himself under the necessity of relinquishing the appointment.

In 1849, a selection of manufactures of the Society of Arts was held in 1849, with increased success. For the purpose of witnessing the working of the French Exposition held in that year in Paris, Mr. Cole went there accompanied by Mr. Wyatt, and upon his return was summoned to attend, with Mr. Scott Russell and Mr. Thos. Cubitt, at Buckingham Palace, to hear the views of his Royal Highness Prince Albert in respect to the Exhibition of 1851. Mr. Fuller, also a member of council of the Society, having expressed a confidence that he could find a capitalist who would be willing to aid the Exhibition with sufficient pecuniary assistance, was afterwards, by permission of the Prince, invited to accompany these gentlemen. The result of this and the several subsequent meetings we have already given in the memoirs of his Royal Highness and Mr. Scott Russell. Mr. Cole forthwith proceeded to visit the manufacturing districts, to obtain the co-operation of manufacturers, and attended several meetings to explain the views of the Prince. Mr. Cole was named by the Society of Arts as one of the Executive Committee, on their behalf; and, before the appointment of the Royal Commissioners, was actively engaged in all the preliminary arrangements.

Foreseeing that the public, if they identified themselves with the Exhibition, would naturally prefer to carry it out by their own means, he obtained the insertion of a clause in the contract with Messrs. Munday, by which it was provided that it might be determined, if it should be the popular wish to cancel it.

Upon the appointment of the Royal Commission, he obtained leave of absence from his duties in the Record Office, abandoning, for the time, his official salary.

As a member of the Executive of the Royal Commission, the apportionment of space, and the arrangement of the articles in the Exhibition, have constituted his particular duties, in which he was most materially assisted by Mr. Owen Jones and Captain Owen. With the assistance of Mr. Wallis, Mr. Cole superintended the general arrangements of the manufactures; and, at the request of the contractors for printing the Catalogue, and with the permission of Prince Albert, he wrote the introduction to the larger Catalogue, which presents a brief history of the undertaking.

Since August, 1849, Mr. Cole has been incessantly occupied with the Exhibition. He is now chairman of the Council of the Society of Arts, and its numbers considerably exceed 1000 members.

In 1850, Mr. Cole married Marian Fairman, daughter of the late William Andrew Bond, of Ashford, Kent, by whom he has six children.

Our portrait is from a Daguerréotype by Claudet.

MATTHEW DIGBY WYATT, ESQ.

Mr. Wyatt, youngest son of Matthew Wyatt, Esq., the well-known Police Magistrate of Lambeth-street Police Court, born July, 1820, at Rowde, near Devizes, was educated at Mr. Bigg's school in that town; and at the age of sixteen entered the office of his brother, Thomas Henry Wyatt, architect to the Institution of Civil Engineers, Middlesex Hospital, Salisbury Diocesan Church Building Society, &c. His earliest studies were devoted to the combination of art with manufactures, not only in his own special department, but in the most extended application. In 1836 he received a prize for an essay from the Architectural Society. In the practical department of his profession he acquired considerable experience from acting for several years as his brother's sole assistant in managing the duties of one of the largest metropolitan district surveyorships; and after the completion of an unusually long course of professional preparation, he left England in the October of 1844 for the Continent, where for upwards of two years he devoted himself to the study of the principal monuments of art and antiquity in France, Germany, and Italy. During his residence abroad he forwarded some drawings to England, which were exhibited at the Royal Academy, and received highly favourable notices in the public journals. At Christmas, 1846, Mr. Wyatt returned to England, and brought with him a large and valuable collection of sketches, amongst which were a carefully-finished series of studies of the geometrical mosaics of the middle ages, selected from the principal basilicas and churches of Italy and Sicily. The interest excited by these sketches, and the valuable facts illustrative of the history of mosaic-work which they contained, led to a determination, collected at the same time, induced Mr. Wyatt to read papers, in illustration of the subject, to the Royal Institute of British Architects, the Archæological Institute, and the Society of Arts. The drawings were subsequently published in a series of coloured lithographs, by Day and Son, reproducing with great accuracy the rich effect of design and colour in the original.

In 1848 Mr. Wyatt undertook the arrangement and decoration of the Adelphi Theatre, and about the same period bestowed a large amount of time and attention on an elaborate work upon artistic designs in metal, the carefully coloured illustrations of which are mostly from his own hand.

In 1849, on the occasion of the Exposition of Industry at Paris, Mr. Wyatt was selected by the Society of Arts to visit Paris, for the purpose of reporting upon the exhibition. In the report, which afforded much valuable information, Mr. Wyatt gave, by way of introduction, a complete history of the origin and progress of the French industrial expositions. On his return to England, Mr. Wyatt found, that, in his absence, he had been selected to occupy the position of secretary to those members of the Society of Arts who had set on foot the project of the Great Exhibition. Travelling with them in the prosecution of the inquiries entrusted to them by his Royal Highness Prince Albert, Mr. Wyatt visited, during the months of August and September, 1849, the chief seats of manufacture in the kingdom, and assisted in the collection of the mass of information which subsequently formed the basis of many arrangements. On the issue of the Royal Commission, Jan. 3, 1850, Mr. Wyatt was formally confirmed in his appointment; and from that period until the middle of April his attention was devoted to the conduct of the correspondence, and other important duties connected with the transaction of the vast and complicated business of the Executive Committee. In that month, on the reception of the competition designs for the Building, his professional attainments were made useful to the Building Committee in the analysis of the numerous plans brought under their review; and from that time until the present his services have been required in all matters connected with the Building, and he has, in conjunction with Mr. Owen Jones and Mr. Wild, given his constant attention to the constructional details and practical department of the works.

WILLIAM EDMOND LOGAN, ESQ., F.R.S., F.G.S.,

DIRECTOR OF THE GEOLOGICAL SURVEY OF CANADA, AND ONE OF THE COMMISSIONERS REPRESENTING CANADA AT THE EXHIBITION.

THE subject of our memoir, second son of William Logan, of Clarkston, Strilingshire, was born at Montreal, Lower Canada, whither his grandfather had emigrated from Scotland in the April of 1793. He was educated at Dr. Shakel's, of Montreal; and in 1813 was sent from Canada to the High School of Edinburgh, and attended the class of Mr. Pillans, then rector of the school, now one of the professors of the University. In 1817 he quitted the University, and entered the counting-house of his uncle, Mr. Hart Logan, late M.P. for East Suffolk, who was engaged in the general Canadian trade. In 1823 he became a partner in the firm, and in the same year paid a visit to Canada.

Subsequently his uncle formed a commercial connexion with Mr. Starling Benson, and jointly with him became largely engaged in the working of coal and smelting of copper at Swansea. In 1830 Mr. Logan retired from the Canadian business, and undertook, with Mr. Starling Benson, jun., the management of the works in Wales. This was the turning point of his life. His attention became earnestly devoted to the examination of the coal-field of South Wales; and for several years, with the exception of a three months' travel through France, Spain, and Portugal, he gave every moment that could be spared from actual business to a detailed survey of about one half of the South Wales coal-field, and which comprehended the entire country from South Valley to Carmarthen Bay. About the same time he became a Fellow of the Geological Society; and in 1837, having almost completed, exhibited, at the meeting of the British Association in Liverpool, his coal-field map, on which were marked the distribution of the several workable seams, their faults and dislocations, and read a paper to the geological section chiefly on the subject of the dislocations. He soon after presented the map to Sir Henry de la Beche, for the use of the Government Geological Survey, and on examination it was found so accurate that it was adopted without the slightest alteration, and now forms part of the published sheets of the Geological Survey of Great Britain.

In 1838 his uncle died; and in the following year Mr. Logan went to Canada, and employed the intervals of business in making a collection of birds and insects, which he presented to the Swansea institution.

On his way back to England, he visited the anthracite coal regions of Pennsylvania, and the bituminous fields of Nova Scotia; and, upon examination, found the most complete confirmation of the views he had previously propounded in the paper read to the Geological Society.

In 1839 the Welch Smelting Works were sold, and Mr. Logan retired from the trade.

In 1840, the Canadian Government voted a sum of £1200 for a geological survey of Canada, and sent the name of Mr. Logan to the Home Government as the most competent director of the survey. The appointment was at once offered him by Lord Stanley, then at the head of the Colonial Office, and accepted by Mr. Logan, who, in August, 1842, re-crossed the Atlantic, and spent the remainder of the season in making a preliminary reconnaissance, "with the view of recommending such a plan of investigation as might promise to lead to the most speedy and profitable development of the mineral resources of the country."

On New Year's Day, 1843, he once more took ship for England, to complete the arrangements required by his retirement from business, and in the Spring returned to resume the labours of his survey, for which, in 1845, an act of the Canadian Legislature was passed, establishing the survey, without a single dissentient voice, for five years, and granting a fund of £1000 a year for the purpose, and which was again, with the like unanimity, renewed last year.

The area entrusted to Mr. Logan for survey consists of 330,000 square miles; and his permanent staff, of a chemist, Mr. J. S. Hunt, known as an able contributor to the *Philosophical Magazine*; one geological assistant, Mr. Alexander Murray, who for some time was in his service as a volunteer to Sir Henry de la Beche, in the English survey, and won the esteem of Sir Henry by his diligence, knowledge, and activity. He is most enthusiastic in his profession, contributes an annual report, has proved of great efficiency, and has a special exploration committed to him.

The collections of minerals, geological specimens, &c., made during the survey, are intended to form a provincial museum, those shown at the Exhibition, and which were collected within two months, on a special tour for the purpose by Mr. Logan, fairly represent the mineral economic material of the country, so far as they are known. The main part of the collection, comprising, amongst other matters, native gold, from the working of the Chaudiere Mining Company, and other parts of the district lying to the south-east of the prolongation of the Great Mountain Chain of Canada, was shown at the Montreal preliminary exhibition, in October, 1850, upon which Mr. Logan was one of the commissioners. He was afterwards nominated to proceed to England, in charge of the minerals, which he arranged in the Canadian department of the Great Exhibition. He was subsequently appointed on Jury, Class No. 1, minerals and their products, of which Sir Henry de la Beche is chairman, and M. Dufrenoy, Director of Mines in France, vice-chairman and reporter

At the late election of the Royal Society, June 5, Mr. Logan was chosen a fellow.

Our portrait is from a Daguerréotype by Claudet.

EDWARD RIDDLE, ESQ.,

UNITED STATES COMMISSIONER.

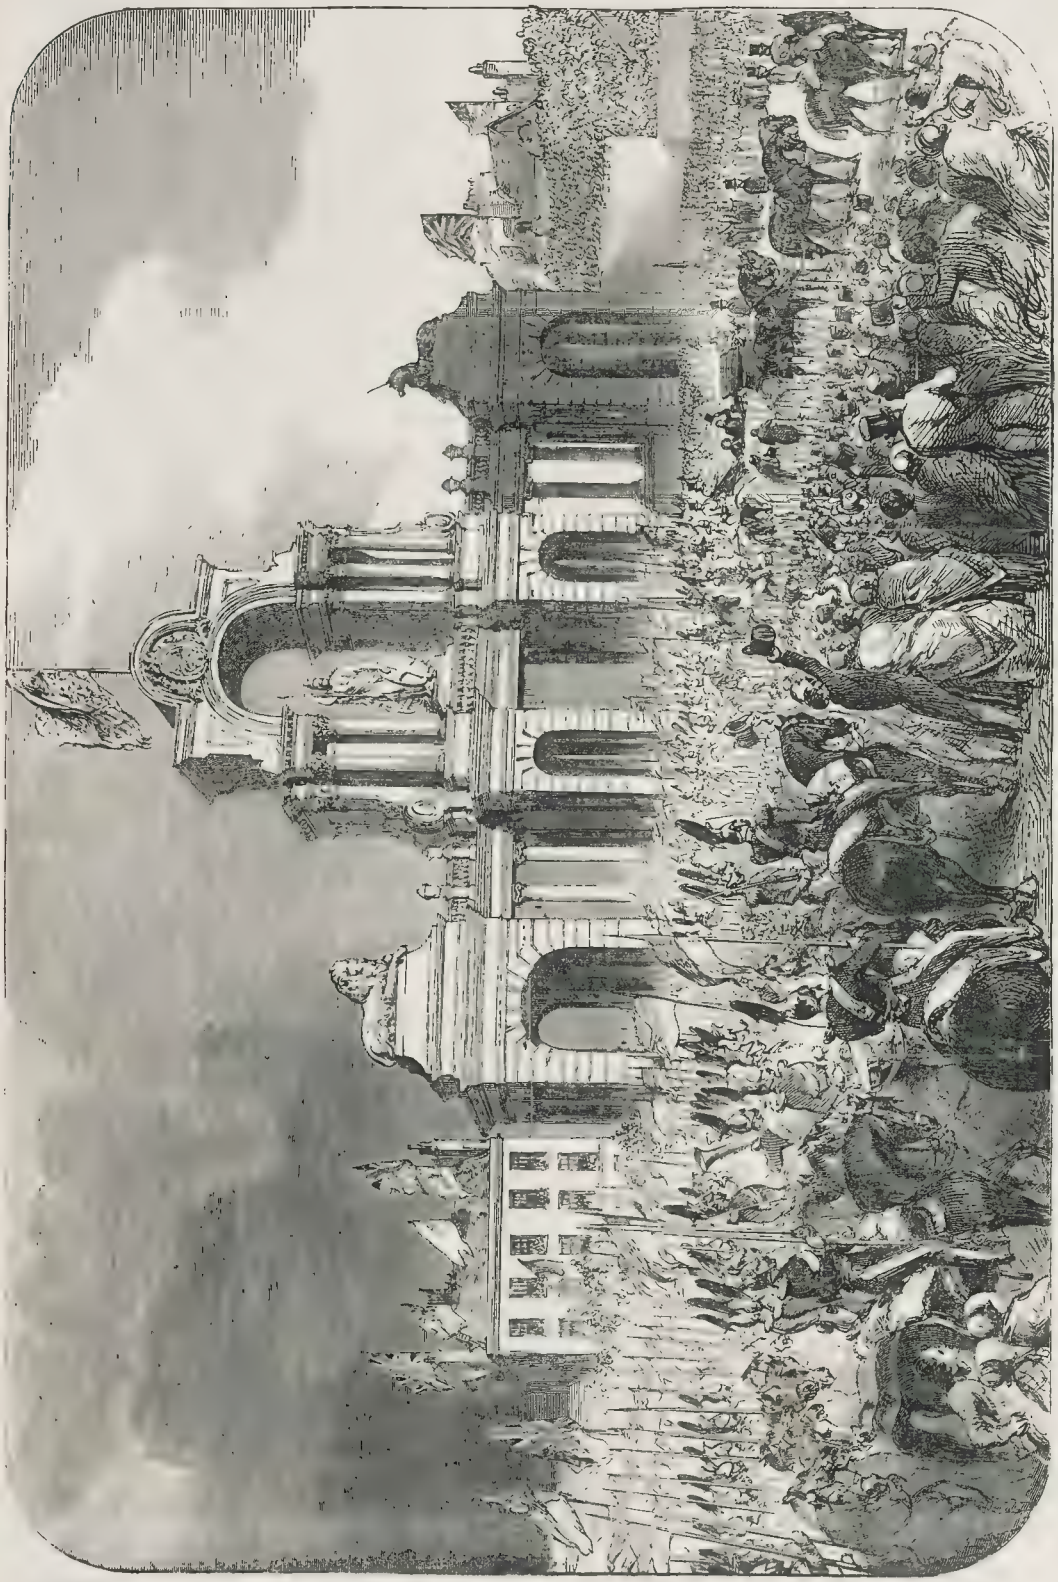
MR. RIDDLE was born in Philadelphia, in 1818. His father and mother died when he was quite a child, and he was left uneducated and entirely unprovided for. Now, however, he has one of the largest and most prosperous commission houses in the city of Boston. He is self-taught, and owes his success to his indomitable perseverance. After some time in connexion with the Great Exhibition, he was in the first instance named by the Boston Legislature a local commissioner to represent the state of Massachussets; and this becoming known, he was appointed by Daniel Webster, American Secretary of State, Commissioner to England for the United States.

DR. WOLDEMAR SEYFFARTH,

HIS MAJESTY THE KING OF SAXONY'S COMMISSIONER.

DR. WOLDEMAR SEYFFARTH was born at Weissenfels, a town in the Prussian duchy of Saxony, and studied the law in the University of Leipzic, where, in his 20th year, he obtained the degree of Doctor of both laws. After having been for seven years a magistrate, Dr. Seyffarth retired from office and travelled over the chief parts of Germany, France, Italy, and Switzerland, the result of which journeyings he gave in his "Reistage" (Travelling Days), 4 vols. In the year 1834 he came to England, and was united to Miss Louisa Sharpe, the well remembered member of the Old Society of Painters in Water-colours. He sketched London life in a novel, "Dick Brown," continued his contributions to German periodicals, and left England for Germany with his family on a visit to his father, whose death made him take up his residence at Dresden, where, in 1842, his wife died. Since then he has given himself entirely up to literature, and chiefly writing about England. Though Dr. Seyffarth had never in any way been connected with the Saxon Government, the Commissionership for the kingdom of Saxony at the Great Exhibition of 1851 was offered to and accepted by him, and has since incessantly occupied his time.

[The completion of the Series of Memoirs of the Royal and Foreign Commissioners, &c., whose Portraits appear in the Gratis Supplement published with the present Number, will be given, together with other Portraits and Memoirs, in future Gratis Supplements illustrative of the Great Exhibition.]



THE ROYAL PROCESSION AT WINDSOR BRIDGE ARCH, SALFORD.

THE ILLUSTRATED LONDON NEWS

No. 525.—VOL. XIX.] SATURDAY, OCTOBER 18, 1851. { TWO NUMBERS, 1s. WITH HALF-SHEET SUPPLEMENT, GRATIS.

HER MAJESTY'S VISIT TO LANCASHIRE.

THE Royal progresses of Queen Victoria are not mere matters of form and ceremony. Wherever she goes, she takes heart and purpose with her. If she retires to the beautiful seclusion of the Highlands, or elsewhere, the people know and respect the motives which lead her to withdraw for a season from the glare and bustle, always cumbrous and often perhaps oppressive, of the Court; and their best wishes for her health and happiness follow her into her privacy. If, on the other hand, she makes a public visit to any portion of her dominions, the politician and the statesman are always well assured that she and her advisers have good reason for the selection both of the place and the time; that increased popularity will follow her footsteps, and that the Throne will acquire an additional security in the affection of the multitudes to whom she thus introduces herself. If she appear in a district where there has at any time been discontent and disaffection—as in Ireland—her presence is sufficient to remove the last lingering remnant of it, and convert it into loyalty. If she show herself where her name, virtues, and position have ever been popular, she converts popularity into enthusiasm. The sober English, and the more staid and reflective Scotch, throw off the habitual restraint and coldness of their demeanour at the mention of one of her progresses into the heart of their habitations; and the doughty men of the great commercial and manufacturing districts, which have supplied the greatest Republic in the world with its staunchest Republicans, shout with earnest approval when the apparently weak and defenceless woman who represents the monarchy of England shows herself among them, stronger and better guarded by the love of her subjects than if she had a hundred thousand soldiers in her train, or walked through her dominions with double the legions of the Emperor of Austria, or of the great Xerxes when he invaded the Grecians.

The visit which her Majesty has just paid to Lancashire is not the least interesting and significant of the many similar progresses to other parts of the empire which have signalised the present reign. It is not only the first time that a British Sovereign has ever been present, except as a travelling stranger, in the great hive of industry, which has more than any other contributed to maintain England in the foremost rank amongst the nations, and eclipsed the brilliancy of her arms by the magnificence of her commerce, and the splendour and extent of her manufactures; but it seems the natural consequence of, and the fitting and crowning grace of the Great Exhibition which has rendered the present year so memorable. The visit has been well timed and well conducted, and will long be remembered as an agreeable and auspicious circumstance, and peculiarly interesting to the most populous part of England, and by no means without importance and significance in the history of our time.

One reflection in relation to it must force itself on the attention of all who look with any degree of sagacity upon contemporary events. If the Corn-laws had not been repealed; if the great departed statesman who sacrificed his friendships and offered up his heart rather than neglect or evade his duty, had not had both the courage and the intellect to perceive the course before him; if the Anti Corn-law League had been still in existence, preaching, apparently in vain, the right of the English labourer to buy his bread at the fair market price of the world, Queen Victoria could not well have shown herself in Lancashire. The charm and appropriateness of the occasion would have been wanting. The loyalty of the people towards her, personally, might, perhaps, have been as fervent, but it would scarcely have been exhibited in so cordial and triumphant a manner as it is now, when, to use the eloquent words of Sir Robert Peel, "those who earn their daily bread by the sweat of their brow, recruit their exhausted strength with abundant and untaxed food, the sweeter because it is no longer leavened by a sense of injustice."

Another reflection, which possibly suggested itself to the mind of her Majesty—let us respectfully hope that it did so—is excited by the report of that most interesting of all the interesting incidents of the day—the gathering together in one place of 85,000 infant children. How much of the manufacturing and commercial greatness of England is due to the labours of these babes, of these young attendants upon that mighty worker, the steam-engine? How much of the joy of their bud-

ROYAL VISIT TO LIVERPOOL.—THE QUEEN AT THE TOWN-HALL.—AREA OF THE EXCHANGE.—(SEE PAGE 482.)

ding lines is sacred to the paramount necessities of society? How much wealth in that tender season of their existence is unimpaired or ruined by the toil, which, in a happier state of circumstances, ought not to be required of infancy? And what part do the employers of all that labour perform in making some amends to the rising generation, for thus monopolising their health and strength, at a period of their lives when the mind is best fitted to receive the impressions which shall fit the immortal being for the proper enjoyment of this world, and lead to a right preparation for the next? Something, no doubt, has been done, and still more has been attempted, by individuals, as well as by the State, to pay the debt of a moral, religious, and intellectual education, to these tiny but multitudinous workers in our great hive; but no one can have looked upon that vast assemblage of babes without the sorrowful conviction that an immense deal yet remains to be done by society before it can acquit itself of neglect of duty. A Sunday-school education, which most if not all of these 85,000 infants received, is an admirable thing; but that it is of itself sufficient to fit the little recipients for the discharge of the duties of life in this busy, this scientific, this intellectual era, is what few, we suppose, will be inclined to assert. Yet, even in this respect, Lancashire will gain by comparison with other portions of the empire. The Legislature has taken the infants employed in the textile manufacture under its peculiar care, and prevented, by wise enactment, the utter destruction of their intellectual powers by the two grasping spirit of trade. In other parts of the country, the children employed in the metal, and, indeed, in all other manufactures, have no such protection against the supposed necessities of capital, and against the real cupidity of their parents or employers; and have no other such check against overwork and total ignorance of the alphabet than private benevolence, always zealous in this country, but always, of necessity, of limited operation. Let us hope, however, that at some day, not far remote, the means may be found of solving this great and difficult, and, unfortunately, most irritating question of popular education, and that the children of England may have as good a chance, not simply of a religious and next-world education, but of a secular and practical education for the duties of this, as the children of more fortunate America, or even of Germany.

But this subject would lead us too far from the immediate events to the detail and illustration of which so large a portion of our Journal is this week devoted. We will but repeat, in conclusion, that on this, as on all previous occasions that we remember, her Majesty's public appearance has been peculiarly interesting in itself and appropriate to the circumstances of the country. The Great Exhibition could hardly have had a more fitting accompaniment to its closing scene than the visit of the Sovereign to the great centre of industry, which supplied so many of the works that gave the Exhibition its practical and useful, no less than its more brilliant, character. From the objects themselves, to the people, young and old, who manufactured them; from the elegant Crystal Palace to the busy and not over fragrant, and by no means elegant or handsome Manchester, which produced them, was a natural transition for her Sovereign to make. Such events cannot but be beneficial. They are the real triumph of the British democracy; a democracy that, having a fair day's wages for a fair day's work, cheap bread, "unleavened by a sense of injustice," together with the right to speak and to think, to meet and to petition, needs no immense armies to keep it in order, and almost does without a policeman's truncheon. A communance of the same state of things, with the addition of a little more and a little safer trade to the young children, and England, by the favour of Providence, may surpass all her former power, and all her previous good influence upon the fortunes of the world.

FOREIGN AND COLONIAL NEWS.

PARISIANA.

(From our own Correspondent.)

THURSDAY, Oct. 16.

We are just now in the height of the most serious Ministerial crisis that Paris has witnessed since 1848. The situation is sufficiently alarming. Time will show what will come of it.

Dr Véron, the editor of the *Constitutionnel*, who has been the most zealous supporter of Prince Louis Napoleon through good and evil report, is evidently alarmed, and, alluding to some minor differences of opinion between the *Journal des Débats* and his own paper, a day or two ago, he kindly appeals personally to M. Bertin, the proprietor, to sink all secondary topics of dispute, and to join with him, heart and hand, against the common enemy. "Let us be friends, Bertin," writes Dr Véron. "Or consider, if the anarchists gain the upper hand, their first step would be to transport us both to the Marquesas. Imagine the tedium of such a voyage if we were no longer friends."

While the political horizon is thus cloudy, the gay butterflies of a Parisian season appear not the least disturbed, and the note of preparation for the winter's amusements is heard on every side. Notwithstanding the sorlonsness of his occupation, the President of the Republic has been daily, for the last week or two, entertaining his friends at St. Cloud. Dinners and hunting-parties in that pretty *château* and lovely grounds have been the order of the day; and though, in Paris, the fashionable promenade resort of the Champs Elysées, the capital has seldom been so crowded. The close of your Great Exhibition in Hyde-Park is daily sending us over numbers, who, having explored the wonders of the Crystal Palace, come over, some to enjoy the sights of Paris and others to pass the winter. The consequence is, that every hotel and *maison meublée* is crammed to excess.

The higher circles of the Faubourg St. Germain have been painfully disturbed during the last few days by the sudden death of a despicable nature in reference to a noble family, which has been snatched out by destiny or calamities of the darkest nature. These painful accounts will doubtless reach you from other sources. I hesitate at giving further publicity to a statement which it is to be hoped, for the honour of human nature, may turn out to be untrue.

The musical season for the winter may be said to have commenced on Tuesday night, with the opening of the Italian Opera by Mr. Lumley. Before, however, I give you an account of the *début*, a few words upon theatricals and music in general.

Little more than the Français gave us a new tragedy, or rather drama, "Le dernier Abencerrage," versified and adapted from Chateaubriand's well-known romance by M. Beauvallet, the comedian. Had it been written in decent prose, it might have been tolerable, but meagreness of interest, added to the insipidity of poetless rhyme, is something unendurable. The author, who is rather a respectable actor, has given himself the lion's share in the piece, and was abundantly applauded by his friends. The affair, however, has not the slightest claim to public favour. Mdlle. Allard quits the Opera at the end of the present month. A little repose seems necessary; her fine organ, obviously suffering by being forced into a soprano from its real compass, that of a contralto, is now at times almost inaudible, a misfortune which has led to off-nights critical the week to remark, with at least as much ill-nature as wit: "*Il est beaucoup plus facile de la voir que de l'entendre.*" Scribe and Halévy's much-talked of "Juif Errant" is now in active rehearsal: more, however, in point of the extended splendour of the scenery and costumes than of the music of the piece. Some of the choruses are, however, spoken highly of, as is a duet for the two bass, Massol and Morelli, and the finale of the first act—the only portion of the opera as yet fully rehearsed. A new candidate for a high place among the composers of the day has just come forward with an opera in three acts; namely, the ex-dentist M. Dupré. It destination is the Grand Opera here, but it is to be first essayed at the theatre in Brussels, where Mdlle. Dupré will sustain the leading character. This young lady has just sung *Amina* in that city with very great applause; we have not, however, learned more, however, in zeal

OVERLAND ROUTE TO INDIA.—RAILWAY THROUGH EGYPT.

A highly influential meeting of merchants and other persons interested in the communications with India and China, and Egypt, was held at the London Tavern, on Tuesday afternoon, for the purpose of considering the course most advisable to be adopted in the present position of affairs between the Governments of the Sultan and the Pacha of Egypt, and the obstacles impressed by the former to the construction of the projected railway through the Egyptian territories, with a view to averting the danger which now menaces the important British interests connected with our colonies and possessions in the East. Mr. Samuel Gregson, chairman of the East India and China Association, presided; and amongst the gentlemen surrounding him were Mr. Anderson, M.P., Mr. Alexander Mackay, M.P., Mr. Macgregor, M.P., General Briggs, Mr. Larking (chairman of the Oriental Club), Mr. Barton, Mr. Foster (member of Council of Fort Philip), Mr. Dr. Leslie, Mr. Du Sala, Mr. Briggs, Mr. Ewart, Mr. Robert Brook, Mr. Thomas Fox, &c.

In opening the business,

The Chairman said it would not be necessary for him to detain them with a long introductory address, and he should therefore proceed at once to state that the overland route through Egypt being in danger, it was the object of that meeting to take into consideration what means should be adopted for averting so great a calamity to the commercial interests as the interruption of that splendid line of communication with the vast regions of India and China. Any interruption to that communication would be calamitous in the highest degree to the interests of Great Britain, prejudicial to our great Eastern empire—he had almost said destructive to her Majesty's Ministers themselves (Hear, hear)—and distressing to thousands of families who had their nearest and dearest relations in that part of the world. (Hear.) Above all, they must bear in mind, that rapid communication and easy personal intercourse invariably tended to cement the concord and promote the civilisation, peace, welfare, and happiness of the nations of the earth. The line of communication with India and China, of Egypt, had been carried on in the most satisfactory manner for more than ten years. It was established by that great ruler of Egypt that wonderful man, Mehemet Ali, whose penetrating mind foresaw that prosperity was sure to accrue to his country by making it the highway for all the world. Under his successor, Ibrahim Pacha, this state of things continued still to exist; and up to the present moment, under his Highness Abbas Pacha, it was only maintained in the same satisfactory state, but the Pacha, encouraging the energy of his grandsire, now proposed to improve the communication by introducing into his country the greatest of all modern improvements—a railway. (Cheers.) The Sultan of Turkey had, on the other hand, given to the consideration of all parties in these countries interfered and prohibited the completion of that railway. (Cheers.) It was contended that by the treaty of 1841, all were guaranteed by means of the great highway in Egypt, and that had no longer the power to interfere with the internal arrangements of Egypt, because upon former occasions greater works, if possible, had been undertaken, inasmuch as it was nothing more than the recognition of a principle which was not over as regards, and will, as little formality, as circumstances would allow. [illegible] which was urged as a fitting occasion of the prayer and [illegible] the 1st of May, was a day rendered [illegible] and respectful attention of more than 20,000 persons whilst it was [illegible] up by the Bishop of [illegible] was something worth seeing and remembering in connexion with the [illegible] visits of her Majesty, the Prince, and the youthful Prince [illegible] cesses, proved, most conclusively, if required, the deep interest the [illegible] Exhibition. On Monday, different portions previously visited, [illegible] examined, were visited; and on Tuesday, a very rapid tour seemed to [illegible] been made of the whole Building, for during two hours the motions [illegible] a group of Royalties were [illegible] and respectful [illegible] as [illegible] and a large number [illegible] in an amazingly short time, and it was only at twenty-to [illegible] that the Royal Party [illegible] Buildings, that [illegible] Majesty and the Prince [illegible] the Princess [illegible] took their final leave of a display from which they [illegible] information and instruction, and [illegible] which they have been enabled to [illegible] their choice of articles of [illegible] which so happily had them to the people.

The exhibitors [illegible] were marked by much interest of examination. There was no longing [illegible] every one seemed determined to [illegible] he could during the brief time allowed for doing so; and it was surprising to see the many persons contrived to see much more than they had ever before seen in one day.

Every one now seems desirous to get rid of all responsibilities as quickly as possible. The jury reports are rather the first of the public that appear promptly presented. The organisation for the removal of the goods seems calculated to make very quick, if not very sure, work of the distribution, and in a few weeks all will be a memory of the past.

The cloth for which Apperley, of Stroudwater, has received the exhibitors' medal, and the doeskin by Mr Emms, which has also had a medal, are works whose respective merits for which Lord Ravensdale, the member Mr. John Bull's gold medal in June last, and they were exhibited, along with the Himalayan cloth, which has also obtained a prize, by Messrs Ball and Wilson.

IMPROVEMENT OF THE LABOURING CLASSES.—PRINCE ALBERT.

On Monday afternoon, the annual meeting of the Royal Association for Improving the Condition of the Labouring Classes took place at Hall Farm, near Windsor, his Royal Highness Prince Albert, the president of the association, occupying the chair, supported by General Wemyss, the Marquis of Abercorn, Colonel Read, M.P., and the *elite* of the gentry of Buckinghamshire.

A vast concourse of spectators, chiefly of the middle classes, was also present. Although the event was held for four o'clock, the field was crowded long before two, the spectators amusing themselves by watching a ploughing-match, as that agricultural pursuit formed one of the eight classes to which rewards were distributed. Clay Hall Farm originally belonged to Mr. C. S. Cantrell, of Windsor, but it was purchased by his Royal Highness Prince Albert, and a portion of it added to the Home Park, a remainder being about to be devoted to agricultural purposes on the "high farming" system.

The place selected was about 400 yards from the Long Avenue, where a large marquee was erected for the reception of the Prince. Around it were smaller tents containing the agricultural produce forwarded for inspection, and specimens of cottage handicraft, such as spinning, knitting, needle-work, carpentry-work, basket-making, &c., forming in fact a kind of exhibition of domestic industry, no very formidable rival to the national Exhibition, but sufficiently interesting to those who had at heart the objects of the association, viz. the encouragement of prudent and economical habits, sobriety, cleanliness, and industry, amongst the labouring classes, whether industrial or agricultural. A military band was in attendance.

The field committee consisted of Major General Wemyss, Colonel F. Seymour, W. H. Wrench, Esq., the Rev. S. Neville, the Rev. T. T. Carter, Mr. C. S. Cantrell, Mr. Charles Hughes, Mr. Foley, Esq., E. Manning, Esq., and the Rev. J. C. Lucas. In front of the pavilion a semicircle was formed by the children of the Cumberland Ranged School, to many of whom prizes were awarded for works of domestic industry, while small gratuities were promised to those boys whose teachers should report most favourably of their application, cleanliness, and general good conduct.

As a few minutes to four his Royal Highness arrived on horseback, and having taken the chair amidst loud cheers, the report was read by H. Wrench, Esq., hon. secretary.

From this document it appeared that the objects of the association were to make domiciliary visits to the cottages of the [illegible] has annual meeting of the association. The present [illegible] had been carried out sufficiently evident; and they trusted that when it became more generally known, and its objects more fully appreciated, the association would receive that general support which its objects and enterprise deserved. The report recommended also that the system of domiciliary visitation should be continued earlier in the year, and more continuously observed, as by that means the general and uniform good conduct of those recommended would be ensured. At the conclusion of the reading of the document,

His Royal Highness proceeded to distribute the prizes, which consisted of small sums varying from 10s. to £1 1s., under the following [illegible]

To the labourers who had lived and put their families in [illegible] industrious habits, without parish relief, except in cases of sickness

To the widow of a labourer who had brought up his family in honest, sober, and industrious habits, whether with or without parish relief.

To females distinguished for cleanliness and tidiness in house and person, of service in the same [illegible]

To the best cultivators of garden or allotments, being also persons of honest, sober, and good moral character.

Prizes were also given to the ploughmen who had most [illegible] themselves in the performance of the day, and to labourers for the best collection of vegetables, approved specimens of handicraft, and needlework. One of the principal prizes for needlework was, curiously enough, awarded to a little boy of the tender age of seven years, who had [illegible] and respectful attention to nearly all the children in the ragged [illegible] of the town, [illegible] had displayed in various branches of industry. The prizes for the ploughmen were of the most valuable description, ranging from £2 2s. to £5.

At the close of the distribution, Prince Albert proceeded to the marquée, where the articles of the exhibitors were placed. He inspected the whole of them with great minuteness and apparent interest, and spoke in the highest terms of praise of the ingenuity and skill which they had exhibited. His Royal Highness then returned to the Castle, amidst the enthusiastic cheering of the assembly.

In the evening the members of the society dined together at the White Hart Hotel, Major-General Wemyss presiding. The speakers confined themselves to the discussion of matters connected with agriculture and the industrial arts, and made no reference whatever to party politics.

At the meeting the healths of her Majesty and Prince Albert (the patron of the society) were drunk in the most cordial manner.

THE GREAT EXHIBITION.

The work of destruction has fairly commenced, and already a great quantity of the richest and most valuable of the more portable articles are removed, and the fittings are rapidly disappearing from the more prominent positions. The first removal was the splendid fountain, which took place on Monday night, to make way for the erection of the platform, on which the final act of the Royal Commission in immediate connexion with the Exhibition itself was to be enacted; and in the course of Tuesday the removals became almost painfully apparent, so as to permit the visitors of Wednesday to see the proceedings, and for the reception of seats and barriers. Landing-stages for goods are erected at all the doors, and carriages, hackney-coaches, and omnibuses give way to carts and waggons exteriorly, while order, silks, and broadcloth are replaced by disorder, fustian, and calico. The complete work of clearing the Building will take some time, but the rapidity with which the work has been commenced promises to shorten it very considerably.

As we anticipated, and stated in our last, the closing of Saturday was not permitted to be of so ordinary and business-like a character as certainly was intended by the authorities, although they subsequently sanctioned an arrangement by which all the organs should at a given signal commence playing "God save the Queen" at five o'clock, and a corps of singers was extemporised, and a good effect was produced by this spontaneous outbreak of feeling. Every one seemed unwilling to give up their place in the Building, and it took a considerable time to clear it, notwithstanding the perseverance efforts of the bell ringers and gong-players, the latter of whom thrashed their instruments with more than usual energy.

On Friday, 46,913 persons entered the Building, and the receipts were £4914 1s. 6d.; and on Saturday the numbers were [illegible] The receipts in round numbers reach £300,000, and the number of visitors [illegible] two millions. There is one little fact connected with this, and not astounding the credit of the well-to-do classes, and that is, that 4,90 in bad money was taken at the doors, with the exception of one half-sovereign, all Irish in half-crowns, no bad shillings having been taken, or so few as not to be worth mentioning. This last fact is a most significant proof of honesty in the humbler classes, whilst the former tells fearfully against the want of it in those who know and ought to better.

The ceremonial of the closing day (Wednesday) is detailed elsewhere. The weather was most unpropitious; this, together with the absence of her Majesty, whom everybody seemed determined to expect should be present, although it was distinctly announced that she would not, had cast a degree of gloom over the business, which accorded with the feelings of many who were present. The rush for tickets of admission showed now earnestly every one felt, in their desire to add item to so much that had tended to enlighten, instruct, and gratify them; and this was fully confirmed by the numbers who were present in spite of the weather. As regards the ceremony itself, it can be said, inasmuch as it was nothing more than the recognition of a principle which was not over as regards, and will, as little formality, as circumstances would allow [illegible] which was urged as a fitting occasion of the prayer and [illegible] the 1st of May, was a day rendered [illegible] and respectful attention of more than 20,000 persons whilst it was [illegible] up by the Bishop of [illegible] was something worth seeing and remembering in connexion with the [illegible] visits of her Majesty, the Prince, and the youthful Prince [illegible] cesses, proved, most conclusively, if required, the deep interest the [illegible] Exhibition. On Monday, different portions previously visited, [illegible] examined, were visited; and on Tuesday, a very rapid tour seemed to [illegible] been made of the whole Building, for during two hours the motions [illegible] a group of Royalties were [illegible] and respectful [illegible] as [illegible] and a large number [illegible] in an amazingly short time, and it was only at twenty-to [illegible] that the Royal Party [illegible] Buildings, that [illegible] Majesty and the Prince [illegible] the Princess [illegible] took their final leave of a display from which they [illegible] information and instruction, and [illegible] which they have been enabled to [illegible] their choice of articles of [illegible] which so happily had them to the people.

The exhibitors [illegible] were marked by much interest of examination. There was no longing [illegible] every one seemed determined to [illegible] he could during the brief time allowed for doing so; and it was surprising to see the many persons contrived to see much more than they had ever before seen in one day.

Every one now seems desirous to get rid of all responsibilities as quickly as possible. The jury reports are rather the first of the public that appear promptly presented. The organisation for the removal of the goods seems calculated to make very quick, if not very sure, work of the distribution, and in a few weeks all will be a memory of the past.

The cloth for which Apperley, of Stroudwater, has received the exhibitors' medal, and the doeskin by Mr Emms, which has also had a medal, are works whose respective merits for which Lord Ravensdale, the member Mr. John Bull's gold medal in June last, and they were exhibited, along with the Himalayan cloth, which has also obtained a prize, by Messrs Ball and Wilson.

TOWN TALK AND TABLE TALK.

At last the fact has become history. The one great sight of London, of England, of Europe, towards which every eye was turned, and which formed the one monster topic of discussion and admiration, overshadowing and dwarfing all others; this great spectacle, but a week [illegible] isting, fluri[illegible] a part, as it were, of our daily lives and thought and sensations, is over and passed, a thing of memory, a vision to be mentally recalled. The blank is curiously great. It is as if a great void had suddenly appeared in the daily habits of our existence. The Crystal Palace had got to be not only a household world, but a household thing. People had grown into the habit of talking of it and thinking of it as an ordinary feature of the sayings and doings of their lives. If a lady or a gentleman were not found at home, you put it down as the necessary alternative that they were at the Exhibition. People went to Hyde Park as regularly as to their parlours and drawingrooms. It became the grand lounge, the grand resort, the grand centre to which a continuous and unprecedented social force was constantly urging the whole body of the community. And now this centre is suddenly withdrawn. The Building, which formed a sort of secondary and supplementary home to a great portion of society, is closed. The spectacle which formed the one [illegible] and overshadowing subject of all tongues and all brains, is suddenly paralysed. It is almost with us as it was with Rome in the time of Marcus Curtius. We wake, and find a gulf gaping in the Forum. The unflinching exactness with which the catastrophe was carried into execution, striking on the day and hour of its announcement, is a curious tribute to our sternly rigid habits of business. Probably the vast proportion of society would have liked to see the Exhibition prolonged; but not a murmur, not a whisper, to this effect was raised. What was to be done was done, and that was forthwith and was fulfilled. No "extra weeks by particular desire;" no "positively the last fortnights, in consequence of the expressed wish of the public." As an eclipse predicted for centuries, it may be, commences true to the very minute assigned to it by the calculations of astronomers, so did the doors of Mr. Paxton's Palace close, as by the hand of Fate, at the appointed second. The clocks struck the last hour, and all was over. How different the auspices of the opening and the shutting; the beginning and the end! On the 1st of May all was sunshine, the sky blue, and the young leaves green. The 15th of October brought round weather of a fitting dolefulness for the last and closing scene: cloud, mist, mud, and rain presided over the maimed rites with which the great Exhibition departed this life. The day in fact was a specifically appropriate one. They brightened gloriously over the young structure gleaming in the May-day morning: they spread a sombre pall over the death-scene of the defunct. But his career was glorious—his name is famous—and we may be permitted to express a hope, that, though the individual be dead, the race is not extinct; and that the Great Exhibition of 1851 will be an ADAM, boasting a long line of flourishing posterity.

Bloomerism hardly seems to make much way amongst us. The Yankee yacht, the Yankee reaping machine, and the Yankee [illegible] were all triumphs in their way; but the Yankee pupil-pattern of trousers has made converts of but a very small number of feminine [illegible] people agree that the costume is pretty, nee [illegible] in serviceable and economical. At theatres—each of which has [illegible] bloomer dress—one or two feet of [illegible] means what managers and authors expected from it. Instead of being mightily laughed at, it is mightily admired. At one or two houses the style has been made laughable by being burlesqued and worn by men, [illegible] gathered in so as to snow grace [illegible] found to be much more provocative of applause than mirth. One of the reasons, probably, is, that, accustomed as we are to the *bizarre* and extravagant dresses of the stage, the Bloomer costume appears perfectly unobtrusive and unpretending. At all events, however, the fact is a fact, that it speaks well for the absence of anything essentially and intrinsically [illegible] in the transatlantic fashion. Had Bloomerism, however, been twice as pretty and twice as convenient as it is, it came from the wrong quarter for adoption in England. It should have crossed the Channel, instead of the Atlantic. Fashions coming from America remind us of the Thames flowing back again to the Malvern Hills. New York is to London in this respect very much what London is to Paris. From the creative imagination of the tailors of the Boulevards and their patrons, how those new cuts, new styles, and new *tones* of dress which are repeated in Regent-street, and exaggerated and caricatured in Broadway. The wave is always on the roll from east to west, and it seems almost important in favour of Bloomerism, that it should have a specific right of its own. We import Yankee jokes and Yankee notions of a miscellaneous character to a great extent and will great gusto, but [illegible] fashion manufactured in the go-ahead West are of no [illegible] and [illegible] when one knows that there is no matter of taste and style in dress, is tolerably sure to go for nothing. Had Bloomerism come recommended by a Parisian mania, its praises sounded by modists of the Rue de la Paix, and rumours of its success floating hither from the Faubourg St. Honoré, or the Chaussée d'Antin, how different, in all probability, might have been its fate! It might have become in a week the ruling fashion—it might have triumphed like the waltz or the polka, and our eyes might already have become accustomed to see trousers where petticoats were, and the embroidered tails of smart paletots in the place of bedraggled skirts sweeping up the winter mud. Another reason prejudicial to the success of the new light in costume, was the fact that its promoters, with true Yankee 'cuteness, have attempted to make a money speculation of the project. One don't think so much of the missionaries of an idea when they disseminate their doctrines at so many coppers per head, and when their object, evidently, is full as much to pick up shill ings as converts. Most of the lectures have thus, as demonstrations in favour of Bloomerism, been failures; and we suppose that, for a space at least, the cry so often addressed to proxy orators of "[illegible] short!" will neither be raised nor responded to, as regards the [illegible] coats of England.

The *Morning Chronicle* has pointed out a printer's error in the current number of the *Quarterly Review* which really deserves the utmost publicity which can be given to it, so simple is the mistake—of a single letter—and so thoroughly ludicrous the train of associations to which it gives rise. Everybody knows Dryden's portrait of a model country parson, supposed to have been intended for Bishop Kerr. It opens thus—

> A parish priest was of the pilgrim train,
> An awful reverend and religious man,
> [illegible]
> Of [illegible] well [illegible] at last
> To [illegible] ed to feast

In quoting the passage, the *Quarterly* made the last line—

> To sixty more, but that he lived too fast.

The association of ideas between the venerable journey and a rackety, [illegible] new may himself out at cyder cellars and casinos, is curiously ludicrous. The best of the matter, however, is, that this is not the first time the error has been committed. On turning to the only copy of Dryden I have at hand, that in Anderson's "British Poets," published at Edinburgh, in 1793, I find the sublime spelling of the preposition. There, also, the good parson is represented as living "too fast" to live long. At that period it is true the word "fast," used as an adjective [illegible] not [illegible] to [illegible] ludicrous associations and it might have been argued that the meaning simply was, that the good man passed [illegible] in holy acts and holy [illegible] so rapidly, that his [illegible] naturally impaired. The lines immediately [illegible]

> [illegible] signed himself to toil, to earth the sense;
> And made almost a sin of abstinence.

suffle only prove what was Dryden's meaning and what another to the many recorded short-comings of Anderson's edition of our good old Scott in projecting his *Imagnum opus*, I remember—characterised as [illegible]

People have sometimes tolerably vague notions of history. I once heard a learned jurist attribute the discoveries in astronomy, which Copernicus demonstrated not to have been discovered till to Pitt, King of Egypt; but even this extraordinary piece of learning pales before one recently said to have been exhibited at the mess table by a crack regiment, and which throws a completely new light upon the blood, race, and complexion of the conqueror at Poitiers. The subject of discussion was the different historic characters eligible, in point of costume, to be represented at one of the fancy balls of last season. "I don't think," said one gallant, if not learned, professor, "of going as the Black Prince. There's only one objection to the character." "And what is that?" was carelessly demanded. "Why," returned the unabashed of Hume and Smollett, "it's such a dreadful bore to have to rub your face and hands all over with black stuff!"

THE NATIONAL MUSIC
OF
ENGLAND,

THE POETRY BY CHARLES MACKAY, LL.D., THE SYMPHONIES AND ACCOMPANIMENTS BY SIR HENRY R. BISHOP, KNT.

PROFUSELY ILLUSTRATED BY THE FIRST ARTISTS AND ENGRAVERS

The Proprietors of the ILLUSTRATED LONDON NEWS have the honour to announce to their readers and the public, that they have entered into engagements with

SIR HENRY R. BISHOP, KT.,

a gentleman whose name, in connexion with the Music of England, is of itself sufficient to stamp with approval any composition to which it is attached; and with

CHARLES MACKAY, LL.D.,

whose popularity as a poet is justified by some of the most beautiful lyrical composition of our day, to publish, in connexion with that Journal, a SERIES of the

ANCIENT AND POPULAR MELODIES OF ENGLAND,

copiously Illustrated in the finest style of Wood-Engraving by the most celebrated Artists, and at a price which shall place these effusions within the reach of the humblest purchaser. It has often been alleged that the English have no national music—a reproach which the forthcoming series will show to be entirely unfounded. Many of the ancient melodies which delighted our forefathers have fallen into neglect as songs, on account sometimes of the grossness, indelicacy, or unfitness of the words with which they are associated; at others, of the vulgarity of their tone or the obsoleteness of their allusions. Good music is of all time; but it has been the misfortune of English music, in too many instances, to have been married not to immortal—but to immoral verse. For this reason it has been banished, except in an instrumental form, from the company of the educated and refined of both sexes. It will be the object of the proprietors and editors of the forthcoming series to remove this objection, and to reform, for English music, what Burns and his coadjutors performed, to some extent, for the music of Scotland, and what the poetic genius of Thomas Moore, aided by the musical taste of Sir John Stevenson, performed so thoroughly for the music of Ireland. The music of England is as rich and varied as either, but has hitherto wanted the poet and the musician to restore it to the place which it ought to hold in the affections of the people. The Proprietors of the ILLUSTRATED LONDON NEWS, in selecting Sir Henry Bishop and Mr. Mackay to perform this task, believe not only that [illegible] good, but the very best possible selection, and that their forthcoming series, while it will be a marvel of beauty and of cheapness, will recommend itself to all lovers of poetry and music as a national work.

Further particulars of the time and mode of publication will be duly announced

198, Strand, Oct. 18th, 1851.

THE LAST DAYS of the GREAT EXHIBITION.—The last number of the CRYSTAL PALACE, which will be the LAST DAY, price 1d (16 quarto pages), contains FIVE splendid ILLUSTRATIONS of the closing Scenes at the Great Exhibition, and a biography of Sir Prince Merlin Rice Arkwright, the Honourable Member for Proof the Jewel of Hawick, and five other Engravings; and twenty columns of interesting literary matter. ALL the MOST INTERESTING DEPOSITS at the GREAT EXHIBITION will, in turn, be LECTURED ON at the ROYAL POLYTECHNIC INSTITUTION.—The general Lectures are by J. H. Pepper, Esq., on the Application of Iron and Steel in the Manufactures of this United Kingdom, now exhibiting in the Crystal Palace: and by Dr. Bachhoffner on the Electro-Metallic Deposits here, illustrated by a splendid collection of Messrs. Elkington's Specimens. The each Lecture on Monday, Wednesday, and Friday evenings, at Eight o'clock precisely. Admission to the Lecture Theatre, Stalls, 3s.; Area, 2s.; Gallery, 1s. Open daily from Ten till Five, and every evening from Seven till Half-past Ten.

COMMUNICATION between ENGLAND and IRELAND, viâ Holyhead, Three Times each way on Week-days, Twice on Sundays.—Reduced Parliament Fares remain:—Dublin: First Passage, by Express, London to Dublin, 36 Hours, 1st Class, £3 3s. Second Class, £2. Return Tickets available for a fortnight: 1st Class £4 10s.; 2d Class, £3. Cheap Excursion Tickets (First-class), 2 days and Return Through Tickets are also issued between the principal towns in England and Ireland.—For full particulars see Bradshaw's Guide, page 153, and Walsh's "Irish Railway Guide," page 29.

GRATIS
EXHIBITION SUPPLEMENTS
WILL APPEAR
WITH FUTURE NUMBERS
OF
THE ILLUSTRATED LONDON NEWS.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS GIVEN A SUPPLEMENT, GRATIS, WITH LIST OF AWARDS OF THE GREAT EXHIBITION, &c., &c.

*** CONTINUATION OF THE ILLUSTRATIONS OF THE QUEEN'S VISIT TO LANCASHIRE.—Next week we shall continue the Illustrations of the interesting Visit, including Prince Albert's Visit to the Cotton Mill, Owen's Free College, Manchester, the Presentation of the Addresses by the Mayor of Lancaster, &c., with EXHIBITION SUPPLEMENT GRATIS. The ILLUSTRATED LONDON NEWS, Price 6d., with Supplement Gratis.

ERRATUM.—In our last week's Supplement, some beautiful china vases, ornamented with groups of flowers in Parian (Prize in Class 25), and some Parian statues, were illustrated and described as the productions of Messrs. Copeland. This error we hasten to correct; the articles in question are the productions of Messrs. R. and W. Boote, of the Waterloo Pottery, Burslem, Staffordshire.

GRAND PANORAMA
OF THE
GREAT EXHIBITION.

In order to perpetuate a complete and comprehensive view of the Great National Exhibition, as presented within the Crystal Palace, the proprietors of the ILLUSTRATED LONDON NEWS are preparing a series of Panorama Views, based upon Photographic Sketches by Claudet, which they intend publishing

These Views, extending to a length of nearly eighty feet, comprehend, with a reality impossible to be surpassed, every object in the whole range of the Exhibition—every Department, and each particular object in the main avenues, being successively embodied in the precise order in which they stood. This series of Views will therefore constitute a picturial remembrance of the more striking features of this Great Industrial Gathering, at once vividly truthful, and of inherent and lasting interest.

Further particulars of the time and mode of publication will be duly announced.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 18, 1851.

THE Great Exhibition has finally closed. The public, on Saturday, took its "last fond lingering look" at its assembled treasures; and on Wednesday the illustrious Prince, to whose enlightened mind it owed its origin, and to whose fostering care it was indebted for much of its success, went through the concluding ceremonial of receiving the Report of the Commissioners and the Jurors. Of course, the close was not as brilliant as the inauguration. Hope is always more brilliant than memory; and the welcome we give to an honoured guest, if not more cordial than the leave-taking, is always more cheerful and enthusiastic. But the slight ceremonial of Wednesday was none the less effective or appropriate on that account. The speech of his Royal Highness on this interesting occasion was characterised by the good taste, the good sense, and the enlightened philanthropy for which he is so pre-eminently distinguished; and will serve to endear his name not only to those foremost thinkers of our time who see beyond and through the smoke and clamour of to-day, the brighter prospects of the morrow of society, but to those more practical men whose attention is absorbed by the circumstances and wants of the present time. We have not, however, done with the Exhibition. The real work of its promoters—strange as it may seem—has now to be begun. To turn the great event of the year 1851 to its proper account—to employ their large surplus fund in a creditable, satisfactory, and enduring manner, is no easy, though to them it will doubtless be a pleasurable, task. For many months yet to come their work is laid out for them. Their responsibilities are great, for the occasion is one of the most magnificent ever offered to any body of men, and their decisions will be looked to with interest and anxiety in all parts of the civilised world. There is every prospect that their decision, whatever it may be, will be a careful and considerate one, and that the benefits derivable from the Great Exhibition will not close with the dispersion of its treasures, but will revive and be perpetuated in another and perhaps a better form. At all events, the people, notwithstanding some murmurs at the minor details connected with the Exhibition, are disposed to give its promoters credit, both for the highest sagacity and the most thorough honesty, and to aver with confidence the next development of an idea, already so fruitful, and destined, we can scarcely doubt, to become much more so.

THE slow march of events in the French Republic has been somewhat expedited during the past week by a misunderstanding of no recent date, which, after many attempts at conciliation or compromise, has finally broken out between the President and his Ministers. The question is a grave one, and the difficulties attendant upon it, no doubt gave rise to those rumours of projected *coups d'état* with which the public for the last three or four months have been rendered familiar. The President, who owes his present high position not only to the immense popularity of his name, but to the operation of the right of universal suffrage, which was solemnly established as one of the main principles of the Revolution of 1848, by M. de Lamartine and his colleagues, and without which his popularity would have gone for little, is naturally anxious, now that his term of office draws towards completion, that his claim to re-election should be submitted to, and decided by the same wide constituency which placed him where he is; but there are, unluckily for him, and, as we cannot but think, still more unluckily for the French nation, two great, difficulties in the way. The first difficulty was created by M. Marrast, and the other parents of the unworkable constitution, under which France has groaned and grumbled since 1848. Taking the United States of America for their model, these Republican *doctrinaires* limited the tenure of the Presidential office to four years, as in America; and to impede the ambition, either of the Bonaparte family, or the daring and unscrupulous Algerine generals, fostered amid the *razzias* of the African war, they prohibited the re-election of any President until after an interval of four years. This is the first difficulty, and M. Louis Napoleon Bonaparte will not speedily overcome it. The second is the creation of the Legislative Assembly, who, in a moment of terror at the growing popularity of the doctrines of the Communists and Red Republicans, and in the fanaticism of a blind and unreflecting reaction, deprived of the suffrage, in contravention of the constitution from which they themselves derived their only power and authority, a full half of the French people. The President, to secure his own purposes, desires to restore the suffrage, thus unwarrantably and unconstitutionally restricted; and, though well contented that the new Assembly should be elected by the small, is anxious that the President should be elected by the large, constituencies. His Ministers, to whom he has proposed to make the question a Cabinet one, have refused compliance, and have, one and all, sent in their resignations. At the present moment he is, therefore, virtually without a Ministry; and rumours of a *coup d'état*, as the only possible solution of the difficulty, are once more raised;—this time with more pertinacity than ever. It would seem, as we observed a week or two ago, that the French people, taking them as a body, have more sympathy for a violent than for a legal and peaceful extrication from this knot of embarrassments; and that sooner or later the popular prediction of, and faith in a *coup d'état* will work out its own fulfilment. By presenting itself to the mind of the President as the sole mode of procedure, it may, perhaps, at no distant day, assume sufficient mastery over him to urge him to the commission of acts, from the consequences of which he will find it impossible to recede. Between a republican constitution, founded upon a model which does not accord with the circumstances or the feelings of France, and a monarchical assembly, which has no faith in any particular individual, and only knows that it dislikes the present occupant of the supreme power more thoroughly than any other person—Messrs. Lamartine, Marrast, and Ledru Rollin excepted—the part to be played by the actual President is enough to tax all his wisdom and his courage. With empire as the prize of success, and imprisonment, exile, or even a worse fate, as the punishment of failure, he walks in a round of perils and perplexities. He is like a man on the brink of a precipice, with a yawning gulf beneath his feet, whose only safety is in the chance of a leap across the chasm. If he do not leap, he will probably be pushed over the brink and dashed to pices; and if he do leap, he may not have strength to carry him over. Yet leap he must, unless, by dexterously allowing his opponents to rush over the prec ipi tous-ness themselves by the very impetus with which they would urge him downwards, he should contrive to hold on, until they have, by falling in the chasm, ruined themselves. One thing is clear;—the Legislative Assembly has no hold upon the affections or respect of the French people, whether in the mass, or as it is represented by the public opinion of the educated classes. There is scarcely a man of any solid and enduring principle in it, except M. de Lamartine and General Cavaignac, and their reputations are somewhat shattered. Its leaders are either impracticable, though, perhaps, respectable men, like M. Berryer, or wily adventurers, like M. Thiers, who have some head, but no heart, and who never advocated any cause that they did not damage, and afterwards ruin. They all want honesty, and it is in this particular that the actual President, whatever his general defects of character may be, stands on an elevation so eminently superior to every one of them. Some stirring scenes are evidently to be enacted in Paris within the next few months. The car of revolution, stopped for a while, will roll on again with fresh velocity. Louis Napoleon, however, has faith in himself, and in his position; and, with his popularity, that is more than half the battle.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

Her Majesty the Queen and his Royal Highness Prince Albert, with the youthful members of the loyal family, arrived at Windsor Castle, from the North, at 27 minutes after seven on Saturday evening. The Royal suite consisted of the Viscountess Canning, the Hon. Beatrice Byng, Colonel the Hon. A. Gord n, Sir James Clarke, and the Rev. Mr. Lee.

Her Majesty has left at the Castle as Lady Caroline Barrington, who had previously arrived from Osborne, with the junior members of the Royal family, Prince Arthur, and the Princesses Helena and Louise.

On Sunday, after an early walk in the slopes, Her Majesty and the Prince Consort, with the Prince of Wales and the Princess Royal, the ladies and gentlemen of the Court and the domestic household, attended Divine service in the private chapel of the Castle.

On Monday, the Queen and the Prince Consort, accompanied by the Prince of Wales and Prince Arthur, with the Lords and Ladies in Waiting, arrived at the Great Exhibition Building, in Hyde Park, from Windsor Castle. The Royal party travelled by a special train on the Great Western Railway; and after visiting the Exhibition about two hours, the Queen returned by the same route to Windsor. The Prince Consort remained on to some hat later, in order to preside at a meeting of the Royal Commissioners

The Queen and Prince Consort, accompanied by the Princess Royal and the Princess Alice, and attended by the Royal suite, came to town again on Tuesday, to visit the Great Exhibition. Her Majesty and the Prince returned to Windsor Castle shortly before twelve o'clock. His Royal Highness Prince Albert proceeded to Clay Hall Farm immediately after returning from London, to distribute the prizes awarded by the Royal Association for Improving the Condition of the Labouring Classes. In the afternoon, her Majesty and the Prince Consort, with his Royal Highness the Prince of Wales, rode out on horseback in Windsor Park.

On Wednesday the unfavourable state of the weather prevented the usual party taking their accustomed early exercise on horseback. Her Majesty arose at ten o'clock, and came to town to effect the closing of the Great Exhibition. In the evening his Royal Highness Prince Frederick of the Netherlands arrived at the Castle on a visit to her Majesty and the Prince Consort.

Col. Francis Hugh Seymour has relieved Col. the Hon. Alex. Gordon in his duties as Equerry in Waiting on his Royal Highness Prince Albert.

Her Royal Highness the Duchess of Kent arrived at Clarence House, St. James's, on Tuesday afternoon, from Frogmore, N.W. Her Dowager was attended by Lady Augusta Bruce and Colonel Sir George Couper.

THE TIMBER DUTIES.—In pursuance of an order of the Lords Commissioners of her Majesty's Treasury, the Commissioners of Customs have caused the collectors and controllers and other principal officers at Customs-house, Deptford, to report to the Board the number of loads of timber that have paid the several rates of duty, under the acts 8 and 9 Vict., cap. 90, on timber and wood goods, the produce of and imported from the British possessions, notwithstanding the rates of duty mentioned in the table annexed to the act 14 and 15 Vict., cap. 98, were in strictness (from an omission of the word "foreign") applicable to timber and wood goods generally.

SUITORS IN COUNTY COURTS.—An interesting return, and one of general importance, respecting the expense of actions in county courts, was printed among the papers ordered by the House of Lords. It will be seen that considerable fees can be saved by suitors agreeing without a public hearing. The costs in an ordinary defended action for money not between £20 and £50 are £3 11s. 8d. For any action not exceeding £1 the costs are 2s. 11d.; not exceeding £2 the cost is 6s. 4d.; above £2 and not exceeding £20 the expense is 9s. 7d. in the pound. Absent half-crowns and shillings in which plaints are entered are tried, and by that means the suitors in causes between £20 and £50 save the hearing fee of £2 2s. 4d. and the bailiff's fee of 1s. 8d., together £2 3s., thereby reducing the costs to £1 6s. 8d. In any case where a barrister or an attorney is employed, the above costs do not include any fee paid to them, nor do they include the costs of witnesses. In no case under £5 are the costs of counsel or attorneys allowed. Thus it will be seen that parts-arranging as to terms—profiting by the hint given in the above historical lesson the expenses

On Tuesday week a new church, dedicated to St. Paul, built entirely by voluntary subscription, was opened in Hodgate-lane, in the suburbs of York. The building is capable of accommodating 700 persons, one-third of which may be seated free. The cost of erection, including the purchasing of the land, is £2850, of which sum £2000 was raised prior to the opening. The church cannot be consecrated for want of endowment. The first house had to be opened by license.

The floating island near the head of Derwent Lake, Keswick, made its appearance for the first time this season at the close of last week. The extent of ground above water is considerably greater than last year, and appears to be well covered with grass.

The Stockholm papers announce the death, in his seventy-first year, of Dr. Thomas Wineard, Archbishop of Upsal, and Primate of the kingdom of Sweden. Dr. Wineard had long occupied the chair of Sacred Philology at the University of Lund. He has left to the University of Upsal the library, consisting of upwards of 34,000 volumes, and his rich collections of coins and medals, and of Scandinavian antiquities. This is the fourth library bequeathed to the University of Upsal within the space of a year, amounting to books never no fewer than 115,000 volumes. The entire number of volumes possessed by the university is now said to be 288,000, 14,000 of those being in manuscript.

CHURCH, UNIVERSITIES, &c.

MEMORIAL TO A CLERGYMAN.—A tablet, bearing the following inscription, has lately been erected in Battersea Church, by the joint contribution (varying from one halfpenny to ten shillings) of 260 of the inhabitants of Battersea and St. Katharine:—"To the memory of the Rev. Spencer Madan, M.A., late vicar of this parish, who, throughout his incumbency of 25 years, until incapacitated by sickness, sedulously attended to the duties of his office, ever administering to the wants of the poor; whilst, by his truly Christian demeanour, he engaged the esteem and affections of his richer brethren; and to whose zeal and liberality the enlargement of this church and of the schoolhouse, on two occasions, is mainly attributable, this tablet in gratefully inscribed by his parishioners. A.D. 1851."

ANOTHER NEW BISHOP.—A bill is to be introduced into Parliament in the ensuing session, which has for its object the erection of the Channel Islands into a bishopric, and separating them from the diocese of Winchester. The reason assigned for this step in the preamble of the bill is, "that the Channel Islands are above a hundred miles from England, and consequently still farther removed from Winchester as seat of your bishop. The population is of a character total y distinct from the rest of the diocese, and is rapidly [illegible] the islands of Sark and Alderney contain each one clergyman and one church. The contemplated new bishop is not to have a seat in the House of Lords, and his income is not to exceed £2000 per annum.

The Bishop of Manchester, in announcing his next ordination on [illegible] ordination, as he is very averse to granting letters dimissory to other bishops.

UNIVERSITY COLLEGE.—On Wednesday the session of the University College was opened by the delivery of an inaugural lecture by the Rev. Dr. Hoppus, in the Botanical Theatre of the institution, on the study of botany.

CHURCH TRAINING SCHOOLS.—The Vice-Principalship of Exeter Training College has been conferred upon Mr. Abraham Haworth, of St. Mark's, Chelsea; and the Vice-Principalship of the Training College at Winchester has been conferred upon Mr. J. Blair, of Battersea College.

PROPOSED LEGAL UNIVERSITY.—Lord Brougham intends during the ensuing session of Parliament to submit to the Government (with a view of improving the system now in force for admitting gentlemen to the bar), a proposition for consolidating the Middle and Inner Temples, Gray's and Lincoln's Inns, into one legal university, to be governed by a senate and chancellor similar to other universities. In such an university professorships are to be established in the different branches of law and equity, who are to lecture as the professors do at Oxford or Cambridge. It is also proposed to abolish the immense fees which are at present charged for "entering."

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been made:—*Hon. Canonries:* The Rev. Marmaduke Vavasour, to the cathedral church of Peterborough; the Rev. George Madan, to the cathedral church of Gloucester. *Prebend:* The Rev. Thomas George James, to the prebenda stall at Combe, the ninth in the cathedral church of Wells. *Rectory:* The Rev. M. H. Vane, to St. Mary-le-Bow, Cheapside, with St. Pancras, Soper Lane, and All-Hallows, Honey-lane, London. *Vicarages:* The Rev. J. M. Collyns, to Sancred, Cornwall; the Rev. J. Garbett, to Harborne, Staffordshire; the Rev. H. R. Ridley, to Stranton, Durham.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. Cheal Green, on his retiring, from the parishioners of Rustington, and several old inhabitants of Littlehampton; the Rev. Edward Brine, second master of the Grammar House, Kidderminster, from friends at Kidderminster, on his departure; the Rev. Leonard Sedgwick, incumbent of Laithkirk, from the pupils of the Laithkirk Parochial School, Mickleton, Yorkshire; the Rev. W. H. Hugall, from the congregation of Sproadley and Bulton.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

DON MANUEL GODOY.

DON MANUEL GODOY, the once famous Prince of Peace, after years of absence from public life, died on the 4th inst., at his residence, Rue Michodière, Paris, in the 87th year of his age. Godoy, originally a private in the Spanish Guards, was, at the end of the last and beginning of the present century, a prominent actor in the most important political events of Spain, of which country, for a time, he was Minister and absolute ruler. As the favourite of the late King Charles IV., or rather of his Consort, Maria Louisa of Parma, Godoy, a mere commoner, was the prominent cause of the Spanish war with the Emperor Napoleon. Prince Ferdinand (afterwards Ferdinand VII.), tired of the thraldom in which he was kept by his Royal mother and her Minister, applied for protection to Napoleon Bonaparte, discovering that he had done so, against the latter, a plot or conspiracy to dethrone his father. This led to the most unseemly scenes. A revolt broke out at Aranjuez, and Godoy nearly lost his life. Charles IV. abdicated, and Ferdinand assumed the sceptre; but the grandeur of the latter's views was not permit him to hold it. Napoleon took the crown of Spain for his own family, and the terrible Peninsular war was the result. The consequences, meanwhile, of Godoy's reckless love of wealth and honours, and his resistance in foreign lands for nearly the remainder of his life.

In 1847 the Spanish Minister published a Royal decree, authorising Don Manuel Godoy, Prince of Bedmar, Grandee of Spain, and Duke of Alcudia, Prince of Peace, to return to Spain, and ordering that a certain portion of his once vast property should be restored. The latter part of the decree was acted upon, however, but the promised return of the Prince never may have taken the place. Of this singular politician half a century ago, those who knew him in his old age could not but admire him as the finest specimen of Spanish gentleman. To the last he was remarkable

for his handsome and his high-bred Spanish courtesy. In conversation he was most agreeable, possessing as he did, and as might naturally be supposed of him, a fund of reminiscence and anecdote. The world, too, should be indebted to him for his memoirs, if misfortunes not experienced, poverty, and obscurity, have done much to store for the family committed in a time of sudden and intoxicating exaltation, and of unbounded power by the man who was then a Prime Minister, and despot of Spain, but who has just died, with the weight of eighty-seven years upon him, a quiet, inoffensive, and forgotten man, in a retired lodging at Paris.

THE REV. CANON TYLER.

The Rev. [illegible] ENDELL TYLER, B.D., Canon of St. Paul's and Rector of St. [illegible] of Monmouth, and received his early education at [illegible] he afterwards became a distinguished student and a fellow of Oriel College, Oxford. When he had entered into holy orders, his talents and industry in the pulpit were soon discovered to be highly impressive. On a particular occasion, he happened, as one of the Whitehall preachers, to attract the attention of Lord Liverpool, then Premier, who, after inquiry, presented him, in 1824, with one of his sinecure, and to his great surprise, with the living of St. Giles's-in-the-Fields. This very arduous cure he filled actively and ably. During the period of the cholera, which spread fearful havoc in the parish of St. Giles, at that time one of its present improvement, about the worst in London, the Christian energy and charity of Mr. Tyler, in visiting the horrible dens, courts, and alleys of the place, were great and remarkable. His manner was at once remarkable, it having been converted into a most useful body under his auspices. To the staff in St. Paul's he was, without his asking, presented by the late Sir Robert Peel, "as a mark," as he himself expressed it, "of Mr. Tyler's esteem for the cause of education at Oxford, and of his exemplary discharge of his onerous duties at St. Giles." As an author, Mr. Tyler gained some celebrity. His "Life of King Henry V." attracted much attention, from its careful research and its reference to original authorities.

Mr. Tyler's recent death has caused the deepest regret to his family, and to a large circle of friends.

WILLIAM TYSON, ESQ.

MR. TYSON, originally educated for the law, passed the greater part of his life in the city of Bristol, and he was well known and much appreciated as an antiquary. He was the principal writer of the papers in the volume of the *Bristol Mirror*, and he wrote many able papers on antiquarian subjects in it. He was the local secretary of the recent Archæological meeting in Bristol. He was a Fellow of the Society of Antiquaries. Mr. Tyson died recently, at his residence, Dove-street, Bristol, in the 67th year of his a

THE LATE MR. BAGLEY.

Two officers of the Belgian Cuirassier-, Lieutenant Van den Eynde and Van den Hattie, stationed with their regiment at Bruges, gathered on Sunday a quantity of mushrooms, and partook of them for supper. In the night they were seized ill, with every symptom of poisoning, and died after a few hours' suffering.

HUMANE INVENTIONS.—An experiment was on Saturday last made, in presence of Mr. Lee, Metropolitan Commissioner of Police of Mr. Durand, inspector general of the markets, and M. Lescuyot, chief of the syndicate of the butchers, of a new vehicle for conveying calves. This vehicle, which can be drawn by one horse, is so contrived, that twelve calves, weighing on an average 720 lb. each, can leave a separate cell, in which each can lie down or stand as in a stable. The inventor of the cart is M. Turc, and the adoption of it will lead to the annihilation of the present cruel mode of conveyance, in which the poor animals are carried with their heads hanging over the sides of the cart.

DISASTER TO THE CLIPPER SHIP "JOHN TAYLOR."—Accounts were received at Liverpool on Saturday of a serious disaster that had befallen the fine clipper ship *John Taylor*, Captain Hawkins, sister ship to the *Cynosure*. It will be recollected that the *John Taylor* sailed from Liverpool on the 5th of August, for Bombay. She proceeded successfully on her voyage until the 31st of that month, when she encountered a very heavy and sudden squall, and, before there was time to take in sail, she was dismasted, with the exception of the main and mizen lower masts. One man was killed, and three severely injured. The *Eleanor Thompson*, arrived at Queenstown, spoke her on the 31st ult., off the Cape de Verds, and supplied her with spars, sails, &c., and she was preparing to rig jury-masts.

METROPOLITAN NEWS.

MR. ALDERMAN SALOMONS, M.P., AND THE HOUSE OF COMMONS.—The question between the House of Commons and the Jews will shortly come before the Court of Queen's Bench. Mr. Alderman Salomons's solicitor on Saturday last, received "notice of trial" in two separate actions for the sitting after Michaelmas Term consequently, the cases will come on early in December, as the term ends on the 25th of November. The actions are brought against the aldermen "for having voted in the House of Commons without having first taken the oaths required by law."

MUSEUM OF ECONOMIC GEOLOGY.—A society of the most meritorious character has been recently formed for the purpose of supplying a home with additional assistance to reduced members of the medical profession, and their necessitous widows, and also establish [illegible] education of the sons of such practitioners [illegible] exclude:

An Asylum, in which 100 pensioners, who must be duly qualified medical men, or their widows (possessing incomes of at least £50 a year), shall be provided with comfortable residences, and with such additional assistance and accommodation as the funds may permit. The council, however, confidently hope that the society will be enabled wholly to maintain some few deserving persons in possession of the required income. 2. The [illegible] and washing; while the rest will be orphans, educated and maintained entirely at the expense of the society. 3 A chapel, capable of accommodating 300 persons. The entire cost of the site and buildings, including [illegible] is estimated at £20,000. The whole of the property in providing suitable accommodation to the pensioners, remuneration of officer's and other establishment charges, is calculated at £1500. Subscriptions have been entered into to the amount of £1,000 and upwards.

THE MEDICAL SOCIETY OF HOMŒOPATHY.—At a very numerously attended meeting of the fellows and members of the Medical Society of London last week the following resolutions were most unanimously agreed to:

1. That the practice of Homœopathy or the prescribing medicines in what are called "infinitesimal doses," on the principle that like cures like in the cure of disease, is founded in palpable error, is a delusion on the part of the practitioner, a deception on the public, and a source dangerous to its welfare.

2 That the Fellows of the Medical Society of London cannot honorably hold any professional communication with Homœopathists.

3 That, consequently, any fellow of this society who shall hereafter practise Homœopathy, or who shall knowingly meet in consultation any professed Homœopathist, will thereby render himself unworthy of the Fellowship of this society.

At the same meeting Mr. Hancock, Surgeon to the Charing-Cross Hospital was appointed Lettsomian Professor to the Society.

BRITISH BENEVOLENT INSTITUTION.—The annual meeting of the governors and proprietors of this institution was held on Monday at the London Tavern, Lord Erskine in the chair. The Rev. William Jones, M.A., the secretary, read the report. It stated that since the foundation festive of this institution, in 1839, 1850, two elections of annuitants had taken place. The first in October, when four gentlewomen were elected, and the second in April, when five more were added to the list. Each of these ladies was now receiving the annual annuity of £50 per annum by monthly instalments. There were now 42 gentlewomen applying for the pensions. During the present month five more annuitants would be placed on the funds of the society. The statement of the financial position of the company for the last year showed that the receipts had amounted to £1187 19s., and the disbursements to £917 16s. 2d., leaving a balance of £270 2s. 10d. The outstanding subscriptions due were about £500, and the liabilities about £180.

MERCHANT SEAMEN'S ORPHAN ASYLUM.—The annual examination of the children educated in this asylum was held on Tuesday, at the Asylum, Bow, the Lord Bishop of Chichester presiding. His Lordship opened the proceedings by addressing the children in a most earnest and affectionate manner, observing that the general welfare of the friendless orphan child must ever be regarded as the most ennobling pursuit that could engage the enlightened mind of man. He felt a particular sympathy and interest for the welfare of this institution; for, although his was but a small diocese, still it was in a locality which embraced 90 miles of seacoast, and was close to the very celebrated seaports, Portsmouth and Southampton. Independently of this, he was descended from one who had been engaged all his life in the service of the navy, and met with a watery grave when commanding his own ship. He would earnestly call upon them not to neglect the advantages held out to them by such an institution, as their future prospect in this world, and, what was of far more importance, their eternal salvation in the world to come, depended upon the attention they paid to the religious instruction which was every revealed in the Holy Scriptures, and inculcated in that asylum. The Rev. Henry Rendall, the chaplain to the [illegible] then proceeded in his examination of the boys, commencing with religious and general knowledge, and concluding with questions upon scripture and general religious instruction, on which subject the children seemed, by their answers, thoroughly well grounded. The secular portion of their education, which included writing, arithmetic, geography, history, English grammar, etymology, algebra, music, and singing, &c., was the next subject; and these examination, in these various studies, proved the great care bestowed on the children by the committee and the master of the asylum. The examination was proved equally meritorious; and, after a few suitable remarks from the Rev. gentleman who had conducted the examination, the proceedings terminated.

NEW METROPOLITAN COMMISSION OF SEWERS.—The first meeting of the Commissioners of the Metropolis Sewers was held on Tuesday, at the municipal office, in, Greek-street, Soho-square. There were present—Mr. Lawes (chairman), Mr. Hawes, Captain Dawson, Mr. Austin, Mr. Bagley, and several other officers, he re-appointed during the pleasure of the court, but that, with respect to all other officers, they be re-appointed for one month, the object being to enable the commissioners thoroughly to investigate the whole of the public establishment. A communication was directed to be sent to the Lord Mayor, informing his Lordship of the issuing of the commission, and requesting that four aldermen of the Court of Aldermen or Common Council might be appointed under it, in respect to all matters which concerned the city of London. The days of meeting were then fixed, and after the transaction of some routine business the commissioners adjourned.

NEW CITY OF LONDON CORPORATION BILL.—The following are the heads of the Bill which the Court of Common Council have determined shall be brought into Parliament in the ensuing session:—That every person who shall occupy premises in the city of London for a period of [illegible] and shall pay and bear the rates, shall be a freeman and a citizen, and shall be entitled to the benefits and privileges, and be subject to all the duties thereof. That every freeman and citizen be rated to some municipal, parliamentary, or parochial rate, to an amount not less than £10. That a reference to the register of voters for members of Parliament be repealed. That the roll of freemen and citizens be made out in the first week of October, to be open for the inspection of the aldermen, the Lord Mayor and the sheriffs. That the qualifications for candidates for the Common Council be the same as those of the electors; and that provision be made to prevent any person being a candidate for the office of Alderman or Common Councilman, who may not have paid his debts in full, in the event of his having been bankrupt, insolvent, or [illegible] compounded with his creditors. That the qualifications for aldermen be [illegible] freemen of the city, as aforesaid, and that the aldermen be elected for a period not exceeding seven years. That the act of 11th George I. cap. 18 (Election Act), be further amended as follows:—That freemen occupiers be entitled to vote at all elections in Common-hall, in addition to their freedom. That the poll at elections in Common-hall be limited to one day. That no [illegible] be eligible to be a candidate at elections in Common-hall, for the offices of chamberlain and bridgemaster, without seven days' notice of such intended election. That all enactments of the present session acts inconsistent with the foregoing, be repealed.

GRAND FLOWER SHOW.—The last dahlia show of the season of the Islington Society was held on Monday, at Mr. S. Barnes's, the Junction Arms, Stroud's-vale, Holloway. The show of dahlias was first-rate, and the decorations, which were of very novel design, attracted a large share of attention. A wall, loaded with grapes, and a fine collection of fuchsias, shown by Mr. Barnes, were also very much admired, as was a model of a cottage and flower-garden, designed by Mr. Williams. Several prizes were given for the best show of dahlias in boxes of six.

PREPAYMENT OF LETTERS.—The following important notice to the public, and instructions to postmasters, have been issued from the General Post-office this week:—"On and from the 1st of November next, all letters for packets posted at the principal post-office, for places within the United Kingdom, must either be pre-paid by stamps or be sent unpaid, as money pre-payment for inland letters will no longer be permitted at any such office."

PROPOSED IMPROVEMENT IN THE LONDON DOCKS.—A great improvement in the warehousing accommodation of the London Docks is about to be effected. The entrance to that portion of the docks has been closed for some time, the water has remained so long in the basin that it often becomes troublesome to the neighbours, who are much annoyed by noxious vapours emitted therefrom. The directors intend to use this portion for the ingress and egress of very large vessels.

THE GREAT NORTHERN SEWER.—The Commissioners of Sewers are now constructing the Great Northern Trunk Sewer, connecting the sewers of the northern districts with the Metropolitan sewer recently formed along Charing-cross and Parliament-street. It passes from the end of the Haymarket, up Great Windmill-street, along Little Windmill-street, Conduit-street, &c., to Poland [illegible] Oxford-street, the greater portion of this neighbourhood being entirely destitute of sewerage. [illegible] at elevation of these spots above the level of the Thames has rendered it necessary to sink the bed of the sewer to an extraordinary depth, upwards of 120 feet below the surface.

Within the last few days it has come to the knowledge of the Messrs. Hoare, bankers, of Fleet-street, that a robbery to a considerable extent has for some time been committed upon them by a confidential clerk, who, from appreciating on the Stock Exchange, had incurred considerable losses, and in an evil hour had been induced to alter the figures in the bank books, whereby a defalcation, to the amount, we believe, of upwards of £10,000, has occurred. The person has been in the service of the Messrs. Hoare upwards of twenty years.

MANSION HOUSE.—On Wednesday the Lord Mayor entertained the chairman and the members of the General Purposes Committee of the Lord Mayor elect, the Sheriffs, and several private friends, members of the corporation; and on Friday the Lord Mayor will receive at dinner the chair. an and directors of the Un on Bank of London, of whom his Lordship is also a director, and the masters of several City companies.

THE METROPOLITAN BOROUGHS.—A very important meeting is to be brought before Parliament, having for its object the [illegible] municipal boroughs of the City [illegible] wich, Southwark, Finsbury, and the Tower [illegible] with the administration of the water supply, sewerage, &c., of the entire metropolis, which, for the purposes of this act, will be deemed to include all the [illegible] within the limits of the Bills of Mortality, or the Post Office. The plan received [illegible] parties.

SOYER'S "SYMPOSIUM," GORE HOUSE.—On Monday, at the Court of Bankruptcy, a sum of £1000, which had been taken out at the instance of Mr. Simmonds, of Southampton-row, Russell-square, silversmith, and [illegible] before Mr. Commissioner Evans. The amount claimed was £600. Mr. Lucas disputed the validity of the debt. It was alleged to have arisen in respect of arrears due under a verbal agreement, whereby the defendants had agreed to pay Mr. Simmonds £100 a week for the use of glasses, plate, tables, and other articles, which he had supplied to the establishment. One of the partners, it appeared, had only joined the concern on the 12th July last, a former partner, a Mr. Feeney, having retired on the 5th of July. With the former partners there had been a written agreement, whereby a much smaller sum than £100 was payable weekly; and there was no evidence to render the new partnership liable for a larger sum. Mr. Bagley called a servant of the plaintiff, who spoke to interviews between the plaintiff and one of the defendants, and deposed that £100 a week was distinctly agreed to as the sum to be paid. There was then an arrear of £600, and out of £24 arrears handed to pay £200 on account, on consideration of the plaintiff's not being disturbed. Mr. Lucas submitted that there was no debt due. The plaintiff had been paid £920 between the 12th of July and the 5th of September, and this was the full amount to which he was entitled according to the terms of the written agreement. He proposed to examine the [illegible] partners themselves, but his Honor did not think he could hear the evidence of the [illegible] themselves, the new and not having yet come into operation. Mr. Lucas [illegible] ing to postpone the case till the 1st of November, but this was objected to. Mr. Lucas then contended that the original agreement in writing was still in force, and could not be varied by any subsequent parole agreement. It was most exorbitant to say that £100 a week, or £5000 a year, was to be paid for the use of those articles. Mr. Bagley submitted that the original agreement had terminated with the dissolution of the first partnership on the 5th of July last; and that the existing one had been entered into and ratified by the new partners. He thought the parties ought to be called on to give security to abide the result of an action. His Honor said it appeared to him to be a case in which security must be given; he would allow a week for that purpose.

SINGULAR ACCIDENT.—On Tuesday morning, about three o'clock, an accident of rather a remarkable character happened in the London-road, Southwark, of which the following are the particulars:—For some time past a drain has been in the course of construction, in order to carry the sewerage from the road into one of the back streets. The earth having been excavated to the depth of five or six feet, some two or three feet wide, and seven feet in length, was shored round at night with scaffold poles, and two men left to take charge of the lanthorns, and to see that the candles were not allowed to go out. The men either fell asleep or neglected to trim their lights, which went out, and left the hoarding scarcely perceptible until within a few feet of the hole. A man came up driving a cab, and the horse dashed through the scaffolding, and immediately fell into the aperture in the ground. The cab being too large to enter the sewer, remained above, but the weight of the horse broke the shafts away from the carriage, and the animal became entangled in the earthwork of the sewer. It was with great difficulty that it got him out alive, and, after struggling for some time, he was suffocated. The horse is described as being a very valuable one, the loss will, therefore, be considerable, as the vehicle is much damaged. The driver received a [illegible] but the other two men escaped with a few bruises only.

[illegible] SLAUGHTER IN THE CITY.—On Monday [illegible] and a representative of each of the [illegible] assembled at the Albion Tavern, Aldersgate-street, [illegible] assisted upon Mr. Lewis, the attorney, of [illegible] by-place, and presented him with [illegible] dishes, weighing upwards of 130 ounces, bearing an inscription in gratefu[illegible] acknowledgment of his great exertions in defending Benjamin Cole, a constable [illegible] at the Central Criminal Court. In justice to the man who was tried, it is proper to state that the principal officers, who actively investigated the case, are convinced that he did not strike a single blow which caused the death of any of the persons [illegible] that occasion.

EXTENSIVE ROBBERIES.—On Wednesday information was received that the premises, 34, Hertford-street, May fair, had been plundered of four sable muffs, a fur cape, a fur tippet, a fur boa, fourteen dollars, fifty-five shillings, and three two-dollar; from 47, Leicester-square, 25 sovereigns, and three £5 notes; also from the Duchess of Clarence, Vauxhall-bridge-road, jewels and other property, value £100; and from 3, Belvedere-road, Lambeth, a gold watch, with £190 in notes and gold; also from 361, Oxford-street, a number of costly rings, set with rubies, diamonds, and emeralds; also from the residence of W. Bosk, Esq., Rotherham, Sussex, a quantity of jewellery. Information was also received that Messrs. Pearson, Esq., Brighton Hall, Congleton, had been burglariously entered and costly silver plate value £200 carried off.

A DISTRESSING TRAGEDY [illegible] similar to that noticed last week at Camberwell, has been committed in the immediate vicinity of the Old Church, Bermondsey, viz the murder of a daughter, a girl about seven years of age, by her mother, who after committing the deed put an end to her own life. The unfortunate woman lived with her husband, James Newman, [illegible] ter, at 23, Bridge-street, close to the South-Eastern Railway, and [illegible] afternoon her little girl, who had been very much annoyed by some boys, scarcely entered the house when she uttered a loud scream, and almost immediately afterwards rolled down the stairs, with blood gushing from a wound in the throat. Having regained her feet she ran into the street, and [illegible] took shelter in the house of Mrs. Farmery, a [illegible] next door. Several of the neighbours were standing in the street ran to the assistance of the poor child, and, having [illegible] her on the floor of the shop, a number of handkerchiefs were procured and placed round the neck, in order to stay the hæmorrhage during the time lost in sending for medical aid. The poor sufferer gave only three or four convulsive struggles, when Mr. Marsh arrived, and at once sewed up the wound in the throat, and plugged the nostrils, but without any success, and death speedily terminated her sufferings. Upon entering the apartment occupied by the wretched family a fearful scene presented itself, for the floor was covered with blood, and large spots were seen the window and ceiling, whilst in the centre of the floor was extended the lifeless body of Mrs. Newman, with a large wound in the [illegible] extending in length from ear to ear. At the side of the body was found a razor covered with blood, with which she had perpetrated the frightful deeds. The wretched woman had been subjected to rheumatic fever some months back, and it is thought her previous illness had affected her brain. The coroner's jury gave a verdict in accordance with the above facts.

BIRTHS AND DEATHS.—The births registered in the week ending Saturday, October 11 Males, 741; females, 674; total, 1415. Deaths registered in the same period—Males, 494; females, 456; total, 950. The above return includes the whole of the metropolitan districts. The average number of deaths in the corresponding weeks in 1841-50 was 992; but, as population increased during the ten years and up to the present time, the average, to be rendered comparable with last week's mortality, must be raised in proportion to the increase. The average thus corrected may be stated as 1014, on which the deaths of last week show a decrease of 64. The zymotic or epidemic class of diseases produced 248 deaths, or more than a fourth of the total amount, while the corrected average is 265. The number of fatal cases ascribed to small-pox is 18, all of which occurred in children, and in some it is stated that the disease was of a very mild character. Vaccination is repeatedly noticed by the registrars. Amongst epidemics it is evident that scarlatina is making progress. In the last week of August it was fatal in only 26 cases. Since that period the weekly numbers have run thus:—29, 37, 41, 48, and in last week 55. Diarrhœa and dysentery continue to decrease; the number from these causes which in the first week of September rose to 200, has now, with the decline of temperature, fallen to 84. Four deaths from cholera were registered during the week. Typhus has lately shown a disposition to increase, and in [illegible] carried off 60 persons, of whom one-half were of middle age. One hundred cases of measles, besides the epidemics, the most important are fever (including phthisis), which numbers 173 deaths in the present return; that of affections of the respiratory organs, which numbers 111; diseases of the brain and nervous system, which number 97; and diseases of the digestive organs, which number 72.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean height of the barometer in the week was 29.743 inches. The mean reading of Saturday was 30.100 in. The mean temperature of the week was 54.6 degrees. The daily mean rose from 51 degrees on Wednesday and Thursday, to 61 degrees and 59 degrees on Friday and Saturday. On the first five days it was near the average of corresponding days in 10 years, but on Friday it rose 10 degrees above it. The wind blew from the south-west during nearly the whole week.

Mr. Kindersley, Master in Chancery, and Mr. James Parker, Q.C., will be the new Vice-Chancellors. There never has been any intention of conferring a peerage on Sir J. Knight Bruce.

The Queen of Portugal was prematurely confined of a still-born child on the 4th inst., but is considered out of danger.

It has been agreed to intrust the execution of the equestrian statue of her Majesty, in Glasgow, to Baron Marochetti.

PRESENTATION OF THE ADDRESS TO HER MAJESTY, IN THE EXCHANGE, MANCHESTER. (SEE PAGE 483.)

THE STATE BARGES ON THE BRIDGEWATER CANAL.

THE STATE BARGES ON THE CANAL.

In anticipation of her Majesty's visit to Worsley, the Earl of Ellesmere had two state barges constructed and most luxuriously fitted up, illustrations of which are given above. That occupied by her Majesty on the route from Patricroft to Worsley, a distance of two miles, was about 40 feet in length, and 8 feet 6 inches wide. The saloon was about 12 feet long and 8 feet wide. Both the exterior and interior were painted white, relieved by gold mouldings. The state chair in the saloon, together with the other seats, the window curtains, and the blinds, were all of crimson satin. The barge occupied by the Royal suite was both smaller and lighter: it was fitted up with great elegance, and every attention paid to the accommodation of the occupants. Upon the stern of each barge was emblazoned the Ellesmere arms, and the noble Earl's crest was also placed at the 'prow. The fore-part of each of the boats was open.

WORSLEY HALL.

Worsley Hall is a building of very modern date, the foundation-stone having been laid, we believe, in 1846. The mansion was completed in 1846, soon after which the Earl of Ellesmere came to reside at Worsley. It was erected from the designs of Mr. Blore, and is finely situate on an eminence, commanding a view of no less than seven counties. The style of architecture, as will be observed from our Illustration, is Mediæval, and seen from certain points the Hall is a very pleasing composition. The view obtained from the southern or garden fronts is extensive and fine. Carrying the eye directly south, the view ranges across the centre of Cheshire, the conical peak of the Wrekin towering up in solitary grandeur in the distance. On the east, the Derbyshire hills are very distinctly seen in their undulating altitudes; and on the north a glimpse of the Westmoreland mountains may frequently be obtained on a clear day. To the westward of the Hall the eye is carried over an area of comparatively limited extent, within which a population numbering millions is located, whose energy, industry and enterprise have achieved wonders unsurpassed in the history of the world. Within that area the huge cotton manufacture of the kingdom is confined; the laborious occupation of the miner, upon which that manufacture so largely depends, is pursued by many thousands; and the first experiments in two systems of transit which have materially aided that manufacture in its growth—the canal and the railway—run before the front of the Hall itself. It would probably be difficult to discover a place possessing more interest for a reflective mind than Worsley; and there can be no doubt, that, in glancing upon the landscape, her Majesty and her Royal Consort must have risen from the mere transient gratification of the vision to the contemplation of higher matter—the national interests which are found within it. Worsley Hall is a place as yet but little known to tourists, and not much spoken of in guide-books. The interior is not so extensive as might be supposed from an external view of the house, and consists of a larger proportion of bed rooms than is usual. The panellings of the principal apartments are of oak, and in character with the exterior of the building. Rich and costly undoubtedly the furniture is, but one is struck rather with the admirable taste which could combine so much of elegance and comfort. In the drawingroom is Landseer's celebrated picture of the "Return from Hawking," in which the artist has so admirably contrived to give the likenesses of the Earl and Countess, and of their family, as an historical illustration of another phase of society and its customs. A delightful piece of sculpture by Marshall, in white marble, "Paul and Virginia," is also to be seen here, but space is wanting to catalogue a tithe of the works of art the mansion contains. While upon this subject, we must not omit to notice, that in the neighbourhood of the modern mansion are three curious old halls. One of them is situated at the northern extremity of the gardens of the new Hall, and is constructed of brick, wood, and plaster, with pointed gables. This house, the successive residence of the Worsleys, the Masseys, the Stanleys, and the Egertons, was formerly remarkable as the depository of a series of spirited, grotesque, and allegorical heads, with an intermixture of ornamented designs engraved in oaken panels, brought from Hulme Hall Manchester, one of the manorial residences of the Prestwiches. This curious collection has since been removed by the present noble owner to the modern mansion. Another of the ancient halls of Worsley is a brick, wood, and plaster building called Kempnall Hall, adorned by two gates, now in decay, the property of Mr. L. G. P. Starkie, of Huntroyd. It is said to have been the residence of Nicholas Starkie, in 1594, when his family was under the supposed visitation of demoniacal possession. To the east of Kempnall Hall is the ancient pile of Wardley Hall, of the age of Edward VI., situated in the midst of a small woody glade, and originally surrounded by a moat, except on the eastern side. This edifice is of a quadrangular form, consisting of ornamented wood and plaster frames, interlined with bricks, and entered by a covered archway, opening into a courtyard in the centre. This hall has lately been repaired by Lord Ellesmere.

WORSLEY HALL, THE SEAT OF THE EARL OF ELLESMERE.

FINAL CLOSING OF THE GREAT EXHIBITION.

THE Great Industrial Exhibition of all the Nations of the Earth is no more. It has accomplished its noble destiny, and it takes up its proud position in the history of the nineteenth century as the most novel and unprecedented of the grand events of the past.

Wednesday last was the day on which the last act of the glorious drama was brought to its final and triumphant close. The morning was singularly unpropitious, the rain descended with ceaseless violence, from early dawn until the approach of night, and then the whole metropolis, in a dank, dark, dreary mist, presented the most wretched and gloomy aspect imaginable. The popularity of the Exhibition, however, overcame all obstacles which the miserable weather interposed to the enjoyment of those who desired to be present at the closing scene, and accordingly so early as ten o'clock the Crystal Palace was crowded with exhibitors, their friends, and a countless number of spectators.

In the Transept, on the site of the crystal fountain (which had been removed), a dais, covered with crimson cloth, was raised, and thereon stood the ivory throne belonging to the Indian collection. In front of the throne, a table, decorated with crimson drapery, was placed, and around stood several ornamental chairs, selected from various collections in the Exhibition. The dais was reserved for Prince Albert and the Royal Commissioners, whilst the chairs and benches more immediately surrounding it, were occupied by the representatives of the press, and various titled and distinguished visitors. In the Transept a number of seats were arranged for the lady exhibitors, the jurors, and their friends, and for others who had influence to obtain access to this reserved space; admission to which from either main avenue was cut off by barriers.

In order that the view from the Galleries and certain portions of the Building might not be obstructed, the various flags and banners with which the interior was ornamented, were all struck. Large objects, for instance Keith and Co.'s silk trophy, and the pile of Canadian timber, were also removed. Many of the statues that filled the north and of the Transept were swept away, and in a word, as much space as possible was cleared towards the centre of the Building, in order that the attention of spectators might be concentrated upon that point. As the time fixed for opening the proceedings of the day approached, the choir formed by the Sacred Harmonic Society took up its position in the South Gallery of the Transept, and, in the absence of Mr. Costa, Dr Wylde presided.

At 12 o'clock precisely, the cheering outside the Palace, and in the South Transept Gallery within, announced the approach of Prince Albert; and his Royal Highness immediately entered at the south central gate, preceded by the members of the Royal Commission, the Executive Committee, the architect, contractors, Foreign Commissioners, jurors, &c. As soon as the procession arrived within the gates, the organ and orchestra struck up the National Anthem, and the vast assemblage burst into one hearty and enthusiastic cheer, which made the walls and roof of the Crystal Palace ring again. The cheering and waving of flags and handkerchiefs were renewed again and again, until his Royal Highness arrived upon the platform, when still more vehement acclamations broke forth. The Prince was speedily on all sides, and appeared to feel the cordiality and heartiness of his welcome. He was attired in a plain morning dress, and his only distinctive decoration was the Star and Ribbon of the Garter. His Royal Highness then took his seat on the Indian throne, Lord John Russell occupying the seat immediately on his right. The Earl of Carlisle, the Bishop of London, in full canonicals, Earl Granville, and all the other distinguished personages on the platform, took up the positions assigned to them. Among those on or near the platform we observed the Earl of Clarendon, Sir George Grey, the Bishop of Oxford, Baron Lionel de Rothschild, Lord Colborne, Mr. Labouchere, M.P., the Duke of Devonshire, Mr. F. Baring, M.P., Sir R. H. Inglis, M.P., Mr. Pusey, M.P., Colonel Challoner, Mr, Fox Maule, M.P., the Chancellor of the Exchequer, Mr. Cubitt, C.B., Mr. Paxton, several of the foreign Ministers, &c., Colonel Reid, Mr. Dilke, Mr. Cole, Mr. Bidshaw, and the other members of the Executive Committee, Most immediately behind the Prince's chair, and the Foreign Commissioners and jurors occupied the front seats of the serried ranks that hemmed in the platform on all sides.

The proceedings were commenced by Viscount Canning, the President of the Council and Chairman of Juries, who read the following report on presenting the award of the juries to the Royal Commission. The vastness of the place rendered it almost impossible for his Lordship to be heard beyond the immediate circle in which he stood.

Having had the honour of acting as President of the Council of Chairmen of the Juries, it falls to me to lay before your Royal Highness and her Majesty's Commissioners the reports of the several juries upon the subjects submitted to them for examination, and the names of the exhibitors whom they have judged entitled to rewards.

In doing so, it will be convenient that I should state briefly the principle upon which, by the authority of her Majesty's Commissioners, the juries were constituted.

The various subjects included in the Exhibition were divided, in the first instance, into thirty classes. Of these, two were subsequently found to embrace fields of action too large for single juries, and were therefore divided into sub-juries. This increased the number of acting juries to thirty-four

Each of these thirty-four juries consisted of an equal number of British subjects and of foreigners. The British jurors were selected by her Majesty's Commissioners from lists furnished by the Local Committees of various towns, each town being invited to recommend persons of skill and information in the manufactures or produce for which it is remarkable. The Foreign jurors were appointed by authorities in their own countries, in such relative proportion amongst themselves as was agreed upon by the Foreign Commissioners sent here to represent their respective governments.

In the event of a jury finding themselves deficient in technical knowledge of any article submitted to them, they were empowered to call in the aid of associates. These associates, who acted as advisers only, without a vote, but whose opinions were of the greatest value, were selected either from the jurymen of other classes, or from the lists of persons who had been recommended as jurors, but who had not been permanently appointed to any jury.

Each jury was organized by a chairman, chosen from its number by her Majesty's Commissioners. The deputy-chairman and the reporter were elected by the juries themselves.

Such was the constitution of the thirty-four juries taken singly. They did not, however, act independently of each other, inasmuch as they were associated into six groups, each group consisting of such juries as had to deal with subjects in some degree of kindred nature; and before any decision of a jury could be considered as final, it was required that it should be brought before the assembled group of which that jury formed a part, and that it should be approved by them.

The chief object of this provision was, that none of the many foreign nations taking part in the Exhibition should incur the risk of seeing its interests overlooked or neglected, from the accident (an unavoidable one in many instances) of its being unrepresented in any particular jury.

Each group of juries received the assistance of a deputy commissioner and of a special commissioner, appointed by her Majesty's Commissioners to record the proceedings, to furnish information respecting the arrangements of the Exhibition, and otherwise to facilitate the labours of the juries composing the group.

It was further left upon them by her Majesty's Commissioners, that the chairmen of the juries, consisting of an equal number of foreigners and equal numbers, should be formed in a council, and that the duties of the council should be to determine the conditions upon which, in accordance with certain general principles previously laid down by her Majesty's Commissioners, the different prizes should be awarded; to frame rules to guide the working of the juries, and to secure, as far as possible, uniformity in the result of their proceedings

These are the most important features of the system upon which the jurors found themselves organised. I will now refer briefly to their course of action.

The Council of Chairmen, in proceeding to the discharge of their duties, were met at the outset by a serious difficulty. Her Majesty's Commissioners had expressed themselves desirous that merit should be rewarded wherever it presented itself, but anxious at the same time to avoid the recognition of competition between individual exhibitors. They had also decided that the prizes should consist in three medals of different sizes; and that these should be awarded, not as first, second, and third in degree for the same class of subjects and merit, but as marking merits of different kinds and character

The Council of Chairmen found, to their regret, that it would be impossible to lay down any definite rule for awarding of the medals, by which the appearance at least of denoting different degrees of success amongst exhibitors in the same branch of production could be avoided. Accordingly, after fully explaining their difficulty to her Majesty's Commissioners, they requested, as a course by which it might be materially diminished, that one of the medals might be withdrawn

Of the remaining two, they suggested that one, the Prize Medal, should be conferred wherever a certain standard of excellence in production or workmanship had been attained—utility, beauty, cheapness, adaptation to particular markets, and other elements of merit being taken into consideration according to the nature of the object; and they recommended that such a medal should be awarded by the juries, subject to confirmation by the groups.

In regard to the other and larger medal, they suggested that the conditions of its award should be some important novelty of invention or application, either in material, or process of manufacture, or originality combined with great beauty of design; but that it should not be conferred for excellence of production or workmanship alone, however eminent: and they further suggested that this medal should be awarded by the Council of Chairmen, upon the recommendation of a jury, supported by its group.

The principle thus described met the views of her Majesty's Commissioners, and was subsequently further developed by them in a minute which they communicated to the Council of Chairmen its application, however, was not without difficulties, especially as regarded foreign jurors. Many of these had taken part in the national Exhibitions of France and Germany; and to them the distinctive character of the two medals, and the avoidance of all recognition of degrees of merit between the recipients of prizes, were novel principles, and at variance with the practice of countries in which, as in that of Austria, the periodical national Exhibitions of the Continent has been to distinguish the various degrees of success attained by rival exhibitors.

It was to be expected, therefore, that cases would occur in which the Council medal, as the higher reward, would be asked for exhibitors whose claims were only somewhat stronger in degree, without differing in kind from those of others to whom the prize medal had been awarded. In such cases it became the duty of the Council of Chairmen to refuse their sanction to the award of the Council medal, without, however, necessarily impugning the alleged superiority of the article for which it was demanded. On the other hand, some instances have occurred in which they have felt themselves called upon so confirm the claim to a Council medal where the object for which it was claimed showed, in itself, ten merit of execution or manufacture than others of its class. It follows, therefore, that the award of a Council medal does not necessarily stamp its recipient as a better manufacturer or producer than others who have received the prize medal. It is rather a mark of such invention, ingenuity, or originality, as may be expected to exercise an influence upon future productions more extended and more important than could be produced by mere excellence of manufacture.

This is to be borne in mind in considering the list of awards which I have the honour to lay before your Royal Highness; I trust that it will be found that the juries have succeeded in doing justice to the exhibitors of every nation and class, and that they have not departed in any important degree from the purpose of her Majesty's Commissioners

One of the first instructions addressed to the juries by the Council of Chairmen was to the effect that the prizes should be awarded without reference to the country of the exhibitors, the Exhibition being considered in this respect as recognising no distinction of nations.

It is gratifying to add, that the Jurors of every country cordially acquiesced in this principle; and that, notwithstanding unavoidable difference of opinion, uninterrupted harmony prevailed amongst them throughout the whole course of their labours. It is not too much to hope that the happy influence of this intercourse may extend and endure far beyond the present occasion.

It is not necessary that I should detain your Royal Highness and her Majesty's Commissioners with a recital of the other instructions framed by the Council of Chairmen for the guidance of the juries, or with a detailed account of their proceedings in the discharge of their own functions.

The number of prize medals awarded is 2017. The number of Council medals is 180.

It is important to observe that no more than one medal of either denomination has been allotted to one exhibitor in the same class, although he may have contributed to that class more than one article deserving a reward

The juries have found it just, in framing their reports, to make honourable mention of certain exhibitors whose contributions were not such as to entitle them to receive a medal Some have supplied specimens of raw materials, which, although curious and instructive, do not imply any great merit of production on the part of the exhibitor; and others have furnished articles of manufacture, which, without reaching a high degree of excellence, are interesting as examples of the processes or present condition of the trades which they illustrate.

Before concluding, I trust I may be allowed to add that it would be difficult duly to estimate the time and labour expended by the jurors in their endeavour to discharge faithfully the important duty confided to them. The number of exhibitors was about 17,000. Of these, many, who were reckoned but once in the catalogue, contributed a large variety of objects, and came within the province of more than one jury; while in other cases, towns, and even whole countries, were counted as single exhibitors, although they presented for examination every kind of manufacture and raw produce which their ingenuity and natural resources could furnish. For example, the task of the juries involved the consideration and judgment of at least a million articles; the difficulties attending it being not a little increased by the want of a uniform system of classification of the subjects in some of the foreign divisions, and by unavoidable imperfections in the Catalogue

In these circumstances the juries can scarcely venture to hope that accidental omissions may not have occurred; but they have the satisfaction of feeling, that these, if any, are not attributable to a want of care or diligence on their part.

It now only remains for me, in laying the result of our labours respectfully before your Royal Highness and her Majesty's Commissioners, to offer, on behalf of my colleagues and myself, our grateful acknowledgment of the honourable confidence which you have placed in us; and to express the hope that we shall be found to have fulfilled our trust in a manner worthy of the noble undertaking in which we are proud to have been called upon to be a part.

Viscount Canning having concluded, and resumed his seat,

Prince Albert rose, and after the cheering which greeted him had subsided, delivered the following address:—

My Lord,—The Royal Commissioners are much indebted to your Lordship, and to the distinguished gentlemen of this and other nations, who have acted on the juries charged with the award of the prizes in the recent Exhibition, for the zeal with which they have undertaken, and the ability with which they have fulfilled, the task which has been allotted to them. The Commissioners are sensible that the services of these gentlemen have in many instances been rendered at great inconvenience to themselves, and at the sacrifice of very valuable time and important avocations. It is with pride and pleasure that they have noticed in the lists of those who have performed this service to the Exhibition, the names of men of every nation of the most exalted rank, and the most eminent reputation in statesmanship, in science, in literature, in manufactures, in commerce, and in the fine arts; of men in every respect well calculated not only to form a correct technical judgment upon the merits of the articles submitted to their inspection, but also to maintain the high character which the Commissioners have uniformly striven to impart to the Exhibition.

In no department of the undertaking, which has just been brought to a happy close, were greater difficulties to have been apprehended than in that in which your Lordship and your eminent colleagues have given your assistance. On this, the first occasion on which the productions of the different nations of the globe have ever been brought together for the purpose of comparing their several merits, not only were prejudices and jealousies to have been expected to interfere with the decision, but the nature of the case presented many difficulties of a formidable character, to the formation of a judgment which should appear satisfactory to all. The names of the jurors, indeed, when once made known, were of themselves a sufficient guarantee for that impartiality which was essential to the fulfilment of their task; and from all that has come to the knowledge of the Royal Commissioners during the progress of their labours, they are fully satisfied that every award has been made with the most careful consideration, after the most ample and laborious investigation, and upon grounds most strictly honourable, just, and candid

But, although the high character of the jurors would have fully justified the Commissioners in entrusting to them with the award of the prizes without fettering their discretion with any instructions whatever, had nothing more than an impartial decision been required, there were difficult as of a very peculiar nature inherent to the task, which seemed to render necessary the adoption of some regulations, that might, at first sight, appear to be somewhat arbitrary in their character. The differences in the means of various nations having necessarily impressed their several manufactures with different characteristics, it would seem to be almost impossible for those who have been in the habit of judging the productions of their own country by one standard, to enter fully into merits which can only be properly appreciated by another standard, since the very points which in the one case appear to be excellences, may, in the other, not unnaturally, be taken as defects. This consideration, and a knowledge of the evils which were to be apprehended from any accidentally erroneous decision, on a matter so intimately connected with the commercial interests of every nation, induced the Royal Commissioners to lay down, for the guidance of the juries, those principles to which your Lordship has referred.

It would perhaps have been more interesting to the public had the Commissioners instructed the juries to follow the practice which had usually prevailed in the exhibitions of individual nations, and to grant medals of different degrees, to mark the gradations of excellence among the exhibitors; but they feel that they have adopted the safer course, and that which was upon the whole most in accordance with the feelings of the majority of the exhibitors, in directing that no distinction should be made between their merits if their productions came up to the standard requisite to entitle them to a prize, but that all should, without exception take the same rank and receive the same medal.

The Commissioners, however, considered it right to place at the disposal of the Council of Chairmen a "Council" or "Council" medal in the case to which your Lordship has referred. Important discoveries in many branches of science and of manufactures have in the Exhibition been brought under the notice of the public: and it seems just that those who have rendered services of such a kind to the world, should receive a special mark of acknowledgment on an occasion which has rendered so conspicuous the advantages which the many have derived from the discoveries of the few

The grant of the Council medal for beauty of design, and for excellence in the fine arts, applied to manufacture, though made upon a somewhat different principle, is also compatible with the views of the Commissioners, since in the case in which it has been made it does not mark any greater comparative excellence of manufacture, or design to one producer a higher place than is accorded to others, but it is to be regarded as a testimony to the genius which can clothe the articles required for the use of daily life with beauty that can please the eye, and instruct and elevate the mind. Valuable as this Exhibition has proved in many respects, it appears to the Commissioners that there is no direct on in which its effects will be more sensibly and immediately perceived than in the improvement which it may be expected to produce in taste, and the impulse it has given to the arts of design; and a special acknowledgment is justly due to those who had afforded the best examples of art, whether pure or applied, and led the way in this interesting career of improvement.

It now remains for the Commissioners once more to return to your Lordship and your colleagues their cordial thanks; and they must not omit to include in these acknowledgments those gentlemen who have in various ways assisted you in your labours, particularly those who have acted with you as associates or experts for the purpose of assisting your judgment in matters requiring very minute and special knowledge of particular subjects; and the Commissioners are well aware that these gentlemen have been of the greatest service. In the hope that the jurors and associates might desire to possess a lasting memorial of the Exhibition, a special medal has been struck in commemoration of their important services

It is the intention of the Commissioners to publish not only the names of those to whom the juries have awarded prizes, but also the valuable reports which they have prepared on the state of science, and manufactures in the several branches of the Exhibition with which the juries have been conversant. The Royal Commissioners fully appreciate the zeal and talent displayed by those jurors who have accepted the laborious office of reporters to the juries; and no doubt that these reports will form most interesting records of this Exhibition, and will afford important materials for ascertaining the progress of human industry, at any future time, when another review of its productions, like the present, may be determined on.

It now becomes my pleasing duty on behalf of the Royal Commissioners, to deliver my most sincere acknowledgments and thanks for the hearty co-operation and support which the Exhibition has constantly received from foreign countries. The Foreign Commissioners, who have left their own countries for the purpose of superintending the illustration of their respective national industries at the Exhibition, have ever shown that desire to aid the general arrangements which alone has rendered possible the success of the undertaking

To the Society of Arts, which, by its exhibitions of works of national industry, prepared the way for this international Exhibition, the Royal Commission and the public feel that their acknowledgments are especially due, and the Commission have to thank that body for having formed one of the preliminary arrangements to an extent which justified me as their President in the application which I made to the Crown for the issue of a Royal Commission

The Commission have also to acknowledge the valuable services afforded by the eminent scientific and professional men, who, on the Sectional Committees, aided most materially in founding a scientific basis on which to rear the Exhibition.

To the Local Commissioners and members of Local Committees, but more especially to those who have undertaken the onerous duties of Secretaries, our best acknowledgments also are due. Without their zealous aid, it would have been impossible to have obtained an efficient representation of the industry of their respective localities.

And, finally, we cannot forget that all the labours of those thus officially connected with the Exhibition would have been in vain, had not been for the hearty good-will and assistance of the whole body of exhibitors, both foreign and British. The zeal which they have displayed in affording a worthy illustration of the state of the industry of the nations to which they belong, can only be equalled by the successful efforts of their industrial skill. Their admission have always had support and encouragement from them during the progress of the undertaking, and they cannot forget how cheerfully they submitted to regulations essential for their general good although sometimes producing personal inconvenience to themselves. If the Exhibition be successful in aiding the healthy progress of manufactures, we trust that their effort will meet with a due reward.

In now taking leave of all those who have so materially aided us, in their respective characters of jurors and associates, Foreign and Local Commissioners, members and secretaries of local and sectional committees, members of the Society of Arts, and exhibitors, I cannot refrain from remarking, with heartfelt pleasure, the singular harmony which has prevailed amongst the eminent men representing so many national interests—a harmony which cannot end with the event which produced it. Let us receive it as an auspicious omen for the future; and while we return our humble and hearty thanks to Almighty God for the blessing He has vouchsafed to our labours, let us all earnestly pray that the Divine Providence, which has so benignantly watched over and shielded this illustration of Nature's productions, conceived by human intellect and fashioned by human skill, may still protect us, and may grant that this interchange of knowledge, resulting from the meeting of enlightened people in friendly rivalry, may be dispersed far and wide over distant lands; and thus by showing our mutual dependence upon each other, be a happy means of promoting unity among nations, and peace and good-will among the various races of mankind.

His Royal Highness read throughout in a clear, distinct tone of voice, and was frequently cheered; but, from the vastness of the place, it was impossible that the sound of the human voice could be audible, except to a small circle around the dais. At the part of the Prince's speech in which the Foreign Commissioners were mentioned, all those gentlemen ascended the dais, and this part of the affair was loudly applauded. On resuming his seat, the Prince was again greeted with loud cheers.

This part of the ceremonial being concluded, the organs again gave

voice, and another verse of the National Anthem was sung. After which the Bishop of London offered up the following prayer:—

O Almighty and most merciful God. Father of all mankind, who hast made of one blood all nations of men, to serve and worship Thee, and by their works and works to glorify Thy holy name; who didst send thy only Son into the world to reconcile it unto Thee, and to unite all men in one brotherhood of holiness and love; we, Thine unworthy servants, most humbly beseech Thee to accept our offering of prayer and praise. From Thee alone proceed all good counsels and all useful works; and by Thee a one are they conducted to a prosperous end.

We acknowledge, with all humility and thankfulness, the gracious answer which Thou hast vouchsafed to the prayers of Thy people; and for their prayer, in blessing, with a wonderful measure of success, an undertaking designed to exhibit the glories of Thy creation, to promote the useful exercise of those faculties which Thou hast implanted in the sons of men, and to encourage the growth of peace and brotherly love.

We humbly thank Thee, O Lord, that Thou hast graciously prospered the counsels of him who devised, and of those who have carried out that great design; and that Thou hast mercifully protected from harm the multitudes who have thronged this Building. We acknowledge it to be of Thy goodness, that a spirit of order and mutual kindness, of loyalty to our Sovereign, of obedience to the laws, and of respect for the sanctity of thy Sabbaths, has been manifested by the people of this country, in the sight of those who have been gathered together from all parts of the world.

We thank Thee also, that Thou hast disposed the hearts of many nations to enter upon a generous and peaceful competition in those arts, which by thy merciful appointment minister to the comfort of man, and redound to thy glory, as the Giver of every good and perfect gift.

We devoutly pray, that all may be led to acknowledge thy power, wisdom, and goodness, in the achievements of man's industry and skill; and may depart to their several homes to "speak in their own tongues the wonderful works of God." Continue to them, we beseech Thee, thy favour and protection; let thy good providence conduct them in safety to their native land; and bless them with abundantly showered upon it; to save and defend all Christian Kings, Princes, and Governors, and to bless thy people committed to their charge. Give them grace, that they may in all things seek thy honour and glory; and be diligent in the maintenance of enlightening and purifying machinery of diffusing through the world the blessings of peace; and of extending the kingdom of thy dear Son, who has taught us to approach thee as our common parent, and to say

Our Father, which art in heaven, hallowed be thy name. Thy kingdom come. Thy will be done on earth, as it is in Heaven. Give us this day our daily bread, and forgive us our trespasses, as we forgive them that trespass against us. And lead us not into temptation, but deliver us from evil: for thine is the kingdom, the power and the glory, for ever and ever. Amen.

The grace of our Lord Jesus Christ, and the love of God, and the fellowship of the Holy Ghost, be with us all evermore. Amen.

The prayer being finished, the Hallelujah Chorus was given by the choir, aided by the tones of one of the large organs; after which Prince Albert retired, accompanied by the Royal Commissioners, and in a short time the gay throng separated, and retired from the Crystal Palace. The entire ceremonial occupied only thirty-five minutes.

The closing incident of the day has scarcely been noticed by our contemporaries. At five o'clock, when the bells began to ring out, there was a pressure towards the platform, which was soon occupied by the boys of her Majesty's Chapel Royal, in their state dresses, and by some of the most active members of the Sacred Harmonic Society, who, without musical accompaniments, sang the National Anthem, which was loudly encored and repeated. Loud cheers were then given for her Majesty, for Prince Albert, the Royal Commissioners, Mr. Paxton, Messrs. Fox and Henderson, &c.

After the Exhibition had thus been formally closed, it became known that the honour of knighthood had been offered to Mr. Paxton, to Mr. Cubitt, the engineer, and to Mr. Fox, the contractor.

Autograph letters from his Royal Highness Prince Albert were received on Thursday morning by the two special Commissioners, Dr. Playfair and Colonel Lloyd, and by Messrs. Cole, Dilke, and Scharf, Colonel Reid, of the Executive, thanking each, individually, for his efforts in connexion with the Exhibition, and expressing regret that the gold medal with which his Royal Highness had hoped to present them, as a memorial of their services, had not yet been received from the royal list. The letter to Dr. Playfair contained, in most flattering terms, an offer, which Dr. Playfair has accepted, of the appointment of Gentleman Usher to his Royal Highness, rendered vacant by the acceptance of the Governorship of Malta by Colonel Reid. This is the only instance in which the appointment has been held by a man of science; hitherto it has been given to military men.

THE LATE EARL OF DERBY'S MENAGERIE AT KNOWSLEY

The sale of the late Earl of Derby's menagerie was concluded on Monday, when some lots not sold during the previous week were offered to competition. This collection of animals is now scattered over the face of the earth, in England and foreign countries, having only produced about £7000; while it is stated to have cost nearly £10,000 per annum to keep it in efficiency. The prices were generally indifferent, and we shall therefore content ourselves by enumerating a very few of them. The Brahmin bull is fetched £30 and £40 each, and the cows £14 and £21. The llamas realised from £33 to £55. Two zebras were sold, one for £150, and the other for £140; and three kangaroos, £105. The birds were considered to realise much better prices than the animals. The eagles fetched from £10 10s. to £30 each; the emus, £60 the pair; the ostriches, from £16 to £70 each; the parrots and parrquets, from £1 4s to £5 5s each; the bustards, £16 the pair; East India cassowary, £38; grunes £36 each; red backed pelicans, £24 the pair. The black-necked swans, which have hatched two or three broods, fetched £174 5s. for four. Mr. Sclater-Booth, who has lately added to the Derby Museum, at Stanley, a valuable collection of birds, purchased a large number of the lots. Many of the birds were purchased for the Queen.

NAVAL AND MILITARY INTELLIGENCE.

THE OFFICIAL REPORTS FROM THE LATE ARCTIC EXPEDITIONS.—A committee is being formed by the Admiralty, of which, it is said, Admiral Bowles, M.P., will be chairman, to examine the reports which will be made by each of the respective commanders of the Arctic searching expeditions, and to report what, upon a close and careful investigation of the facts laid before them, further, if any, steps should be taken towards the same end, with the view of ascertaining the fate, of Sir John Franklin and his companions. Although the story of Sir John Ross and his informer, Adam Beck, is not entertained by any official person of the Admiralty, it would, perhaps, be as well for the committee, now that they have the intelligent young Esquimaux, Erasmus York, at hand, as well as Captain Penny's able interpreter, to examine him formally on the subject.

THE ARCTIC PROMOTIONS.—The promotions on account of the unparalleled services of the officers of Captain Austin's expedition will be made as soon as Captain Austin's report is made to the Admiralty.

RAISING OF REGIMENTS.—The Select Committee on Army and Ordnance Expenditure approve of the system of reliefs that has been adopted with respect to regiments serving abroad, as it provides for the regular performance of the military duties in the colonies, and at the same time secures a fair amount of home service to the soldier; and upon the principle that for every ten years abroad each regiment shall have five years at least of service at home, and in India, when, on account of the great distance and high rate the heavy expenditure involved in frequent interchanges of regiments, it has not been deemed expedient to relieve them more frequently than once in every fifteen years.

NOTION OF A JUDGE'S DUTY.—A writer in the *Daily Wisconsin* says:—"When I first came to Wisconsin I chanced to meet an enemy of Judge Hubbell; and being a stranger, and no doubt a little inquisitive, I asked him what were the grounds of his dislike to the judge? 'Why,' said he, 'I helped to elect him, and the very first suit I had in court he refused to charge the jury in my favour.' This reply astounded me. It was a solecism, pure enough, and suggested a long train of recollections on the policy and expediency of an elective judiciary."

ITALIAN RAILWAYS.—In the *Monitore Toscano* we have the official text of the treaty with the Governments of Austria, Tuscany, Rome, Modena, and Parma, for uniting the Tuscan and Lombard Railways, and which affects English interests, inasmuch as a junction is proposed with the lines of the Maria Antonia or Papal-Italian Railway. The portion of the railway through the Papal territories is very short, but it is necessary to effect the present combination, and as a basis for an extension of the railway system towards Ancona. The railway system proposed begins with two arms, one from Piacenza, through Parma, and the other from Mantua, and which will unite at Reggio, proceeding thence by Bologna to Pistoja or Prato, in the Tuscan territories, where a union with the Tuscan railway system will be effected. The Tuscan Government undertake to complete the line between Pistoja and Lucca. It is proposed that the several lines shall be conceded to a company by contract, and that the Governments shall give every support and assistance, not only by legislative powers, but by affording a guarantee.

CHESS.

TO CORRESPONDENTS.

HON SECRETARY, SCOTIA.—Those clubs who have any desires of availing themselves of Mr Löwenthal's services during his proposed tour through the northern and midland counties, should apply to him by communicating with him on the subject. Address to him at the St George's Club, Cavendish-square London

AN OXFORD FRESHMAN.—You can obtain the Stanton Chessmen, and the Perrott Chessboards, we have no doubt, at Spiers' and Son's well known establishment in the Strand.

BOMBADOM.—Cook's rare treatise, "Il Giuoco degli Scacchi" &c was first published in 1766. We doubt if there are half-a-dozen copies in being now

DISCIPLINE.—You are quite right with regard to Barry 8th. As to 6th the words Black and White have been transposed—look at it again, and you will soon discover there is no Mate in one move. Your diagram is wrong.

R H—It shall be so examined. We will suspect it is wrong. Problem of the so called deception usual ever much more trouble than they are worth, both to the composers and the solvers, after all nobody to go will attend them

DELTA.—Correct. Thanks.

J B, Staffordshire.—You are too easy and are defective also in constructive skill. Give a few more beastly "D Orville Boston Bangs" and other authors, letters you especially, to difficult task of composing Chess problems.

LONDONENSIS.—In moving to Queen a Pawn matches straight on to his eighth square unless at his last step he have to take an adverse Rook, when, of course, he makes the capture of the Pawn.

M H. Sclater.—Received with sincere thanks. They shall be duly examined and reported on shortly. A communication has been forwarded, and we shall await impatiently the promised consultation.

CRO.—The position is one of great difficulty. Let us know who has to play, and we will examine and decide upon the best move.

H L C A.—We are pleased to hear again from our old correspondent. His problems shall be reported on next week

C M I.—If two parties agree to play a game by *correspondence*, they do not fulfil their agreements by playing it over the board. We think the best plan in the case mentioned is to begin de novo

JOSEPH.—We have not got the work at hand; but, if you will write out the problem, we will satisfy you. 2 The first is Kt at R 7th second, at the

PROBLEM No. 404.

By the Rev. H. Bolton.

This fine position was originally published as a problem of six moves, but the true defence having never been given, it has been set down prematurely by several writers as capable of solution in five moves. We have the distinguished inventor's authority for declaring that it cannot be solved under six moves; and that the real merit of the situation has never been discovered.

White, playing first, mates in four moves.

THE CHESS TOURNAMENT.

The tediously protracted match between Messrs. Löwenthal and Williams has at length terminated, as was expected, in favour of Mr. Löwenthal. The score at the conclusion giving—

Löwenthal	.. 7 games
Wilkams	.. 5 ,,
Drawn	.. 4 ,,

In the contest between Messrs. Deacon and Lowe the former has gained four games, the latter two, and one game has been drawn.

MEETING OF THE LINCOLNSHIRE CHESS-PLAYERS.

The Lincolnshire Chess gathering took place, as was announced, on the 9th inst.; and, notwithstanding the day was unusually wet, and the remoteness and comparative obscurity of the place of rendezvous, a numerous and most respectable body of amateurs, consisting of the clergy and many of the resident gentry, together with visitors from some of the adjoining counties, and from the metropolis, were assembled to do honour to this, the first meeting of Caissa's votaries which has ever been held in Lincolnshire. Amongst the most conspicuous of the residents and visitors, all of whom appeared to take the liveliest interest in the amusements of the day, were—the Rev. Sir Charles Macgregor, Bart.; the Rev. H. Maclean, the Vicar of Caistor; the Rev. Horatio Bolton, the Rev. J. T. Bell, the Rev. S. Turner, the Rev. Mr. Padley, the Rev. Mr. Stevenson; George Skipworth, Esq., the Lord of the Manor; Dr. Mackintosh, Heaton, Esq.; R. M. Drake, Esq.; A. B. Skipworth, Esq., the hon. secretary of the Caistor Chess Club; J. T. Dixon, Esq.; J. P. Dixon, Esq., the treasurer of the Club; Dr. Buckley, Esq., Peter Löwenthal, the celebrated Hungarian chess-player; S. Newbury, &c., and several members of the Nottingham club, besides a host of amateurs from other parts of Lincolnshire.

The most attractive and delightful feature in the interesting reunion was the presence of a few bevy of ladies, most of whom were evidently well versed in all the intricacies of the beautiful game they had met to celebrate, and who took and manœuvred their pieces in the lists, with a gallantry and skill which excited general admiration even from the veteran players of the other sex.

Upon the termination of the day's sport, the party sat down to a handsome dinner, at the usual hours, and the festivities were carried on apparently to the enjoyment of every one until a late hour in the evening.

EXHIBITION TRAINS ON THE GREAT WESTERN RAILWAY.—One of the last Exhibition trains on the line consisted of 151 carriages, containing about 5000 persons.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

It is expected that the Earl Granville, Paymaster of the Forces, and Lord Seymour, First Commissioner of Public Works, will be shortly added to the Cabinet.

Napoleon Bonaparte, son of Jerome Bonaparte, Governor of the Invalides, at Paris, visited Chelsea Hospital on Sunday. He was received by the civil and military authorities, formally inspected the interior of the establishment, and particularly inquired into all the arrangements as to Lenten fare made for the comfort of the old veterans.

Upon the nomination of the Marquis of Salisbury, the Lord Chancellor has appointed William Fane de Salis and Louis C. Tompson Epenett, Esqrs. to be magistrates for the county of Middlesex.

Manten-lane, adjoining the Great Northern metropolitan railway station, Pentonville, is to be changed in name to "Derby-st," in accordance with the wish of the inhabitants of the neighbourhood.

In pursuance of an order from the Lords of the Treasury to that effect, the proper authorities of the revenue have given directions for thirty casts, marked "Caissa," and a quantity of plaster moulds, which were brought over in the ship *Fortunate* with the Nineveh sculptures, to be delivered at the British Museum, having been imported for deposit in that national establishment.

Count Batthyany, the celebrated Hungarian nobleman, the companion of Kossuth, in his exile in Turkey, has hired apartments in the Champs Elysées, Paris, where he purposes to lead a life of retirement.

M. Valée, keeper of the reptiles at the Paris Garden of Plants, observed, on the 14th July last, in the space reserved for turtles, six eggs lying on the sand. He took three of them, and placed them under the hatching apparatus; and on the 14th ult. he examined the eggs, and found a turtle about the size of a walnut, supposed to be the first that has ever been hatched by artificial means.

The King of Hanover remains so indisposed that he cannot receive his Ministers on any business.

A young man, named Murray, died on Thursday week, at Belfast, from the loss of blood consequent on the extraction of a tooth.

A fatal event occurred at the final meeting of the general assembly of Vaudois Cutto in encampments, held at Sayonce, in Haute Dauphiné, on the 10th inst. Whilst one of the members was making a speech, a cry of fire was heard to issue from the body of the crowd. It seems that one of the gas-lamps having been accidentally broken, a slight escape of gas caused an explosion. The gas was immediately turned off, but the sight of the fire had created a panic amongst a part of the crowd in one of the galleries. A rush was made for the staircase, which became so crowded that several persons were suffocated before it was discovered that all fear of fire was removed.

A new line in the Lake district is proposed to be called the Ulverstone, Furness, and Piel Harbour Railway.

An unusually large number of persons are now leaving the neighbourhood of Sheerness, and emigrating to America. Twenty-four persons connected with one family left at Michaelmas. Four labourers have recently gone, leaving their families, consisting of more than twenty persons, to the charge of the Sheppy Union.

The Royal visit to Manchester has not, we regret to say, passed over without three fatal accidents. A girl named Louisa Teal was shot in the eye by the wadding from a cannon, fired by a youth named James Alcock, and he has been committed for manslaughter. An infant was also squeezed to death in its mother's arms, on Friday night, and a man was crushed by a cart wheel against a barrier.

The Emperor of Austria has ordered the prosecution against sixty-three individuals implicated in the Hungarian revolution to be dropped. The sentence on the rest of the delinquents will be published before the end of the year.

The Duke of Nemours has purchased the domains of Leitomischel, in Bohemia.

The question between France and Germany relative to the navigation of the Rhine is expected to be settled definitively before the 1st of January. Meanwhile, Bavaria, Baden, Nassau, and Hesse have agreed to admit France to the enjoyment of equal rights of navigation on that stream up to December 31. The *Débats* de *Paris* asserts that Prussia, who had hesitated, has also consented to this arrangement.

Three "Bloomerists" made their appearance on the Boulevards, at Paris, on Saturday, and attracted so much inconvenient attention, that they were obliged to take refuge from the crowd in a brougham

The *New York Tribune* says that the use of the new female costume is greatly on the increase, and adds of the Bloomers:—"We are glad to observe a better behaviour towards them by the sovereign public. It is one benefit at least of the increased adoption of the dress. Bloomers are getting to be too general to excite surprise or ridicule."

On Saturday a new candidate made his appearance in the field for the purpose of contesting the county of Hertford against Sir Edward Bulwer Lytton, Bart. (Protectionist), at the next vacancy. The gentleman is Mr. C. W. Fisher, of Youngsbury, in the county. He comes forward in the Liberal interest.

Father Mathew is now in New York, expecting shortly to return to his native land. A letter has been written by Henry Cary to Mr Henry Grattan, warmly recommending a united effort on the part of our citizens to relieve the devoted apostle of temperance from the pecuniary embarrassments which he has incurred in the discharge of his self-sacrificing mission

The Ferrets papers state that his Grace the Duke of Leeds and party, at Mar Lodge, have brought down upwards of 90 fine stags in the forest during the season.

The Earl of Arundel and Surrey left Limerick on Thursday, with the intention of proceeding immediately with the Countess to a southern continental climate for the benefit of his Lordship's health, which is rather in a delicate state.

A duel, of a characteristic duel, in which one of the parties was slain, occurred in Brown-ville, Texas, on the 8th inst. On Sunday evening, about eight o'clock, says the American paper, a dispute arose between Mr. W. H. Harrison, of that city, and Mr. J. G. Clarke, of Port Isabel. A set of friends on both sides of shooters was proposed and accepted on the instant in the street. They went out, and at fifteen paces commenced the contest. Both pistols missed fire in the first attempt; but the deceased's pistol missed fire a second time; his antagonist fired, without effect, and again fired a second time, when he deceased fell by a shot near the region of the heart. A warrant was issued for the arrest of Mr. Harrison, but he passed the river into Mexico before it could be executed.

Some American gentlemen, who have been on a visit to the negro colonies of Canada, contradict the oft repeated assertion that the negro population of Canada are in a miserable condition. They report that it is colonised inhabitants amount to over 30,000, and are generally represented by the white population as good, moral, and industrious citizens; and that the destitution and suffering which is reported to prevail is exaggeration. The only assistance they stand in need of is in maintaining schools and the advancement of religion.

The *Austrian Correspondent*, a semi-official journal of Vienna, declares that the English Government, in tolerating the demonstrations in favour of Kossuth, acts contrary to national propriety, and to the obligations of international law.

The *Gazette of the Empire*, of Austria, announces that the Prussian Government has addressed to the Governments of the principal powers a circular note, in which it is stated that the Cabinet of Neufchâtel is under the government of the King.

According to the German papers, the Court of Rome intends establishing a Catholic Bishopric at Hamburg.

Several arrests have been just effected at Dresden. It is said that a plot has been discovered there, connected with that the heads of which were the King since arrested at Berlin. At Hamburg, also, perquisitions have been effected, and one writer, M. Brunnig, arrested.

No decision has yet been given by the Board of Inland Revenue to the several railway companies whom they have called upon for the payment of the passenger duty (one-eighth of a penny per mile) on the excursion trains; and it is, therefore, concluded by the railway companies, that the board will proceed in the Court of Exchequer in the next term for the recovery of the amount

An ordinance of the police placarded in Paris enacts that, in order to diminish the obstacles to circulation, the hawking about the streets, either in hand-carts or by hand, of household utensils, playthings, boxes, stationery, cutlery, or articles for sale, shall cease from the 1st of February next. Exceptions are, however, to be made in favour of certain streets, squares, and fairs for food, but they are not to be allowed to traffic within a certain distance of the shops.

Mr. William R. Callett, formerly a member of Parliament, chairman of the Chester and Holyhead Railway Company, of the Commercial Bank of London, and of the Imperial Slate Quarry Company of Ireland, and connected with a number of other public enterprises has surrendered in bankruptcy at Dublin.

The tower of Southmolton church, during a violent storm last week was struck by the electric fluid and seriously injured.

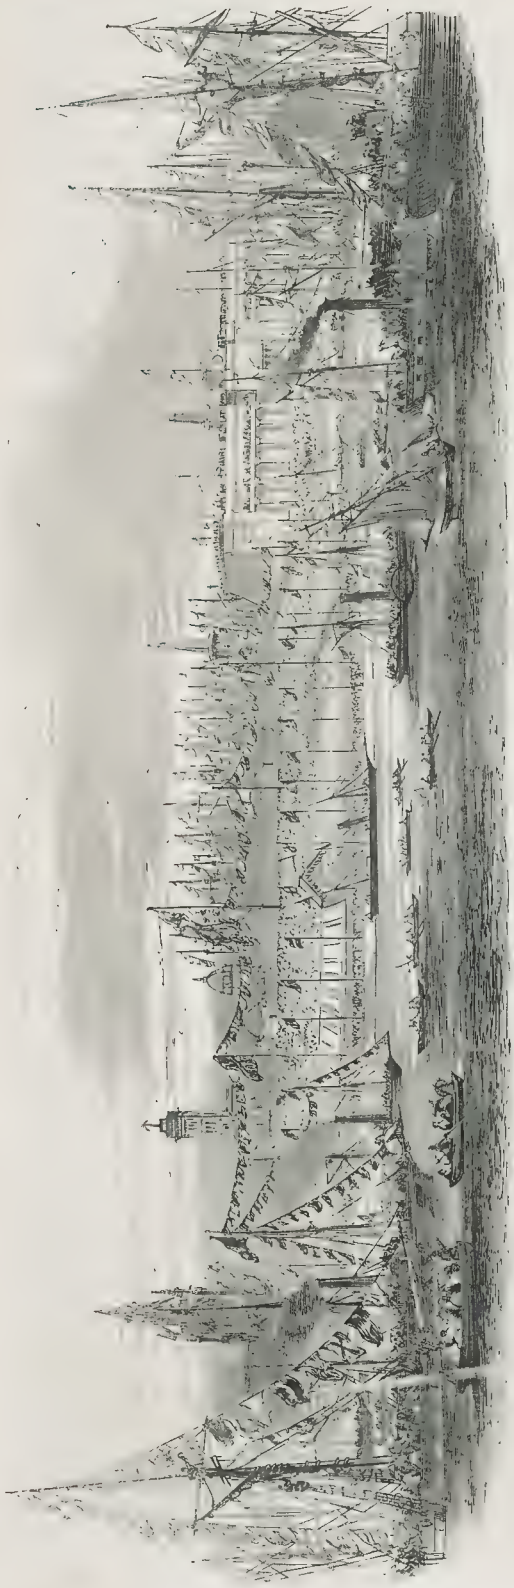
The number of schools received and from Government in the county of Northumberland is 10; and in the county of Durham 32. The number of apprentice-teachers is:—In Northumberland, boys, 27; girls, 14; total, 41: in Durham, boys, 64; girls, 37; total, 91.

Messrs Peto and Betts, the contractors for the Oxford, Worcester, and Wolverhampton Railway, have issued a notice that they will not allow the sub-contractors on the line to carry on the truck system.

Nothing in the way of actual literal communication with the Continent and the metropolis has yet been accomplished by the submarine telegraph, although the cable has now been "submerged" more than a fortnight, and it has the communication been carried out between the south Foreland and the south-Eastern Company's telegraph station.

The treaty between Bavaria and Austria, for regulating the navigation of the Danube, provides that the river shall be free of transit dues from its source down to Presburg.

The *Milan Gazette* of the 6th, states that the Adda, the Brenta, and other streams, have overflowed their banks, and that fears are entertained of an inundation not inferior to nor less disastrous than that of two years ago.



EMBARKATION OF HER MAJESTY FROM THE LANDING-STAGE, LIVERPOOL.

THE ROYAL EXCURSION ON THE RIVER MERSEY.—(SEE PAGE 492.)

THE "RACER" CLIPPER PACKET-SHIP, OF NEW YORK.

COLOSSAL INDIAN GUN.

We have been favoured with the accompanying Sketch of a very curious and colossal piece of Indian ordnance, lately discovered in the bed of the Bhagretti River, at Moorshedabad, in Bengal.

Unlike any cannon of the present day, this piece consists of two separate portions—the huge cylinder that forms the barrel, and the smaller piece, or breeching, which alone was loaded, and, when required for use, was lashed on with ropes or chains to the hinder part of the large cylinder, and fired.

The hollow cylinder (for it is open at both ends) is of wrought iron, and of very coarse workmanship, being constructed of iron hoops embracing longitudinal bars, but, by rust and age, all appearing to be one and the same uneven mass. The Cannon has been vastly strengthened by eleven powerful and massive rings, that encircle the cylinder at the distance of ten inches apart. An attempt has been made to ornament the face of the vent and last muzzle ring; the former by a rude Vandyke edging to the vent, the latter by a row of round bead-like excrescences. Between the muzzle and the last vent-ring are a quantity of bronze, or copper, longitudinal small bars let into the iron of the gun, probably for side sights, perhaps for ornament.

As no attempt ever appears to have been made to bore the gun, the cylinder is anything but smooth, the bars rising and falling in some places a full perpendicular half inch. How a cannon ball would behave passing over or out of such a bore, it is hoped, experience never informed the maker, as nothing but the most disastrous consequences could possibly result from firing such a dangerous machine. Many large guns exist in India, that have, at different periods, been cast by kings and princes, but have never been fired; the present Gun may be one of the many

The whole length of the hollow cylinder is 12 feet 2 inches; bore, 18½ inches; length of detached breeching, 4 feet 3 inches.

No interest is attached to the Gun, but it is believed by some to have been manufactured and intended to be used against the Mahrattas, who in days gone by, after having traversed nearly the whole of India, were in the habit of making descents upon the city of Moorshedabad.

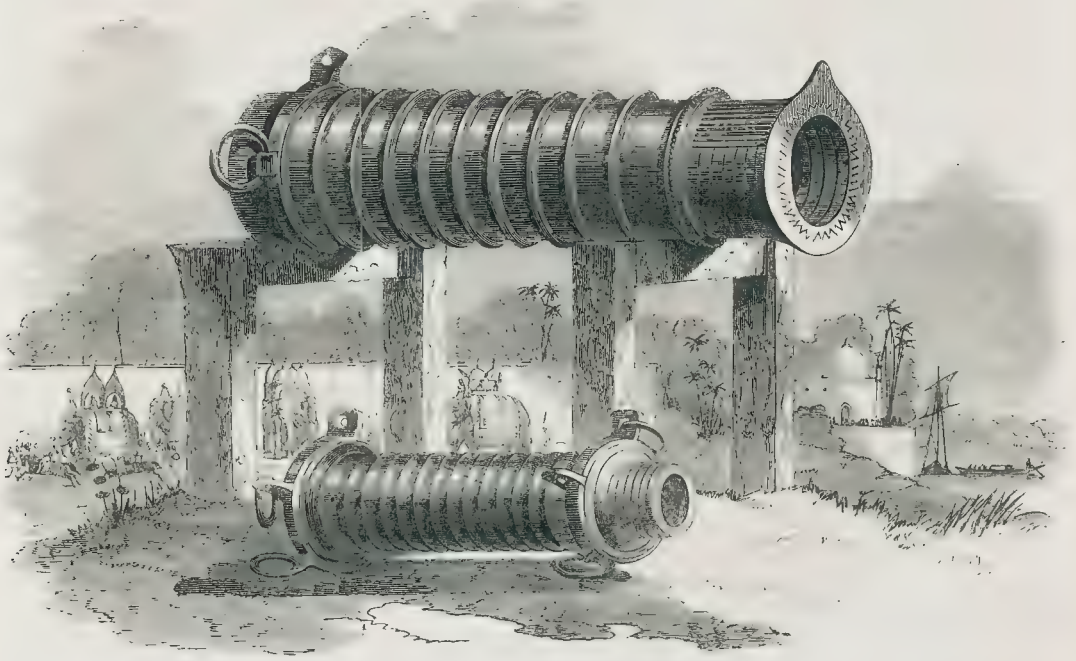
Mr. H. Torrens, the agent of the Governor-General at the Court of his Highness the Nuwab Nazim of Bengal, has had the gun exhumed from the sand of the Bhagretti River, and placed opposite to the Nuwab's Palace, at Moorshedabad.

THE CLIPPER SHIP "RACER."

H. W. STEELE, COMMANDER

This splendid vessel has recently been built upon the Merrimack River, Newbury Port, at a cost of £25,000. She is owned by David Ogden and others, of the city of New York, and is designed for the St. George's Cross line of Liverpool packets. The *Racer* is 200 feet long on the keel, 207 feet on deck, 42 feet 6 inches in extreme breadth of beam, 28 feet depth of hold, 7 feet between decks, and registered 1650 tons. Her estimated load line is 20 feet draught; she has 10 inches dead rise at half floor, and has three decks. She is long, and pretty sharp, yet not so much so as to prevent her being a large carrier, and at the same time a fast sailer. Her sheer is beautifully graduated; and, with her smooth finish, she presents a truly noble appearance. She is provided with large loading ports, one on each side, in the upper between decks and two on a side in the lower between decks. Her bow is ornamented by a finely carved and gilded representation of the head of a race-horse; and the name *Racer*, in heavy gold letters, occupies the trail-boards. Her stern is rounded, and has a beautifully formed appearance, it is ornamented with a large spread eagle, carved and gilded, and also her name and port of hail.

In stepping on board this fine vessel, one is surprised at the immense deck, which, spacious in itself, is so arranged as to give the best opportunity for working the ship. Her form here presents itself in great beauty. Between the fore and main mast is a large house, 47 feet by 18, in which are apartments fitted



COLOSSAL GUN LATELY FOUND IN BENGAL.

with cocked-hat ranges for crew and passengers, hospital, boys' room, vegetable room, ice-house, &c.

The 60-towing are the dimensions of a few of her spars:—Foremast, 84 feet long, 31 inches diameter; fore-topmast, 47 feet, 7 inches diameter, fore-top gallantmast, 26 feet 11 inches diameter; fore-royalmast, 16 feet, 9 inches diameter; fore-yard, 74 feet, 30 inches diameter: fore-topsail yard, 46 feet, 16 inches diameter; fore-royal yard, 34 feet, 8 inches diameter; bowsprit, 46 feet outboard, 34 inches diameter, jib-boom and flying jib-boom, 35 feet, 18 inches diameter.

The chief cabin, or, as it is called on the present deck, is a splendid apartment: the panels, framework, and part of the pilasters are of fine mahogany, the remainder of the pilasters and part of the cornice is rosewood, richly ornamented, in imitation of inlaid gold: and the cants of the pilasters are of *papier maché*, resembling carved rosewood, and serve not only for ornament, but ventilation of the state rooms. It will be seen, by reference to the size of the spars, that she spreads an immense amount of canvas in proportion.

MUSIC.

FOREIGN MUSICAL NEWS.

Meyerbeer, who was so dangerously ill at Boulogne, is now in Paris, still under medical treatment. He is ordered absolute quiet and cessation from his labours. To a director who lately applied to him about a new opera, he replied, "Spend no more about my opera than 100,000 francs (4000*l.*), however, is rallying, and, when well enough, will return to Berlin, his native city.

We hear of the large salaries received by the foreign *artistes* in this country, but it is a great mistake to suppose that singers only obtain large salaries in London. Celebrated vocalists in any country get their price. The following scale of salaries at the Italian Opera-house in St. Petersburgh, for the present season, from the 10th of October to the 30th of February last, will afford some notion of the terms paid on the Continent:—Grisi and Mario, 24000 each—80000*l.*; Madame Persiani, Pamberlick, Tamburini, and Ronconi, 12000 each.

Madame Castellan is engaged for the Italian Opera-house at Madrid.

DEATH OF ALEXANDRE LEE, THE COMPOSER.—We regret to announce the decease of this popular composer, after a long illness, at his residence in Newton terrace, Glasgow, on Saturday, the 8th inst. On that very evening a concert had been organised for his benefit, at Frampton's Dancing Academy, in the York-road, but he expired in the afternoon. Alexander Lee was the son of Harry Lee, a known boxer in his day, whose son had the patronage of the late Lord Barrymore. Mr. Alexander Lee, at one period was leader of Drury Lane Theatre, in partnership with Captain Polhill. He had been musical director of the Olympic and Strand Theatres, of Vauxhall Gardens, &c. He was the music for the "Invincibles," which had such a run, while Madame Vestris was in the chief part, at Covent Garden Theatre. To name the numerous other [illegible] would occupy a large space, nor a more pretty song [illegible] than "Flow away to the mountain's brow," "Come where the turn[illegible] is," "Oh, no subtonsible wife," "Rose, pearls, moon," "[illegible] dwell with me," "[illegible]," "Meet me at [illegible]," "[illegible]," "Who will [illegible] in on Le grass," "[illegible] where the bliss bees," &c. Many of the above positions will perpetuate the name of Alexander Lee as a composer of the [illegible] school of unaffected melody. He never was well since the death of his wife, Mrs. Waylett, the vocalist.

MOSES BENEDICT.—A most melancholy affliction has befallen this celebrated composer and pianist. After his safe return from his year's trip in the United States, with Jenny Lind, he visited his native town, Stuttgardt (Wurtemburg), with his family, and then went to Paris, on his way to Naples to join Madame Benedict's children. On the Rhone steamboat, at the Lyons bridge of St. Esprit, the funnel of the boat caught the arch, was broken in two, and fell on the deck, mortally wounding Benedict's youngest boy Edward, twelve years of age. He was removed to Avignon, and there died in the arms of his distracted parents. The body was embalmed, and sent to Paris, with the unfortunate youth's tutor, to be buried in that capital, Benedict being compelled to continue his journey to Naples, in consequence of the precarious state of health of Madame Benedict. The bridges on the Rhone are very dangerous when the river is high, and the Government ought long since to have taken steps to make the passage of the single arch of the Esprit available, less perilous.

THE THEATRES.

HAYMARKET.

On Saturday the season terminated with the opera of "Somnambula," the comic drama of "Grandmother Grizzle," and the farce of "Grimsleys, Bagshaw, and Bradshaw?" on which occasion Mr. Webster delivered the valedictory address, in which he attributed the late prosperity of his theatre to the Great Exhibition. Since the opening of the Crystal Palace on that night, 180,000 persons, said Mr. Webster, had passed his windows, but for whose house, he stated, would remain closed until the 31 of November: it has, however, been reopened for four nights during the present week, and was finally re-closed on Thursday.

On Monday, Knowles's play of "Love" was performed, for the benefit of Mr. Frederick Webster an occasion noticeable for the *début* of his pupil, Mr. William Morgan. This gentleman has many requisites for the stage in person and bearing, but is deficient in voice. His style, however, is careful and reverential, and occasionally pointed. Miss Reynolds played the *Countess* with considerable effect, and Miss Cooper impersonated *Catherine* very cleverly.

LYCEUM.

On Monday, "The Game of Speculation" was played for the benefit of Madame Vestris, being the last night of the season.

SADLER'S WELLS.

On Friday week, Miss Fanny Vining made her first appearance at this theatre, in the character of *The Wife*, in Mr. Knowles's charming play of that name. Miss Vining will be a great acquisition to this stage, and played with decided force and pathos. Mr. Marston, as *St. Pierre*, was remarkably effective, and Mr. Rousseau, as the considing Duke and husband, justified the promise which his previous attempts had suggested. On the Thursday, "Much Ado about Nothing," was revived, and Miss Vining, in *Beatrice*, exhibited much talent.

OLYMPIC.

The sacred basis on which the opera of "Azaïl" is built should have preserved the subject from the profanity of burlesque. The management of this theatre, and the heroine of plays, have thought otherwise. The prologal is here treated as the son of a Jew Gypsey (whatever that means); the father is an old clodsman, and *Jeffida* a gypsy girl. Vauxhall, the Casinos, and the Crystal Palace are the metropolitan attractions by which the lad is seduced from the roadine of humble duty; and Hampstead Heath is the scene of a series of visionary prophecies of the probable result of vicious courses. The jests and parodies were sufficiently amusing, and the incidents altogether of the "fast" school. The piece has been illustrated with co-ity accessories. It was first played by a small dramatis of faces, termed "Caught in his own Trap," turning on a point of French law, by which lady, having three interviews with a gentleman, is entitled to demand his hand in marriage. Mr. Compton personation of *M. Veyrac*, a French Parisian lawyer, is one of the actor's best. The novice he gives is turned against himself; *Madame Vondarbuskit* (Mrs. Alfred Phillips) contrives to fascinate him, despite of his [illegible] [illegible] [illegible]

MURRAY'S READING for the RAIL; or, Cheap Books in a large readable type, to be Published occasionally, and varying in Price from One Shilling and upwards.
The aim and object of the Publisher in this New Series may be summed up in a few words. He intends to issue a Series of Books which shall be sound and entertaining in their character, sometimes original, sometimes selected from the Back Numbers of Periodicals which are for the most part offered to the notice of Rail way Readers. His designs to introduce a class of books to those who have hitherto not been in the habit of purchasing, or who have merely to read on the Rail way, and thrown aside at the end of the Journey, but which shall deserve a permanent place on the shelves of the library. It will thus form an appropriate sequel to the "Home and Colonial Library."

THE GREAT EXHIBITION.

THE EXHIBITION AND ITS MANAGEMENT.

We resume this week the subject of the Exhibition—its origin and its management—on which we offered in our last some few preliminary observations.

If the novelty of the undertaking occasioned the promoters of it to be altogether unprepared for the vast success, in a pecuniary point of view, which has attended it, so it may excuse them for many errors of omission and commission by which the opportunities which such an undertaking might have afforded have not been turned to the very best account; and if we now proceed to review the management of the Executive of the Great Exhibition, it is simply by way of providing a lesson of experience for the regulation of future undertakings of the kind which may occur in this country or elsewhere. Many of the sins of the Executive may be traced to the simple fact of their want of means in the outset, and their doubt as to amount of means which the sympathy of the public might place at their disposal. The project had to work its way into the favour and into the pockets of the public, and that against a strong tide of prejudice and opposition. And in this they had still a double task: they had to promise an alluring Exhibition to the slight-seeing public, and they had, at the same time, to canvass the manufacturers and producers for contributions in aid of the general display; and we know that in very many instances it was not till the very last moment that the local committees succeeded in inducing proprietors of goods to send them in, and then it was very often done as a personal favour to the energetic agent. In the midst of all this doubt and struggle it was that Mr. Paxton's letter came out, which to all the world seemed very like a tender of resignation of business on behalf of the whole body: and by many of the Manufacturing and Commercial families was exasperated into an actual declaration of bankruptcy. Added to this was the rumour that the Building itself was not water-tight, and could not possibly outlive the heavy rains at that time prevailing.

In this critical position of affairs, the Press, whose agents had been admitted to the inside of the Building, and who reported its actual condition, and its gradual furnishing forth with goods of all sorts, from all parts of the world, came to the rescue of the apparently devoted enterprise; and many British producers, who had hitherto held aloof, found themselves forced or shamed into sending in contributions to compete with those so abundantly transmitted by foreign rivals. One little month of tolerably fine weather, one little month of newspaper spoon-feeding, changed the whole aspect of affairs. Season tickets were eagerly bought; and when it was announced that her Majesty would honour the World's Industrial Congress by inaugurating its proceedings in person, the public became worked up to the widest pitch of excitement to obtain ingress within the walls of the Crystal Palace. And here the Commissioners committed, or meditated the commission of, two grave errors, one upon the other; though they were fortunately prevented from carrying either into execution by the loud and unanimous voice of public opinion, and the good sense and good feeling of the Queen and the Prince Consort. The one was the proposal that her Majesty should inaugurate the greatest public institution of modern history in private, attended only by the Commissioners and a retinue of beefeaters and policemen. In private! Let those who recollect the vast and animated assemblage, which cheered and roared with ecstacy when the Queen of "Merry England" walked along the main avenues of the Crystal Palace on that glorious 1st of May, and then the shout of exultation when she declared the Exhibition open, contemplate the amount of *lèse majesté* and the depth of ignominy which would have been involved in denying her Majesty and her loyal subjects and foreign guests the heartfelt pride and satisfaction of that day's ceremonial! The other error of the Executive at this time, when it was determined that the public should be admitted, was the attempt to make a show of Royalty, by raising the price of season tickets—an attempt which, as soon as it came to the knowledge of the Prince President of the Commission, he very promptly reprobated and prohibited.

The exclusion of exhibitors was an error—a serious error, as regarded the enjoyment of the public, the results of the Exhibition, and the interests of the exhibitors. And this stupid injustice was perpetrated and persisted in. In the same paltry spirit which devised the idea of setting a premium upon the gracious smiles of our Queen: which farmed out the responsibility and privileges connected with the publication of the Catalogue as a property, instead of working upon it as a labour of love tending to the honour and usefulness of the whole undertaking; the same spirit of penury which formed the principle of the monopoly of retailing tea, coffee, ices, and "other light refreshments," at heavy rates of charge, and to caterers who insisted upon demanding 1d. for a glass of "iced water" to wash down a thimbleful of ice, in face of the announcement that "water is given away," and in which, up to the close of the Exhibition, a deaf ear was turned to all suggestions for an abandonment of, or even a reduction upon the absolute shilling, on behalf of numerous industrious classes, as policemen, omnibus drivers, public schools, &c., who have but few opportunities of participating in the intellectual enjoyments of their fellow-citizens; the same spirit of penury and pence-gathering which originated many a little job, to the disparagement of the public interest, and the enjoyment of their own Exhibition for was not the Exhibition the public's own, when it was made up of voluntary contributions from the manufacturing community, stored in a house built upon public property, and rescued from all risk of failure by the shillings of the multitude? All that the Commissioners can lay claim to is the glass-house, and that they only had through a happy accident; and which they wanted to get off their hands before the time arrived for opening its doors. The bare walls were thrown open to the public, and the public provided the entertainment, and found the company and the money. How little the Commissioners have done to reciprocate the liberal spirit of the public—to promote the interests of exhibitors, which was a secondary inducement—and the interests of science and knowledge, which was the paramount inducement to the undertaking—are questions which are very fairly debatable by public journalists.

In assembling together the richest assortment of natural products and manufactured wares, of machinery and philosophical instruments, from all quarters of the globe, which the world ever saw collected together, the first step was taken to the acquirement of a full knowledge of the state of human science and industry over the whole face of the earth; and the materials so obtained, if properly made use of, would have formed a complete store of practical knowledge, a perfect encyclopædia of human intelligence, which would have been invaluable as an authority—a starting-point for the future. But how if half these productions were promiscuously thrown together, badly classified, and therefore unattainable without guides or direction-posts? how if many of them were so inclosed under glass cases that it became impossible to examine their properties? and how if the peculiarities of nine-tenths of them were unintelligible to the general observer, without explanation from the owner or producer? and how if the owner or producer was excluded from the privilege of presiding over the portion of the intellectual banquet which he had provided? In all such cases, the Exhibition became an unprofitable and provoking blank and a delusion unless, indeed, the Executive, who had driven away the legitimate and natural guardians of the various objects, had taken the task of expounding their properties upon themselves. But they did no such thing. They sold their birthright in the Catalogue for a mess of pottage (£2300, and "a Royalty" of twopence upon every copy sold in the Building), as a commercial speculation. And when, in the excitement of catering for advertisements, the contractors forgot to take the necessary steps and engage the necessary assistance to collect and arrange the contents of the Catalogue; when the Catalogue was discovered to be a heavy humbug, from which no information could be obtained; and when the "second edition," and the "second corrected edition," and each succeeding "corrected edition," was found to be as unintelligible as the original Simon Pure: when, in despair, the public—having spent successive shillings in successive visits and successive purchases of catalogues and guides and hand-books—all rushed wildly and hopelessly about, enquiring for Class A 995, or the Naval Architecture department, or the Raw Produce department, what did the Commissioners do? They issued a hand-bill, in which they announced that they had found out another job, involving another shilling's worth at their disposal, and had already farmed it to an enterprising commercial company. This document, which deserves to be preserved as a matter of history, ran as follows:—

> CRYSTAL PALACE.—Approved and qualified persons to act as guides, showing visitors through the Building by the hour. Parties:—Parties not exceeding three—First hour, 6d. each person; every other hour, 4d. Parties not exceeding six—first hour, 6d. each person; every other hour, 4d. each person. N.B.—The person acting as guide will show all the principal objects in the Building. Apply to the Superintendent at the south entrance.—— —— Office, —— street, City.

After this, to ask your way, to ask the simplest question of a policeman or any functionary in the Building, was constructively an infringement of the rights and privileges of the Guide Company, and such applications were met with the reply—"There are guides appointed, and if you want information you must pay for it."

The foreign exhibitors, particularly the French, with their older experience in expositions and bazaars, perceived the importance of having some one on the spot to display and explain the merits of their wares, and generally did so at the cost of a season ticket; and, as a consequence, a very striking contrast was presented between the aspect and atmosphere of the foreign and the British departments. In the former, you were greeted with the light of smiles, welcome to examine, invited to touch—we will not say urged to purchase, the various beautiful objects, which, without such means of scrutinising, might have lain as dead lumber in an outhouse, for all the spectator cared: in the latter, with few exceptions, all was still life—a huge town of shops without a shopman amongst them; and if you did but look a little closely, and pull out your pocket-book to make a note, one of the thousand extra policemen appointed for Exhibition purposes interrupted you with an authoritative "You must not copy anything;" and if you did but lay a finger upon pot or plough-handle, Scotland-yard was in arms! And with respect to the locking up of goods, we will only instance one branch of manufacture, that of Locks and Keys, upon which we were anxious to obtain all the information we could for publication in this Journal; yet, although we made a dozen journeys to the hardware department, and hovered anxiously about the glass cases filled with some five hundred different kinds of infallible locks, we were not until the close of the Exhibition enabled to inspect, or obtain any information concerning any one of them.

The regulation prohibiting the affixing of prices to articles exhibited might have had something to recommend it in the eyes of the Commissioners; but, upon the whole, it appears so clearly to be at variance with the grand object of the Exhibition—that of obtaining and promulgating information upon all points relating to the manufacturing interests and processes, both of ourselves and of other nations—that it ought not to have been persisted in after its impolicy had been pointed out. And surely the price at which any article may be produced is an important element of the value of the process by which it is produced; and to deny the manufacturer the privilege of announcing this particular, was as absurd as it was unjust. The exhibitors, however, soon got over this difficulty by resorting to the distribution of prospectuses, with priced lists of all their wares, and steam presses in one part of the Building were kept hard at work, throwing off reams of puffs for exhibitors in other departments; and the Executive Committee were so amused and gratified with this contravention of their orders, that they set about collecting, in the Building itself, fifty copies of all the puff-mongery of the Great Exhibition, for the purpose of being bound up and deposited in the Bodleian and other public libraries! In addition to this, the agents for the Foreign departments very early resorted to the expedient of printing "priced catalogues" of their goods; the Zollverein, Russia, Saxony, Austria, had each their handbook, completed with their details of £ s. d.; and very soon after they will be as materials for a new edition of the "History of Prices;" but when it came to the turn of the British exhibitor, he was referred to Messrs. Spicer and Clowes, "the contractors," who demanded a shilling a line for the insertion of the descriptions and prices of goods. In short, the Great Exhibition was converted into a job, in its greater as well as its minuter details.

We have not left ourselves space in this article to review the general contents of the Exhibition, and to see how far they have filled up the scheme which the world's eye might have framed for it. We cannot help observing, however, that they have been wanting in many essential particulars, and were too generally not disposed to advantage The manufacturing appliances of this country, which ought to have been the principal features of the whole affair, have been very inadequately represented; many branches of manufacture wholly absent; and the machinery which was sent in, consigned to a sort of back-shop, where they were crowded together, without order of arrangement, without space between them to inspect them in operation; and many of them, Nasmyth's steam hammer, to wit, not in operation at all, owing to the want of steam. The collections of raw materials, instead of being classed in groups comprising the various contributions from all parts, and those groups in convenient proximity to the machinery which respectively related to their manufacture, were scattered about in all directions, generally in the backways, in such a manner as to be utterly useless for the purposes of scientific research. Our vast navy and commercial marine; our shipbuilding has been wholly unrepresented, with the exception of a top model of a ship in the Transept, and a few models of lifeboats stowed very carefully out of sight, in the rear of the Western Gallery—a seclusion in which we only discovered them after many a fruitless voyage of discovery. The exclusion of works of painting from the Great Exhibition we have already, in a previous article, commented upon, as most ill-judged. If it did nothing else, it converted the so-called Fine Art Court into a mere toy-shop—an object of ridicule to all observers of mature age.

In short, money-getting being the object, everything was sacrificed to show and sound; the most gaudy inutilities and commonplaces were thrust into the foreground, and plain usefulness was ordered to the rear, to shift for itself where it could. Is it to be wondered at, that, conducted upon this principle, the Great Exhibition of Industry became, to a great portion of the multitudes who thronged its avenues, an idle lounge—a huge bazaar—a covered Regent-street—a promenade *concert monstre*? Amid this state of things the Press again came to the rescue; —its various agents prying and scrutinizing in all quarters, and in spite of many difficulties, proceeding to unravel the web of confusion in which things left to shift for themselves had resolved themselves, to drag from concealment and expound to the reading public objects of real importance, which otherwise have been in a great measure overlooked; and their labours they have preserved materials which will prove of value in aid of the history of art and of the progress of society. On the occasion of any future Exhibition of the like kind, however, those who have the management of it will do well to avoid some of the errors of judgment which we have felt it our duty to animadvert in the foregoing columns.

THE GREAT EXHIBITION—OFFICIAL AWARD OF THE PRIZES.

NOTE.—WHERE NO COUNTRY IS MENTIONED, THE EXHIBITOR IS OF THE UNITED KINGDOM.

UNCLASSIFIED COUNCIL MEDALS.

His Royal Highness Prince Albert, for the original conception and successful prosecution of the idea of the Great Exhibition of 1851, joint medal with that granted for the model lodging-house in Class VII.

Chamber of Commerce, Lyons, for the collection which it exhibits, in which is shown the general progress made through their exertions in the silk manufactures of Lyons.

East India Company, the Honourable, for the very valuable and extensive collection, illustrating the natural resources and manufactures of India.

Egypt, the Pachs of, for the very valuable and extensive collection, illustrating the manufactures and natural resources of Egypt.

French Minister of War, for the part taken by him in exhibiting the valuable collection of raw products from Algeria.

Spain, the Government of, for the very valuable and extensive collection of raw products, showing the natural resources of Spain.

Tunis, the Bey of, for the very valuable and extensive collection, illustrating the manufactures and natural resources of Tunis.

Turkey, the Government of, for the valuable and extensive collection of raw products, showing the natural resources of Turkey.

CLASS I.—(Jury 1.)

MINING, QUARRYING, METALLURGICAL OPERATIONS, AND MINERAL PRODUCTS.

COUNCIL MEDAL.

Bérard and Co, France, process for washing and purifying coals

Brockedon, W, Cumberland lead, condenser and blocks

Estivant Brothers, France, brass of superior quality

Glittler, W, Prussia, treatment of arsenical ores, and the extraction of gold from them

Klesist, Baron von, Austria, iron of superior quality and manufacture

Krupp, Fried, Prussia, cast steel of superior quality

Patinson, H L, process for treating lead ores, and separating silver from lead

PRIZE MEDAL.

Abercarn and Gwythen Collieries Company, process for blasting, &c.

Adirondac Manufacturing Company, New York, United States, steel and iron

Amand, Joseph, Belgium, quality of iron

Archibald, G D, Nova Scotia, cast iron

Bagnall and Pearson, section sample of coal from South Staffordshire thick seam

Bagnall, J, and Sons, rod iron

Bardy, A T, France, quality of steel

Bickford, Smith, and Davey, safety fuze

Bird, W and Co, collection illustrating the iron trade

Blackwell, S, collection of iron ores, with descriptive catalogue

Bowling Iron Company, the, Class XXII., quality of iron

Buccleuch, the Duke of, apparatus for condensing the fumes of lead works

Byers, J, the manufacture of lead

Chaudoir, C and H, Belgium, brass and brass tubes

Cocker, Samuel and Son, Class 22, quality of steel

Cosin, J R, France, polished granite and serpentine

Delloye-Matthieu, C, Belgium, iron, sheet iron, and steel

Demidoff, Messrs., Russia, iron and copper

Derville and Co, France, marbles from the Pyrenees

Deyeux, —, France, crucibles

East India Company, the Hon, India, Woots steel and manufactures

Ebbw Vale Company, the, collection of manufactured iron, models, &c

Egger, Ferdinand, Count Von, Austria, iron and steel

Ferrier, Hou J, Canada, quality of iron

Fischer, Anton, Austria, steel and iron, iron wire

Gallicher and Co, France, quality of iron (known as Berry iron)

Gandhiot and Co, France, iron tubes

Gimarch Brothers, Bavaria, iron and steel

Graham and Hallett, South Australia, specimens of copper from the mines of Burra Burra

Grenvus, J W, specimens of slates, &c, from Festiniog

Grouit and Co, France, copper tubes, &c.

Guenvin, Bouchon, and Co, France, mulstones

Hird, Dawson, and Hardy—Low Moor Company—(Class XXII), quality of iron

Huth and Co, Prussia, steel

Johnson, Cammell, and Co (Class XXII), quality of steel

Johnson and Matley, collection, metallurgic

Jonghaus and Venator, Duchy of Hesse, geological maps

Kenigshütte, Royal Iron Foundry at, Prussia, cadmium

Kongsberg Silver Works, Sweden and Norway, silver ores, ultrastrive

Landau, S, Prussia, lava mill-stones of Anan'cherd

Leibrand, Falkenroth, and Co, Prussia, steel

Leneuse Asturian Company, Spain, iron and steel

M'Donald, Major C, collection of turquoises

Malapana, the Royal Iron Foundry at, Prussia, zinc

Mansfeld, the Combined Mining Works of, Prussia, copper and copper smelting

Mehu, J M F, France, apparatus for raising minera and materials

Meng, C, collection of grindstones, hones, &c.

Mila, R, plan for opening and closing doors in mines

Monchsur, F and A, Belgium, quality of iron

Montreal Mining Company, Canada, copper manufacture

Morris, Jones, and Co, United States, plate iron

Motala Iron and Engine Works, Sweden and Norway, quality of iron

Muessler, M L, Belgium, safety lamps

Nassau, the Government Engineers of Mines of, Nassau, collection of mineral produce and metallurgy of Nassau

Naylor, Vickers, and Co, Class XXII., quality of steel

Neuhaus and Losch, Switzerland, fine iron wire

New Jersey Exploring and Mining Company, United States, zinc ores, iron (Franklinite) ores, smelting process, &c.

Northumberland and Durham Coal Trade, collection exhibited

Nouvelle Montagne Zinc Mining Company, the, Belgium, zinc smelting and manufacture

Orban, J M, and Son, Belgium, sheet iron

Oxland, R, the separation of wolfram and tin

Pommereul Smelting Company, the, Belgium, quality of iron

Ponomareff, Madame (Iron Works of Khamounitsky), Russia, steel and other iron

Poules, J F, France, spun lead

Ramsele and Perard, Belgium, sheet iron

Rochatz, C and Co, Prussia, zinc and its preparations

Ruffer and Co, Prussia, zinc and its preparations

Russia, Imperial Manufactories of, Russia, iron and copper

Schwarzenberg, Prince, Austria, iron and steel

Selby and Johns, Iron tubes and enamelled iron

Sopwith, T, Illustrations of lead manufacture, &c.

St Hubert, Ed de, Belgium, millstones

Stolberg, Rochweiler Mining Company in, Prussia, lead and zinc

Topper, Andreas, Austria, sheet and bar iron

Treasury Iron Company, U S, iron of fine quality, ores, &c.

Turton and Sons, Class 22, quality of steel

Tuscany, Royal Mines of, Tuscany, illustrative mineral and and metallurgic stores

Tuscany, Royal Technological Institute of, Tuscany, mercury ores

Welsh Slate Company, the, slate from Festiniog

Wilkins and Weatherley—Class 22, fine iron wire

Wilsterdorf Tin Plate Works, Austria, sheet iron for tin plates

Vienna, *Dépôt* of Imperial Mines at, Austria, iron and stee. (cast) and cinnabar

Zous, Widow, Carl, Austria, quality of iron and steel

CLASS II.—(Jury 2.)

CHEMICAL AND PHARMACEUTICAL PROCESSES AND PRODUCTS GENERALLY.

COUNCIL MEDAL.

Guimet, J B, France, artificial ultramarine

Larderel, Count F de, Tuscany, boracic acid, and method of preparing it

Longmaid, W, Class I., process for treating copper pyrites with common salt

Prat and Agard, France, salts of potash, and other products of sea water

PRIZE MEDAL.

Avignon, the Chamber of Commerce of, France, garancine

Barnes, J E, valerianates

Batka, Wenzel, Austria, metallic preparations, &c.

Bischof and Rhodius, Prussia, white lead

Boekstegt, Professor S, Nether.ands, oxide of zinc

Blundell, Spence and Co, painters' colours

Bobde (Widow) and Lemire, France, acetic acid and acetates

Bonjean, J, Sardinia, sepiolite

Bouxwiller Mining Co, the, France, prussiate of potass, alum, &c

Brunwell, T and Co, prussiate of potass

Brosche, F N, Austria, succuinic acid and oxide of chromium and uranium

Brown, F, oxide of zinc

Brown and Co, salts of ammonia

Büchner, W, Grand Duchy of Hesse, ultramarine

Bullock, J L, rare organic products

Burt, S J, cantharidine

Cappellemans, Deby, and Co, Belgium, pink salt, &c

Cercauil, L P, France, dyed flocks

Cochius, E E, Prussia, prussiate of potass

Colville, Mdlle Anna, France, colours for porcelain painting

Comrie, J W, France, chemical preparations

Corridi, G, Tuscany, santonine and other chemicals

Courserie and Co, France, iodine, &c.

Courtai, —, France, ultramarine

Curtas, J, Prussia, ultramarine

Dauptuis, Gorton, and Co, ultramarine

Davenport, J T, chemical products

Davy, Bickford, and Co, glycerine, and various salts

De Cavallion, France, salts of ammonia

Dentath, W, and Co, salts and colouring matters, and oxide of zinc

Droman and Brossier, France, printers' colours, &c.

Dufour, L, Sardinia, quinine

Fonchet Spielmann, France, chemical products

Gademann, H, Bavaria, ultramarine

Godfrey and Cooke, pharmaceutical products

Halmhof and Ellis, sulphate of copper

Heunzen Brothers, Austria, cudbear and archil

Hemingway, A and W, United Kingdom, salts of iron

Herbert, F P, Baron von, Austria, white lead

Herrman, O, Prussia, glacial pisophoric acid, &c.

Hills, F C, sal ammoniac

Hopkins and Williams, chemical products

Howards and Kent, alkaloids, and other preparations

Hurlst and Campsie Alum Co, alum and prussiates

Huskisson, J W and H, chemical products

Jobst, F, Wurtemberg, quinine

Kent, J H, dried pharmaceutical herbs

Kuhlmann Brothers, France, chemical products

Kuhlein, Dr, Louis, Prussia, pink salt and oxide of uranium

May and Baker, chemicals, mercurial preparations

Kurtz and Schmersahl, colouring matters, &c.

Leichs, T, Class 22, France, white lead

Leroux, —, France, salicine

Leverkus, C, Prussia, ultramarine

M'Farlan, J F, and Co, chemical products

Mathes and Weber, Prussia, chemicals

Meissonier, Charles, France, chemical products

Menier and Co, France, pharmaceutical extracts

Michel, A, France, extracts, colouring woods

Moberly, W, alum

Moreau, A, France, products of distilled bitumen

Morson, J, and Son, organic products

Pauli, Otto, Prussia, phosphorus, &c

Pontifex and Wood, tartaric and citric acids

Power and Weightman, United States, chemicals

Rohr, F, Nassau, ultramarine

Santi, —, Russia, salts of leads, &c.

Schaenberg, A Mecklenburg-Strelitz, red leads

Schlippe, C, Russia, prussiates, alum, &c.

Scott, L, oxide of zinc

Siegle, H, Wurtemburg, red lakes

Smith, T and H, alcone and cantharidine

Sorel, —, France, oxide of zinc

Spencer, J A, chemical products

Squire, F, chemical and pharmaceutical products

Stohmann and Wilstenfeld, Prussia, chemical preparatio

(*Continued on page 505, Supplement Gratis.*)

LONDON: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, OCTOBER 18, 1851.

GREAT EXHIBITION.—AWARD OF PRIZES.

(*Continued from page 504.*)

Sturge, J and E, red phosphorus
Vieille Montagne Zinc Mining Company, The, Belgium, oxide of zinc
Wagesmann, Seybell, and Co, Austria, chloride of potassium
allich, Dr N, collection of chemical and pharmaceutical preparations
Ward, J, iodine, &c
Watt, W, iodine, &c
Watts, J, chemical and pharmaceutical products
Weiss, J H, Prussia, red lakes
Wesenfeld and Co, Prussia, sulphate of soda.
Wiesmann, A and Co, Prussia, products of distilled schist
Wilson, J and Son, alum
Winsor and Newton, artists' colours
Young, J, saunaste of soda, mineral oil, paraffine from coals, &c
Zimmer, C, Frankfort-on-Maine, quinidine
Zuber, J and Co, France, ultramarine

CLASS III.—(Jury 3.)

SUBSTANCES USED AS FOOD.

COUNCIL MEDAL.

Borden, Gall, jun, United States, for the preparation called "meat biscuit"
Darblay, —, jun, France, for the gruaux and household flour, of very fine quality, obtained by his novel and economical process
Grar, N and Co, France, for the sugar obtained from beetroot by the barytic process
Lawson, Peter, and Son, for their admirably displayed, very complete, instructive, and scientifically arranged collection of the vegetable products of Scotland
Masson, E, France, for dried vegetables, prepared by his new and economical process
Serret, Hamour, Duquesne and Co, France, for beet-root sugar, procured by a method, the result of which is to save valuable substances previously lost in the manufacture, and consequently to reduce materially the price of the sugar itself

PRIZE MEDAL.

Abbas Pasha, Egypt, soft white wheat
Albert, H R H Prince, sample of beans and winter oats
Albrecht, Greenhill and Co, Ceylon, a very fine series of cinnamon
Aska Sugar Factory, Madras Presidency, India, Ganjam sugar
Assam Company, assortment of teas
Astagram Sugar Company, India, different kinds of sugar
Anderson, G and Co, British Guiana, sugar
Avi Ayuntamiento de, Spain, a Montanchies ham
Bagner, —, Russia, wheat (Arnaout) from the government of Saratoff
Barz, T A, Cape of Good Hope, soft wheat
Barnes, W, United States, maple sugar
Batty and Feast, pickles
Baup, H, Switzerland, for meats preserved by simple desiccation
Baxin, —, sen., France, a new variety of wheat, and an important collection of agricultural produce
Bell, T, United States, soft wheat from Genessee
Benson, W, a fine selected series of varieties of American and other tobacco, raw and manufactured
Blondel Gaston and Co, Sardinia, rice
Buck, Peter, and Son, oatmeal and wheat flour
Cabanne and Rambié, France, flour (thirds)
Carstens, D H, Lubeck, excellent preserved meats
Chevet, jun, France, preserved meats and vegetables
Chitty, J, flour (best whites)
Christie, D, Canada, white wheat
Clarence, R, Cape of Good Hope, dried fruits
Clans and Caron, Belgium, cane sugar
Clemens, J, Malaga raisins and Jordan almonds
Cohen and Orr, Havannah cigars (Hugues brand)
Copland, Barnes and Co, preserved meats and vegetables
Cossacks of, on the estates Petrowsky, & Nova-Spasskaja, Russia, wheat, black and blue-eared, called Bosigarka
Crespel-Delisse, T, France, best sugar
Da Fonseca Vax, Pinto, Portugal, dried fruits
Damiaovitz, France, artificial honeycomb
Dean, L, United States, maple sugar
Dean, Day, and Deane, Van Diemen's Land, white wheat
De Arietta, Jose Joaquin, Spain, sugar from Havannah, prepared by the vacuum process in the plantation itself
De Beauvoys, Ch, France, a hive on the plan of Huber
De Cabanas et Cabazal, La fille, Spain, cigars of Havannah
De Sandoval and Co, France, chocolate
De Zulueta, J, Spain, sugar from Havannah
Dill and Mulchahey, United States, Cavendish tobacco
Duffield, C, United States, ham
East India Company, The Hon, India, a collection of rices, teas, spices, and cigars
Enriques, J N, Spain, cane sugar from Malaga
Exshoff, Lieut-General, Russia, the samples of millets
Etteb-Meisan, Tunis, a collection of varieties of dates
Faulkner, R and C, preserved fruits
Fery, A, Algeria, rice, from the landes of Bourdeaux
Feyenx, N D M, France, a series of, flours, and similar substances
Fisher, Arthur, Canada, maple sugar
Fortunon, Mason, and Co, a fine collection of dried fruits
Fry, J S and Sons, a series of cocoa and other substances used in the preparation of chocolate
Gamble, J H, preserved meats
Garrisini, P, Sardinia, vino di Arancio
Gomes, G L, Portugal, dried figs
Gonzalez Berry, Buenaventura, Spain, cigars of Havannah (Ramas)
Grant, J H, United States, Cavendish tobacco
Gross, H, Granada, nutmegs
Guinery, Deslandeles, and Co., France, preserved meat and vegetables
Hallet, R and Sons, South Australia, wheat (white soft), wheat flour
Hammond, W P and Co, Labuan, sugar from Siam
Heath and Barrows, South Australia, wheat (white soft)
Hecker and Brother, United States, Genessee flour
Heriot, E T, United States, Carolina rice
Hill and Underwood, malt sugar
Jeanti, Prevost, Perrand, and Co, France, best sugar
Jonas, E, and brothers, English cigars, manufactured from Havannah tobacco
Jones, B and Co, a collection of Havannah cigars, representing the state of the English market
Jones, D, Canada, white peas
Jordan and Barber, Austria, Granux and common flour
Kidd and Podger, flour
Kirtland, B B, United States, a collection of maize, 34 varieties
Koschaleff, Count, Russia, a collection of corn and hops
Lambert and Butler, English cigars, manufactured from Havannah tobacco
Le Conteur, Col, Jersey, a series of wheats
Lepolletier, Algeria, soft wheat
Limages, D, Canada, white peas
Lundyfoot and Co, snuff
Mac.Callahd, Dr, India, isinglass, from the *Polynemus plebeus*
Macliesty —, Borneo, coffee
MacKillican, J, white wheat
MacPherson and Francia, Van Diemen's Land, wheat
Magnan, J V, France, macaroni, vermicelli, and hard wheat of Auvergne
Maille and Sazond, France, wine vinegar aromatized
Maoud, B, hybrid wheats
Medina del Campo, the Mayor of Spain, wheat
Mellagan, A M, Van Diemen's Land, biscuits
Milton, A M, Class IX, improved cottage hive
Monteiro, L A, choco ate
Moore, E B, preserved milk and cream
Newcastle, N S W Fresh Meat Preserving Company, New South Wales, preserved boiled mutton
New York State Agricultural Society, United States, collection of wheats
Paine, J M, Golding's hops
Paoletti, F, Tuscany, maccaroni, vermicelli, &c
Payne, H, Trevitt wheat
Perron, E, France, chocolate
Portugal Royal Tobacco and Snuff Company, Portugal, cigars and snuff
Purdie, W, Trinidad, nutmegs, cloves, black pepper, and cigars; cocoa, as prepared for the Spanish market
Ryan and Schuyler, United States, flour (thirds)
Raybird, High, hybrid wh at
Reichardt, G, Canada, hops
Richardson Brothers, rol. tobacco and snuff
Richardson, Timothy, and Sons for Golding's hops, grown by Mr Phillips, of Offham, in Mid Kent
Richter, Anton, and Co, Austria, beet sugar
Ripley, P W, China. a large assortment of teas of th fi quality
Ritchie and M'Call, preserved meats
Robb, J, Canada, biscuits
Robinson, F, United States, Cavendish tobacco
Rousanoff, —, Russia, wheat and flour
Rousseau Brothers, France, beet sugar
Schooley and Hough, United States, ham (Cincinnati)
Sellvanoff, — Russia. oats, grown from English seed
Shabelsky, Colonel, Russia, wheat (hard Odessa)
Simpson, J and Co, Canada, wheat flour
Smith, B, Canada, hops
Snowden, R, coffee prepared by his process of separating the tough membrane from between the folds of the seed or berry
Spigiaroff, Alexis, Russia, Russian cigarettes, from Russian-grown tobacco
Squair, R, Canada, oatmeal
Stein and Schröder, Grand Duchy of Hesse, hops
Sublime Porte, The, Turkey, hard wheat, and a very fine collection of Turkish tobacco, also honey
Travers and Co, a collection of spices
Turpin, F A, France, chocolate
Valencia, Province of, Spain, samples of rice
Vézon Brothers, France, gluten, granulated
Vickers, James, Russian isinglass, Class IV
Wairick-Delespaul, France, chocolate
Watts, R M, Canada, Polish oats
Webb, Richard, Talavera wheat
Webb, Brothers and Co, Mauritius, sugar
Wittekop and Co, Prussia, macaroni, vermicelli, &c

CLASS IV.—(Jury 4.)

VEGETABLE AND ANIMAL SUBSTANCES CHIEFLY USED IN MANUFACTURES, AS IMPLEMENTS, OR FOR ORNAMENT.

COUNCIL MEDAL.

Belfast Flax Improvement Society, The Royal, for the perseverang and successful efforts made to improve the quality of the fibre of flax, as illustrated by the series of specimens exhibited
Crane, Jean Louis—de Manchamp, France, the originator of a new and valuable quality of wool, giving to the variety of merino the best quality for combing, and possessing increased strength, brilliancy, and fineness of fibre
Garnett, J, F, France, a new and improved mode of obtaining a pure, inodorous, and colourless gelatine from the refuse parts of animals, and valuable and diversified modes of applying the materials, as illustrated in the collection exhibited
Mercer, John, Class XVIII., the process of modifying the fibre of cotton by the action of caustic alkali, whereby its physical and chemical properties are altered and improved in a most remarkable manner
Pepelin-Ducharne, France, for the novel and economical mode of preparing vegetable charcoal from the small branches of trees, and from annual plants

PRIZE MEDAL.

Abdul Hamid, Egypt, collection of raw produce
Adams, John, flax
Ahlen, M, France, silk
Almeida, Messrs, India, collection of lingoa wood
Angola, The Governor of, 1850, Portugal, tacula wood
Arbuthnot, Messrs, India, indigo
Ardaumatky Brothers Russia, flax
Arduin and Chanlet, France, silk
Aversang, Delorme, and Co., Algeria, palm fibre
Bazley, T, Cape of Good Hope, cotton
Beauvais, France, silk
Bee, J F, British Guiana, cotton and woods
Belleville Brothers, France, starch, &c.
Berger, S, Class III., rice starch
Besnard, Richoux, and Genest, France, hemp, &c.
Bethell, J, pegged wood
Birnbaum, Jacob, Austria, hemp
Bishop, T, India, fixed oils
Blaef, Louis, and Co, Belgium, oils
Blair, D, British Guiana, cotton
Blundell, India. collection of woods
Bond, S, United States, cotton
Boucherie, J A, France, wood preserved
Boudon, L, France, silk
Brandt, Messrs, The Royal Agricultural and Commercial Society of, colonial produce
Bronno-Bronski, Major, Count de, France, silk
Brousse, Emile de Sirricidurlere de, Turkey, silk
Brown, W, New Zealand, Kauri gum
Brownrigg, Van Diemen's Land, woods
Brunneck, Von, Prussia, wool
Burch, W, collection of dye substances
Burn, R, Class III., cotton-seed oil
Burnett, Sir W, preserved woods
Busk, C J, Cape of Good Hope, red ebony wood
Butterworth, the Hon Lieut-Col, India, colonial produce
Calderon, J, Spain, hemp and flax
Canada, J, Spain, essential oils
Cape of Good Hope, The Agricultural Society of, Cape produ
Casals-a and So-a, Sardinia, silk (duce
Castel-li, Francis, isinglass, a series of
Champanhet-Sargeau, J, France, silk
Chuffart, —, Algeria, cottons
Clarence, R, Cape of Good Hope, sheep's-tail oil
Claussen, F, flax, and flax cotton, process of preparing it
Cleghorn, Dr, India, ramboge
Cockburn, Messrs, India, starch
Cockerill, —, United States, wool
Colegate, W and Co, United States, starch
Colonial Gas Coke Corporation, Australia, collection of raw produce
Collas, M & C, France, essential oils, &c
Colman, J and J, Class III starch
Curtet, jenuer, Algeria, fabrication of oils
Curtis Brothers and Co., tanning substances
Cutch, The Rao of, India. raw produce
David and Co, Belgium, flax
De Géminy (France) cotton-oil
Denison, Sir W T (Van Diemen's Land) collection of raw produce
Desmedt and Co (Belgium) flax
De Tillancourt (France) silk
Derriton, C, wool
Deires and Co, Spain, silks
Ducci, A, Tuscany, walnut-wood veneers
Dumortier, L, France, flax
Dupré de St Maur, Algeria, cotton
Duval, A, France, silk
Elliot, W—Vizagapatam, India, cattimundoo (resin)
Esthonia, Government of Russia flax
Ewing, J H, United States wool
Fabian, C G, Prussia pine-needle fibre
Faunsleroy, R and Sons, collection of woods
Fegdor, Isaac and Sons, Austria, wool
Fitzmaurice, Messrs, India, hemp
Fisher, G F, India, indigo obtained from wirhlia and cotton
Fowler, —, Van Diemen's Land, woods
Francaschini, G, Tuscany, silk
Frankenfelde, The Royal Flock at Prussia wool
Garnett, H T British Guiana starch, cassava
Gibelin and Son, France, silk
Gilis, J L, Belgium, hemp
Girod, de Am le Général, France, wool
Godfrey, Messrs, India, oil of roses
Grain, Stelmuck & Kwarna Breeding Association at, Austria, silk-worms, breed of
Gwalior, H H, the Maharaja Rao Scindia of, India, fixed oil
Hadden, Lieut-Col, Dustria's Land, woods
Haller, J C, Prussia, wheat starch
Hammond, W P, and Co, India, collection of Siam produce
Hampton, W, cotton
Hardy, A. Algeria, cottons
Haro, E F, France, United States, essential oils, &c
Harris, Lord, Governor of Trinidad, produce of Trinidad
Harrison, R and J, collection of woods
Hentig, Lubuan, Borneo cotton
Hernandez, J, Spain, flax
Hicks, Geo, United States, Tillandsia nanoides
Hilas, F, purified oils
Holmes, G D, United States, cotton
Holtzapffel and Co. collection of woods for turning
Hood, R V, Van Diemen's Land, woods
Hotchkies, G and L B, United States, oil of peppermint
Huffnagle, Dr, India, series of acts, &c
Hughes, jun, France, essential oil
Hunter, Dr, India, vegetable fibre
Hunyady von Kethsley, Count Joseph, Austria, wools
Hutchinson and Co, vegetable fibres
Jacquet, R and Co, Sardinia, silk
Jaeger, W and Co, Tuscany, silk
Jame, Bianchi, and Dusejneurr, France, silk
Jardine, D, Calcutta, silks
Jennings, India, silks
Jenkins, Major F, India, Assam produce
Jeypore, The Rajah of, India, attar of roses
Jocadan Factory, The proprietors of, India, indigo
Jone, J R, United States, cotton
Jones, J V, United States, cotton
Jones, O and Co, Class III., starch from rice
Joubert-Bonnaire and Co, France, hemp
Karnovitch, E, Russia, flax
Kaufmann, A, Russia, woods
Key, Professor J, Madras, fixed oils
Kimber, A M and Co, United States, wool
King, Emma, anatomised plants
Kishengurk, The Rajah of, India, fixed oils
Koteh, The Rajah of, India, collection of raw produce
Krasnenenekoff Russia hemp
Kupfer, Prussia, wool
Lailler E H, France. flax
Laine-Laroche and Max-Richard, France, hemp
Lapayre and Dolbeau, France, silk
Larisse-Münnich, Count II, Austria, wools
Lasare and Lacroix, France, dye colours
Leal, F & C, Portugal, collection of oils, fixed and volatile
Leclerq Brothers, France, hemp and flax
Lefèvre, Elizée, France, wool
Lepori, T, Tuscany, silk
Lindenberg, J, Cape of Good Hope, vegetable wax
Lisinsk Forest Institution, Russia, birch oil, turpentine, &c.
Louis, Marques de, Portugal, collection of woods
Lubbock, E, Prussia, wool
Lütteldt, Baron Von, Prussia, flax
MacArthur, Col, New South Wales, collection of woods
Mackenzie Brothers, India, silks
Macleod, W W, United States, cotton
MacNair, —, India, indigo
MacNabb, W, India, silks
MacNaughten, Van Diemen's Land, woods
Madrid, The Cabinet Botanical Garden of, Spain, collection
Mahon, —, Cape of Good Hope, cotton
Markwick, M, "spongio-piline" fabric
Manaz, P, Spain, hemp
Maryland, The State of, United States, collection of produce
Mesherdetz Djezairlioglu, Turkey, silk
Médeville and Robert, France, silk
Mercurin, E J, Algeria, silks
Méro, C D, France, essential oils
Merriweather, J B, United States, cotton
Mevesen, G, Prussia, flax
Milligan, J, Van Diemen's Land, collection of raw produce
Milner, R, collection of Irish woods
Mitrowsky, Count Anton. von, Austria, wools
Moulines, L, France, silk
Montfort, F, Spain, silks
Montigny, G de, Algeria, dyes
Montreal Central Commission (Canada) collection of woods
Morin, Algeria, cottons
Moses, Son and Daniels, New South Wales, tallow
Mottet, C, Fran e, dyes
Mourgues and Co Turkey, silks
Murcia, the province of, Spain, silk-worm gut
Napier, J, United States, cotton
Nordlinger, Prof, Wurtemberg, collection of woods
Nordmann, G L, Prussia, wool
Nouri Mehemet, Pacha, Turkey, silk
Oswego Starch Factory, United States, starch
Outridge, J, British Guiana, collection of woods
Parlett and Co, Cayenne, oils
Paulsky, J, Turkey, silk
Paisseer, C, Algeria, cottons
Pellous, Brennanno, and Co, Bavaria, silk
Perkins and Brown, United States, wool
Philippine Islands, Economical Society of, Spain, fibrous substances
Piaris, T A, Ceylon, collection of oils and gums
Pope, J, United States, cotton
Preston, J and Co, flax
Prins, C C, Netherlands, potato starch
Querini, Giovanni, Austria, silk
Rambouillet, National Sheepfold of, France, wool
Ravaza, F, Tuscany, silk
Rea, E, collection of resins
Reed and Meakins, Canada, hard woods
Rebow, J Gordon, wool
Regard Brothers, France, silk
Rey and Co, Spain, silks
Richer, F, France, wools
Rier, Peter, Russia, silk
Rupalds, Count, Spain, hemp
Rouzet, F, France, flax
Ruas and Co, France, silk
Ruas, L, France, starches
Sildin, Alfred, Prussia, flax
Samie, Messrs, India, cocoa-nut oil
Saragossa, Agricultural Society of, collection of produce
Saunders, W W, collection of woods
Scheibler and Co, Austria, silk
Schoenburgk, Sir R, St. Domingo, collection of produce
Schönberg Tarry Spinning Mill, Austria, hemp
Schönevald and Westerbaan, Netherlands, starch
Scott, Brother, Tuscany, silk
Scott, Turkey, silk
Scott, E and Co, collection of woods
Seabrook, W, United States, cotton
Semenoff, J and Faleyeff, Alexis, and Basile, Russia, bristles, &c
Shier, D, British Guiana, starch, cassava
Sid Mahmond Bevyad, Tunis, collection of native produce
Smith, Captain, India, manjeet
Smith and Son, Ichen and endbear
Speede, India, starch
Steinbach, J J, France, starches
Steinbock, A, Austria, samples of oil
St. Ubery, France, collection of woods
Stutchbury, J S, British Guiana, woods and oil
Tao Nui, New Zealand, collection of woods, &c
Tandler, Stefan, Austria, wood fibre
Tolasor Cros, L and E, France, silk
Thompson, Rev Z, United States, woods
Tulloch, Lieut-Co., India, fixed oils and collection of woods
Tucker, C, wood
Technologues, Institute, Tuscany, collection of woods
Ulbersdorf, Flax Retting Establishment, Austria, flax, &c
Valenzia, the Agricultural and Commercial Society of Spain, collection of raw produce
Vanbogaert, J S, Belgium, flax and hemp
Van der Gon Verschuir, A D, Dutch Guiana, cotton
Van Geotesuyen, C, Belgium, starch
Van Riet, P J, Belgium, hemp
Van Wint, J B, Belgium, flax
Verbeeck, P J, Belgium, flax
Verbeist, F, Belgium, hemp
Versa Brothers, Austria, silks
Violette, J H M, France, charcoal
Vizianagram, Rajah of, India, fixed oils
Volkhousky, France, Russia, hemp and starch
Watson, Ceylon, silks
Weber, L, India, vegetable fibre
Welcker, A C, Prussia, potato starch
Weston, W, Western Africa, oils, &c
White, —, flax
Whitesides, —, Van Diemen's Land, collection of woods
Wigan, Dr, India, collection of various specimens of cotton
Wood and Bedford Athens and dyes
Wright, L W and Co, flax and china grass
Yan Kee (of Shanghai), China, silk
Zavagli, F, Tuscany, silk

CLASS V.—(Jury 5.)

MACHINES FOR DIRECT USE, INCLUDING CARRIAGES, AND RAILWAY AND NAVAL MECHANISM.

COUNCIL MEDAL.

Appold, J G, a centrifugal pump with curved vanes
Cockerill, J, Belgium, pair of 140-horse power vibrating cylinder engines for river navigation; a locomotive engine; an oscillating cylinder 3-horse power land engine; tubular boiler; a vertical cylinder 16-horse power land engine. (The award is made for the whole)
Crampton, T R, two passenger locomotive engines
Dubs, C, a railway transverse frame
Fraser and Son, France, a double turbine
Penn, John, and Son, two pair of compact marine engines, of light construction, for small vessels

PRIZE MEDAL.

Adams, W B, light locomotive engine and double railway carriage
Armstrong, W G, hydraulic crane
Atherton, G, for the application of an eccentric to working expansion valves
Baines, W, railway switches and chairs
Bank Quay Foundry Company, great hydraulic press
Barlow, W H, wrought iron permanent way
Beacroft, Butler, and Co, railway wheels and axles
Bérenger, J and Co, France, weighing machines
Chesvin, S, filtering pump
Clair, F, France, a dynamometer and indicator; and a mode in action of a locomotive
Clayton, Shuttleworth, and Co, an eight-horse power vertical oscillating cylind r engine
Collings, C and Co a five-horse power direct-action steam-engine
Crosskill, W, oscillating cylinder direct-action steam-engine
Cwm-Avon Iron Company, railway bars
Davies, J and G, a patent revolving elliptic steam-engine, with an ingenious governor, equilibrium valves, and feed-valves
Davidson, J and Co, scales and weighing-machines
Day and Millward, weighing-machines
De Bergue, C, railway buffers
Derwent Iron Company, large plates of rolled iron, for sway-beams of engines and ship-building purposes; and a railway bar 66 feet long
Ebbw Vale Company, railway bars
Edwards, T, five-horse power direct-action steam-engine
Enfer, E, France, blowing-machine
England, G and Co, tank locomotive engine; traversing screw-jack
Enthoven, K L, Netherlands, iron crane for lifting and weighing
Fiaud, H F, France, five-horse power vertical cylinder direct-acting high-pressure engine, for working at high velocities with high-pressure steam
Fourdinier, E N, safety cage for mines
Fox, Henderson, and Co, derric crane
Great Western Railway Company, Swindon, passenger engine
Haddan, J C, *papier maché* carriage
Hawthorn, R and W, locomotive passenger engine
Henson, H H, railway goods waggon
Hosking, R, treble-boat pump valve
Jackson, P R, railway tires; hydraulic press
James and Co, weighing crane
Kitson, Thompson, and Hewitson, locomotive tank engine
Lee, J, wheels, axles, and railway breaks
Letsam, —, France, fire-engine
Lloyd, G, blowing machine
Manzaze, J N, France, friction clutch
Merryweather, M, fire-engine
M'Connell, J E, corrugated iron railway carriage
M'Nicoll and Vernon, steam traversing crane
Mersey Iron Company, patent roller iron for ship-building
Nasmyth, J, four-horse power direct-acting engine
Paraut, —, France, scales
Patent Shaft and Axletree Company, railway carriage and other axles
Perry, G and Brothers, Canada, fire-engine
Piepenstock and Co, Prussia, disc wheels and hollow axles
Pooley, H and Son, weighing machines
Pope, W and Son, four-horse oscillating cylinder direct-acting steam-engine
Pouyer, Quertier Fils, France, apparatus by which any number of movers may be connected or disconnected at pleasure
Ransomes and May, water-crane, patent compressed trenails, and wedges for railways
Schmid, H D, Austria, weighing machine, parabolic governor for a steam-engine
Shand and Mason, fire-engine
Siemens, C W, chronometric governor
Simpson and Shipton, ten-horse power reciprocating engine
Smith, P P, a series of screw models, showing the progress of screw propulsion
Société Anonyme des Hauts Fourneaux, Usines et Charbonnages de Marcinelle et Couillet, Belgium, mine ventilator
Spencer, J and Son, Bailey's patent volute springs
Thornewycroft, G B and Co, railway wheels and axles
Thornton and Sons, hydraulic lifting-jack
Watt, James and Co, pair of horizontal cylinder steam-engines for screw-propellers
Williams, C C, railway carriage
Worsdell, G and Co, railway axle, wheel-tire, and axle-box
Young, C and Co, simultaneously-acting gates for railway crossings

CLASS Va.—(Jury 5a.)

CARRIAGES.

PRIZE MEDAL.

Andrews, R, a neat pony carriage
Baiwallette Brothers, France, a Stanhope or sporting phaëton, of excellent design, and well finished
Briggs, G and Co., a town chariot, admirably carried out as to good taste
Brown, W, a caned car, very neat and well finished; a carriole car, made with Fuller's patent shafts, to be used occasionally with one horse
Childs, C, United States, a slide-top buggy or phaëton; enamelled leather of apron of very superior quality: the whole well got up and neatly finished
Davies, D and Son, a Battenna Brougham, a very good piece of work
Dunsaine, J A, France, a town Berline, well formed and got up in a superior manner
Hammarks, Aldebert, and Hallmarke, a green barouche: very good carriage
Holmes, H and A, a park phaëton, very neatly finished, and in good taste
Hooper, G, a green Brougham, got up in the neatest manner, all in good taste, and well done
Jones Brothers, Belgium, a cab phaëton; a well-finished carriage
Peters and Sons, a park step-piece barouche, highly finished, and with good taste
Robinson and Co, a park phaëton, very neat, and an excellent piece of work
Rock and Son, a patent diaraphia, very ingenious as regard the shifting, and well shaped
Silk and Brown, a full-sized park phaeton, elaborately finished; a very superior specimen of workmanship and art
Van Aken, P and Son, Belgium, a cabriolet chaise, neatly got up
Ward, J, a Bath chair, with patent noiseless wheels; the whole well shaped, well arranged, of excellent form, and well finished
Watson, G W, United States, a sporting waggon, very neatly finished in all respects
Wyburn, Muller, and Turner, an elegant dress chariot, in all respects very highly finished

CLASS VI.—(Jury 6.)

MANUFACTURING MACHINES AND TOOLS.

COUNCIL MEDAL

Barlow, A, Jacquard loom with two cylinders, simultaneously raising and lowering the suspended wires
Call and Co, France, vacuum apparatus for the manufacture of sugar
Donsthorpe, G E, double wool-combing machine
Donkin, B, and Co, paper machinery
Dick, D, United States, various engineers' tools and presses
Fairbairn, W, and Sons, riveting machine, and a corn-mill
Herman, C, France, a series of chocolate machines
Hick, B, and Son, mill gearing, radial drill, engineer's machine tools, improved mandrills, portable forges
Hrcasman, C, Prussia, vacuum apparatus for the manufacture of sugar
Hibbert, Platt, and Sons, a complete series of machines employed in the cleaning, preparation, and spinning of cotton, showing the whole process, to the weaving inclusive
Lewis, T, and Sons, numerous machines employed for the preparation of flax
Mason, J, woollen carding machine, also slubbing and roving frames
Maudsley, Sons, and Field, coining press acting by an eccentric
Marsden, A, and Co, France, machinery for spinning and carding wools
Nasmyth, J and Co, steam hammer
Parker, C E, and Co, power-loom for weaving sailcloth
Pembrex and Wood, vacuum apparatus for the manufacture of sugar, in copper and brass
Reeds, T S and Co, new power-loom for weaving fringes with mitrettes
Rose, Mills, Parker, and Co, paper-making machine for cleaning and preparing pulps for printing
Sharp Brothers and Co, large double lathe for railway

wheels, slotting machine, and other engineer's machine tools, also a beautiful constructed ring and traveller throstle

Uhlhorn, H, Prussia, coining press

Whitworth, J and Co, a large collection of engineer's machine tools of all kinds, screw stocks, standard gauges, and a knitting machine. Also his machine for measuring less than the 200,000th part of an inch

PRIZE MEDAL.

Acklin, France, Jacquard employing paper instead of cards

Adorno, J N, cigarette machine

Ball, Dunnicliff, and Co, warp lace machine

Berry, B and Sons, machinery for manufacturing worsted

Berthelot, N, France, circular looms for fancy frames

Bessemer, H, centrifugal machine for refining sugar

Birch, J, machine for cutting wood sash bars

Birkin, R, bobbin-net lace machine, with Jacquard

Black, J, paper folding machine

Blodget, S C, United States, sawing machine

Boland, A, France, kneading machine

Bonardel Brothers, Prussia, Jacquard, and punching machine for Jacquard cards

Borie Brothers, France, machine for making hollow bricks

Baranowski, J J, France, machine for printing and numbering tickets

Brewer, C and W, rollers of wire cloth for paper-makers

Bullough, W, stopping motion to a power-loom

Calvert, F A, wood bursing and cotton cleaning machine and cylinders

Church and Goddard, machine for cutting card-boards, and printing and preparing railway tickets

Claussen, P, circular hand-loom for hosiery

Crawhall, J, machine for manufacturing hemp ropes

Crichton, D, new taking-up motion for a loom

Cuyere, Mrs, Tuscany, weavers' reeds

Davenport, J L, various machines for manufacturing silk

Dalgety, A, small lathe, with self-adjusting chuck

De Bergue, C, reeds made by machinery

De la Rue and Co, envelope machine

Dandoy-Maillard, Lucq, and Co, France, rollers for spinning machinery

Durier, H, Switzerland, press for cutting out watch-bands

Dorey, J F, France, machine for weaving improved heralds

Earle, T K and Co, United States, card clothing

Frey Fils, France, machine for making nails

Frost, J, improved silk machinery

Furness, W, machines for tenoning, morticing, planing, and moulding wood

The heirs of P Gamba, Austria, Jacquard cylinder

Garforth, W J and J, steam rivetting machine

Hamann, A, Prussia, burning lathe

Hacking, Pullein, and Johnson, machinery for making printing type

Harding-Cocker, France, heckles

Hayden, W, United States, governing regulator for cotton

Higgins and Son, cotton machinery, and long line flax machine

Holtzapfel and Co, amateur foot lathe with overhead motion; slide rest and eccentric chucks, &c., for ornamental turning, with various apparatus and tools

Hornby and Kenworthy, sizing and dressing machine, and self-acting backing-off motion to a warping machine

Huck, France, apparatus for grinding and preparing alimentary substances

Hue, J B, France, press for manufacturing hooks and eyes, cutting and bending them at the same time

Ingram, H, Applegath's vertical printing machine

Jacquin, J J, France, circular hosiery frames

Johnson R and Brothers, wire-drawing benches

Jenkins, G T, beald machine and improved beald

Lawrence, J, sen, refrigerator, store cask, &c

Lacroix and Son, France, felting machine for cloth

Leonhardt, J E, Prussia, type-moulding machine

Lewis, F and Sons, wheel-cutting and bevel-paring spindle

Lowell Machine Shop, United States, self-acting lathe and power-loom

Manlove, Alliott, and Seyrig, centrifugal washing and drying machine

Muir, W, small lathe and various tools

Mareschal, J, France, machine for winding meat

Miroude Brothers, France, card clothing

Morey, C, United States, Eastman's stone-cutting machines

Nicolas, P, France, machine for engraving metal cylinders

Napier and Son, letterpress printing machine

Perry, John, wool-comb

Preston, F, spindles and flyers

Prosser and Hadley, ornamental sawing machine

Plummer, R, scutching, heckling, and other flax machines

Parr, Curtis, and Madeley, various machines for carding and spinning cotton; three self-acting mules; also various engineers' machine tools

Renaud, A, envelope-making machine

Ransomes and May, Leggatt's Queen Press, with self-acting apparatus

Robinson and Russell, large steam sugar-cane mill

Roswag, A and Son, France, wire-cloth for paper-makers

Ryder, W, forging-machine

Saurenat, Fils, France, machine for planing and moulding

Schmerber, J, France, forging-machine [wood

Schneider and Legrand, France, shearing-machine

Serive Brothers, France, card clothing

Smith, M, various power-looms

Shepherd, Hill, and Spink, self-acting slide-lathe

Smith, Beacock, and Tannett, self-acting slide-lathe, drilling and planing machines

Société du Phœnix, Belgium, soft bobbin-frame

Stamis and Co, France, spinning-frame

Stewart, D Y and Co, mould-making machine for cast-iron

Starr, C, United States, bookbinding-machine [pipes

Taylor, J, heckles

Taylor, W, machine for forming hemispherical paper-shades from flat discs of paper

Thomas, H, Prussia, steaming-machine for woollen goods

Tizard, W L, model of a brewery

Touaillon, C, France, dressing-machine for millstones

Troupin Brothers, Belgium, shearing finishing machine

Varrall, Middleton, and Elwell, France, machinery for manufacturing paper

Westrup, W and Co, corn-mill

Wilson, G, paper and millboard-cutting machines

Woodbury, J P, wood-planing, tonguing, and grooving machine

CLASS VII.—(Jury 7.)

CIVIL ENGINEERING, ARCHITECTURAL, AND BUILDING CONTRIVANCES.

COUNCIL MEDAL.

H R H Prince Albert, model lodging-house; Joint medal to that granted for the original conception and successful prosecution of the Exhibition of 1851

Fox and Henderson, great building—for the execution

Paxton, Joseph, great building—for the design

PRIZE MEDAL.

Brown, Sir S, models of ships and railways

Bunnett, J and Co, patent shutting and water-closet

Carrington, F A, topographical models of portions of England

Dutch Railway Company, Netherlands, model of railway drawbridges

Finch and Willey, model of a wrought-iron bridge over the Helske, E, diving apparatus [Wye

Ibbetson, Captain, model of the Isle of Wight

Iron Bridge Company, United States, model of Ryder's patent iron bridge

James, Jabez, model of Britannia Bridge

Lané, J F, Switzerland, set of boring tools

Lennann, J, Switzerland, model of Strasburg Cathedral

Morton, S and M, model of patent slip for ships of the largest class

Mulot Frères et Fils, France, excellent and powerful boring

Pratt, Major, design for tidal steps [tools

Rose, J T, design for a timber viaduct of great span

Salter, S, models of bridges

Siebe, A, diving apparatus

Smith, W H, model of light floating breakwater; for theidea

Stuart, W, model of Plymouth breakwater

Travers, L Fils, France, model of observatory, dome, and

Vignoles, C, suspension bridge for model [roof at Paris

Wilkins, W C, revolving floating light

Wilson, T H, gate-bolts and slides for doors

CLASS VIII.—(Jury 8.)

NAVAL ARCHITECTURE AND MILITARY ENGINEERING; ORDNANCE, ARMOUR, AND ACCOUTREMENTS.

COUNCIL MEDAL.

Admiralty, for hydrographic charts, and for the models of the ships constructed by them

Department des Cartes de la Marine, France, hydrographic surveys, and maps of France, Algeria, Africa, and Corsica

Dépôt de la Guerre à Paris, France, great topographical map of France

Geological Survey Department of Great Britain, for their geological surveys and maps of the United Kingdom

Duke of Northumberland, for having caused a large number of models of life-boats to be designed, with the view to obtaining the best form of boat for the preservation of life and property in cases of shipwreck

Ecole des Mines à Paris, France, geological map of France

Ordnance Department of England, for the illustrations of the great ordnance surveys of Great Britain, for the copper-plate etchings, and electrotype process

Military Topographical Department of Austria, Austria, for their survey and detailed maps of the country in and around Vienna, and of Italy

Sir Wm Snow Harris, for his system of lightning conductors attached to the masts and hulls of ships, which have been for several years in general use in the navy, as a means of preserving life and property from the effects of lightning

PRIZE MEDAL.

Ancion and Co, Belgium, for their complete and varied collection of arms, and merit in manufacturing and commercial point of view

Alasli, C, Placed in Class V., a gunning punt on a new principle, for fowling purposes

Barbottin, Capt, France, improved capstan for managing chain cables

Beeching, J, design of a life-boat, which was recommended for the prize of 100 guineas, to be awarded by the Duke of Northumberland for the best life-boat

Berminolin, N and Brother, Belgium, collection of sporting and trade guns

Berthon, the Rev E L, models of patent perpetual log for indicating the speed and lee-way of ships, and of his patent clinometer for showing the list (or inclination) and trim of ships; and also of a collapsible life-boat, of a portable and useful description

Bertonnet, France, sporting guns and arms

Brazier, J and Son, lock for best guns

Brown, Sir S, Captain, R N, chain cables

Carte, A G, self-acting life-buoy, an instrument by which, since 1838, nearly 400 persons' lives have been saved

Collin, C E, France, map engraving

Corporation of London, for the various illustrations of the art of ship-building for the commercial marine, almost all showing the greatest and most important improvements in strength, symmetry, and efficiency, and mostly coming from the establishments within the jurisdiction of the port of London

Claudin, F, France, guns, rifles, and pistols

Deane, Adams, and Deane, double and single guns and pistols

Dent, E J, Class 10, for a successful attempt to construct a compass that should not be disturbed by the motion of the ship at sea, nor by the firing of guns on board

Dacmeng, M, France, for his improvements in the shading of maps, by printing different colours at the same time

Delvigne, G, France, apparatus for saving life from shipwreck. A projectile discharged by means of a howitzer. This invention involves a new principle, that of a portion of the line to be carried out being contained in the projectile

Devianne, —, France, sporting guns and arms

Ditchburn, T J, models of paddle and screw steam vessels

Fischer, C A, Lübeck, double gun, rifle, and pistols

Fox, A, fine specimens of nets, seine, &c., for pilchards

Gauvain, J, France, pistols—form and execution; sporting guns, &c.

Gastinne-Renette, France, sporting guns and arms

Greener, W, guns—barrels perfectly forged and finished; harpoon guns, for whale fishery, and for saving life from shipwreck

Green, Messrs, for a specimen model of a merchant vessel designed and built by them for the East India trade

Groom, J J, specimens of deep-sea fishing-lines and hooks

Hawker, Colonel P, for his improvements and perfection in punt guns

Hinks, Henry, design of a life-boat. Also recommended for the prize of 100 guineas to be awarded by the Duke of Northumberland

Houllier-Blanchard, H, France, pair of pistols and apparatus

Jansen, A D, Belgium, collection of sporting and ornamental guns

Jeffery, Walsh, and Co, specimens showing the advantages of marine glue, as a substitute for pitch, and for other purposes connected with ship-building

Jerningham, Capt R N, for an anchor, bent on to a line, to fire from a Manby mortar a sufficient distance to afford the means of hauling a life-boat through the surf

Lang, J, double and single guns and pistols

Lahure, —, France, iron life-boat

Legoff, —, France, for an excellent system of stopping chain cables

Lavalinois, N C, Belgium, target rifle, with accessories of every kind

Leopold, Bernard, France, double and single barrels, of damascene workmanship

Lepage, Antoine, numerous collection of sporting and trade guns

Lepage-Moutier, France, sporting guns, ornamental arms, swords and side-arms of De Luynes, damascus of remarkable novelty

Manby, Capt G W (representatives of), mortar apparatus, for shipwreck purposes. The object of this instrument is that of saving life from shipwreck, by means of firing a projectile, with a line attached, over a vessel when on shore

Mare, C J and Co, models of sailing and steam-vessels, both paddle and screw; ditto of yachts designed and built for various merchants' services

Mortimer, T E, guns, rifles, and pistols

Napier and Son, for a compass used for registering the hourly deviation of the needle, and for detecting errors in the steerage of a ship

National Institution of Washington, United States, models of ships of war and large merchant vessels

Needham, Henry, guns, rifles, and pistol

Plenty, J and E Peiew, for having exhibited a good specimen of a life-boat

Parsons, W, guns, rifles, and pistols

Plomdeur, N, Belgium, best guns, rifles, and pistols

Reeves, Greaves, and Reeves, swords and other side-arms, artistically embellished

Renkin Brothers, Belgium, numerous collection of sporting and trade guns

Rhind, W G, deck seat to form raft. This seat can be readily formed into a safety raft, capable of sustaining eight people

Richards, Westley, best guns, and sporting guns

Rigby, W and J, guns, pistols, and rifles, and barrels of Damascus

Rigmadden, Jient J, R.N., model of improved mode for setting up the standing rigging of ships

Robinson and Russell, placed in Class V, models of steamboats designed and built by them

Rocher, M, France, distilling and cooking galley

Rodger, Lieut W, models of improvements in form of anchors

Royal Thames Yacht Club, models of vessels belonging to their club

Saunders, J E, placed in Class XXXIX, model of a walled smack for fishing, fitted with auxiliary screw propeller. A novel application to vessels of this description

Semmens, J and T W, model of Mount's Bay fishing-boat. A fine description of boat for the purpose

Schneider, —, France, specimen and plans of steam-boat *L'Oiseau*, for the river Rhone, which vessel has attained great speed, and rendered much service to the commerce on that river

Sochet, —, France, distilling apparatus

Sauerbrey, V, Switzerland, target rifle

Smith, S, model of a spring machine, for modelling ships of any form or dimensions; an ingenious and ready means of setting up a design and model

Smith, Thomas and William, specimen model of fine merchant vessels, designed and built by them for the East India trade

Teasdell, W, for a good specimen of a life-boat

Tenrey, —Belgium, an ornamental double gun, guns and arms

Trulock, E and Son, guns, pistols, and rifles, and barrels of good damascus

Tutt, G, placed in Class XXIX, model of a Hastings fishing-lugger, a very fine description of boat for the purpose

White, J, models of vessels for merchant service, and yachts; designed and built by him

White, T J and R, models of fine sailing and steam-vessels and yachts

Wigram, M, and Sons, models of sailing and steam-vessels, both paddle and screw; designed and built for various merchants' services.

Wilkinson and Son, guns, rifles, pistols, and swords. Swords h gily ornamented

Zulaga, D E, Spain, firearms and swords

HONOURABLE MENTION.

Birnie, Alex, for having exhibited a complete set of fishing nets, lines, and hooks, for deep sea fishing. £50

Rothway, Joseph, for having exhibited models of his improvements in the construction of blocks, combining strength and other advantages with much less weight. £50

Harvey, Daniel, for having exhibited a model of the *Victoria and Albert* yacht, executed by him, being a fine specimen of workmanship. £40

Dempster, —, for an ingenious system of signals for merchant ships. £20

CLASS IX.—(Jury 9.)

AGRICULTURAL AND HORTICULTURAL MACHINES AND IMPLEMENTS.

COUNCIL MEDAL.

Busby, W, two or four-horse plough, horse hoe on the ridge, rolling corn drill, and cart

Crosskill, W, Norwegian harrow, meal mill, cart, clod crusher and gorse bruiser

Garrett and Sons, horse hoe, general purpose drill, 4-row turnip drill on the flat, improved hand barrow drill for grass seeds, steam-engine and thrashing machine

Hornsby and Sons, corn and seed drill, drop drill, 2-row turnip drill on the ridge, oil cake bruiser, steam-engine

M'Cormick, C H, United States, reaping machine

PRIZE MEDAL.

Ball, W, two-horse plough

Barrett, Exall, and Andrews, thrashing machine and patent gear, linseed and corn crusher

Bentall, E H, cultivator, dynamometer

Bunyon and Kay, improved American churn and turnip cutter

Burrell, C, gorse bruiser

Claes, P, Belgium, corn drill and roller

Clayton, Shuttleworth, and Co, steam-engine

Clayton, H, tile machine

Coleman, R, cultivator, expanding harrow

Comins, J, horse hoe

Cornes, T, chaff cutter

Crowley and Sons, cart

Delstanche P, Belgium, plough

Duchesne, J J, Belgium, churn

Dixson, M, clod crusher

Gray and Sons, cart [drill

Heinmann and Son, thrashing machine, 4-horse plough, corn

Holmes and Sons, thrashing machine

Howard, J and F, 2-horse XX plough, 4-horse plough, horse

Hurwood, G, meal mill [rake

Jenkin, W, Netherlands, plough

Lavoisy, A D, France, churn

Newington, Dr S, top-dressing machine

Nicholson, W N, oil cake bruiser

Odeurs, J M, Belgium, plough

Prouty and Mears, United States, plough

Ransomes and May, drop drill

Reeves and Bratton, water drill and liquid manure distributor

Samuelson, B, turnip cutter

Scragg, T, tile machine

Smith and Co, haymaker, chaff cutter, horse rake

Stanley, W F, linseed and barley crusher

Talbot Brothers, France, plough

Thetford and Sons, steam-engine

Wilkinson, T, churn

Williams, W, light and heavy harrows

Whitehead, J, tile machine

Vachon, Son, and Co, France, a seed and corn separator

CLASS X.—(Jury 10.)

PHILOSOPHICAL INSTRUMENTS, AND PROCESSES DEPENDING UPON THEIR USE; MUSICAL, HOROLOGICAL, AND SURGICAL INSTRUMENTS.

COUNCIL MEDAL.

Bain, A, electric telegraph

Bakewell, F, copying electric telegraph

Bond, W, and Son, United States, for the invention of a new mode of measuring astronomical phenomena. &c

Bourdon, E, France, for the invention of metallic barometers, and for his manometers

Brett, J, electric telegraph

Brooke, C, for the invention of a means of self-registering natural phenomena, by photography

Buckle, R, Class XXIV, for his photographs on paper

Buron, —, France, for his good telescopes, the object glass being of rock crystal

Chance Brothers, Class XXIV, a disc of flint glass 29 inches diameter

Claudet, A F, for his several inventions based upon experiments in the practice of photography; and for his non-invertedpictures

Daguet, T, Switzerland, for the superiority of glass for optical purposes, good specific gravity, clear; crown glass as clear as flint

Delcuil, L J, France, for his balance air-pump; and for the invention of an arrangement to keep the charcoal points in electric light at a constant distance

Dollond, G, for atmospheric recorder, by means of which the reading of the barometer, those of the thermometer, evaporator, fall of rain, direction of the wind, its strength, electric state of the air, &c, are simultaneously registered

Dubosq-Soleil, J, France, for a very ingenious heliostat, on a new construction, by Silbermann; the invention of an apparatus for fixing the charcoal points for electric light; a saccharometer of delicate structure and much ingenuity, and an elegant and novel instrument, by Brevais, for exhibiting the phenomena of polarized light

Dunin, Count E, for the extraordinary application of mechanism to his steel engraving figure of a man

Froment, G, France, for the goodness of the work of his theodolites and divided metre

Gambi, Professor T, Tuscany, planometer, a machine for measuring plane surfaces

Griffith, J, for his barometer, with a vacuum capable of complete restoration by an air-trap at the top

Henley, W T, for his convenient and ingenious application of magnetic electricity to the purpose of electric telegraphs

Logeman, W M, Holland, for the excellence of the magnets shown by him

Martens, F, France, for his Talbotypes on glass, by the albuminous process

Mers and Sons, Bavaria, equatorial, combining cheapness with excellence of workmanship

Newman, J, for the originality, excellence, and perfection of his air-pumps, and self-registering tide-gauge

Oertling, L, for very delicate large and small balances

Quennesen, France, a platina alembic, to hold 250 pints, all in one piece, without solder or seam, &c.

Ross, A, for great improvements in microscopes, and for the solidity of structure, good mechanism, and distribution of power, evinced in his large equatorial

Ross and Thomson, Class XXX., for great improvements in photography

Siemens and Halske, Prussia, electric telegraph

Smith and Beck, for excellence of microscopes

Tairines, France, dynamometer

Vidie, France, for the invention of the aneroid barometer

HONOURABLE MENTION.

Ackland, W, dividing engine

Allan, T, electric telegraph

Bache, A D, United States, balance

Batka, W, Austria, chemical apparatus

Baumann, T Prussia, compurateur

Bayard, H, France, balcotype

Beaulieu, A, Belgium, theodolites and sextants

Bertaud, Junior, France, slices of crystals

Beyaert, C, Belgium, meteorological lenses

Blunt, Henry, model of Eristothenes; part of moon

Bourgogne, J, France, microscopic preparations

Brady, M D, United States, Daguerréotypes

Breithaupt, F W and Son, Prussia, surveying instruments

British Electric Telegraph Company, their series of electric telegraphs

Burt, W A, United States, solar compass; surveying instruments

Chaills, Professor, scales for calculating the corrections for a transit instrument

Chuard, France, safety lamp

Collot, E and A Brothers, France, balance

Cotton, W, coin weighing machine

Crichton, J, drawing instruments and sextants

De la Rue and Co, Class XVII., irridescent films

Denten, J B, process of relief mapping

Dolberg, A, Prussia, balance

Dover, J, balance

Elliot and Sons, drawing instruments

Engel, F, Prussia, wave surface

Ericsson, J, United States, sea lead, pyrometer, &c

Ertel and Son, Bavaria, universal astronomical instrument

Facy, R, orrery

Fischbron, F, France, Talbotypes

Galy-Cazalat, France, manometer, upon the hydraulic prin-

Griffin, J J and Co, chemical apparatus [ciple

Gyal, F, Switzerland, drawing instruments

Hamann, E F, France, planometer

Henneman and Malone, Talbotypes

Heik, A, microscopic preparations

Hewitson, J, side engraving

Hjorth, S, Denmark, electro-motive power

Hommel-Kaser, F, Switzerland, drawing-instruments

Horne, Thornthwaite, and Wood, good work in photograph apparatus

Hughes, W, topography for the blind

Johnson and Matthey, Class I., palladium crucibles

Johnston, W and A K, geological and physical globes

Jürgensen and Sons, Denmark, metallic thermometer

Kilburn, W E, photographs

Kinzelbach, T, Zollverein, diolitte telescope

Knight and Sons, chemical apparatus

Kunmer, K W, Prussia, large relief globe

Lawrence, M M, United States, Daguerréotype

Leeson, Dr H B, Class I., for exhibition of crystals

Lloyd, Isaac-Colonel J A, storm-indicator—a typhodicator

Luhme, J F and Co, Prussia, chemical apparatus

Mads, J, France, prism of sinc glass

Marchesi, C, Austria, instruments for the blind

Mitchell, Rev W, models of crystals, Class I

Nachet, France, microscopes

Naumyth, A, moon maps

Negretti and Zambra, meteorological instruments on glass

Newton and Son, globes

Nobert, J G, Prussia, fine lines on glass

Oerrling, A, Prussia, balance

Penrose, F C, heliograph

Perreaux, France, dividing engine

Phillips, W H, Cambridge, Class V

Pillischer, M, elliptic compass

Pisgniol, A, France, camera obscura

Pretsch, P, photographs

Reade, Rev J B, solid eye-piece

Sacré, E, Belgium, balance

Schieck, J G, France, photographic apparatus

Schouli, C A, Switzerland, model of Mount Sentis

Schröder, J, Hesse, descriptive models of joining in wood, crystals, &c

Seel, H, Prussia, pharmaceutical apparatus

Shadbolt, G, microscope condenser

Simms, W, the astronomical instruments

Smith, Capt, India, coin-weighing machine

St. John, John R, United States, detector compass

Stefke, A, Russia, calculating machine; machine for weighing precious metals, &c.

Stoehrer, E, Saxony, electric telegraph

Thomas, C N, France, calculating machine

Topping, C M, microscopic preparations

Van Schendel, P, Belgium, a model of descriptive geometry: perspective

Varley and Slater, telescopic camera lucida

Vedy, F, France, sextants and reflecting circles

Walker, C V, graphite batteries, &c.

Ward, R, botanical cases

Watkins and Hill, Class V., dry pile apparatus, galvanometer, &c.

Westmoreland, J, electrical machine

Whipple, J A, United States, Daguerréotype of the moon

CLASS Xa.—(Jury 10a.)

MUSICAL INSTRUMENTS.

COUNCIL MEDAL.

Boehm, T, Munich, for important scientific improvements of the flute, and the successful application of his principles to other wind instruments

Ducroquet, P A, France, for his application of the pneumatic lever to a church organ

Erard, F, Paris, and Erard, France, for his peculiar mechanical actions applied to pianofortes and harps

Gray and Davison, for their invention in organ building, of a new method of connecting the great organ with the swell organ, by means of a pedal, and of a new stop called the Keraulophon

Hill and Son, invention of a stop of great power, and for their mode of shifting the stops by means of keys

Sax, A, France, for his invention of several classes of wind instruments in wood and metal

Vuillaume, J B, France, for new modes of making violins, in such a manner that they are matured and perfected immediately on the completion of the manufacture, thus avoiding the necessity of keeping them for a considerable period to develop their excellences.

Wills, H, for his invention to organs of an improved extending valve to the pneumatic lever, the application of pneumatic levers in a compound form, and the invention of a movement in connexion therewith for facilitating the drawing of stops either singly or in connexion

PRIZE MEDAL.

Addison, R, for a "Royal Albert" transposing pianoforte

Bernardel, A, France, violins

Besson, G, France, for various metal musical instruments

Betts, A, for two violins

Breitkopf and Hartel, Saxony, for a grand pianoforte

Broadwood, John and Sons, for their successful improvements in pianoforte making

Bryceson, H, for a church barrel organ

Buffet, A, France, for oboes, clarionets, flutes, and a cornoinglese

Callcot, J, for his invention of a French harp without loose crooks

Chickering, J, United States, for a square pianoforte; and the jury think highly of his grand pianoforte

Collard and Collard, for piano, and for their successful application of several improvements in pianoforte-making

Debain, A, France, for a mechanical pianoforte

Dessi, A and M, Tuscany, for an organ with a "Baristata" stop

Eisenbrant, C H, United States, for clarionets and flutes

Fornari, S A, for a violoncello, violin, and viola

Franchi, C, France, for a repetition action in a pianoforte

Gallegos, J, Spain, for a "guitarra harpa"

Gelnhar, C J, Senior, Prussia, for a pianoforte

Gemunder, G, United States, for a Joseph Guarnerius violin (chiefly), and for three other violins and a viola

Godfroy, C, Dalcker, France, for flutes

Hockel, J A, Nassau, for a bassoon of a new and improved construction

Hopkins, J H, bearing apparatus made of gutta percha

Helwert, J, Wurtemberg, for a bassoon with 19 keys, of an improved construction

Hund, F and Son, for a horizontal grand pianoforte with new patent action

Hund, F and Son, for a cottage pianoforte, in the form of a lyre, named the "Lyra" pianoforte

Jaszrebski, P, Belgium, for an upright pianoforte

Janlin, J, France, for a panorgue, and for his improvements in free reeds

Jenkins, W and Sons, for an expanding piano, for yachts, &c.

Kirkman and Son, for a semi-grand piano, and an oblique piccolo pianoforte

Knocke, A, Bavaria, for his mechanical improvements in kettle drums

Köhler, J, for a slide trombone, and for the application of his patent valves to other metal wind instruments

Lambert and Co, for a cottage pianoforte

Macfarlane, A, for an improved cornet-à-piston

Mahillon, C, Belgium, for clarionets, and a trombone and ophicleide

Meyer, C, United States, for two pianofortes

Montal, C, France, for four cottage pianofortes

Nunns, R, and Clark, United States, for a 7-octave square pianoforte

Oates, J P, for improvements as applied to cornets

Pape, J H, France, for certain improvements in pianofortes

Pask and Kousin, for clarionets and brass instruments

Purdy and Fendt, for a double bass (chiefly), and for four violins, and two violoncellos

Roller and Blanchet Fils, France, for three pianofortes

Rudall, Rose and Co, for a Boehm's patent flute

Schiedmayer and Son, Wurtemberg, for a square pianoforte, in mahogany

Schulze, J F and Sons, Prussia, for an organ

Southwell, W, for a grand pianoforte

Stodart, William and Son, for a square pianoforte

Triebert, F, France, for oboes and a "corno-inglese"

Ward, C, for a newly-constructed bassoon and a pair of kettle-drums
Wheatstone and Co, for a novel invention of a portable harmonicon
Wornum, R, for an improved piccolo pianoforte

CLASS X.b.—(Jury 10.b.)

HOROLOGICAL.

COUNCIL MEDAL.

Dent, E J, for his large turret clock, on account of the combination of strength and accuracy of time-keeping attained in it, which are also accomplished by a cheaper mode of construction than in other turret-clocks of high character
Japy Brothers, France, clock and watch movements made by machinery, much cheaper than any other movement, and equally good
Lutz, C, Switzerland, for his watch balance springs, which were submitted by the jury to the test of stretching out and heating without affecting their form.
Wagner, J, France, for his clock with a continuous motion for driving telescopes, and for his collection of turret-clocks, which, on the whole, display great fertility of invention.

PRIZE MEDAL.

Audemars, L, Switzerland, watches and watch movements
Benoit, A, Sardinia, watches and tooth-polishing machine
Brocot, A, France, half-dead jewelled escapement
Bu Bois, F Will ams, Switzerland, astronomical clock
Bouchie and Houdin, France, good collection of clocks
Frodsham, C, chronometers and watches
Gr ndjean, H, Switzerland, pocket chronometers
Gros Gaud, C H, Switzerland, two watches
Gunery, V, France, astronomical clock
Ge wand, James, clock escapement
Gourdin, J, France, small turret clock
Hutton, J, chronometers
Jackson, W H and S, watches, solid key
Jorgensen and Sons, Denmark, chronometer
Loseby, E T, compensated balance
Lecoultre, A, Switzerland, watches, watch movements and pinions
Mercier, S, Switzerland, watches
Medhowall, Charles, escapement (clock)
Montandon Brothers, France, watch mainsprings
Patek, Philippe, and Co. Switzerland, chronometers, watches, &c
Parkinson and Frodsham, chronometers and watches
Richard, Louis, Switzerland, chronometer
Reydor, P G Brothers, and Colin, France, cheap house clocks
Rodier, A, France, cheap watch alarums
Rousseau, N, France, watch with printing seconds hand
Roberts, R, turret clock and watch plate drilling machine
Roskell, J, collection of models and watches
Rotherham and Sons, collection of watches
Vimière, France, chronometers

CLASS X.c.—(Jury 10.c.)

SURGICAL.

PRIZE MEDAL.

Arnott, Dr J, mode of applying cold as a novel therapeutical agent
Auzoux, Dr L, France, anatomical models. These models are calculated to aid the study of anatomy, human and comparative
Avery, J, illuminating apparatus for exploring long and narrow cavities
Bodge, H and Son, for collection
Bo rat Brothers, France, hernisary bandages
Calamai, Prof, Tuscany, a series of models in wax, representing the anatomy of the torpedo
Caplin, Madame, corsets
Clapin, J, gymnastic apparatus, and orthorchedic instruments
Charrière, J F, France, for collection
Coxeter, J, for collection
Evans, W, artificial leg
Evans and Co, for collection
Ferguson and Sons, for collection
Gordon J, anatomical model in ivory
Gowing, Thos W, veterinary instruments
Grossmith, W R, artificial eyes
Hutchinson, Dr, spiroscope
Junod, T, Switzerland, apparatus for hemospatie
Luer, A, France, for collection, and the great ingenuity and admirable workmanship of several instruments for operations on the eye
Mitchell, T, saw, or osteotome
Palmer, B F, artificial leg
Polycarpo, A, Portugal, a case of surgical instruments
Smith, B C, acoustic instruments for the deaf
Simpson, H, for collection
Simpson, G, anatomical model of the human figure. This figure consists of pieces that may be detached at pleasure, and is calculated to stand the heat of tropical climates
Tiner, France, Tererelle
Towne, J, anatomical models in wax
Weiss and Son, for collection

CLASS XI.—(Jury 11).

COTTON.

PRIZE MEDAL.

Anoukoaw Manufacturing Company, United States, an assortment of drillings, tickings, sheetings, and cotton-flannel
Anderegg, T, Switzerland, cambric muslins of unusually fine yarns
Anderson, D and J ginghams
Brook, James and Brothers, two to nine cord sewing thread
Christy and Sons, Turkish bath towel
Claudville, A, France, execution of manufacture in harness
window curtains, and piece muslins
De Bast, C, Belgium, grey cassimes
Dubar Delespaul, France, cotton trowserings
Duranton, J B, France, shirt fronts, loom made, in imitation of needle-work
Fehr, J C, Switzerland, Jacquard muslins
Fenouille and Rolland, France, novelty of design and beauty of manufacture, in coloured and figured muslins
Finlayson, F and Co, beauty of design and superiority of execution, in fast-coloured sprigged lappets
Gardner and Barsley, fine yarns
Hartmann and Son, France, figured cottons
Horrockses, Miller and Co, shirtings and long cloths
Houldsworth, T and Co, fine yarns
Johnson, J, quiltings and toilet covers
Jourdain, X, France, muslin
Lambeth, A (Christ Son), Prussia, cotton kalmucks and beavers
Lang, Johan, Austria, ginghams; design suited to French and German taste
Laumann, Brothers, Switzerland, specimens of Turkey red
Lisbon Weaving Company, Portugal, cotton blankets and shawls
Lode and Co, cotton diaper woven by power
Mallet (of Messrs. Vanroyen and Mallet), France, yarns
Major and Gill, loom-made double cuntils and nankeens for corsets
Mat, J, Son and Co, cheap window curtains by a new arrangement of the Jacquard loom
Marsin, W, and Son, furniture chenilles
Peyrecough, Steele and Co, toilet quilts and bed covers
Pouff, M, Switzerland, toilet quils and bed covers
Pouff, J, Switzerland, spotted muslins
Princamp, the Company of (Peigné Delacourt, manager), France, bleached nainsoolains
Putnam, A, and Co, figured and chequered cambries
Rieman, and Hauschild, Saxony, four-thread and other numbers of knitting cottons
Robertson, Jamieson and Co, imitation of Madras handkerchiefs
Rochie and Co, Switzerland, imitation of Madras handkerchiefs, trees and lions ground especially good
Schwanner, Aebly, Switzerland, tartan and book muslin
Shrimpton, H H, and Co, harness window curtains
Skinner and Topham, Saxony, cotton table-cloths
Spiegel and Carner, Prussia, laminettes
Steigle, J J, Wurtemberg, waistcoatings (with relation to cost)
Ultimentic Duck Manufacturing Company, United States, cotton sail-cloth

CLASS XII.—(Jury 12.)

WOOLLEN AND WORSTED.

PRIZE MEDAL.

Boyd, J and Son, damasks, including also the award for Bonnappe yarns
Aksenoff, J, Russia, woollen cloths
Alibaud, jun, France, blankets
Apperley, J and D, black cloth
Armitage, Brothers, woollen cloths
Asturian Company, articles made of hare fur
Bacot, P and Sons, France, fancy black and satin doeskins; also fine piece-dyed black cloths, of a thin make
Barnard and Hirst, woollen cloths
Beardsell, Isaac, and Co, woollen cloths
Beardsell, C and Co, woollen cloths
Bennett, J and A, woollen cloths of new materials
Benoist, Maison, and Wallaeckele, France, fine flannels
Bernhard, W, Saxony, woollen cloths
Berteche, Chesnon, and Co, France, fancy doeskins
Bietry and Maison, France, Cashmere cloths
Billiet and Huot, France, yarns
Boilley, F and Son, Belgium, thin piece-dyed black for exportation
Bottomley, M and Son, figured goods
Braun Brothers, Prussia, woollen cloths
Brooke, J and Sons, woollen blanks
Brown, J and H and Co, Scotch tweeds, &c.
Brown, W, damask made of wool, silk, and cotton
Brim and Nagler, Prussia, cloths of worsted weft and silk warp
Caillet Franqueville, France, merinos
Carr, T and W, woollen cloths, also beavers
Chatelain and Foron, France, flannels
Chemnewitz, T, France, woollen cloths
Carenbach and Son, Prussia, woollen yarns
Clark, J and T, woollen cloths
Crombie, J and Co, Scotch tweeds
Cronie le, Nephew, France, yarns
David Brothers and Co, France, merinos and cloths, mixed with organzine and spun silk
David-Lasbré and Co, France, merino fabrics (lowness of price)
Davies, R S and Sons, fine scarlets
Dauphinot-Pérard, France, merinos
Debeselle, A J, Belgium, shawls, swanskins, &c
Delattre and Son, France, worsted fabrics and merinos
Dickinson and Langs, woollen fabrics
Dubois, G and Co, Belgium, trowser-cloths
Early, J and Co, Witney blankets
Ecroyd, W and Son, Carder and Genappe-yarns
Eyres, W and Sons, woollen cloths
Fiedler, A G, Russia, woollen cloths
Firth, E and Sons, blankets with cotton warp
Forster, F, Prussia, Spanish stripes
Foster, J and Son, worsted stuff goods, including also the award for alpaca, mohair, and lustre-yarns
Fortin-Herman, France, felt-cloths for pianos
Gamble, W, Canada, blankets
Geisler, C S, Prussia, woollen-cloths
Gevers and Schmidt, Prussia, woollen cloths
Gilbert and Stevens, United States, flannels, exhibited by Johnson, Sewell, and Co
Gott and Sons, woollen cloths (for exportation)
Goutchkoff, E and J, Russia, woollen cloths, worsted and organzine silk warp fabrics, and Cashmere-de-laines
Gray, S, woollen cloths
Grossmann, C G, Saxony, woollen cloths
Gruner, F W, Saxony, merinos
Hass, L F and Schmidt, Prussia, woollen cloths
Hass, P and Sons, Austria, furniture damasks and woollen velvets
Haberland, G A, Prussia, woollen cloths
Hague, Cook, and Worrall, blankets for various markets, also travelling rugs, including award for Spanish stripes
Hargreave and Nussey's, woollen cloths from new materials
Helme, W, doeskins, cassimeres, &c.
Hendrichs, F, Prussia, woollen cloths
Henry, A and S, and Co, woollen cloths
Herrman, W, Saxony, wool or cloths
Hindenlang, sen, France, Cashmere and merino yarns
Hösel, R and Co, Saxony, damasks
Holdsworth, J and Co, damask and other furniture cloths
Hooper, C and Co, fine cloths, also elastic cloths for gloving
Horsfal, J G and Co, light cloths
Ingels and Brothers, yarns
Isaeff, P, Russia, woollen cloths
Itzigsohn, M, Prussia, woollen cloths
Junod, Desmeules, and Co, woollen cloths
Jowett, T and Co, fabrics from alpaca weft and silk and cotton warps, also of silk warp and linen weft
Kay, Richardson, and Nor, choc. ching. goods of worsted, cotton, silk, and linen, with printed warps
Keller, J, Austria, woollen yarns
Kesselkaul, J H, Prussia, woollen cloths
Knupfer and Steinhitzner, Prussia, merinos and brocaded satin de chinés
Lachapelle and Levaricr, France, woollen yarns
Lanfrin and Co, France, barge and woollen yarns
Leach, J and Sons, flannels
Lepaix Spinning Company, Saxony, merino yarns
Lloyd, W and Co, Welsh flannels
Lockwood and Keighley, woollen cords and velveteens
Lohse, E, Saxony, damask goods made with worsted and cotton warp and worsted silk
Lucas Brothers, France, merino yarns
Lutze Brothers, Prussia, woollen cloths
Marling, S and Co, woollen cloths
Mathieu, Robert, France, merinos
M'Cree, H C and Co, damasks
Meisener, F C, Saxony, woollen cloths for exportation
Milligan, W and Son, embroidered alpaca goods, under a patented process of the exhibitors
Molet-Warnet Brothers, France, fabrics of worsted mixed with silk, much used for foreign consumption
Morand and Co., Prussia, drapa d été, or summer cloths
Mourceau, —, France, stuffs for furniture hangings, screens, table covers, &c.
Offerman and Co, Prussia, fancy trouser goods
Pahing, W, billiard cloths, and scarlet hunters' or milled cloths
Parmait, Dautzsenne, and Co., France, woollen cloths
Patterson, J, Canada, blankets
Patur-e-Lupin, Seydoux, Sieber, and Co., France, merinos, drapa d'été, mousseline-de-laines, barèges, and challs, including also the award for yarns
Pawson, T, Son, and Martin, woollen cloths
Pease, H and Co, Coburg cloths, single and double twill, worsted weft and cotton warp, including also the award for yarns
Peel and Co., Prussia, woollen cloths
Peiss, and Mentzel, France, Cashmere fabrics
Petit-Clément, France, merinos
Pin-Bayard, France, woollen cloths and damask worsted shawls
Pocock and Rawlings, woollen cloths
Pouches-Pothier, France, merinos
Rand, John, and Sons, fabrics of wool, and wool combined with cotton and silk, including the award for yarns
Reid, J, frieze cloths and milled tweeds
Roberts, W and Co, tweeds
Robinson, T, blankets
Roger Brothers, and Co, France, merino yarns
Rogers, G, coburg cloths of worsted and cotton
Salter, S and Co, woollen cloths
Salt, Titus, alpaca and mohair fabrics, also their yarns; moreens for furniture hangings
Schlumberger, G and Co, France, damasks for furniture hangings, of worsted and silk
Schmidt, J G, jun, and Sons, Saxony, folded card-yarns
Schmieser, A, Austria, woollen yarns
Schöll, A, Austria, woollen cloths
Schooler, L and sons, Prussia, woollen cloths
Schofield, Benj and Sons, Saxony, flannels
Schürrman and Scherüber, Prussia, woollen cloths
Schwann, Keel, and Co, fabrics of various descriptions, and also adapted for foreign markets
Scotts, Son, and Co, France, woollen yarns
Shaw, J W and H, woollen cloths

Cowan and Sons, soaps
Cowper, E., models for the use of schools
Cubero, J., Spain, three terra-cotta figures
Dark, M., and Dark, R., articles used in the game of cricket
Dorvell, Elizabeth, flowers in wax
Dongias, J. S. and Son, Hamburg, toilet soaps
Duke and Son, articles used in the game of cricket
Dumortier and Co., France, stearic candles
Duvellercy, P., France, fans
Edwards, T. J., dressing-cases
Eichner, L. L., Bavaria, mechanical toys
Farina, J. M., (opposite the Jülichs-place, Cologne), Prussia, Eau-de-Cologne
Fein, A., France, fans
Field, J. C. and J., (Class IV.), stearic acid
Flöge, G., Austria, amber for pipes, and pipe-tubes and bowls
Foster, Son, and Duncum, flowers in cambric
Freeman, E. and J. (Class IV.), spermaceti candles
Friedrich, J., Austria, meerschaum pipe bowls, and cigar tubes
Furstenhoff, Emma, France, artificial flowers and materials
Gaudet du Preau, France, artificial flower leaves
Guild, sen., and Co., France, toilet soaps made by the cold process
Gibbs, D. and W., common and toilet soaps
Grassanini, J., artificial essences and perfumery
Gutterriez de Leon, R., Spain, three terra cotta figures
Hadji Miram, Turkey, amber mouth-pieces for pipes
Halfer's, J. (Widow) and Son-in-Law, Austria, toys
Hancock, J., taxidermy,
Harand, E., France, flowers in cambric
Hartmann, L., Austria, meerschaum pipe bowls; sticks, and umbrella handles
Hazel, J., United States, toilet soaps
Hedinger, C., Wurtemburg, walking canes
Hendrie, R., toilet soaps and perfumery
Hoffmann, C. W., Prussia, manufactures in amber
Hofrichter, C., Austria, cheap snuff boxes
Holland, Henry, hollow metallic frames for umbrellas
Hull Local Committee, Hull imports
Jullien, Meinier and Co., France, stearic candles
India Company, Hon. East, India, clay figures, representing the various Hindoo castes and professions, manufactured in Kishnagur
Johansson, J., Sweden and Norway, stearic candles
Juneau, Pierre, France, dolls' dresses
Kendall and Co., toilet soaps
Kleinhoff, J., Austria, automaton toys
Knight, John, soaps
Laurent, F., France, dressing and ornamental cases
Lefort, sen., France, materials for flowers
Leistner, G. L., France, perfumery
Little, G. and Co., fishing tackle
Louderback, M. J., United States, preserved peaches
Lumsden, Miss J. (Class XXX.), flowers in wax
Martin, M. C., Prussia, Eau de Cologne, and Melissa water
Masse, V., Tribouillet and Co., France, stearic candles by the process of distillation, and fat acids recovered from waste soaps
Matisen, A. and Co., Russia, stearic candles
Mercier, C. V., France, tortoise-shell and horn snuff boxes
Meyer, H. C., jun., Hamburg, walking canes
Meyers, B., collection of sticks
Miller, T. J. (Class IV.), large block of refined spermaceti, and specimens to illustrate the process of spermaceti refining
Miliau, jun., France, Marseilles soap
Mills Stearine Candle Company, Austria, stearic candles by the processes of saponification and distillation
Minton, J., H. H., Elizabeth and Rebecca, flowers, in wax
Montanari, A., dolls
Montanari, N. (Class XXX.), figures illustrative of Mexican life
Morland, J. and Son, umbrellas and parasols
Motard, J. and Co., Prussia, stearic candles, by the processes of saponification and distillation
Muir Fs, archery, weapons, &c.
Naim Effendi, Turkey, amber mouth-pieces for pipes
Oger, J. L. M., France, fancy and common soaps
Oleby, Chas. and Co., stearic, sperm, and composition candles
Oudard and Boucherot, France, preserved fruits
Palis, A., Prussia, tallow, oil, and palm soap
Paris Candle Company (Class III.), chocolate and syrups
Pelayo, San (Oviedo), the Nunnery of, Spain, preserved fruits
Perret, S., Petit, and Co., France, flowers in cambric
Philippe and Canaud, France, preserved fruits
Pitansier, Russia, stearic candles
Poyen, L., France, toilet soaps and perfumery
Pionquet, H., Wurtemburg, taxidermy
Price's Patent Candle Co. (Class IV.), invention of improved methods of distilling fatty bodies, and for candles made of distilled fat
Quanoune, C. and J., Belgium, stearic candles
Randolph, Wilhelmina, flowers of undyed feathers
Rock and Grauer, Wurtemburg, toys
Rodel and Sons, France, preserved fruits
Roule, J. F., India, collection of animal, vegetable, and mineral substances
Sampaio, W. and J., alpaca umbrellas
Santa Clara, (Funchal), the Nunnery of, Portugal, feather flowers
Sarre, H., jun., Prussia, soaps
Schulz, C., Prussia, walking sticks
Smith, W. and A., Scotch snuff boxes
Söhlke, G., Prussia, tin toys
Sparin, E. C., toys
Staight, D. and Sons, manufactures from Cheverton's artificial ivory
Stier, H., Russia, soaps
St. John, J. R., United States, soap
Strauss, J., Sardinia, pipes
Strickland, Maria, flowers in wax
Sugden, James, and Co., flowers in cambric
Taylor, Humphrey, and Co., soaps and perfumery
Taylor, H. P., and W. C., United States, toilet soap
Tilman, France, flowers in cambric
Touche-Gilles, E., Belgium, toilet and olive oil soaps
Tunis, the Bey of, Tunis, distilled perfumed waters (various)
Turkey, the Sultan of, Turkey, collection of pipes, soap candles, and confectionary
Vancampenhoudt, C., and Co., Belgium, stearic candles
Williams, J. and Son, toilet and common soaps
Winterfeld, J. A., Prussia, manufactures in amber
Wittica, Kemmel and Co., Wurtemburg, carved ivory toys
Wood, —, soaps
Wotherspoon, J. and Co., lozenges and comfits made by steam machinery
Wunder, L., Prussia, soap
Zeitler, J., Austria, pips bowls of Massa

CLASS XXX.—(Jury 30.)

SCULPTURE, MODELS, AND PLASTIC ART.

COUNCIL MEDAL.

Kiss, A., Prussia, the Amazon, cast in zinc and bronzed
Marochetti, Baron (Outside, West), Richard Cœur de Lion, in Plaster
Pradier, J., France, Phryne, in marble
Wyatt, the late Richard J. (Main Avenue, East), Glycera in marble

PRIZE MEDAL.

Appel, K., anastatic printing
Bailey, E. H. (South Transept), a youth resting after the chase, and a nymph preparing for the bath, in plaster
Bell, John (North Transept, Main Avenue, West), statue of Queen Victoria and; eagle slayer, in bronze
Benzoni, Gio. Maria, Rome, statue, in marble, of Gratitude
Beranger, Antoine (Main Avenue, East), France, head on porcelain; and portrait of Prince Albert on China
Bertrand, Joseph, France, designs for shawls
Bertini G., Austria, painted window representing Dante and some of his ideas
Bienaise, C. J., Prussia, Fountains; model of Magdeburg Cathedral
Bonnet, France, St. John, in Enamel
Bucker, H., Saxony, painting on porcelain
Castellini, Raffello, Rome, copy, in mosaic, of medallion of Boniface II., also of head of John the Baptist
Chebeaux, J., France, designs for cotton print and calico
Cheverton, B., the Theseus, as exemplifying the reduction by machinery of statues
Clerget, C. E., France, designs, and works in ornament
Collas, A., France, works exemplifying reduction of sculpture
Conder, A., France, shawl designs
Day and Son (Fine Arts Court), chromolithography and lithography united
Debay, Auguste, France, the "Premier Berceau," in marble
Debay, Jean (Main Avenue, East), France, death of the stag, in bronze
Design, Government Head School of (Fine Arts Court), Designs
Devers, J., France, Holy Family, on Lava
Dieterle, J., France, painting on China, in the Sèvres Manufactory
Drake, Professor F., Prussia, cast, in plaster, of part or pedestal to monument of Frederick William III. of Prussia
Duchuzeau, A. Madame (Main Avenue, East), France, painting on enamel, and of her Majesty, on china
Essex, W., collection of enamel paintings
Etex, A., France, various works of sculpture in plaster and marble
Fischer, K., Prussia, medals
Foley, J. H. (North Transept—Sculpture Court), Youth at a Stream, and Love and Beauties, in plaster
Fraccaroli, Innocenzo, Austria, statues in marble Achilles Wounded, and David Slinging the Stone
Fraikin, C. A., Belgium, Psyche carrying off Cupid, in plaster
Fratin, France, Group of Eagles, in bronze
Fuchs, J. N., von, Bavaria, fresco, exhibited by J Muhr
Gain, Antonio, Austria, statue in marble, Susannah
Geefs, J., Belgium, A Man in Love, in plaster
Geerts, G. Belgium, carving in oak
Gérente, A., France, stained glass
Hamon, France, enamelled casket
Hanhart, J. and N. (Fine Arts Court), chromolithography
Hardman, J. and Co. (Class XXVI.), painted glass window
Hogan, J. (Sculpture Court), drunken faun, in plaster
Hollmandel, and Walton (Fine Arts Court), chromolithography
Jacobber, France, paintings of flowers, on China
Jacotot, Madame, France, head of Raphael
Jennings, B. (Sculpture Court), statue of Cupid, in Marble
Jerichau, J. A., Denmark, a group, in plaster, Hunter and Panther.
Jones, Owen (Fine Arts Court), chromolithography
Kellner, C., Austria, glass painting of window in St. Lorenz Church, Nürnberg
Kornakoff, N., Russia, painting on porcelain
Lacoche, E., France, designs for shawls, barèges, muslins &c
Laurent, Madame Pauline, France, three enamels, on copper
Lawlor, J. (Sculpture Court), marble statue of a Bather
Lechesne, Auguste (Main Avenue, East), France, two casts in plaster, child protected from a snake by a dog
Lemercier, E. J., France, lithography and chromolithography
Lequesne, E. L. (Main Avenue, East), France, the Dancing Faun, in bronze
Limner, Luke (Class XVII.), variety of designs
Liverpool Local Committee (Main Avenue, West), Model of Liverpool
Macdonald, Lawrence, Rome, Iconic statue, in marble
Macdowell, P. (South Transept), Cupid, in marble, and Love the Master; Girl at Prayer, in marble
Marechal and Guynon, France, painted on glass
Marshall, W. C., (Sculpture Court), Sabrina, in marble
Monti, Raffello, Austria, marble statue of Eve
Perez and Co., Spain, inlaid wood table
Powers, Hiram, United States, statue of the Greek Slave, in marble
Ramus, J. M., France, group in marble, Cephalus and Procris
Reinhold, Ernst, Saxony, plaster group, La Pieta; bas-reliefs in marble
Rogers, W. G., cradle, carved in Turkey boxwood
Rouvet, —, France, inlaid work
Salter, S. (Class VII.), model of St. Nicholas' Church Hamburg
Schilt, France, painting on a vase
Sharp, J. (Sculpture Court), statue, in marble, of Boy and Lizard
Silbermann, G., France, chromo typography
Simonin, Eugène, Belgium, plaster statues of Godfrey de Bouillon, and other works
Strazza, Giovanni, Austria, marble statue of Ishmael
Thrupp, F. (Sculpture Court), Boy and Butterfly, and Arethusa, both in marble
Tuerlinckx, Joseph, Belgium, marble statue of Giotto
Vienna, Imperial Printing Office of, Austria, "Paradisus Viudobonensis," in chromolithography
Wallis, T. W. (Fine Arts Court), carvings in wood
Watson, the late M. L., Sheffield, Shield—Main Avenue, West, statue of J Bateman in marble; and Eldon as Stowell Group, alsoin marble
Weishmann and Sons, Prussia, colours and lithographic prints
Wolff, Albert, Prussia, marble group, Innocence
Wurtlich, G., Bavaria, portrait of Charles IX. on china
Wyatt, M. D. (Fine Arts Court), good taste in designs for tiles
Wyon, L. C., medals and medallion portraits of the Royal Family

No. 526.—VOL. XIX.] SATURDAY, OCTOBER 25, 1851. [SIXPENCE { WITH SUPPLEMENT, GRATIS.

ANTICIPATED REVOLUTIONS.

Long before the great Revolution of 1789, the skilful mariners who sailed the seas of politics were aware of the signs and portents of an approaching tempest. In like manner the Revolutions of 1830 and 1848 betrayed their coming by a premonitory darkening of the atmosphere—by a sudden fall in the social barometer, unintelligible and unaccountable to the many, but full of meaning for the few. The air was surcharged with electricity, and the weather-wise were enabled to calculate, almost to the hour, when the clouds would meet, the thunder roar, and the lightning flash upon society. Similar warnings are heard at the present time. Not only are there breakers far ahead, of which the low moaning is audible to the attentive listener, but there are clouds on the verge of the horizon laden with lightning, which the interested, as well as the timid, can observe, and which are certain to break somewhere, if not in our own more immediate locality. It is true that no human sagacity can fix the hour, nor the day, nor even the month, when the storm is to burst; but the season is confidently predicted. The spring of 1852 is the period that every one looks forward to. Already the birds of ill omen, whose voices are always heard on the eve of revolutions, screech the warning note; and the first months of the approaching year are expected with confidence by those whose business is change and insurrection, and awaited with alarm and anxiety, not alone in France, but in other parts of the continent of Europe, by the timorous who have anything to lose by revolutions, either in personal position or in worldly wealth. This small but influential class are putting their houses in order, and looking forward to the day when London—that only refuge of the distressed, the persecuted, and the expatriated—shall yield them both the obscurity and the security which they desire. The cry of danger comes loudest from France, which is now, as it has been for the last sixty years, the focus of revolutions; but it is heard more faintly, but still very perceptibly, in other quarters. Germany is not without alarm. Italy makes small secret of her discontent at the present, and her determination for the future; while Hungary, coerced but not conquered, watches the opportunity, and awaits the signal of another effort to conquer the independence which, if her battle had been single-handed against Austria, she would have achieved a year ago

THE ESQUIMAUX ERASMUS YORK.—FROM A DAGUERREOTYPE BY BEARD.—(SEE NEXT PAGE.)

In fact, the causes of discontent in Europe are so many, the rottenness of such governments as those of Austria, Prussia, Rome, and Naples is so great, and the train of powder which is laid is so heavy, that a spark less potent than that which France might apply at any time, would be more than sufficient to cause an explosion. It is doubtful even, whether, if France were rendered altogether satisfied with the working of her Constitution, and unanimously resolved upon the next occupant of the supreme authority, the states we have named would long remain in their present condition of forced quietude; or whether they would not be driven by national bankruptcy, or by intolerable oppression, or by both combined, into acts of resistance, violent and possibly successful, against the military authority under which they groan.

But in the meantime the most obvious danger comes from France, and it is in the power of the people of that country either to expedite or retard the next great movement of Europe against the military tyranny which has effaced all liberty of speech and action from some of the fairest portions of the world. The perils that menace France are indeed many; and if, by any false movement on the part of the present chief magistrate, and of those whose duty it should be to assure the repose, the prosperity, and the freedom of their country, the ultra-republican faction should gain the mastery in the inevitable struggle that must be decided between this time and May 1852, it is most likely that the world will witness a repetition of the scenes of 1848, and that the great battle predicted by the Emperor Napoleon, between Cossackism, or ultra-Absolutism, on the one side, and Red Republ-

THE SUBMARINE ELECTRIC TELEGRAPH.—POINT OF LANDING THE CABLE AT SANGATTE, NEAR CALAIS.—(SEE NEXT PAGE.)

Icanism on the other, will be fought in France, as well as in Central Europe.

Louis Napoleon has incurred a heavy burden of responsibility; and failure in the difficult and perilous enterprise in which he has embarked, will not simply be disastrous to himself, but to the cause of constitutional government in every country which desires, but has not yet been able to attain, that benefit. But let the French Conservatives of all classes beware; they have more to answer for than Louis Napoleon. They should not forget a fact, that seems, in some unaccountable manner, to have escaped their attention, that there is a party in France by whom a chief magistrate, whether he be called an Emperor, a First Consul, a King, or a President, is not considered at all necessary. While they are squabbling about men, that party, if strong in nothing else, is bigoted upon one particular principle, which the supporters of the various claimants of power have united to ignore or to deny. President Joinville, President Changarnier, or President Bonaparte, a King of the elder or of the younger branch of the House of Bourbon, will be alike distasteful to that party, while they are denied the right of suffrage so solemnly accorded to all Frenchmen by the Revolution of 1848. If—being shut out of the pale of the Constitution, such as it is—they should once more take to the streets, it is likely enough that the first fruits of their victory would be the total abolition of the chief magistracy. They do not forget, what the Orleanists, Legitimists, and Bonapartists do not care to remember, that, at a time when France was surrounded with difficulties, in the midst of distress and bankruptcy, and invaded by numerous foreign armies, the chief executive power was not vested in any one man, but in committees of the National Convention. If the personal pretensions of rival claimants are to keep France in perpetual turmoil and ill-blood, it is not unnatural to suppose that the Ultra-Republicans, reinforced by those great masses of the population unnecessarily deprived of the suffrage, will endeavour to untie the Gordian knot by the simple process of putting them all aside, and re-establishing the system under which Carnot was the military and Robespierre the civil chief, and by which committees responsible to and nominated by the Chamber carried on the whole business of the country.

This is a result which the cool heads of France should zealously endeavour to prevent. The game played at the present time by Louis Napoleon is a bold one, but it is one which we think is more calculated, if successful, to prevent than to cause revolution. It is a Conservative movement—the most politic course for himself, and the safest for France. The restoration of the principle of universal suffrage would deprive the street revolutionists of their opportunity, and consign the fortunes of the Republic to the ballot-box, instead of to the barricades. Its influence upon the mere fortunes of the actual President is the very least of the considerations which should weigh on the minds of those who desire that France should escape another revolution as violent as that of 1848. Great as the responsibility of the President is, the responsibility of the men who represent in the Assembly what is called the party of order is still greater. It is possible, that, as the day draws nearer when this question must be decided, they will, even at the eleventh hour, consent to remove so imminent a source of peril; and, independently of all personal considerations, allow France to declare her wishes by the universal suffrage of the people. If they do not, it seems scarcely possible that the sinister predictions of 1802 shall not be verified, not alone in France, but in all those dissatisfied and politically diseased portions of Europe, that take their impetus in revolutions from the force communicated by the mobs of Paris.

THE SUBMARINE ELECTRIC TELEGRAPH.

EVERY stage towards the consummation of this great work is viewed with interest, which specially extends to the localities in which the grand experiment has been made. Thus, the small village of Sangatte has become a point of attraction, as the landing-place of Brett's Submarine Telegraph on the French coast. Sangatte consists of one long straggling street running parallel with the sea, from which it is protected by a ridge of dunes or sandhills, covered with a short, coarse grass. It contains a small church, next to which is the *auberge*, kept by an old soldier of the Empire. The inhabitants are chiefly small farmers and farm-labourers, as, notwithstanding its proximity to the sea, Sangatte does not possess a single fishing-boat. The cottages are pretty clean and neatly kept; and the moral character of the "commune" may be judged by a visit to the churchyard, in which is a cross Calvary, erected by a former Bishop of Arras, a scion of the noble house of Latour d'Auvergne, to mark his sense of the good conduct of the villagers of this district, by the grant of certain indulgences on offering up their prayers at the foot of the said cross.

The tradition at Calais is, that this part of the coast was chiefly peopled from England, and that the name of Sangatte is a corruption of Sandgate, and was given to the village by its Anglo-Saxon colonists. Be this as it may, Sangatte has a far greater claim upon our attention as connected with the history of our own country, for it was from this point of the Gallic coast that one of the detachments of Cæsar's army embarked for the invasion of Great Britain. It is certainly a curious fact, and one well worthy of comment, that the very spot from which the first hostile army left the shores of France for a descent on England, should be selected as the landing-place of that cable, which, binding together the opposing shores, is no bad emblem of the kind feelings and sympathies that now so happily unite the two most civilised and most powerful nations of our own times.

The Sketch on the preceding page is taken from the summit of the sandy ridge of hillocks looking towards Calais, which is distant by the beach about three miles and a half, and about five by the public road. The spot of disembarkation of the Telegraphic Cable is marked by a flag-staff, and is singularly well suited for the purpose, from the absence of all rocks, or even shingle, the beach being composed of the finest sand.

The iron-bound Submarine Electric Cable is now completed, and the insulation and connections perfect from shore to shore, commencing at the cave immediately beneath the South Foreland Lighthouse (near Dover), and terminating at the point marked by the flag-staff on the ridge at Sangatte, where the first telegraphic messages were printed by this line with Brett's telegraphic apparatus. The Cable is connected with the Telegraph office at Calais; and messages have been forwarded by this means direct to Paris from the English coast, and replies given, in the most satisfactory manner.

THE SEARCH FOR SIR JOHN FRANKLIN.—ESQUIMAUX INTERPRETER.

(SEE THE PORTRAIT UPON THE PRECEDING PAGE.)

ERASMUS YORK (native name, Kalsheirna) was brought to England on board H.M.S. *Assistance*, Captain Erasmus Ommanney, second in command of the Expedition under the orders of Captain Horatio Austin, C.B. Much interest is attached to this young man, as being one of a tribe inhabiting the country in the vicinity of Wolstenholm Sound, at the head of Baffin's Bay, in 76° 3′ north latitude, and the nearest residents to the Ultima Thule of any human beings yet known to exist on the globe. This tribe was communicated with by Sir John Ross during his voyage in 1818, and was by him denominated the Arctic Highlanders. When the Expedition was passing Cape York, in August, 1850, after its release from the ice in Melville Bay, natives were seen from the *Assistance*; and Captain Ommanney went with the *Intrepid* to communicate with them, when it was ascertained that her Majesty's ship *North Star* had passed the winter in the neighbourhood. The fate of this vessel was then a matter of anxiety, as, by her instructions she was cautioned to avoid passing the winter. The tribe consisted of three families, residing in their summer huts at the Cape. As no steamer had ever visited those seas before, it was interesting to watch the impressions upon those primitive beings when they descended into the engine-room: the large furnace and machinery astonished them, and, the latter, on being put in motion, made them take to their huts with fright.

It was after this first interview that the report was raised of the massacre of two ships' crews in 1846. Captain Ommanney, accompanied by Captain Penny, with his interpreter, immediately returned to Cape York, and had a lengthened interview with the natives, who most emphatically denied the statement; adding that no ship had ever been on their coasts but the *North Star* and passing whalers.

On parting, they consented to show Captain Ommanney where the *North Star* had wintered, and to join their ship, for the purpose of being useful as an interpreter, in the event of meeting with any natives during the search for the missing expedition under Sir John Franklin. Without the least reluctance at parting with his immediate relatives, and the only people he knew on the earth, York threw himself into the hands of strangers in perfect confidence. Arriving on board the *Assistance*, he put off his native costume, submitted to the process of ablution, and, clad in a contribution of clothing made by the officers, much to his delight, he performed the duty of pilot to the spot where the *North Star* had wintered.

On entering Wolstenholm Sound, York directed Captain Ommanney and the officers to the station of his tribe, which had been abandoned in consequence of some epidemic, which carried off several persons. On entering the huts, a most appalling sight presented itself: a heap of dead bodies lay one over the other, clad in their skin clothing, as if suddenly cut off by the hand of death. It was an affecting scene in such a remote and desolate region, isolated from all communication with the human race. Curiosity led some of the party to examine a recent grave, which greatly distressed the feelings of York, as it proved to be that of a relative. With tears and entreaties he begged them to desist, which request of course, was immediately complied with.

York subsequently lived on board the *Assistance* by his amiable disposition became much attached to all the Expedition; and, as no opportunity offered of landing him on his native shores, he was brought to this country. The leaders of the Expedition conferred the surname of York upon him from the locality in which he was found, and a Christian name after that of the gallant Captain Ommanney.

The prefixed Portrait is from a Daguerreotype by Beard.

FALSE CHARGE AGAINST THE NUNS OF A CONVENT.

On Wednesday last, Mary Joseph, a nun, residing at the Asylum of the Good Shepherd, at Hammersmith (a charitable institution established for the penitence and reformation of females), was summoned before Mr. Paynter, at the Hammersmith police-court, for assaulting a young woman named Angelina Adams, by cutting off her hair against her will.

Complainant had been brought to the court by the parish authorities a few days ago, and in consequence of her statement the summons was issued.

The complainant now stated that she went into the Asylum of the Good Shepherd in July last, and that about a fortnight after two nuns held her while a third (defendant) cut off her hair against her will. She had often asked to be allowed to leave, but they would not permit her, and at last she effected her escape by getting over a wall and into the road. She had formerly lived in service at Liverpool, in a Catholic family, where she occasionally saw a priest, whose name she did not recollect, who persuaded her to go to London to a situation he had for her, and that he took her to town and to the asylum in question, where he left her, and she had not seen him since. She also stated positively that she was a Protestant, and had always professed to be one, and had lived in Liverpool all her life till now.

In cross-examination by the Rev. Mr. Mullins, chaplain of the asylum, the witness, in a saucy and sullen manner, without looking at him, said she did not know the Rev. Mr. Connelly, of Moorfields. That he had never sent her to the convent with a letter of admission. That he had never relieved her, and that she had never been to Moorfields, or had gone by any other name. She did not know the Orphan Asylum at Hamptead.

Witnesses were then called on the part of the defendant, who, in a most clear manner, contradicted the complainant in every part of her statement, showing that she had been at the asylum three years before, but was dismissed for misconduct, and that she had fallen in with the Rev. Mr. Connelly, and solicited him to relieve her and to send her to this asylum, from which they discharged her the next day, on finding who she was. That she had always professed to be a Catholic, and she was identified as Mary Anne Burke, formerly an inmate of the asylum at Hampstead for three years, in which name she was admitted into this asylum on the previous occasion. It was also proved that the rules of all at this establishment not to cut the hair of an inmate until after four years' residence, and that she was living in London at the time she stated she was in Liverpool.

The chaplain of the asylum said it was unnecessary to remark on the case or the evidence, and it was not their wish to proceed against the girl for perjury. He thought her exposure and her conscience would punish her enough.

Mr. Paynter said he had never heard so shocking a case of deliberate perjury, apparently without motive. The character of the asylum was fully vindicated, and it was only just to the ladies who conducted it, and to whom pure charitable motives as it appeared to him, that perjury should be punished. Mr. Paynter then ordered the prisoner to be put into the dock on a charge of perjury, which was done, and she was remanded for a week that she might be indicted at the sessions.

The summons against the nun was of course dismissed.

EXTRAORDINARY RESULTS OF PHILOSOPHICAL INVESTIGATION.

Two results of a highly interesting character, one of them being also very important in a social and commercial point of view, have been achieved, and within the last few days made known, by Signor Gobini, Professor of Natural History at the University of Lodi, in Italy. The first is an illustration of his theory on the formation of mountains, some curious experiments respecting which he has lately made before an astonished circle of private friends. He melts some substances, known only to himself, in a vessel, and allows the liquid to cool. At first it presents an even surface, but a portion continues to ooze up from beneath, and gradually elevations are formed, until at length ranges and chains of hills are formed, exactly corresponding in shape with those which are found on the earth. Even to the stratification the resemblance is complete, and M. Gobini can produce on a small scale the phenomena of volcanoes and earthquakes. He contends, therefore, that the inequalities on the face of the globe are the results of certain materials, first reduced by the application of heat to a liquid state, and then allowed gradually to consolidate.

The other discovery, as stated, is of a more practically useful character. The Professor has succeeded to a most surprising extent in preserving animal matter from decay, without resorting to any known process for that purpose. Specimens are shown by him of portions of the human body, which, without any alteration in their natural appearance, have been exposed to the action of the atmosphere for six and seven years; and he states that at a trifling cost he can keep meat for any length of time in such a way that it can be eaten quite fresh. The importance of such a discovery, if on a practical investigation it is found to answer, will be more readily understood when it is remembered that the flocks of sheep in Australia are boiled down into tallow, their flesh being otherwise almost valueless, and that in South America vast herds of cattle are annually slaughtered for the sake of their hides alone.

A DISTINGUISHED EMIGRANT.—The expenses of emigrating the widow and orphans of the late Sir Richard Courtney, the celebrated Mangerton guide, have been paid by H. A. Herbert, Esq., M.P., and C. O. Hall, Esq., *Londonderry Chronicle*. The knighthood of Sir Richard is no fiction; the ceremony, says the *Limerick Chronicle*, was performed by the Marquis of Anglesea, when Viceroy, Marquis. Lady, whether the Marchioness or some other member of the family it is not known, ascended Mangerton, and while resting on the margin of the Punchbowl, admiring the glorious scenery around, through some accident fell into the deep lake, and would have been drowned, only for Courtney, who plunged into the water and saved the lady. This heroic conduct was rewarded with a £5 note and the honour of knighthood.

The immense traffic created between the Pacific and Atlantic coasts of the United States was performed by the following:—The steam-ship *Pacific*, Captain Sally, arrived at San Juan del Sud on September 20, with 200 passengers and 100,000 dols. in gold dust on freight, having left San Francisco on the 6th of September. The steam-ship *North America* left San Juan del Sud on the 20th ult., with 250 passengers, for San Francisco. The steam-ship *Gold Hunter* left San Juan del Sud on the 21st for San Francisco. The steam-ship *Monumental City* left on the 21st for Realejo, thence to Panama.

PARISIANA.

(From our own Correspondent.)

THURSDAY, Oct. 23.

Our horizon looks as dark as ever; but the pleasure-loving Parisian has had so many narrow escapes since February, 1848, that he now quietly looks to Providence for a continuance of the same good fortune, and troubles himself no further about what may happen, or whatever may come—

Nec quicquid futuri curat.

The close of the Crystal Palace has sent us over many of the Parisian exhibitors; and, notwithstanding the clamour raised against the decision of the juries, the complaint is by no means general, at least among the French; on the contrary, some of the most eminent of them, whose names I could mention, frankly admit the fairness with which the juries exercised their most delicate and difficult task. How far their success in a commercial sense may have tended to create this conciliatory feeling, I cannot say; but no doubt it has had its due effect. The closing ceremony was hurried over; and it is intended, it is said, to remedy the "maimed rites" complained of, by a grand public banquet to the exhibitors, at which Louis Napoleon is to preside in person. It is intended to be a very splendid affair, and several orders of the Legion of Honour are to be presented to the successful *exposants* by the President of the Republic.

The overflow of rich foreigners to Paris has led to some new kinds of speculation; among others, a French lady of high rank—ruined, it is said (though it is not explained how), by the Revolution, having a splendid hotel, richly furnished, bethought herself of a plan to turn her noble residence to account. Her scheme—a strange one for a *marquise*, for she is no less—was to open a *table d'hôte* for her friends, and those whom they introduced. Being highly connected, the dinners and wines of the first order, and the charges accordingly, the affair went on most prosperously. Unfortunately, however, a little play began to be introduced after dinner, which, moderate at first, soon increased to a most extravagant degree, and immense sums nightly changed hands. At length, an English gentleman, recently arrived from the East (known to all the world in France), that M. Véron began life as an apothecary:—

Sir,—In consequence of the continued attacks I have experienced in your columns, I shall send you a formal challenge, as you publish, that your honour will not allow you to decline the combat. I will not fight you with rapier or pistols, the advantage on my side would be far too great: my weapons on this occasion shall be in your own way—two *pilules* one of them composed of prussic acid, each of us to swallow one. Your honour, both as a man and a *pharmacien*, will not, I am sure, allow you to refuse this satisfaction.

Your obedient servant,

To Monsieur—— LOLA MONTES, Countess de Lansfeld, &c.

Whether the sanguinary missive will have its effect in silencing the journalist, or whether the "affair" is to come off as proposed by the Amazonian Countess, is yet among the secrets of time.

The Neapolitan papers are rapturous in their praises of a new contralto, Mdlle. Borghi, who has just appeared at the Fondo in *La Cenerentola*, her execution of which they describe as unequalled in that city since the days of Pisaroni. Let us hope, if these accounts be true, that the lady will not, like so many of her class, ruin her voice by endeavouring to force it into an indifferent soprano. The same paper gives a long list of nuptial ceremonies in New York between members of the operatic corps now in the United States. Few of these turtles, however, are much known in Paris or London: Marini, the basso, is almost the only exception; his marriage is announced with Signora Rosa Maretzek, a young lady of eighteen. M. Marini is described as a widower; but the latter part of the paragraph is appended an ugly note in the *Pirata*, signifying, "that if the first wife of the celebrated basso has not very lately flown into the clouds, she is living, and in a state of exuberant health at the present moment in Naples." *Mishing mallecho*, Italian means mischief.

Marriages are, in the order of things, followed by deaths, in all well regulated newspapers; so I must next quote you not only the decease, but a terrible murder, of an *artiste*—both of which would be deplorable if they were true, but the story is entirely discredited in Paris. It is given in a letter from Venice, quoted by the *Trieste Gazette*, which states that—

On the morning of the 10th, while the tenor Fraschini was at breakfast, his brother *artiste*, Collini, the barytone, called on him; and, after shaking him by the hand and conversing with him for a short time in the most friendly manner, he suddenly drew a poignard and stabbed him to the heart. The assassin had a conveyance ready, and effected his escape. Fraschini leaves a wife and four children.

Notwithstanding the seriousness of this paragraph, it is set down as one of those tragic pleasantries with which the Italian papers not unfrequently regale their readers.

For a little comedy after tragedy, I may mention a rather amusing incident which occurred at the theatre at Nantes during the late oppressively hot weather. Several of the *gentlemen* in the gallery threw off their coats and vests in consequence of the heat; one, more sensitive to warmth than his fellows, proceeded to divest himself of the portion of his habiliments which, I believe, is considered indispensable in every part of Europe save the Highlands of Scotland. His neighbours, however, thought this a little *too cool*, and the interference of the police was required to enforce a more rigid attention to *convenance*. In fact, the prohibition as to dress insisted on by Mr. Lumley at Her Majesty's Theatre, would be quite out of place at Nantes.

We have had nothing new since my last, at the Italiens; the next opera is to be "Lucia," with Calzolari and Mdlle. Corbari. The task of both will be trying in the extreme; but now is the time of experiments, for the season cannot properly be said to commence in Paris before the middle, or even the close, of November. The first night at this theatre on Saturday, which is here, as in London, the fashionable night *par excellence*, presented a scene of splendour and elegance difficult to be surpassed. Among the crowd of notabilities present was Count Batthyany, who was an object of special interest and curiosity during the entire evening. Madame Barbieri-Nini improves upon further acquaintance; despite an evident decline of power, her admirable and true Italian style is thoroughly appreciated by the cultivated musicians, who, at all times, form the majority of the audience at the Salle Ventadour.

The *Censure* is already at work upon Halèvy's "Juif Errant," preparing, as you already know, at the Grand Opera. The last *tableau* was intended to represent the "Day of Judgment!" but the censorship at once prohibited the appearance of the Destroying Angel on the stage, lest the sublime description of the Scripture should be profaned. The presence of the angel will therefore be replaced by the sound of "the last dread trump" proclaiming the final hour of the world. Disclaiming all ultra-rigidity, the question really forces itself upon one—are such displays and such subjects properly permissible upon the boards of a theatre like the Opera?

The lately opened Opéra National already exhibits symptoms of early decay. At a recent visit to Boisselot's new opera, "Mosquita," I found but a "beggarly account of empty boxes," and a not much better attendance in any part of the theatre; and, if truth must be told, the execution of the opera merits no better patronage we have seldom heard, in Paris so bad. Felicien David's new work announced here, "Le Perle du Brésil," is well spoken of; but, if performed in a similar manner, success is impossible.

AUSTRIA.

According to intelligence from Vienna this week the chief features of the amended Constitution (if Constitution it may be called) are:—1st. An Imperial Senate to be formed, with legislative power, and comprising the members of the Imperial family, the Bishops of the Empire, and the higher nobility, whose seats are to be hereditary. 2nd. Local governments to be established in the various crown lands with extensive powers.

FRANCE.

The Ministerial crisis still continues. As usual on such occasions, various lists of the probable members of the new Cabinet have been published, but in well-informed circles they are regarded as incorrect; and as a day or two may remove all uncertainty in the matter, by the official publication of the names of the new Ministry, it would be useless to mention the names which have been already circulated in the gossiping circles of Paris. It may be stated, however, that Gen. St. Arnaud is regarded by all parties as likely to be the new Minister of War, and Gen. Bonaparte Minister for Foreign Affairs.

M. Billault has had several conferences with the President of the Republic; but that gentleman had been unable to construct a Cabinet.

The President is still busily engaged in composing his message to be delivered to the Legislative Assembly on its meeting after the recess. The document will, as usual, be very voluminous; and it is said, that whatever Ministry comes into office now will only be regarded as a "Pro-[illegible] holding its functions temporarily until the Assembly [illegible] the President's Message.

The [illegible] the discovery of the existence of secret societies in the departments of the Cher and Nievre, have caused those provinces to be proclaimed in a state of siege.

The question of the candidateship of the Prince de Joinville for the presidency of the Republic has been revived, and it is said that a deputation has this week returned to Paris from Claremont, with the Prince's consent to announce formally his resolve to offer himself as a candidate; that his address to the electors is ready, and that it will be shortly distributed at the first favourable opportunity.

UNITED STATES.

Advices from New York to the 11th inst., state that Mr. Owens, the American Consul at Havanna, had been dismissed by the President of the Republic, who declared his defence of his conduct towards the Lopez invaders, when arrested, to be unsatisfactory.

A very destructive gale had swept over the coast of Nova Scotia, by which nearly one hundred fishing and other vessels were driven ashore or sunk, and upwards of three hundred lives lost.

The President has given orders to the naval stations to fire salutes and extend all military honours to Kossuth, at New York and other places. A grand dinner will be given him at the President's house.

By this arrival we have intelligence of the accidental burning of the American screw steam-ship *Lafayette*, Captain Stoddart, at Chagres, on the 11th ult. The *Lafayette* was a new ship, having only made one voyage between Philadelphia and Liverpool.

From California we have advices to the 6th of September, from which we learn that Lynch law was completely in the ascendant, the authorities being set at defiance by the Vigilance Committee, who, on their own responsibility alone, executed persons charged with crime, as shown by the following details reported in the local paper:—

"On the 23rd of August, in conformity with the sentence passed upon them by the law, Thompson, Robinson, and Hamilton were hanged in Sacramento for highway robbery. On the morning of the execution Robinson was reprieved by the Governor, Mr. Dougal, notwithstanding which the populace took the prisoner and executed him. On the Tuesday previous to the above (which took place on Friday), the Governor, with his aids, went in the middle of the night and rescued, without opposition, the two prisoners, Whittaker and M'Kenzie, who were placed in the custody of the Vigilance Committee. This caused a tremendous excitement; but, on account of the forbearance of the committee under the circumstances, order was restored, and everything was thought to be at rest, until Sunday morning, the 24th inst., when a portion of the members of the Vigilance Committee broke into the gaol, took the prisoners, drove them down in a carriage to the committee-rooms, and in seventeen minutes from the time the men were first taken from the gaol they were hanging in front of the committee-room in Battery-street, in the presence of 20,000 people, all of whom approved of the act."

The gold districts furnish satisfactory mining intelligence. One vein in Miraposa, work d by a steam machine, was realising from 600 dollars to 1500 dollars daily. A company of four men, working a quartz mine at Mount Ophir, were taking out on an average 500 dollars a fortnight; and the Carson Creek Mining Company were realising upwards of 5000 dollars per day.

Another large and destructive fire is reported. It took place at Marysville, and is supposed to have been the work of an incendiary. Upwards of eighty buildings had been destroyed. The loss is estimated at upwards of 50,000 dollars.

CANADA.

The intelligence from Canada is dated the 5th inst., and confirms the previous accounts of the ministerial crisis. Lord Elgin was endeavouring to form a Cabinet, but had not yet succeeded. He had sent for Mr. Morin, Speaker of the Legislative Assembly, to form a Cabinet. Mr. Archibald, an Imperial contractor, has addressed a letter to Lord Elgin, offering to complete the Great Western Railroad on the Canadian section of the line, if the amount formerly offered by the provinces [illegible] Nova Scotia, Lake Superior, New Brunswick, and 120,000 dollars a year from Canada. He also offers to construct the European and North American Railway on the conditions offered by New Brunswick, taking the risk of selling the balance of the shares.

CAPE OF GOOD HOPE.

We have accounts this week from the Cape to the 12th September. They are not of a satisfactory character. The general harmony of events since the departure of the previous mail, on July 20, which is furnished by the Cape Town papers, presents a very gloomy aspect of affairs in the colony. At the former period Sir Harry Smith, the Commander-in-Chief, was engaged at King William's Town in sending out detachments of troops to traverse British Kaffraria in various directions; while within the country every frontier district was overrun by the enemy, who had swept off many thousands of cattle and sheep, had burnt numerous farm-houses, and had completely devastated some extensive tracts of country.

"[illegible] that time," says the *Cape Town Mail*, "the same system of operations [illegible] continued, with little variation. Small parties of Kaffirs have been passing to and fro in Kaffraria, occasionally crossing the boundary into the colony; while the depredations of the enemy have been carried on with as much activity and success as ever, in spite of the efforts of the colonists and some detachments of the troops to check them.

From other sources we learn that a serious engagement took place in the Fish River bush on the 1st of September, by which the British troops were defeated with considerable loss; and it is said that the whole of the frontier is in a state of alarming disaffection. The 2d Royals, which had been recently conveyed to the colony, had two men killed and five wounded.

In the Orange River sovereignty, the British Resident has made no movement since his reprisals by Moshesane, on the 20th of June. He has, however, published a "Government notice to the people," in which the people of Moshesh and Moliasane (the Basutos and Batanngs) are denounced as enemies, and the settlers in the sovereignty are summoned to enrol themselves for military service. The inhabitants have generally refused to obey the order, saying the they have no desire or motive for quarrelling with those chiefs. A public meeting of landowners and merchants has been held at Bloem Fontein, at which resolutions were passed severely censuring the conduct of the Resident towards those chiefs as unprovoked and unjust, and declaring that the chiefs, since these proceedings, have expressed their intention to join the enemy

NAVAL AND MILITARY INTELLIGENCE.

MAN-OF-WAR SALUTES TO CONSULS.—The following circular has just been issued to the commanders of her Majesty's ships: "My Lords Commissioners of the Admiralty having been informed by her Majesty's Secretary of State for the Foreign Department, that by the regulations of the Netherlands Government for Dutch ships of war, they are to salute no Consuls except those of their own country, my Lords desire that, as Dutch ships of war are thus precluded from saluting British Consuls, British ships of war not to salute Dutch Consuls."

SOLDIERS' BEDS.—New straw and palliasses are ordered to be issued by the barrack-master in Ireland for the use of the troops, and to try the experiment of the straw lasting ninety days, instead of sixty days as formerly.

The Peninsular and Oriental Steam Company's ship *Sanghai*, en *route* for Calcutta and China, left Southampton on Wednesday morning, carrying out despatches from the Colonial Office, with which she is to call at the Cape of Good Hope.

It is not intended to make any further immediate addition to the forces now at the Cape or on their voyage to that colony.

The Board of Ordnance have authorised the inspector [illegible] to the use of hand-[illegible] power of Lindad

SYMPTOM, GORE HOUSE.—It is understood that M. Soyer has commenced legal proceedings against [illegible] the Chairman of the Metropolitan magistrates, in consequence of what, at their last meeting, fell from that gentleman respecting the establishment at Gore House.

The Rev. Dr. R. O'Reilly, Professor of Theology at Maynooth, has [illegible] his membership, and become a member of the "Society of Jesus" at Naples, having entered as a novice at one of the houses of that order in that city.

A fire brigade, which has been organised by the Dublin Commissioners of Police, has been inspected by the Lord Mayor and others, and found to be a most effective and well-provided body.

THE BISHOP OF NORWICH AND DR. NEWMAN.

A correspondence of a very friendly character, and unprecedented for the conciliatory tone which it presents in communications of a controversial nature, has been published this week.

Dr. Newman writes to his old college friend, the Bishop of Norwich, for an explanation of the following statement made by his Lordship at a recent meeting of the British and Foreign Bible Society, in St. Andrew's Hall, Norwich; adding, that those statements of his Lordship "are as contrary to the teaching of the Catholic Church as they can be repugnant to your own (the Bishop's) views of Christian truth."

The Bishop's words are these:—

> My friends, I have heard—and I am sure all of you who have heard of it will share with me in the disgust as well as the pain with which we have heard of it—that there is a publication circulated through this land, the stronghold of Bible Christianity—a publication issuing from that Church against which we are protesting, and wards it, on the other hand, the stronghold of human authority—a publication issuing from one of the most learned of its members, a man who, by his zeal as a convert, and by his position and acceptance with that Church, speaks to the authority of the Church itself, and represents its doctrine and feelings—a publication, as I have heard with dismay, read, admired, circulated; which maintains that the legendary stories of those puerile miracles, which I believe until now few Protestants thought that the Roman Catholics themselves believed—that these legends *have a claim to belief equally* with that word of God which relates the miracles of our God, as recorded in the Gospel, and that *the authority of the one is the authority of the other—the credibility of the one based on a foundation no less sure than the credibility of the other.*

THE BISHOP OF NORWICH TO DR. NEWMAN

London, October 8.

My dear Newman,—As I have already replied to an inquiry, the same as that which you make, in a letter to the Rev. W. Cobb, Roman Catholic priest in Norwich, I enclose a copy of that letter

If I have misrepresented you, you will, I hope, believe me when I say that it has been from misunderstanding you. Permit me to add, that what has misled me is likely, you may be sure, to mislead others. I shall rejoice, therefore, at any public statement from you which may disabuse your readers of false impressions. When you are found to be maintaining (as you appear to do) that the miracles of the apostolic age were only the beginning of a like miraculous development to be manifested, and accredited through succeeding times, and professing your belief in the facts of the further miraculous development, in terms as solemn as those of a creed, it is very difficult to avoid the impression that the scriptural narratives are to be regarded as the beginning only of a series of fables, historic, partaking of their credulity and authority, although the one may be called Scripture and the other legend.

Time and circumstances have so long divided us, that I ought to apologise for the familiar mode in which I have addressed you; but your hand-writing has brought back on my mind other days, and some dear friends, who were then friends and associates of both of us, and I would still desire you to believe me, very truly yours,

S. NORWICH

The letter to Mr. Cobb, referred to, is appended, but its substance is contained in Dr. Newman's reply, which is as follows:—

DR. NEWMAN TO THE BISHOP OF NORWICH.

Oratory, Birmingham, October 11.

My dear Lord,—I thank you for the kind tone of your letter, which it was very pleasant to me to find so like that of former times, and for the copy you enclose of your answer to Mr. Cobb.

Your Lordship's words, as reported in the Norwich paper, were to the effect that I believed the ecclesiastical miracles to have "a claim to belief *equally* with the Word of God which relates the miracles of our God, as recorded in the Gospels;" that I made "the authority of the one as the authority of the other," and "the credibility of the one as based on a foundation no less sure than the credibility of the other."

You explain this in a letter to Mr. Cobb thus:—"I did not say that Dr. Newman asserted for the miracles related in the Roman legends a credibility based upon the foundation of Divine revelation, no less than those of Scripture. What I said was, that he claimed for the miracles related in the legends, the authorship of which was human, *a claim of credibility as high* for the miracles and Divine revelations recorded in Scripture, the authorship of which was Divine."

Will you allow me to ask the meaning of your word "credibility?" for it seems to me a fallacy is involved in it. Archbishop Whately says that controversies are often verbal; I cannot help being quite sure that your Lordship's difficulty is of this nature.

When you speak of a miracle being *credible*, you must mean one of two things: either that it is "antecedently probable," or *vice versâ*—or that it is "furnished with sufficient evidence," or *provable*. In which of these senses do you use the word? If you describe me as saying that the ecclesiastical miracles come to us on the same *evidence* as those of Scripture, you attribute to me what I have never dreamed of asserting; if you understand me to say that the ecclesiastical miracles are on the same level of *antecedent probability* as those of Scripture, you do justice to my meaning, but I do not conceive it is one to raise "disgust."

I am not inventing a distinction for the occasion; it is found in Archbishop Whately's works; and I have pursued it at great length in my "University Sermons," and in my "Essay on Miracles," published in 1843, which has never been answered as far as I know, and a copy of which I shall beg to present to your Lordship.

First, let us suppose you to mean, by "credible," antecedent probable, or *likely* (*verisimile*), and you will then assume me of saying that the ecclesiastical miracles are as likely as those of Scripture. What is there objectionable, or even startling in such a statement, whether you agree with it or not? I certainly do think that the ecclesiastical miracles *are* as credible (in this sense) as the Scripture miracles—may, more so, because there are Scripture miracles of a character that breaks (as it were) the rule. The miracles of Scripture begin a new law; they innovate on an established order. There is less to surprise in a second miracle than in a first. I do not see how it can be denied that miracles, as coming *after* Scripture miracles, have not to bear the brunt of that antecedent improbability which attaches, as Hume objects, to the idea of a violation of nature. Ecclesiastical miracles are *probable*, because Scripture miracles are *true*. This is all I have said, or implied, in the two passages you have quoted from me, as evident from both text and context.

As to the former of the two, I there say, that if Protestants are surprised at my finding no *difficulty* in believing ecclesiastical miracles, I have a right to ask them why they have no difficulty in believing the Incarnation. Protestants find a difficulty in even listening to evidence adduced for ecclesiastical miracles. I have none. Why? Because the antecedent fact of God's Scripture miracles has taken away whatever *primâ facie* unlikelihood attached to them as a violation of the laws of nature. My whole lecture is on the one idea of "Assumed Principles," antecedent judgments or theories; it has nothing to do with proof or evidence. And so of the second passage. I have but said that Protestants "have no *difficulty* at all about Scripture miracles, which are quite as difficult to receive as any miracles recorded in the history of the saints." Now, I suppose I cannot conceive a thoughtful person denying that the history of the ark at the Deluge is as difficult to reason as a saint floating in his cloak. As to the third passage you quote at length, about "a revelation through nature," and "the Christian system," and the "legendary statements," I know nothing about it. I cannot even guess of what words of mine it is the distortion. Tell me the when and where, and I will tell you what I really made use of. The sentences in question come from my recent lectures, all I can say is, that what I spoke, I read from a printed copy, and what I printed I published, and what is not in the printed volume I did not say.

But now for the second sense of the word "credible." Do you understand me to say that the ecclesiastical miracles come to us on as good *proof* or *grounds* as those of Scripture? If so, I answer distinctly, I have said no such thing anywhere. The Scriptural miracles are credible, *i. e.* provable, on grounds peculiar to themselves, on the authority of God's word. Observe my expressions: I think it "*impossible to withstand evidence* which is brought for the Ascension of the blood of St. Januarius." Should it be asked me why I think the resurrection of Lazarus? should I say, "I think it impossible to *withstand the evidence* for his resurrection?" I cannot tell how Protestants would speak, but a Catholic would say, "I believe it with a certainty beyond all other certainty, *for* God has spoken." Moreover, I believe with a like certainty every one of the Scripture miracles, not only that apostles and prophets "in their lifetime have *before* raised the dead to life," &c., but that Elias did the like, that Peter did that, just as related, and so all through the whole catalogue of their miracles. On the other hand, ecclesiastical miracles may be believed, one more than another, and more or less by different persons. This I have expressed in words which refer to the passage from which you quote, for, after the saying of one, "I think it *impossible to withstand the evidence* for" it, I say of another extraordinary fact no more than, "I see no *reason to doubt* it," and of a third, "I *did not see why it may not*" be; whereas, whatever God has said is to be believed absolutely and by all. This applies to the account of the ark; I believe it, though more difficult to the reason, with a firmness quite different from that with which I believed the facts of the sea and the Jordan, not a firmness based upon man's word, on which rest the miracles of ecclesiastical history.

So very clear is this distinction between verisimilitude and evidence, and so very clear (as I consider) is my own line of argument based on it, that I should really, for my own satisfaction, like your Lordship's assurance that you had carefully read, not merely dipped into, my lecture, before you delivered your speech. Certain it is, that most people, though they are not the first parents of a person of your dispassionate and candid mind, judge of my meaning by bits of [illegible] sentences, mine or not mine, inserted in letters in the newspapers

Under these circumstances, I entertain the most lively confidence that your Lordship will find yourself able to re-consider the word "disgust," as unsuitable to be applied to statements which, if you do not approve, at least you cannot very readily refute.

With very kind feeling personally to your Lordship, very truly yours,

JOHN H. NEWMAN, Congr. Orat.

No. 5.

THE BISHOP OF NORWICH TO DR. NEWMAN.

Norwich, October 17.

My dear Newman,—One of the secretaries of the Bible Society has asked my permission to reprint what I said as chairman of the meeting at Norwich. I will most readily avail myself of this reprint to withdraw the expression "disgust," as it appears to be offensive. I will also, as due to you, have a note appended, referring to the passages in your writings to which my observations were more particularly directed, and stating that you disavow the construction which I put on them.

At the same time, I am unable still to come to any other conclusion than that of the dangerous tendency which I have represented them to have. If you mention (as you distinctly do) not only the *antecedent probability* (*credibility* in that sense) of the legendary miracles, but your firm belief in certain of them, specifically stated, as *facts proved*, and if you further contend that these miracles are only a continuation of those recorded in Scripture, the impression appears to be inevitable, that the legendary channel through which God must have appointed them to be attested and preserved has a purpose and authority the same with Scripture. What I should fear is, not indeed that the generality of your readers will exalt legends into Scripture, but that, seeing grounds for discrediting the legends, they will look on all narratives of miracles, scriptural and legendary, on alike doubtful, and more than doubtful. In short, your view, as I see it, tends to a scepticism and infidelity of which I am sorry to say I am not a disciple.

The report of your speech at Birmingham I read in the *Times*, but the quotation from which I sent to Mr. Cobb I took from a letter in the *Spectator* of September 27, the writer's quotation, according to my impression of your speech as reported, containing words to that effect.

The kind present which you propose for me will, I assure you, be valued, if for no more, as a token that we are still friends, notwithstanding a wide severance in matters of faith, and that we may still believe all things, and hope all things, for one another.—My dear Newman, yours truly,

S. NORWICH.

This correspondence closes with the expression of Mr. Newman's gratitude for his Lordship's friendly compliance with his request.

CATHOLIC DEFENCE ASSOCIATION.

At a meeting of Roman Catholics held in Dublin on Friday week, and presided over by Lord Gormanstown, the objects and rules of this body, which has been called into existence by the enactment of the Ecclesiastical Titles Bill of last session, were published.

Messrs. Reynolds, M.P., Keogh, M.P., and Sadlier, M.P., acted as honorary secretaries on the occasion. Among the gentlemen on the platform were the Hon. Edward Charles, and Thomas Preston; Messrs. M. J. Blake, M.P., Nicholson Calbeck, M.P., and the following Bishops: the Most Rev. Dr. Mac Hale, the Right Rev. Dr. Cantwell, the Right Rev. Dr. Foran, the Right Rev. Dr. Derry, and the Right Rev. Dr. M'Nally.

According to the rules, the association shall consist exclusively of Roman Catholics. Its objects are as follow:—

1. Its first object shall be to procure, by every legal and constitutional means, the repeal of the Ecclesiastical Titles Assumption Act, and of every other statute imposing any disabilities or civil disability on the Catholics of the British empire; and to prevent the passing of any future enactments affecting the spiritual or civil rights of Catholics, or any partial legislative interference with their rights without their approval.

2. It will endeavour to procure the repeal of all laws which now obstruct and endanger the continuance of Catholic endowments and charities.

3. It will assert on the strict allegiance to the Throne, and the maintenance of peace and good-will amongst all her Majesty's subjects.

4. It will aid in the protection of the poor from the insidious efforts of all those who assail their religious faith by a system of intimidation and pecuniary proselytism.

5. It will endeavour to secure to the inmates of workhouses, gaols, and all other public institutions, Christian treatment, and principally to guard their faith and morals against proselytism and corruption.

6. It will assist in affording to all classes the means of obtaining a sound Catholic education.

7. It will endeavour to secure the free exercise of their religion, and the means to observe its practices, to the Catholic soldiers wheresoever employed, at home or abroad.

8. It will struggle to secure the appointment of Catholic chaplains in all vessels engaged in her Majesty's service, in which Catholics are employed, as also in convict ships, and to make provision for the religious education of the children in all Catholic soldiers and sailors on Catholic principles, and under Catholic control.

9. It will promote the publication and distribution of religious books approved of by the prelates, amongst the poorer class of Catholics in the British empire.

10. It will vindicate through the medium of the public press, and otherwise, Catholic doctrines and principles.

11. It will contribute to the intellectual and moral training of the people, and to the improvement of their social condition.

12. It will assist Catholic institutions, protect Catholic endowments, especially those established for educational and charitable objects, and upon all occasions promote the removal and alleviation of the prevailing social misfortunes of the people.

13. It will inculcate a strict and religious obligation of selecting, as representatives of the people, men whose known integrity and talents best fit them to support in the Imperial Parliament our religious rights, to remove the many grievances under which the Catholics of the United Kingdom still continue to labour, and to carry out the objects of this association.

14. It will not desist from its labours until it has succeeded in relieving the Catholic inhabitants of Ireland from the intolerable burden of sustaining an ecclesiastical establishment from which they not only derive no benefit, but the funds and ample resources of which are expended in persevering efforts to subvert the faith and overthrow the religion of the country.

THE COUNTY COURTS—THE BAR AND ATTORNEYS.

On Monday evening, at a meeting which was held in the Freemasons' Tavern, for the purpose of considering the propriety of [illegible] acting some arrangement between barristers and attorneys, with reference to the transaction of business in the County Courts, the following resolution was proposed:—

That a requisition to the council of the Law Institute be drawn up and signed by members of the profession, requesting the council to take the necessary steps for promoting a proper understanding between the two branches of the profession, on the subject of county court advocacy, and for that purpose to call a general meeting of the profession at large at an early [illegible].

It was suggested, as an amendment to the resolution, that the Metropolitan and Provincial Law Association should be requested to bring the matter before the Law Institution. The resolution as amended was agreed to.

In the course of the proceedings, Mr. Clarke, an attorney, who presided, thus alluded to the county court judges:—

"They had a new class of judges in the county courts. [illegible] were very indifferent, and some were very good, but they were [illegible] powers such as had never before been known on the judicial bench [illegible] try since the days of William Rufus. The persons throughout the country were brought before them with prisoners from the county gaols; and the case was a far stronger one than that of the abolition of arrest on mesne process, which had formerly given rise to so great an outcry. He had seen many instances in which the power given to the county court judges had been exercised in the most wanton manner. (Hear, hear.) He had seen a man sent to custody until the rising of the court, because in a long room he had put on his hat before crossing it, and because, as the judge said, he had stroggled [illegible] shoulders in doing so. He had himself on one occasion pleaded a set-off before a county court judge in the country; but the judge told him, that, as the case was under 20*l.*, he could not on any account allow him to [illegible] [illegible] [illegible]

DRURY LANE THEATRE.

The French and American *troupe* of equestrians will close their performances at Drury Lane Theatre this evening. Their success is understood to have been almost unvarying; and it has been merited throughout, for every evening's entertainment has been of first-rate execution. The proprietors of the enterprise, Messrs. Risley and M'Collum, may therefore be congratulated upon having achieved such a run of good fortune as very rarely has fallen to the lot of Old Drury, an arena remarkable for the number of its shortcomings. We shall not be expected to enumerate the attractions of each night, but cannot pass over Mr. Thomas M'Collum, the chief of the *troupe*, a judicious director, and a most accomplished equestrian. Mdlle Caroline was a truly graceful star, and Mdlle Rousseau a young and beautiful impersonation of a Sicilian flower girl.

The feats of strength and posture-making were also excellent. Signor Enrico tossed up heavy balls and caught them upon his muscles with impunity; M. Vildrini's contortions were alike characterised by their intricacy and ease; the Brothers Elliott kicked the world about successfully; and a company of Chinese bell-ringers lent their strange but cheerful music in accompaniment to this national *fête*.

We have reserved for mention the feats of Mr. Eaton Stone, "the bare-backed rider," for the purpose of illustrating the capture of the noble horse which he rode. This fine animal was taken with the lasso at the age of two years, on the pampas of Texas, in the regions of the wild Camanchs Indians. He was brought into the circle when two years and a half old; and it required five years domestication and tuition to enable him to perform with his rider, Mr. Eaton Stone, the acts which have been nightly applauded to the echo of the Drury-lane roof. It was a strange transition from the boundless wilds of nature, and her beautiful atmospheric effects, to the garish glitter of a gas-lit theatre. The capture, too, was a scene of bold adventure, which our Artist has taken great pains to picture.

It is well known among travellers who visit the wilds of Mexico, on the borders of Texas, that these untamed horses are first secured by the lasso. Their legs are then drawn together by a braided cord formed from hides. A rough saddle, formed of buffalo horns and green hide, is next placed on the back of the horse, when one of the most daring Indians mounts, horse and rider are then set loose, to wander through the wide prairie, urged with yells and shouts, and other means of goading, by the remaining party engaged in the capture. The wild horse in the accompanying Illustration never had on either harness or collar: his hair, like all others from the same place, is long and coarse. These prairie horses frequently run from 36 to 50 miles when pursued, and never any other pace except a gallop. They are often taken in quicksand beds, on the borders of watering-places, where they resort in "By-time," or what would be called in England extreme summer heat. When captured on the river banks, the Indians form a half-circle, which by them is termed "Co-Ge-Far," or Half-Moon; and thus they drive the horses through the water, when they make a few swings, partly sink into the sand, and are thus easily secured.

The horses feed entirely on grass as they wander on the prairie, seldom encountering snow or ice for a period of eight years, for the purpose of capturing horses.

We now take leave of the equestrians, and hope that in future arenas their interesting performances may be as liberally appreciated as they have been at Drury-lane in the Great Exhibition season of 1851.

MR. EATON STONE'S CAPTURE OF THE WILD HORSE OF THE PRAIRIE.

PART OF MOSLEY-STREET MANCHESTER.—(See Page 518.)

PRESENTATION OF THE ADDRESS TO HER MAJESTY, AT WORSLEY HALL.

PRESENTATION OF THE WORSLEY ADDRESS TO HER MAJESTY

This very interesting ceremonial took place on Saturday morning, the 11th inst., just previously to the departure of her Majesty from Worsley Hall. The children educated upon the Earl of Ellesmere's estate, about 1400 in number, belonging to the districts of Worsley, Walkden, and Ellenbrook, mustered in the park at an early hour, headed by their respective clergy and teachers, and at ten o'clock took up a station upon the rising lawn in front of the Hall. There were fourteen rows of about one hundred children in each, with their little flags and bannerets floating over their heads, and attended by a juvenile band, whose performance of the National Anthem, and other favourite airs, was most effective. In the rear, the mothers of the children were admitted on to the grass slopes; and above them, on the upper slopes, were the neighbouring clergy, with their wives an dother privileged spectators. A troop of the Duke of Lancaster's Yeomanry Cavalry was drawn up beneath the slopes, and the weather being remarkably fine, the *ensemble* was exceedingly brilliant and interesting. At a few minutes after ten o'clock her Majesty appeared in the porch of the Hall, accompanied by the Prince of Wales, the Princess Royal, the Princess Alice, and Prince Alfred. Among the group surrounding her Majesty were the Earl and Countess of Ellesmere, the Marquis and Marchioness of Westminster, the Earl and Countess of Derby, the Earl and Countess of Sefton, the Earl and

EXTERIOR OF THE MANCHESTER FREE LIBRARY.—(SEE NEXT PAGE

Countess of Wilton, the Ladies Alice and Blanche Egerton, the Duke and Duchess of Norfolk, Earl Grey, &c. As soon as the Queen appeared at the entrance, the Rev. St. Vincent Beechey, incumbent of Worsley, advanced and handed to her Majesty the address, a copy of which we gave last week. The Queen received the document very graciously, and was pleased to remark to Mr. Beechey, "It is very delightful to see so many scholars together on this occasion."

The clergy then retired, and the children sang the National Anthem exceedingly well; after which, in the midst of the most intense three hearty cheers from the scholars and visitors, the Queen re-entered the mansion.

(Owing to the neglect of a local artist, we are unable to Illustrate the recent Royal Visit to Lancaster.)

MOSLEY-STREET, MANCHESTER.

THE extensive and lofty warehouses which form the distinguishing characteristics of the principal streets in Manchester present a marked and curious contrast to the buildings of the other towns through which her Majesty passed, in her progress through Lancashire—more especially to those of Salford. In no part of Manchester are there more noble warehouses crowded together than in Mosley-street, many of them being newly built; and it was remarked, as the Royal *cortege* passed along this street, that the attention of her Majesty and the members of her suite was frequently directed upon one or other of these warehouses, which appeared to excite their astonishment by its altitude and linear extent. Mosley-street is probably the longest, though by no means the widest, in Manchester; it being 565 yards long, and 48 feet wide. Generally speaking, from the number of warehouses crowding one upon another, Mosley-street has a dull and heavy appearance; but, upon the occasion of the Royal Visit, the numerous temporary stages and balconies, filled with the beauty of Manchester and its neighbourhood, and the various flags and other decorations with which it was adorned, literally covered from end to end, combined with the cheerfulness imparted to the scene by the bright sunshine with which it was illumed, and the happy faces crowding the causeways, rendered it peculiarly gay and attractive. Amongst the principal warehouses in Mosley-street are those of Messrs. Westhead, Wilkinson, and Davis, Sampson and Young, Schofield and Co., Bradshaw, Hammond and Co., Travis and Brother, Bayley and Craven, Dagleish and Co., Walker and Co., Edmund Potter, Besby and Co., Craven and Harrop, Thos. Hoyle and Co., Swanwick and Co., Daniel Grant, J. Jackson, &c. The Manchester and Salford Bank, the Royal Institution, and the Union Club are also situated in Mosley-street. The View which our Artist has selected will convey a good idea to our readers of the extent of the Manchester warehouses and the style of building adopted in those of recent date.

MANCHESTER FREE LIBRARY.

THE handsome edifice shown in the accompanying Illustration will contain the first Free *Lending* Library—at least, on any large scale—which has been established in this country. Although intended more especially for the intellectual improvement and recreation of the working classes in the densely-populated district which surrounds it, the new institution is founded on so wide a basis that it is likely to become not only the principal public library of Manchester, but the type or pattern of a series of institutions in all the great towns of the kingdom.

The "Manchester Free Library" owes its foundation to the energetic exertions of the present Mayor, Sir John Potter, who, in the autumn of last year, started a subscription amongst his personal friends, which, in a very short time, amounted to nearly £5000. The overseers of Manchester liberally contributed an additional sum of £2000 from a fund at their disposal. Early in January last, the Mayor convened a public meeting, at which the Bishop of Manchester, the Dean, and several others of the clergy, and several dissenting ministers of different denominations, together with the presidents of the Chamber of Commerce and of the Commercial Association, and many other influential members of the community, were present. At this meeting a committee was elected to co-operate with the Mayor in extending the subscription, and in taking useful measures for the speedy establishment of the proposed institution. The subscription now amounts to above £9100, and is still in progress. In this sum are included various contributions from workpeople in factories and workshops, amounting, in the aggregate, to about £370

The building was originally erected by the Chartists of Manchester, and known as the Hall of Science, in Camp-field, near Deansgate.

Its present appropriation was suggested by Dr. Watts. From first to last, the building cost the Chartists little less than £6000; and by the liberality of Sir Oswald Mosley, who has given up his interest in the freehold, valued at upwards of £1200, the Mayor of Manchester was enabled to effect the entire purchase, including costs of transfer, for the £2147. In order thoroughly to adapt the building to its new purposes, it has been found necessary to expend upwards of £1000 in repairs, alterations, and improvements, independently of the sum which will be required to defray the cost of fittings and furniture, and of the needful apparatus for lighting and warming the building.

Sir John Potter's scheme for the new institution provided from the outset for the formation of two separate libraries—the one a library of reference, to be permanently and distinctively retained for the use of readers only; and students within the building; the other a circulating or lending library, freely available to all persons under such regulations as the committee might thereafter frame for its government; and this twofold character of the proposed Library has met with universal approval. One Library will contain the costliest and most voluminous works in the various departments of literature and science, together with encyclopædias, atlases, long sets of periodicals, and such other books as are usually denominated "works of reference;" the other will comprise the rudimentary and compendious treatises on science, the popular miscellanies, and "standard libraries," together, perhaps, with some reasonable supply of the sounder and healthier portion of the fiction and "light literature" of the day.

The rules and regulations which are to govern the use of the Manchester Free Library in each of its departments are not yet matured, and there is scarcely room to hope that either department can be opened to the public much before the close of the present year. But it may not be altogether without interest for our readers to know that 14,500 volumes have already been purchased at a cost of £2300, or, on the average, at something less than 3s. 6d. per volume. They inclose—as, indeed, might be implied from what we have said already—the best editions of our principal standard authors; together with a large collection of works on British history and biography, in all their departments; on political economy, finance, trade, and other cognate subjects; and on the various branches of mathematical and mechanical philosophy, engineering, and the arts. In natural history the purchases are still very incomplete (as may be said, though in less degree, of many other departments); but they include the best editions of such works as Sowerby's "English Botany," and Curtis's "Flora Londinensis," the "Botanical Magazine," the "Botanical Register," "Geological Transactions" the best works of London, Donovan, Lardley, Shaw, Richardson, Swainson, Kirby, Spence, Kirby, and Wood; Jenyns's "Manual of British Vertebrate Animals;" and the "Illustrations of British Entomology," with those of Haworth, Stephens, and Curtis. The Library is also rich in the best works on Travels and Voyages, including a large collection of the best and most recent narratives.

With respect to the greater English authors, not only the best critical editions, but some costly and rare editions have been purchased. For instance, of Shakspeare, the second and fourth folios, and the first, it is hoped, the much rarer third will shortly be added. Of Milton, the first editions both of "Paradise Lost" and of the minor poems; of Chaucer, the black letter folio of 1561; of Sir Thomas More, the black letter folio of 1557; and of De Foe, a remarkable series of original editions, in 45 vols., may also be mentioned.

For the use of the students of British history, there have also been procured a complete set of the Journals of the House of Commons, in 113 vols. folio, and a set of the *London Gazette*, from the commencement, in 1665, down to the beginning of the present century.

Foreign literature has been necessarily deferred to a future day. The indispensable "Biographie Universelle" has, however, been purchased, together with the splendid works of M. Silvestre, on "Universal Paleography," and the best French works on chemistry.

In addition to the 14,300 volumes which have thus been purchased, nearly two volumes, including many very valuable works of great value, have been presented, so that the Library already possesses nearly 17,000 vols.

The thorough going into the matter detail, we have said enough to show that the Mayor of Manchester, and those who have co-operated with him in his most praiseworthy undertaking, have laid broad and deep the foundations of an institution which will, we trust, be worthily continued in a like spirit by those who shall succeed to the management when it shall have been permanently transferred to the community for whose benefit it has been established.

The importance of the experiment now to be tried in Manchester can scarcely be taken, or over estimated. The establishment of a well-furnished library, freely open to persons of every rank, and secured against those uncertainties of maintenance which have always been attendant upon institutions supported by fluctuating subscriptions, is, or itself, no small boon. But the addition to this of a large and well-chosen collection of books to be freely lent, under proper regulations, to every person of good character who may seek them, is an object of [illegible] moment [illegible]

In conclusion, we cannot but record the establishment of the Manchester Free Library as a [illegible] epoch in the educational history of the country. We trust that other towns are preparing to follow the example [illegible] through the energy and public spirit of its [illegible] and heartily do we wish that all such [illegible] an abundant success.

[illegible] and distinguished, both inside and outside the [illegible] Committee [illegible] Chairman of the general committee of the Library, accompanied by Mr. James Crossley, chairman of the book sub-committee; Mr. John Leigh, one of the honorary secretaries of the Library; and Messrs. A. Ireland and J. Harland, proceeded to examine the building, and much satisfaction was expressed with the admirable room which had been formed in the roof, which is [illegible] The Committee [illegible] diligence to complete the work, which has been now nearly two months delayed beyond the original term of the contract

CALENDAR FOR THE WEEK.

SUNDAY, October 26.—Nineteenth Sunday after Trinity. Hogarth died, 1764.
MONDAY, 27.—Sir Walter Raleigh beheaded, 1618.
TUESDAY, 28.—St. Simon and St. Jude.
WEDNESDAY, 29.—Morland died, 1804.
THURSDAY, 30.—The Great Armoury in the Tower burnt, 1841.
FRIDAY, 31.—Allhallow Eve.
SATURDAY, Nov. 1.—All Saints. Sir Matthew Hale born, 1609.

TIMES OF HIGH WATER AT LONDON BRIDGE,

ILLUSTRATED CYCLOPÆDIA of the GREAT EXHIBITION.—THE FIRST PART of the CRYSTAL PALACE and its CONTENTS will be published with the Magazines for NOVEMBER, price 6d., in a handsome cover. It will comprise 80 pages, 60 pages, and be embellished by 80 Engravings, consisting of Views in the Interior of the Crystal Palace and various subjects in the following departments: the Indian and Canadian Departments—the Zoological Department—Sutton Machinery—the Naval Department—Glass Manufactures—the Fine Arts, Sculpture, &c. When finished, this will form a complete record of the Great Exhibition and of the state of industry and the arts in 1851. Published in Weekly Numbers, 1d.; and Monthly Parts, 6d.—W. S. CLARK, IV, Warwick-lane; and all Booksellers

THEATRE ROYAL, DRURY-LANE.—CLOSE of the EQUESTRIAN SEASON.—Mr. THOMAS M'COLLUM, Manager and Director of the great AMERICAN and FRENCH EQUESTRIAN COMPANY, at the finish of a most successful season, avails himself of the present opportunity, previous to his departure for Dublin, to return thanks, through the public press, on behalf of himself and the distinguished artistes he has had the honour to submit for the approval of a British public. The cheering plaudits bestowed on their individual exertions will be ever gratefully remembered; and about a they, at some future period, have the high gratification of again appearing in this vast metropolis, they hope, by renewed efforts, a continuance of the liberal patronage bestowed on the [illegible] N.B. The American and French Company will make their first appearance at the [illegible] on WEDNESDAY, the 29th inst.

ASTLEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr. W. BATTY.—Positively the LAST SIX NIGHTS of MAZEPPA, owing to the production of a New Grand Spectacle, from the pen of E. Fitzball, Esq., founded on the celebrated drama of "Pizarro." On MONDAY, NOVEMBER 27th, and following Evenings, the Grand Drama of M ZEPPA, or the WILD HORSE of TARTARY. Fourth week of the astounding performances of the ITALIAN BROTHERS. After which, Batty's Grand Scenes of the Arena, uniting the talents of the Company, British and Foreign. The whole concluding with a laughable Farce. Tickets may be had, and places secured, at the Box-office, from Eleven till Four daily. Stage Manager, Mr. T. Thompson

WHITTINGTON CLUB and METROPOLITAN ATHENÆUM.—On MONDAY, OCT 27th, Mrs T. C. FOSTER will deliver a LECTURE, descriptive of a CENTURY of FEMALE COSTUME, from the HOOP to the BLOOMER, illustrated by Paintings, life size. At the latter part of the Lecture Mrs Foster will wear an elegant modification of the Bloomer Commence at 8 o'clock. Tickets, 1s each, Rooms 1 & 2, [illegible]

MR. JOHN PARRY'S ENTERTAINMENT.—Mr. John Parry will give his NOTES, VOCAL and INSTRUMENTAL, on MONDAY EVENING, OCTOBER 27th, at Leamington; on Tuesday, 28th, at Evesham; on Thursday, 30th, at Southampton; on Friday, 31st, at Basingstoke; and on Thursday, 13th November, at the Lecture Hall, Greenwich.

THE ORCHESTRAL SOCIETY, formed for the performance of Works of the highest order of ORCHESTRAL MUSIC, with special reference to new, untried, and comparatively unknown compositions. Season 1851-52. Council: Messrs. Henry Blagrove, Lucas, Cooper, Hill, Pettit, Reed, and Alfred Nicholson. The FIRST SERIES of CONCERTS will be given at Mr. MARTIN'S HALL, on Eight alternate Monday Evenings, commencing NOVEMBER 24th: Subscription for the Series, £2 2s; Stalls, £3 3s. Tickets to be obtained at Messrs. ADDISON and HOLLIER'S, 210, Regent-street. All the concerts to be conducted, and rehearsed throughout by Mr. Seymour.

MR. CALDWELL'S SOIREES DANSANTES every Evening, from Eight to Twelve. Admission 1s. per quarter. At Spindel now Real Rooms, with all the arrangements complete. Musical Director, Mr. J. Bradley, of the Royal Italian Opera. Refreshments of the best description. Wines of their own importation, totally unconnected with the routine of the Ball Room, to unite with grace and freedom, and taste and elegance. Open from Eight to Twelve. Tickets for £1 1s.—Leam-st., Soho.

SKETCHES and DRAWINGS, at the Gallery of the Old Water Colour Society, 5, Pall Mall East, comprising numerous recent and important works, before specimens by Turner, R.A.; Mulready, R.A.; Roberts, R.A.; Stanfield, R.A.; Webster, R.A.; Landseer, R.A.; Eastlake, R.A.; Leslie, R.A.; Cattermole, Uwins, Lewis, Goodall, Frith, A.R.A.; Ward, A.R.A.; Egg, A.R.A.; Hunt, Leitch, Topham, Tennant, Pyne, Hagg, Armitage, Duncan, Cope, Otto Goetze, Gastineau, Goodall, E. Richardson, Prout, &c. OPEN from Ten till Dusk. Admission, 1s. SAMUEL RAYMENT, Sec.

GOLD from CALIFORNIA.—Exhibiting Daily, at 12, 3, and 8 o'clock, at the EGYPTIAN HALL, Piccadilly, the Grand Moving DIORAMA of the OVERLAND ROUTE to OREGON and CALIFORNIA, with fine Specimens of Steam and Mountain Scenery, painted by the celebrated Artists of the great Panorama Company, and exhibited through 4500 miles of country, passing the Rocky Mountains and the Sierra Nevada Mountains and Golden Gate—affording a Panoramic View of the Pacific Slope. Stalls, 3s.

HOLY LAND and NILE.—The Original Great DIORAMA of the Holy Land—EGYPTIAN-HALL, Piccadilly—showing the Streets of Jerusalem, painted from Drawings and Daguerreotypes taken on the spot. Daily at 3 and 8. Admission, 1s; Pit, 1s 6d; Stalls, 2s; the Grand Stalls, 3s; Private Boxes, 21s and 31s 6d. Also, with additional Tableaux of the Streets and Customs of Cairo. Daily at 3 and 8. Admission, 1s; Stalls, 2s 6d.

GALLERY of ILLUSTRATION, 14, REGENT-STREET.—The Diorama of the OVERLAND MAIL to INDIA, showing Southampton Docks, Lisbon, the Tagus, Gibraltar, Algiers, Malta, Alexandria, Cairo Suez, the Red Sea, Aden, Ceylon, Madras, Calcutta, and the magnificent mausoleum, the "Taj Mehal." The reception by moonlight, the beautiful gateway, and the gorgeous interior (lamps lately presented by the CRYSTAL PALACE to MOTEE GARDENS,) is exhibited daily, at 12, 3, and 8 o'clock—Admission 1s and 2s 6d., and 3s. Doors open half an hour before each representation

PRINCE of WALES'S BAZAAR, or the CRYSTAL PALACE of REGENT-STREET, 307 to 309, and COSMORAMA. This beautiful BAZAAR, fitted up in a style of decoration never before attempted in this country, and filled with an endless variety, together with a selected AVIARY of Native and Foreign Birds, and also a fine GALLERY of PAINTINGS for SALE, by the old and modern masters. Admission free.

ZOOLOGICAL GARDENS, REGENT'S PARK.—The URAN UTANG, presented by the Governor of Singapore, is exhibited DAILY, together with the ELEPHANT CALF, and the HIPPOPOTAMUS, presented by the Pacha of Egypt. Admission 1s.—on Mondays, 6d.

THE GREAT EXHIBITION AND THE ROYAL POLYTECHNIC INSTITUTE.—ALL the MOST INTERESTING DEPOSITS at the GREAT EXHIBITION will, in turn, be LECTURED ON at the ROYAL POLYTECHNIC INSTITUTION.—The Machinery in Motion, Every Day. Exhibition of Iron and Steel in the Manufactures of the United Kingdom, and by Dr. Bachhoffner on Steel. The Inventor of the Diving Bell, and the magnificent mansion, the "Taj Mehal." The recently discovered Dissolving Views. Diver and Diving Bell. Model Locomotive, Electric Telegraph, Photography, Opening of the Thames Tunnel, &c., exemplifying objects upwards of 100,000 times their natural size. The great economy of cooking by Gas. Lectures by Professor Ryan, Dr. Bachhoffner, Dr. Hay, Dr. Bachhoffner, Rev. J. Cumming, Mr. Chatterton, Rev. with Vocal Illustrations. A Series of splendid Dissolving Views. Diver and Diving Bell. Lectures, Morning and Evening, Half-price. Open daily from Eleven till Five, and every evening from Seven till Half past Ten

ANCHOR ASSURANCE COMPANY, for FIRE, LIFE, and Life Assurances adapted to every contingency may be effected with the Company at premiums most economically required.
Annuities are granted by the Company on terms exceedingly favourable to the assured.
Fire Insurances are effected at premiums commensurate with the risk arising from the nature of the property.
Offices, 67, Cornhill, London Branches, Manchester, Exchange-buildings, Hull: Greystreet, Newcastle-on-Tyne; and 6, Herrenstrasse, Hamburg

ESTABLISHED 1841

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 30, Pall-Mall.
[illegible] Policies have been issued, more than Three Thousand Two [illegible] ing Assurances to the amount of Thirteen Hundred Thousand Pounds.
Existing Annual Premiums amounting to upwards of Fifty three Thousand Pounds.
This Society is the only one possessing Tables for the assurance of Diseased Lives.
Healthy Lives Assured at lower rates than at most other Offices
A Bonus of 2 per cent. per annum was added to the policies at last Division of Profits.
Agents Wanted. Prospectuses, Forms of Proposal, and every other information, may be obtained of the Secretary at the Chief Office, or on application to any of the Society's Agents in the country.
F. G. P. BISHOP, Actuary.
C. DOUGLAS SINGER, Secretary

THE LADIES' COLLEGE, 47, Bedford-square.—The regular [illegible] ANNS, and the [illegible] the following subjects:
The following Professors:—
Biblical Literature—Rev. F. D. Maurice, Master of the Grammar School, Dulwich College.
Hebrew [illegible] Rev. Isaac Baio, M.A, formerly Lecturer on Moral Philosophy at Marischal [illegible]
[illegible] Langton Sanford, A.M. of Lincoln's Inn.
[illegible] Rev Wm Cook, A.M. of Trin. Coll. Camb.
Natural History—R E Grant, M.D, Professor of Comparative Anatomy in University College, London.
Mechanical Philosophy—Rev W Cook, A.M.
Chemistry—E. H. Hart, Edward Solly, F.R.S, F.S.A, F.G.S. Professor of Chemistry to the Horticultural Society, and Lecturer on Chemistry at Addiscombe College.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS GIVEN A SUPPLEMENT, GRATIS.

GRAND PANORAMA
OF THE
GREAT EXHIBITION.
In order to perpetuate a complete and comprehensive view of the Great Industrial Exhibition, as presented within the Crystal Palace, the proprietors of the ILLUSTRATED LONDON NEWS are preparing a series of Panoramic Views, based upon Photographic Sketches by Claudet, which they intend publishing.
These VIEWS, extending to a length of nearly eighty feet, comprehend, with a reality impossible to be surpassed, every object in the whole range of the Exhibition—every Department, and each particular object in the main avenues, being successively embodied in the precise order in which they stood. This series of Views will therefore constitute a pictorial reminiscence of the more striking features of this Great Industrial Gathering, at once vividly truthful, and of inherent and lasting interest.
Further particulars of the time and mode of publication will be duly announced.

THE NATIONAL MUSIC
OF
ENGLAND,
THE POETRY BY CHARLES MACKAY, LL.D.; THE SYMPHONIES AND ACCOMPANIMENTS BY SIR HENRY R. BISHOP, Kt.,
PROFUSELY ILLUSTRATED BY THE FIRST ARTISTS AND ENGRAVERS.

The Proprietors of the ILLUSTRATED LONDON NEWS have the honour to announce to their readers and the public that they have entered into engagements with
SIR HENRY R. BISHOP, Kt.,
a gentleman whose name, in connexion with the Music of England, is of itself sufficient to stamp with approval any composition to which it is attached: and with
CHARLES MACKAY, LL.D.,
whose popularity as a poet is justified by some of the most beautiful lyrical compositions of our day, to publish, in connexion with that Journal, a SERIES of
ANCIENT AND POPULAR MELODIES OF ENGLAND,
copiously illustrated in the finest style of Wood-Engraving by the most celebrated Artists, and at a price which shall place these effusions within the reach of the humblest purchaser. It has often been alleged that the English have no national music—a reproach which the forthcoming work will show to be entirely unfounded. Many of the ancient melodies which delighted our forefathers have fallen into neglect as songs, on account sometimes of the grossness, indelicacy, or nothingness of the words with which they are associated; at others, of the vulgarity of their tone or the obsoleteness of their allusions. Good music is of all time; but it has been the misfortune of English music, in too many instances, to have been married—not to immortal—but to immoral verse. For this reason it has been banished, except in an instrumental form, from the company of the educated and refined of both sexes. It will be the object of the proprietors and editors of the forthcoming series to remove this objection, and to perform, for English music, what Burns and his coadjutors performed, to some extent, for the music of Scotland, and what the poetic genius of Thomas Moore, aided by the musical taste of Sir John Stevenson, performed so thoroughly for the music of Ireland. The music of England is as rich and varied as either, but has hitherto wanted the pen and the musician to restore it to the place which it ought to hold in the affections of the people. The Proprietors of the ILLUSTRATED LONDON NEWS, in selecting Sir Henry Bishop and Mr. Mackay to perform this task, believe not only that they have made a good, but the very best possible selection, and that their forthcoming series, while it will be a marvel of beauty and of cheapness, will recommend itself to all lovers of poetry and music as a national work
Further particulars of the time and mode of publication will be duly announced.
198, Strand, Oct. 16th, 1851.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 25, 1851.

THE gallant Kossuth has at length landed on the hospitable shores of England, and has received from the people of Southampton and from a host of friends and admirers assembled in anxious expectation of his coming, the first of what is certain to be a series of popular ovations. There is a class of politicians in this, as there is in every other country, whose sympathies are never on the side of the vanquished, and who always consider him who is unsuccessful in any enterprise, however noble in itself, as of necessity an unworthy person—not to be patronised by their respectability. There is another class of persons, who, with equal injustice, applaud every man who has stood in opposition to constituted authority, no matter whether the resistance were right or wrong. At the present time, people of the first-mentioned class are doing all in their power to vilify the character of Kossuth, to throw odium on his motives, and to deny his ability; while those of the second class are shouting as loudly in his favour, and holding him up to the veneration of mankind, for virtues which he never possessed, and which he lays no claim to; but neither of these classes is very large in England, and Kossuth runs as little risk of being injured by the unreasoning calumny of the first, as by the unthinking worship of the second. The great bulk of the English people are distinguished for their plain common sense; and in uniting to give the Hungarian leader a cordial reception in this free country, they do so with the full knowledge of what they are about, and with a correct calculation of the consequences. They see in him a man who struggled nobly, though unsuccessfully, against the tyranny of one of the worst and most oppressive governments that ever afflicted any country, and who would have conquered in the strife but for the intervention of an alien power, whose growing preponderance in Eastern and Central Europe is of the worst possible augury for the cause of rational liberty and constitutional right. They honour him accordingly, and carefully draw the line which separates him from the wild fanatics of ultra-Republicanism, who think nothing of convulsing whole nations for an abstract, barren principle. In honouring him, they testify, by the voice of the only country in Europe that is both powerful and free, and in which public opinion has the means of expressing itself, that the military despotism of the bankrupt or half bankrupt States of the Continent is not approved of or supported by the foremost nation in the

world; and that while England retains her supremacy, there will always be one spot on the globe where rational liberty may find a home, and the oppressed and unfortunate of other nations a shelter and protection. The assault upon Marshal Haynau, some months ago, showed the estimation in which Austrian tyranny was held by the coarse and uneducated, but right feeling mob of London; but the enthusiastic reception of Kossuth, begun at Southampton, will show, even before it has extended through the land, the opinion formed by the sober, industrious, and peaceable middle-classes of the system pursued by such unhappy governments as now, after four years of revolution, have gone back into a despotism, infinitely worse than that from which they started. This lesson is much needed; and we rejoice that M. Kossuth, instead of proceeding direct to America, has afforded the people of this country the opportunity of giving him such a welcome as will prove a warning where warning is so necessary. The welcome that will be given to him in America will sound too faintly from afar to be of much, if of any, influence upon European politics. Not so his reception in England; and M. Kossuth will have the satisfaction, in coming here—which we are certain must be greater to a mind like his than any personal triumph, however splendid—of knowing that he has been the means of eliciting a cordial expression of sympathy in favour of constitutional liberty, and of disapproval of those acts of blindness and oppression, which disgrace the Governments of Austria and Italy, and keep Europe in continual perplexity and alarm. We trust that many future opportunities may arise before he quits our shore of repeating these manifestations of popular good-will, and that they will not be lost upon the minds of those who have most to learn by them.

The Irish emigration continues to such an extent, as to cause alarm in some quarters that the country will be depopulated, and that hands sufficient to cultivate the soil will not be left. The census returns of the present year tell a lamentable tale; and it seems but a melancholy sequel to it when we learn that the peasantry of Ireland, and the classes more immediately above them, are smitten with the same dread of remaining on their native soil, and fly from it as if it were as accursed as the "cities of the plain," and no fit habitation for the righteous. Continually the stream or flood of emigration runs westward. The love of country—a passion in which the Irish once indulged to an extent which bordered upon excess—has lost its hold upon them, for misery is stronger than local attachments, however powerful. *Ubi bene, ibi patria*, is the adage which, although they never heard it, regulates the conduct of the Celtic swarm in their search for a new home. They desire to earn their daily bread by the sweat of their brows; and, as Ireland does not offer them the chance, they try America—not, perhaps, without a pang, but certainly with as much hope of their prospects in the new, as fear of their fate should they remain in their old country. But wonderful as this Celtic "exodus" may be, we do not look upon it with the dread which has been expressed by some of our contemporaries. There is clearly no cause of alarm for the fate of the adventurous multitudes who have energy sufficient to cast from their feet the dust of a home to them but barren and ungrateful, and to try their fortunes in that wide country where land is cheap and human labour dear, and where certain independence is the reward even of ordinary exertion. The Celtic race, when once fairly settled in America, are not objects of any one's pity. They thrive when transplanted, whether they be Highlanders from the melancholy Hebrides, or bog-trotters from Connemara. The thinning of the Irish population, while it is thus of no possible disadvantage to the swarm who leave the country, cannot fairly be considered a disadvantage to those who remain behind. Irish misery has, to a great extent, been caused by the fierce, and, in many instances, insane, competition of the overabundant and starving people for small farms and patches of land, with which they led a life of slow misery, and without which they died in ditches by the road-side. At all events, the "exodus" or emigration relieves the country from that perennial source of degradation, deterioration, and wrong; and, if in any particular district the depopulation should happen to be so extensive as to cause inconvenience to those who own or occupy the soil, the remedy is not difficult. Ireland is no longer for the Irish. Amalgamated with the Anglo-Saxon race in America, the Celts work their way to independence and prosperity, and become eaters of bread and beef, and wearers of good broadcloth. Amalgamated with the Anglo-Saxon race in their own country, the same results will follow; and when the full tide of emigration shall have run itself out, an immigration will commence, which will be the salvation of a country that has long been our opprobrium and our misery. When land becomes cheap in Ireland, when pauperism shall have declined, as it must do, if the emigration continues to only one-half of the extent that it has done for the last three years, Englishmen and Scotchmen, with sharp eyes for bargains, and with a knowledge of the great capabilities of Ireland for profitable cultivation, will fill up the vacant places of the Irish. Nature is working her own cure. If those who deplore this Celtic emigration, and consider it fraught with future evil, would but reflect a little, they might be led to the conclusion, that, if there had been no such emigration, the present state of Ireland, bad as it may be, would have been infinitely worse. The very best thing that could happen to Ireland is, that the people should leave it as they are now doing. They improve their own condition, and leave a better chance for those who are not able to follow them. There may be present inconvenience in this great social change; but we cannot believe that ultimately it will be otherwise than beneficial, or that any other remedy for the accumulated evils of Ireland would have been so effective as that which nature, reduced to an extremity, has now put into operation. *Laissez faire* is not always a good maxim; but in this instance no power of Sovereigns or of Parliaments could work a change so effectual as this spontaneous and natural movement is certain to effect. Ireland will yet be inhabited and cultivated by a bread-eating people, and out of her present misery will spring her future salvation. The cure is a sharp one; but it will be a cure, and not a mere palliative.

The latest news from the Cape of Good Hope is of a still more sombre complexion than the previous accounts might have warranted us in expecting. The honour of the British nation is tarnished by the continuance of such a war as that which we are waging against the Kaffirs. The petty victories of Sir Harry Smith are in reality no better than great defeats. When the savages, encouraged by their success in harassing us, talk of driving the whole race of white men in Africa into the sea, we feel that it is, after all, no such empty boast that they are making; and unless Sir Harry Smith mind what he is doing, they will, not improbably, carry their magnificent threat into execution. Sir Harry—who has some faults as a statesman, but who must be acknowledged to understand the art of war as well as any man living, is fully aware of the difficulties of his position, and of the urgent necessity, both for the sake of the Cape Colony and of the mother country, of bringing this unhappy war to a speedy and safe conclusion—demands, as the public is informed, an immediate reinforcement of 10,000 men; but it is announced, on authority claiming to be semi-official, that he is not to obtain them. We trust that there are good reasons for the refusal. We are in the quarrel, and we must get out of it; and no other terms are to be thought of than the subjugation, once and for all, of our Kaffir enemies. But, as 10,000 men, even if the Government would grant them, are not easily spared, and as they would, unluckily, cost a great deal of money, it is to be presumed, that, in such an emergency, the present head of the Colonial department will see the necessity of accommodating his unlucky differences with the colonists, and of converting them into active principals in the war. They have too long been idle spectators. It is high time that they should be allowed to govern themselves, without unnecessary dictation from a distant official in Downing-street. Allowed the right of self-government, the duty of self-defence would not be neglected. As things at present stand, they have no interest in the struggle that Sir Harry Smith is carrying on against the Kaffirs along a remote frontier. When the savages reach Graham's Town, they will, of course, be compelled to bestir themselves, or consent to be massacred; but we should think the Colonial Office will not allow a consummation like that, or much longer refuse the colonists those rights of free action which, in such a miserable, as well as dangerous dilemma, can alone be effectual for the preservation of the colony.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

The Queen and the Prince Consort continue, we rejoice to learn, in the enjoyment of excellent health. Her Majesty has enjoyed almost daily equestrian exercise during the past week, accompanied always by Prince Albert, and generally by the Prince of Wales.

The Royal hospitality has been extended to a distinguished circle of guests during the week. Among them we may mention his Royal Highness Prince Frederick of the Netherlands, his Excellency Count Buol-Schauenstein, Field Marshal the Count Nugent, Colonel Count A. Nugent, his Excellency Baron Bentinck, Viscount and Viscountess Palmerston, the Marquis and Marchioness of Abercorn and Lady Harriet Hamilton the Earl Granville, and Viscount Canning.

Her Royal Highness the Duchess of Kent has dined with her Majesty and the Prince Consort daily.

The Countess de Neuilly, the Duke and Duchess de Nemours, and the Prince and Princess de Joinville arrived at the Castle from Claremont on Friday, and paid a visit to her Majesty.

Her Royal Highness the Duchess of Gloucester visited her Majesty on the same day, previously to leaving town for Brighton

The "event" of the week took place on Thursday, when her Majesty conferred the honour of knighthood upon Mr. Paxton, Mr. Fox, and Mr. Cubitt. The ceremonial is thus described by the Court Newsman, under the head of—

THE PRIVY COUNCIL.

The Queen held a Court and Privy Council at one o'clock on Thursday, at the Castle

The Privy Council was attended by his Royal Highness Prince Albert, the Marquis of Lansdowne (the Lord President), the Lord Chancellor, Lord John Russell, Viscount Palmerston, Sir Francis Baring, Lord Broughton, the Right Hon Henry Labouchere, the Earl of Carlisle, the Duke of Norfolk, and the Marquis of Abercorn.

The Right Hon. Edward Lord Seymour, Fuel Commissioner of Woods and Forests, was, by command of the Queen, sworn of her Majesty's Most Honourable Privy Council, and took his seat at the Board.

Earl Granville, Vice-President of the Board of Trade, also took his place at the Council.

At the Council, Parliament was ordered to be further prorogued from the 4th of November unto the 15th of January.

At the Queen's Court, the Count de Lavradio, Envoy Extraordinary and Minister Plenipotentiary from her Majesty the Queen of Portugal, had an audience of her Majesty to deliver his credentials. His Excellency was introduced by Viscount Palmerston, G.C.B., her Majesty's Principal Secretary of State for Foreign Affairs.

The Countess de Lavradio was presented to the Queen by the Viscountess Palmerston.

The Hon. John Bilgh, the Queen's Minister Plenipotentiary to the King of Hanover, was presented to her Majesty at an audience, by Viscount Palmerston, on his return, on leave of absence, from Hanover.

Sir John Shaw Lefevre, chairman of the East India Company, and Sir James Weir Hogg, deputy-chairman, had an audience of the Queen, on the part of the Court of Directors of the East India Company, who, in grateful recollection of the patronage vouchsafed by the Queen to the Great Exhibition of the Works of all Nations, and more particularly to the Indian section of it, had, by an unanimous resolution, requested that their chairman and deputy-chairman should offer for her Majesty's gracious acceptance a specimen of each of the principal articles exhibited by the East India Company.

Mr. Richard Kindersley and Mr. James Parker (nominated Vice-Chancellors) were presented to her Majesty by Viscount Palmerston, and received the honour of Knighthood from her Majesty.

Mr. Joseph Paxton, Mr. William Cubitt, and Mr. Charles Fox were severally presented to the Queen by Viscount Palmerston, and had the honour of knighthood conferred upon them by her Majesty.

Most of the Ministers left the Castle at thirty minutes before three o'clock, and returned to town by a special train, on the Great Western Railway.

The marriage of his Grace the Duke of Marlborough with Miss Jane Frances Clinton Stewart, youngest daughter of the Hon. Edward and Lady Katherine Stewart, and niece of the Earl of Wemyss, was celebrated by special license, at Blenheim Palace, on Saturday last. The ceremony was conducted in a very private manner.

Lord Cosmo Russell, son of the late Duke of Bedford, and brother of Lord John Russell, was married on Tuesday, at St. Peter's Church, Pimlico, to Miss Annie Norbury, daughter of the late Maj. J. S. Norbury, Esq. The ceremony was witnessed by a very numerous circle of the friends of both families.

CHURCH, UNIVERSITIES, &c.

Preferments and Appointments.—The following appointments and preferments have been made: *Hon. Canonry*: The Rev. A. W. Brown, M.A., to the Cathedral of Peterborough. *Rural Deanery*: The Rev. Henry Richard Somers Smith, to Ardleigh, archdeaconry of Colchester. *Rectories*: The Rev. Abner William Brown, M.A., to Gretton, Northamptonshire. The Rev. S. L. Townsend, to Painscastle, Radnorshire. The Rev. T. Bartlett, M.A., to Chevening, Kent. The Rev. Philip Dwyer, to Innisaltra, and vicarage of Mountshannon. The Rev. W. Walsham How, M.A., to Whittington, Salop. The Rev. Melville Lee, to Bridport, Dorset. The Rev. F. Sadler, to Kilnagross, Ross. Rev. Bayford J. Ram, B.A., to the incumbency of Warslow-cum-Elkstone, Staffordshire. *Vicarages*: The Rev Edward O'Brien, to Thornton Curtis, Lincolnshire. The Rev. R. Falkiner, to Ardcrony, Borrisokane. The Rev. Henry Gray, M.A., to Almondbury, Gloucestershire.

Testimonial to the late Incumbent of St. Mary's District Church, Lambeth.—The Rev. Robert Eden, M.A., of Corpus Christi College, having been ordained by the Bishop of Norwich to the vicarage of North Walsham, with the rectory of Antingham St. Mary's, Norfolk, the members of the congregation of St Mary's (District) Church, Lambeth, have presented to the rev. gentleman a handsome testimonial of their regard and esteem for his ministry during a period of upwards of twelve years. It consists of an elegant and costly tea-service in silver, a candelabrum of beautiful design, and other pieces. The vicarage of North Walsham, to which the rev. gentleman has been appointed, is worth about £400 per annum, and is in the gift of the Lord Chancellor. A silver pocket communion-service from the parishioners, and a silver pencil-case from the Sunday scholars, to the Rev. Wm. Windle, M.A., on retiring from the curacy of Ravenfield. A silver salver to the Rev. George Stallard, M.A., by the parishioners of St. Mary, Marlborough, on the resignation of his living.

Westminster Abbey.—An act was passed on the 7th of August to "empower the Dean and Chapter of Westminster to build on ground contiguous to Westminster Abbey, and for other purposes." By virtue of this act the Chapter can expend £50,000 in improvements connected with the Abbey and in the purchase of property in Dean's-yard. Other acts have been passed by which the Chapter was empowered to make improvements, and they can now be carried into execution. According to the recital the Chapter was "desirous of facilitating the communication of a spacious and convenient communication between the neighbourhood of the Houses of Parliament and that of Buckingham Palace, and of otherwise improving the adjacent neighbourhood."

Dr. Ogle is appointed to succeed Dr. Kidd as Regius Professor of Medicine at Oxford

Testimonials.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. F. H. Thompson, M.A., from the parishioners of Clerk, on his preferment; the Rev. Temple West, M.A., by the parishioners of St. Mary Magdalene, Taunton, on the occasion of his quitting the curacy of that parish.

ARRIVAL OF KOSSUTH.

(TELEGRAPHIC DESPATCH.)

Southampton, Thursday, 10 P.M.

Kossuth landed from the *Madrid* steamer at half-past two P.M. Thousands were assembled in the dock, and cheered him enthusiastically. With his wife and three children, Kossuth went into a landau, drawn by four greys, the carriage and harness decorated with the Hungarian arms and colours. In the landau were also the Mayor of Southampton and the American Consul. After passing the platform, the procession proceeded with a band of music, and attended by almost the entire population, to the Mayor's house, from the balcony of which Kossuth addressed the immense assemblage in fluent and eloquent English, thanking the people for their sympathy for him and for the cause of independence. He called for three cheers for the Queen; and about an hour afterwards Kossuth went to the Guildhall, where the Aldermen and Town Council were assembled in their robes.

The Town Clerk read the address, congratulating Kossuth on his arrival; to which he replied in a powerful speech, expressive of his gratification at being in the land of practical liberty, and of his wish to witness in Hungary institutions similar to those of this country. He stated that he should soon visit the younger brother of England (America). The young giant would yet fight the battles of European freedom in company with Great Britain. His speech was greatly cheered.

The address of the inhabitants was then presented, and responded to by Kossuth.

Kossuth will stop here to-night, and go to-morrow to the Mayor's house, at Winchester, were a grand *dejeuner* will be given on Saturday. On Tuesday a banquet will be given at the Guildhall, and on Wednesday Kossuth will go to London. Lord Dudley Stuart arrived here at half-past seven, and is now with Kossuth. The procession will meet him on Tuesday on his arrival from Winchester. Delegates from Birmingham and London were here. The weather was superb, and everything has passed off with unbounded enthusiasm.

Meetings to address the Hungarian patriot have been held in various parts of the provinces also, such as Birmingham, Derby, Exeter.

The following address to Lord Palmerston was voted by the corporation of Southampton on Tuesday last:—

TO THE RIGHT HON. THE LORD VISCOUNT PALMERSTON, HER MAJESTY'S PRINCIPAL SECRETARY OF STATE FOR FOREIGN AFFAIRS

May it please your Lordship,—We, the Mayor, aldermen, and burgesses of the borough of Southampton, in council assembled, beg leave to tender to your Lordship our sincere and heartfelt thanks for having so perseveringly used your powerful influence, as the representative of the British empire in its foreign relations, towards procuring the release from captivity of Louis Kossuth, late Governor of Hungary, and the other Hungarian refugees recently confined in the dominions of the Sultan of Turkey. It may be in the recollection of your Lordship, that a few months since this council took the liberty of addressing to you a memorial on the subject of the prolonged detention of Kossuth and his companions in Asia Minor; and, from the reply with which we were favoured by your Lordship, as well as from the patriotic and judicious manner in which you have ever discharged the duties of your high and responsible office, we felt well assured that the honour of the British nation, not less the common interests of humanity, would find an honest and able representative in your Lordship; and we now rejoice to know that through your Lordship's powerful mediation, the brave Hungarian patriots have at length been restored to liberty. In offering to your Lordship our warm expression of gratitude for this triumph of justice and mercy, we have no desire to deprive of its due share of honour in the negotiations that led to the liberation of Kossuth the Government of the United States of America, but we feel that it is to the decided and energetic measures of your Lordship, in supporting the Sultan of Turkey in his humane intentions, that the friends of freedom throughout Europe are mainly indebted for the liberation of those brave and patriotic men. With these feelings and convictions, we beg your Lordship to accept our cordial acknowledgments, not only for the deep interest you have taken in the question with respect to which we now address you, but for the great services you have rendered to your country during a long and distinguished official career. With the great questions of political, civil, and commercial liberty, settled within the last thirty years, your Lordship's name will now be honourably and prominently associated; and as, in addition to your talents as a patriotism as an Englishman, we have also the honour to claim you as a neighbour, we earnestly pray that your Lordship's valuable life may be long spared to be devoted to the service of your Sovereign, and the promotion of the freedom, happiness, and prosperity of your countrymen, and to contribute to the best interests of man in every part of the world.

MEETING IN WESTMINSTER.

On Monday, a public meeting of the inhabitants of Westminster was held at the Hanover-square Rooms, for the purpose of adopting an address to "the great patriot and statesman, Kossuth," on his arrival in England. In the notice convening the meeting, it was stated "that the struggles of Kossuth and Hungary to maintain constitutional government, like our own, against overwhelming despotism, demand from the men of Westminster an expression of cordial sympathy for the exiled patriot about to visit us."

Shortly after one o'clock the chair was taken by Sir de Lacy Evans, Bart., M.P.; and on the platform were Lord Dudley Stuart, M.P., Mr. Feargus O'Connor, M.P., a number of foreigners and members of the Westminster Reform Association; several of whom delivered speeches filled with sentiments of enthusiastic admiration for the conduct of Kossuth and his gallant countrymen in the late Hungarian struggle, sentiments which were vociferously responded to by the crowded meeting.

The following address was agreed to:—

TO HIS EXCELLENCY LOUIS KOSSUTH.

Sir,—Urged by profound sympathy for yourself and the Hungarian people, and by a deep interest in the support of the fundamental principles of freedom, and the ancient customs essential to the maintenance of liberty, which you, sir, and Hungary have nobly struggled to uphold, we, citizens of Westminster, in public meeting assembled, desire to manifest our cordial congratulations for the preservation of your life, and for your deliverance from the foes of freedom and of all firemen. (Hear, hear.)

We hail with thankfulness to God your presence on English ground. (Hear, hear.) Those institutions which you and your countrymen have striven to defend midst danger and death, we happily enjoy. We trust that the spirit which has proved the ancient laws of national and local self-government amongst the British people, will be stimulated and advanced by your example and genius. We desire that the power of ten people on both sides of the Atlantic should be exerted for the maintenance and extension of human liberty and free representative government, wherever nations are so enlightened by a sense of dignity, duty, and self-dependence, such as Hungary has recently displayed. We feel that the privileges wantonly won and resolutely sustained by our forefathers, and which have descended to us, should not be forgotten in the enjoyment of prosperity and peace, but that our minds and hearts should keep a vigilant watch over them, so that encroachments should be repulsed, and our children taught to feel the indefeasible value of the birthright transmitted to them. And, sir, while thus resolved to nurture freedom at home, it is our earnest hope that the British people may at all times be ready to employ their influence and resources in preventing other nations, struggling to defend or obtain similar rights, from being assailed by foreign despots. For while we abhor bloodshed, and have no sympathy with anarchy, or with those revolutions which merely effect a change in the names of rulers.—(Hear, hear)—we feel bound to manifest respect for all national efforts to improve the administration of social affairs. Confident that the time will come when Hungary and the more enlightened nations of the world, closing the career of your career, will again make strenuous exertions for the recovery or attainment of constitutional Government, we doubt not that the people of this country and the United States of America will stand forth with strong arms and firm resolve to succour freedom and resist foreign interference. (Hear, hear.) We cannot allow this opportunity to pass without applauding the firm and resolute protection afforded in defiance of Austrian and Russian menace by the Sublime Porte to yourself and the other noble patriots who took refuge under Turkish hospitality.—(Hear, hear)—and permit us to offer a passing tribute of unfeigned sorrow for the many glorious victims to your righteous cause who fell on the field of battle or under the Austrian executioner. (Hear, hear.) We offer these sentiments to you, noble and excellent sir, because we are assured that they will encourage and rejoice your heart, and lend renewed vigour to the efforts which you can never cease to make for the common cause, and for Hungary's weal." (Loud cheers.)

The Post-Office London Directory, 1852. Kelly and Co.—The Great Exhibition has had its effect upon the sale of this leviathan Directory, and has helped to exhaust the year's edition sooner than usual. We are not surprised at this, seeing that the London season has been one unbroken round of visits, and an unprecedentedly large number of persons has flocked to the metropolis, the majority requiring the class of information as well conveyed in the "Post-office London Directory." Accordingly, the volume for the coming year has been produced thus early: it maintains the high character of the series for accuracy, appropriate classification, and ready reference. The [illegible] the Peerage, and other lists, have been made to the latest possible period; and, altogether, the work is recommended, as heretofore, by its completeness in every department, attainable only by the proprietors' long course of experience and popularity.

THE AUSTRALIAN GOLD DISTRICT.

THE PATERSON DISTRICT, FROM MORPETH.

THE GOLD DISCOVERIES IN AUSTRALIA.

We have been favoured with several Sketches of the localities in which gold has lately been found in Australia, accompanied by private letters, and Sydney and Bathurst newspapers, and specimens of the gold found.

Our first communication is an outline of an interesting journey to the gold district, illustrated by the pair of Views here engraved. Our Correspondent writes:—

"We started by the Company's steamer *Thistle* from Sydney, at ten at night; and arrived at Newcastle, at the mouth of the Hunter River, by daybreak. As it was flood-tide, we lost no time in proceeding up to Morpeth (after landing our passengers), which lies at the head of the estuary, and is as yet the limit of steam navigation. From Newcastle to Morpeth is a distance of about thirty miles, in which several thriving towns are passed; indeed, you scarcely ever lose sight of a human habitation the whole distance—the banks being studded with villas and farm-houses, surrounded with corn-fields and vineyards. Though the land is a dead level for many miles, the scene is exceedingly interesting to a traveller, from the number of strange birds which are seen about the low flat islands near the mouth of the estuary—the pelican purning himself with his great bill being the most remarkable. There is something, too, exceedingly cheerful in the sight of so much plenty, and in the thought that so much has been effected in a short time, comparatively by the hand of man.

"But our present business commences at Morpeth, which is a thriving town, the property of E. Close, Esq., the principal street of which we soon reached, leaving the Bishop of Newcastle's residence on our right. Ascending to the highest ground we could find, we were rewarded with a fine view, the flat land appearing for miles as a vast wheat field, dotted with houses. The rivers *Hunter*, Paterson, and Allys could be traced by the lines of dark trees which fringe their banks; in the distance are seen the mountains, in which two streams take their rise, and in the midst of which is situated the hospitable residence of Charles Boydell, Esq., who, by the latest accounts from New South Wales, is stated to have found among the hills which surround his dwelling a piece of gold weighing thirteen pounds, of about the value of £600 sterling.

"As soon as we had completed our Sketch we started from Morpeth, and reached Cameraliyn, after a warm ride of thirty-five miles, during which we scarcely ever lost sight of paddocks of wheat and of Indian corn waving in the breeze. We were delighted with the scenery, which in some parts reminded us of North Wales, and determined to rise early next morning, and secure a Sketch with the first rays of the sun. The weeping willows were magnificent, and one noble fellow by the road-side was most happily placed. The vineyard, twenty acres in extent, was surrounded with a fine belt of willows in full vigour; indeed, though New South Wales is generally esteemed a dry climate, we thought they far exceeded in height and in luxriance of foliage any trees we had seen in England. Tobacco is also cultivated here on a large scale by

CAMERALLYN THE RESIDENCE OF C. BOYDELL, ESQ.

THE AUSTRALIAN GOLD DISTRICT.

THE GOLD DIGGINGS AT OPHIR, COUNTY OF WELLINGTON, NEW SOUTH WALES.

Mr. Boydell's tenants; and he himself has been successful in the production of light wines, resembling the Rhenish in flavour and quality. The View represents Mr. Boydell's residence, situated in a large garden, abounding in fruit trees: the peach, nectarine, apple, pear, &c., all flourish more luxuriantly than in the mother country. The remaining buildings are stores, stables, cottages of the servants, and such other buildings as are usually found on a settler's estate. The native trees shown in the middle ground chiefly consist of iron-bark, stringy-bark, and gum, of a remarkable height, showing the depth and richness of the subsoil

ing transaction of the day in every point of view was the sale of 7 lb. 3½oz. belonging to a company of four men of good character. Of this quantity, 46⅝ oz. was in one solid piece, which was picked out of the earth by a poor but honest Scot of the name of Henderson. We learn from a gentleman who was near at the time when the golden prize was first perceived by Henderson, he was struck both speechless and powerless, and fell prostrate on the earth. This piece is the largest which has yet been discovered. In shape it is an irregular oblong, much of the shape of a shoulder of mutton, with a transverse diameter of 5 inches and a conjugate of 4. A smaller piece was found shortly afterwards, about 4 inches long by 2½ inches broad, and weighed 18¼ oz. Besides these were several smaller lumps weighing in all 22½ oz.,

July 5.—The arrivals are still very numerous, notwithstanding the number who are returning. On Thursday no fewer than 300 people were counted on the road from Bathurst to Ophir. A few cases of extraordinary luck are still occurring. One individual trespassed upon the digging-ground of Messrs. Heward and Gapham during their absence, and in the course of a few hours got about £380 worth from amongst the roots of a tree. A company of six, consisting principally of Mr. Syers's men, returned after an absence of nine days, and sold the produce of their toil for £140, besides paying £5 for licences. A stranger passed through the town on Thursday, on his way homewards, with 2½ lb. o gold, which himself and two others had found in eight days. Three men passed our office yesterday, who had worked assiduously for nine days, and showed 14 dwts. as the result o their labours.

We have, also, communications to the 7th of July. One lump of gold weighing 8 lb., had been found by a lucky gold seeker. The Government, it is said, had rewarded Mr. Hargreaves, the first discoverer of the mines, with £500, and an appointment of £350 a year, with an allowance for two horses to continue his explorations. The subjoined extracts of letters from Messrs. Young and Co., of Sydney, give details of the progress of affairs:—

"June 26.—The accounts from the diggings are generally favourable, though a great many have been compelled to leave from rigorous weather in the mountains at this season. Several new places have been found where gold is being raised, and rubies have also been brought from the same neighbourhood. About 300 people have arrived from Melbourne, and great numbers are preparing to

MR. E. H. HARGREAVES, THE AUSTRALIAN GOLD DISCOVERER.

"We observed a good deal of schist, shale, slate, and sometimes quartz, but not any granite; it may, however, exist in the mountain ranges. It seems most singular, that, although gold has been found at various times years back in New South Wales, in places wide apart, no one thought of digging for it until Mr. Hargreaves, returning from California with the impression of the similarity of the strata in the two countries, was induced to try the experiment which has been attended with such signal success. The Paterson is distant from Summerhill 80 miles, and the latter from Dubbo, in the Wellington district, about 100 miles, in all which districts it has been discovered; and many years must elapse before the vast extent of the gold regions of Australia shall have been ascertained."

SPECIMEN OF THE GOLD.

We have engraved a piece of gold found in the Bathurst district; it weighs 3 lb. 10 oz., was purchased by Messrs. Smith, Campbell, and Co., of Sydney, and sent by them to Messrs. Duncan, Dunbar, and Sons, of Limehouse, London.

We quote the following "Mining Intelligence" from the *Bathurst Free Press*:—

The town was all bustle with the Sydney merchants, equipages, and gold-diggers. Some of the latter having been more successful than their neighbours, had come into town to turn their gold into negotiable money. Many parcels changed hands in the course of the day. The most interest-

making a total of 7 lb 3¾ oz., which was purchased by Captain Hindson, of Sydney, at the rate of £3 4s. 6d. per oz. A cheque for £382 3s. was handed in our presence to the worthy Scotchman, who appeared as if he could hardly understand this sudden stroke of good fortune. Henderson's company had been at work four days, and consisted of four men. A party, consisting of Messrs. Hawkins, Lane, and others, eight in number, disposed of their golden crop also on Saturday, to Mr. Campbell, of the firm of Smith, Campbell, and Co., merchants, of Sydney, which brought them £36 each. Tom's party sold the produce of their labours for five days, which averaged £2 per man per day for a period of five days. A party, consisting of six men, of whom Mr. Smith, saddler, of William-street, was one, arrived in town yesterday. Their stock amounted to 27 oz. 2 drs., and was purchased by Mr. Austin for £81 2s. We learn from Mr. Smith, that his party had been five days at work, and that on an average they had washed 400 buckets of earth a day. Another company of six men, who had been at work eight days, realised gold to the value of £95 5s., making an average of nearly £2 per day each. This lot was purchased by Mr. Austin, as also several other smaller quantities, varying in value from £5 to £20. Up to the present time, Mr. Austin has been the most extensive purchaser in town. There are considerable quantities still in the possession of parties at the diggings.

LUMP OF GOLD FROM OPHIR DIGGINGS, ACTUAL SIZE; WEIGHT 31b. 10oz.

leave that and others of the neighbouring colonies. By this time next year we expect to see the population of Sydney nearly doubled.

"July 7.—The quantity of gold brought to town has as yet been incon[sider]able. The digging has been much retarded by the cold and wet weather which has prevailed since the discovery, and many have relinquished the work till the spring. Numbers of people continue to arrive from the neighbouring colonies, and [a]re [e]ncamped [o]n the [b]anks of the Parramatta. A few diggings are said to be richer than those at Ophir, [a]nd [m]uch gold is found in the shape of dust. A fresh discovery has been made on place at Stony Creek, O'Connell Plains, 30 miles south of Bathurst. The other places are north and west of Bathurst. There is now a dearth of provisions in the whole district being an extensive gold field, and that [p]rovisions will be reported, so as to give a choice of operations to the thousands who will be attracted."

It will thus be seen that the certainty with regard to the extent of the yield is considerably increased. The most interesting fact, however, by this arrival is, that in the adjoining colony of Victoria (Port Phillip) several specimens have been found, which indicate a probability that that neighbourhood may be almost equally rich. The following is an extract of a letter from Mr. D. Hill Young, dated Melbourne, Port Philip, July 1

"Since my last letter we have had specimens of gold forwarded here by Dr. Brahn, found by him in the Pyrenees, about 100 miles from Melbourne. They have been tested, and ascertained to yield a considerable quantity of pure gold, about a grain and a half to the drachm. The gold is said to exist in large quantities, and the diggers are now preparing to go there, thinking that they will stand a better chance than at Bathurst, where so many have preceded them.

"Specimens have also been brought to town by a very respectable man, a Mr. Ben Clarke, who says that they were found by him at a place called King Parrot Creek, near Kilmore, about 50 mi es from Melbourne.

"The explorers out in all directions looking for gold in this district, but the late heavy rains have prevented many from continuing their operations.

"There is great fear that many of the shepherds will desert the sheep, and follow gold as the more profitable labour."

THE OPHIR "DIGGINGS."

The upper Engraving upon the preceding page represents the Summer-hill, or Ophir "Diggings," near Bathurst, 145 miles from Sydney, New South Wales. Here we have the great field of the gold-seekers, in full activity. In the left foreground of the picture, on horseback, is Mr. Edward Hammond Hargraves, who first discovered gold at Ophir early in February last, and disclosed the "find" to the local Government in the early part of May. Towards the centre of the entire picture is "Yorkey's Corner," the spot where the first pick was struck. The stream crossing the view is Summer-hill Creek, whose upper bank is the washing ground where the gold-seekers are rocking the cradles. The miners' tents are scattered throughout the hills and foreground; and the "diggings" are estimated to be nearly 300 miles in extent in one direction. The whole scene puts one of those busy fields of enterprise which reminds us of the splendours of gorgeous Oriental fable, yet conveys the lesson of history, that the reputed "wonders" of one age become the matter-of-fact occurrences of another.

In a week or two we shall resume our Illustrations of this new field of gold discovery.

We have to thank Mr. T. Tyrwhitt Balcombe for the early transmission of the View of the Ophir "Diggings," and the Portrait of Mr. Hargreaves; and we are likewise indebted to the courtesy of Dr. Jackson, Bishop of Lyttleton, New Zealand, a passenger by the *Nimrod Arbuthnot*, who kindly undertook the safe and speedy sending of the Lithographic Sketches to our office.

THE AUSTRALIAN ANTI-CONVICT LEAGUE.

It has been already announced, that the Australian colonies, with a view to putting an end to transportation to their shores, have entered into a solemn league and covenant with each other for the purpose of effecting their object. The following is its tenor:

THE LEAGUE AND SOLEMN ENGAGEMENT OF THE AUSTRALASIAN COLONIES.

January, 1851.

Whereas, in the year one thousand eight hundred and forty, by an order in council, the practice of transporting convicts to New South Wales was abandoned by the Crown; and whereas, by divers promises, the Government of Great Britain engaged not to send convicts from the United Kingdom to New South Wales, New Zealand, Victoria, or King George's Sound; and whereas, by an act of the British Parliament, transportation to South Australia was positively prohibited; and whereas Lieutenant-Governor Denison, in the year one thousand eight hundred and forty-seven, declared to the colonist of Van Diemen's Land her Majesty's most gracious purpose that transportation to that island should be discontinued; and whereas the colony of Van Diemen's Land has been deeply injured by the pouring in of enormous masses of transported offenders; and whereas divers and repeated attempts have been made to depart from the letter and spirit of these promises; and whereas the avowed object of her Majesty's Secretary of State is to transfuse the convicts disembarked in Van Diemen's Land through the Australasian colonies, and thus to evade the spirit of the promise and act of Parliament so made; and whereas large tracts of lands have been purchased by the colonists from the Crown, many millions of capital invested with improvements, and many thousands of her Majesty's subjects have settled in Australasia on the pledged faith of the Crown not to disturb their social welfare by the importation of crime; and whereas these colonies are entitled to all the rights and privileges of British subjects, and to the sympathy and protection of the British nation; and whereas many and varied efforts have been made to induce her Majesty's Ministers and the British Parliament to trample the principles of transportation to these colonies, but without success: now, therefore, the delegates of these colonies, in conference assembled, do declare their league and solemn engagement to the effect following:

1. That they engage not to employ any person hereafter arriving under sentence of transportation for crime committed in Europe.

2. That they will use all the powers they possess—official, electoral, and legislative—to prevent the establishment of English prisons or penal settlements within the bounds; that they will refuse assent to any projects to facilitate the administration of such penal systems, and that they will seek the repeal of all regulations and the removal of all establishments for that purpose.

And, lastly, they solemnly engage with each other to support, by their advice, their money, and their countenance, all who may suffer in the lawful promotion of this cause.

Offices of the New South Wales Branch of the Australasian League.

THE RAILWAY THROUGH EGYPT.

It is understood that all the obstacles to the formation of this railway have been removed.

The following correspondence has been published regarding it. The first letter is from the Secretary of the Peninsular and Oriental Company to the Chairman of the recent Public Meeting.

Peninsular and Oriental S. N. Company,
London, 22nd October, 1851.

Sir,—By order of the directors of the Peninsular and Oriental steam Navigation Company, I have the honour to transmit to you, as chairman of the public meeting held on the 14th inst., at the London Tavern, a copy of a letter from Viscount Palmerston, which has been received by them as the answer to the petition of that meeting; and I am desired also to state that the directors have no objection to your making such public use of this communication as you may deem expedient.

I am, your most obedient servant,
(Signed) C. W. Howell, Secretary.

Samuel Gregson, Esq., Chairman East India and China Association.

Foreign Office, October 14, 1851.

Sir,—I am directed by Viscount Palmerston to acknowledge the receipt of your letter of the 10th inst., expressing on behalf of the Peninsular and Oriental Steam Navigation Company the apprehensions entertained by that association lest the issue of the discussions between the Porte and the Pasha of Egypt should have a prejudicial effect upon the transit of passengers and goods through Egypt.

I am to state to you in reply, for the information of the company, that whatever questions of etiquette and form may have arisen between the Sultan and Abbas Pasha in regard to the construction of a railway between Alexandria and Cairo, or in regard to the introduction of the Turkish flag, Lord Palmerston entertains no apprehension that the construction of the railroad will be stopped, or that the local government of Egypt will be deprived of the means of maintaining order in that province.

I am, sir, your most obedient humble servant,
(Signed) H. U. Addington.

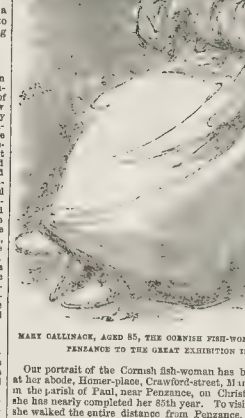
C. W. Howell, Esq., Peninsular and Oriental Steam Navigation Company.

Wreck of a French Frigate.—Intelligence has reached Lloyd's, by means of the Overland mail from India, which brought despatches from Sidney, and Singapore, of the calamitous wreck of a fine frigate of war belonging to the French Republic, called the *Alcmene*, mounting thirty-six guns, commanded by M. le Comte d'Harcourt, on the west coast of Sydney, New South Wales. Towards the latter end of June she proceeded on a voyage from Hobart Town, and on the 3d of July, when between Kiapara Head and Hick-anga Head, she was driven ashore on a formidable ridge of sand. All exertions proved fruitless in getting her off. Nearly the whole of the crew succeeded in reaching the coast, but, unhappily, all were not preserved; between twelve and fifteen persons having perished in trying to reach the beach. Several of the officers, after great exertion and fatigue, reached their way on to Auckland, and the Governor of the lamented vessel, his Excellency instantly adopted the most prompt measures to afford them assistance. The loss of the frigate will reach to £30,000.

LONGEVITY AT THE GREAT EXHIBITION.

Amongst the many remarkable circumstances in connexion with the Great Exhibition, is the extraordinary number of persons of great ages who have journeyed long distances to see the World's Fair. Much might be said upon the reflective results of these patriarchal visits: the delight which the good old people received from the industrial spectacle may have, in many instances, been akin to the vivid impressions of youth; at the same time that it may have given rise to comparisons of the perfections of the present times with the shortcomings of the past. We leave these general reflections, however, for a special portrait of one of these aged visitors, whose presence on the morning of the 23d ult., at the Mansion-house, by her harmless eccentricity, relieved the dull routine of the police report. The circumstances were thus related in the Illustrated London News for September 24:—

On Tuesday, among the visitors at the Mansion-house, was Mary Callinack, eighty-four years of age, who had travelled on foot from Penzance, carrying a basket on her head, with the object of visiting the Exhibition, and of paying her respects per-sonally to the Lord Mayor and Lady Mayoress. As soon as the ordinary business was finished, the aged woman was ordered by the justice room, when the Lord Mayor, addressing her, said, "Well, I understand, Mrs. Callinack, you have come to see me?" She replied, "Yes, God bless you; I never was in such a place as this; I have come up asking for a small sum of money—I am 84." The Lord Mayor: "Where do you come from?" Mrs. Callinack: "From the Land's-end." The Lord Mayor: "What part?" Mrs. Callinack: "Penzance." She then stated that she left Penzance five weeks ago, and had been the whole of this time walking to the metropolis. The Lord Mayor: "What induced you to come to London?" Mrs. Callinack. "I had a little matter to attend to as well as to see the Exhibition. I was there yesterday, and meant to go again to-morrow." The Lord Mayor: "What do you think of it?" Mrs. Callinack: "I think it's very good." (Much laughter.) She then said that all her money was spent but 8d. After a little further conversation, which caused considerable merriment, the Lord Mayor made her a present of a sovereign, telling her to take care of it, there being a great many thieves in London. The poor creature on receiving the gift burst into tears, and said, "Now I shall be able to get back." She was afterwards received by the Lady Mayoress, with whom she remained some time; and having partaken of tea in the housekeeper's room, which she said she preferred to the choicest wine in the kingdom, and which latter beverage she had not tasted for sixty years, returned thanks for the hospitality she had received, and left the Mansion House for one more visit to the Exhibition, and then to her native home.



Mary Callinack, aged 85, the Cornish fish-woman, who walked from Penzance to the Great Exhibition in Hyde Park.

Our portrait of the Cornish fish-woman has been sketched from life, at her abode, Homer-place, Crawford-street, Marylebone. She was born in the parish of Paul, near Penzance, on Christmas-day, 1776, so that she has nearly completed her 85th year. To visit the present Exhibition she walked the entire distance from Penzance, nearly 300 miles; she having "registered a vow," before she left home, that she would not accept assistance in any shape, except as regarded her finances. She possesses her faculties unimpaired: is very cheerful; has a considerable amount of humour in her composition; and is withal a woman of strong common sense, and frequently makes remarks that are very shrewd, when her great age and defective education are taken into account. She is fully aware that she has made herself somewhat famous; and, among other things which she contemplates, is her return to Cornwall, to end her days in "Paul parish," where she wishes to be interred by the side of "Old Dolly Pentreath," who was also a native of Paul, and died at the age of 103 years. "Old Polly" signed herself as the last person who could converse in the old Cornish language. Mary Callinack took rank in the Exhibition as the most remarkable of all the visitors to the "Great Exhibition of 1851."

On Tuesday the 14th, when the Queen visited the Exhibition, her Majesty, in taking her departure, with her usual kindness and condescension, noticed the old Cornish pedestrian fisherwoman, who had been placed in her way, and with hearty emphasis exclaimed, "God bless your Majesty!"

We have next to chronicle the visit of an aged party, who, on Thursday, the 2nd inst., were conveyed in a pair-horse van, from Bletchingly, in Surrey, if we mistake not, a locality conducive to health and long life. The expenses of the visit were paid by a subscription commenced by the worthy rector, the Rev. C. Fox Chawner. The names and ages of the party were as follow:—

William Galyer, 83; James Lee, 82; Stephen Morris, 82; Thomas English, 77; William Goffard, 77; — Ramsay, 73; Thomas Cawley, 71; John Main, 69; Dame Lee, 76; Dame Coppard, 76; Dame Sanders, 76; Dame Amy Lee, 68; Dame Collings, 66; Dame Main, 65; Dame Stone, 64; Dame Goodsell, 64; Dame Richardson, 63; Dame Stevens, 63; Dame Goodsell, 62; Dame Richardson, 62; Dame Stevens, 62; Dame Goodsell, 61; Dame Richardson, 61; Dame Stevens, 61; Dame Goodsell, 60; Dame Richardson, 60; Dame Stevens, 60; Dame Goodsell, 59; Dame Richardson, 59; Dame Stevens, 59; Dame Goodsell, 58; Dame Richardson, 58; Dame Stevens, 58; Dame Goodsell, 57; Dame Richardson, 57; Dame Stevens, 57; Dame Goodsell, 56; Dame Richardson, 56; Dame Stevens, 56; Dame Goodsell, 55; Dame Richardson, 55; Dame Stevens, 55; Dame Goodsell, 54; Dame Richardson, 54; Dame Stevens, 54; Dame Goodsell, 53; Dame Richardson, 53; Dame Stevens, 53; Dame Goodsell, 52; Dame Richardson, 52; Dame Stevens, 52; Dame Goodsell, 51; Dame Richardson, 51; Dame Stevens, 51; Dame Goodsell, 50; Dame Richardson, 50; Dame Stevens, 50; Dame Goodsell, 49; Dame Richardson, 49; Dame Stevens, 49; Dame Goodsell, 48; Dame Richardson, 48; Dame Stevens, 48; Dame Goodsell, 47; Dame Richardson, 47; Dame Stevens, 47; Dame Goodsell, 46; Dame Richardson, 46; Dame Stevens, 46; Dame Goodsell, 45; Dame Richardson, 45; Dame Stevens, 45; Dame Goodsell, 44; Dame Richardson, 44; Dame Stevens, 44; Dame Goodsell, 43; Dame Richardson, 43; Dame Stevens, 43; Dame Goodsell, 42; Dame Richardson, 42; Dame Stevens, 42; Dame Goodsell, 41; Dame Richardson, 41; Dame Stevens, 41; Dame Goodsell, 40; Dame Richardson, 40; Dame Stevens, 40; Dame Goodsell, 39; Dame Richardson, 39; Dame Stevens, 39; Dame Goodsell, 38; Dame Richardson, 38; Dame Stevens, 38; Dame Goodsell, 37; Dame Richardson, 37; Dame Stevens, 37; Dame Goodsell, 36; Dame Richardson, 36; Dame Stevens, 36; Dame Goodsell, 35; Dame Richardson, 35; Dame Stevens, 35; Dame Goodsell, 34; Dame Richardson, 34; Dame Stevens, 34; Dame Goodsell, 33; Dame Richardson, 33; Dame Stevens, 33; Dame Goodsell, 32; Dame Richardson, 32; Dame Stevens, 32; Dame Goodsell, 31; Dame Richardson, 31; Dame Stevens, 31; Dame Goodsell, 30; Dame Richardson, 30; Dame Stevens, 30; Dame Goodsell, 29; Dame Richardson, 29; Dame Stevens, 29; Dame Goodsell, 28; Dame Richardson, 28; Dame Stevens, 28; Dame Goodsell, 27; Dame Richardson, 27; Dame Stevens, 27; Dame Goodsell, 26; Dame Richardson, 26; Dame Stevens, 26; Dame Goodsell, 25; Dame Richardson, 25; Dame Stevens, 25; Dame Goodsell, 24; Dame Richardson, 24; Dame Stevens, 24; Dame Goodsell, 23; Dame Richardson, 23; Dame Stevens, 23; Dame Goodsell, 22; Dame Richardson, 22; Dame Stevens, 22; Dame Goodsell, 21; Dame Richardson, 21; Dame Stevens, 21; Dame Goodsell, 20; Dame Richardson, 20; Dame Stevens, 20; Dame Goodsell, 19; Dame Richardson, 19; Dame Stevens, 19; Dame Goodsell, 18; Dame Richardson, 18; Dame Stevens, 18; Dame Goodsell, 17; Dame Richardson, 17; Dame Stevens, 17; Dame Goodsell, 16; Dame Richardson, 16; Dame Stevens, 16; Dame Goodsell, 15; Dame Richardson, 15; Dame Stevens, 15; Dame Goodsell, 14; Dame Richardson, 14; Dame Stevens, 14; Dame Goodsell, 13; Dame Richardson, 13; Dame Stevens, 13; Dame Goodsell, 12; Dame Richardson, 12; Dame Stevens, 12; Dame Goodsell, 11; Dame Richardson, 11; Dame Stevens, 11; Dame Goodsell, 10; Dame Richardson, 10; Dame Stevens, 10; Dame Goodsell, 9; Dame Richardson, 9; Dame Stevens, 9; Dame Goodsell, 8; Dame Richardson, 8; Dame Stevens, 8; Dame Goodsell, 7; Dame Richardson, 7; Dame Stevens, 7; Dame Goodsell, 6; Dame Richardson, 6; Dame Stevens, 6; Dame Goodsell, 5; Dame Richardson, 5; Dame Stevens, 5; Dame Goodsell, 4; Dame Richardson, 4; Dame Stevens, 4; Dame Goodsell, 3; Dame Richardson, 3; Dame Stevens, 3; Dame Goodsell, 2; Dame Richardson, 2; Dame Stevens, 2; Dame Goodsell, 1; Dame Richardson, 1; Dame Stevens, 1; Dame Goodsell, 0; Dame Richardson, 0; Dame Stevens, 0; Dame Goodsell, —1; Dame Richardson, —1; Dame Stevens, —1; Dame Goodsell, —2; Dame Richardson, —2; Dame Stevens, —2; Dame Goodsell, —3; Dame Richardson, —3; Dame Stevens, —3; Dame Goodsell, —4; Dame Richardson, —4; Dame Stevens, —4; Dame Goodsell,

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Lord Campbell, Lord Chief Justice of England, is now at Rome, and on the 17th instant had an audience of his Holiness the Pope at the Vatican.

The new Chancery appointments are now settled. Sir James Knight Bruce and Chief Cranworth, as formerly stated, are the new Lords Justices. Mr. James Parker, Q.C., and Mr. Kindersley, Vice-Chancellors; and Mr. James, Master in Chancery. The Lords Justices will each receive £6000 a year; the Vice-Chancellors £5000 each; and the Master, £2000.

A juvenile gymnasium has just been erected in Buckingham Palace for the use of the youthful members of the Royal family. It consists of a neat framework, nearly square, upon which an apparatus has been constructed for a great number of bodily exercises.

The new project of the constitution of Saxe-Coburg Gotha, which established a diet for these duchies, has just been published. By this constitution it is determined, that in case Prince Albert, husband of the Queen of England, shall be called to the throne of the duchy, he shall be permitted to appoint a Governor if he does not wish to fix his residence in the duchy. Should he assume any foreign throne, he will, in consequence, forfeit his right to the throne of the duchies.

The Lords of the Treasury have given directions for a case of paintings, which has just arrived by the ship *Trafalgar*, and intended for deposit in the East India Company's Museum in the East India House, to be delivered to the Board of Directors for that purpose.

Via New York we have advices from Jamaica to the 20th ult., which state that the cholera was prevailing in that island: eleven deaths had occurred during the week ending the 29th. A smart shock of an earthquake had been felt in Port of Spain, but no damage was done. Antigua, St. Vincent, Grenada, and Dominica papers furnish no news of interest.

The import of foreign grain, cheese, &c., into Liverpool, for the three weeks ending 15th October, 1851, were—268,859 parcels of wheat, 2308 bags ditto, 130,618 barrels of flour, 9414 sacks ditto, 68,969 bushels of Indian corn, 13,994 sacks ditto, 48,360 bushels beans, 9969 bushels peas, 48,200 bushels barley, 4313 boxes cheese, 445 cases ditto. Omitted in list of 24th September:—17,442 bushels wheat, 499 cases cheese.

Early this month, a statue of Rembrandt, destined for Amsterdam, the town in which the painter died, in 1674, was successfully cast in bronze, before a select company of witnesses at the Hague. The model is the work of the Dutch sculptor, M. Royer. It is 16 feet in height; yet, notwithstanding its colossal proportions, weighs only 18,000 lb.

Mr. Dilke had the gratification of receiving from her Majesty, on Monday, a very handsome diamond and ruby brace et as a present for Mrs. Dilke. The letter which accompanied this record of her Majesty's approval stated that it was sent as a mark of her Majesty's sense of the trouble Mr. Dilke had taken in executing her commissions at the Exhibition. Mr. Dilke also had the honour, from the Royal children their portraits, in remembrance of the attention shown to them during their visits to the Exhibition.

The principles of the early Closing Association were ably advocated on Sunday last, in the morning, by the Rev. Thomas Davies (author of the Prize Essay on the late hour question), at Welch-house Chapel; and in the evening, at St John's Church, Charlotte-street, Fitzroy-square, by the Rev. R. S. Redfern, curate. Several sums for the furtherance of the cause were handed over to the secretary in the vestry, at the conclusion of both services.

Spaulding, the circus proprietor (say the American papers), is about building, in Cincinnati, a monster floating palace, for theatrical, circus, and menagerie performances. It is to be 400 feet long, with 60 feet beam, and is to accommodate 4000 spectators. It is to be towed by two steam-tenders to the various towns upon the Mississippi and its tributaries in summer, and be moored at the levee in New Orleans in the winter. It is estimated to cost 40,000 dols., and will be completed next spring.

The officials at the Manchester workhouse, anxious to let the indoor paupers participate in the festivities of her Majesty's visit, gave leave of absence for the day to as many as could go, clothing them in new garments, in order that they might appear respectable. Twenty of them absconded with their new dresses.

At a meeting of the governors and subscribers of the Royal Naval Benevolent Society, held on Monday, at the Thatched House Tavern, St. James's-street Sir William Pell in the chair—it appeared from the accounts that the receipts for the last quarter, including a balance of £990, amounted to £1710 4s. 4d., and the disbursements to £707 3s. 4d., leaving a balance of £1212 1s 2d. A resolution was passed for the purpose of allowing assistant-surgeons and naval instructors to secure for themselves, their widows, and families, the benefits of this institution, upon their paying 5s. annually, or a life subscription of £5.

After the 31st of March next, no steam-vessel is to go to sea, or to steam within the limits of the United Kingdom without having a safety-valve upon each boiler, free from the care of the engineer, and out of his control and interference, and such safety-valve is to be deemed to be a necessary part of the machinery upon which the engineer surveyor is to report to the Board of Trade. This new regulation is ordered by the 21st section of the act 14 and 15 Victoria, cap. 79.

On Monday information was received that two persons of gentlemanly appearance had, under pretence of requiring the use of a private room to transact some professional business, succeeded in plundering the Archway public-house, Enfield Chase, of £78 in gold and silver, a valuable gold watch and chain, and other property. The same men have committed similar robberies at other houses. They both appear about thirty years of age, and are attired in mourning, one being very thin and pale, the other stout, much seamed with the small-pox, with sandy hair and whiskers.

The expenses of Lord Arundel's uncontested election for Limerick amounted to £880, exclusive of donations by his Lordship to public charities.

About 100,000 tons of rails have been contracted for to construct the proposed railway between Aberdeen and Perth, at a cost of only £5 per ton. In former days the price per ton was between £10 and £12.

A correspondent says:—"Cab reform is at last to be carried out. A public company is forming for that purpose, on a principle entirely different from the present, and completely putting an end to all extortion and imposition, now so loudly and justly complained of. The fare will be reduced to 4d. per mile; liveries are intended to be supplied by the company, and the driver will be under as strict regulations as the metropolitan police force."

On the 12th ult., his Highness the Prince Electoral of Hesse was going from Wilhelmshöhe to Cassel, when a fulminating ball exploded near or beneath his carriage. The researches of the police have hitherto led to no result.

The Florence official Gazette, *Il Monitore Toscano*, of the 13th inst., contains three decrees of high importance, suppressing entirely the office of the Tuscan Minister of War, and putting the entire control of the military resources of the grand duchy into the hands of Austria.

Recent accounts from Rome state that that city, which had been almost deserted during the summer, had begun to fill for the winter season, and it was expected that the influx of foreigners would be greater than it had been for several years past.

The committee of watch, clock, and chronometer exhibitors have forwarded to the superintendent of the Division of the metropolitan police an expression of their admiration and satisfaction at the vigilance, courtesy, and attention of the police stationed in the vicinity of their goods in Class 10, and they accompany the same with a silver watch of a superior quality, to be presented to police-constable Jones, 343 A, who was especially attached to their department.

The Dublin papers mention the following extraordinary case:—On the 1st of December, 1854, Lieutenant R. W. Croker, late of the 32nd Light Infantry, at Prince Albert's Own Regiment, received a wound from a musket shot at the storming of Rangoon, in the Burmese empire. The ball lodged in the bone of the right leg, under the knee, and remains there until the 2d instant, causing the most excruciating and incessant pain. Owing, however, to the care and skill of Sir Philip Crampton, Bart., the Surgeon-General, Mr. Croker has been released from his sufferings. The ball has been most skilfully extracted by that eminent surgeon, and presents a most extraordinary appearance. It was half opened by the force with which it struck the bone, and it is partly covered with a hard osseous substance mixed with iron.

All the letters lately received from Greece agree in stating that the internal situation of the country is improving. For the last two months robberies had ceased, and the formidable brigand Calmatta had been forced to take refuge in the Turkish territory. His wife had requested Athens to implore the Government to grant his pardon, but without any great probability of her prayer being granted.

The last news received at Constantinople from Persia states that the Russian policy triumphs definitively in that country. At the instigation of Prince Dolgorouki, the Shah had decided to send an ambassador to St. Petersburg, to dissipate the displeasure of the Emperor Nicholas for the ill-treatment which the Russian legation had been subjected to at Ispahan by the Turcomans. The person chosen as Ambassador is the present President of the Royaume, an able man, and whose reception, it is expected, will be a favourable one, at the court of St. Petersburg. Our informant left Persia on the 1st ult.

This year the rising of the Nile in Egypt was of such a nature as to inspire serious fears for the crops in Upper Egypt: it was feared that the maize would be completely lost.

We find by a correspondence in the American papers, between an enterprising citizen and the Mayor of New York, that Mr. John N. Genin proposes to "one of a hundred persons to contribute 1000 dollars each towards a gift which will render Kossuth independent upon his arrival in the United States. The Mayor has consented to act as treasurer to this fund.

Colonel W. Reid, C.B. (Governor of Malta), and Mr. R. Mayne, C.B. (Commissioner of Police), are promoted to be Knights Commanders of the Bath (Civil Service). Sir Stafford Henry Northcote, Captain Du Plat Hay (Commissioner of Police), Mr. Henry Cole, and Dr. Lyon Playfair, are appointed Companions of the same order. Mr. Paxton, Mr. Cubitt, and Mr. Fox to be Knights Bachelors.

Intelligence from the city of Mexico to the 1st inst. states that disturbances had broken out in several parts of Northern Mexico, and that Government had sent 3000 men to defend Tamaulypas. Don Fernando Romero had accepted the appointment of Minister of Foreign Affairs, and was charged with the formation of a new Cabinet.

The clipper ship *Flying Cloud* has made the run from New York to San Francisco, round Cape Horn, in 89 days, the quickest ever accomplished.

CHESS.

TO CORRESPONDENTS.

J M——Y, Vienna. Did our communication of the 11th come duly to hand?

X Y Z. TOBY.—A player can call a Queen for every Pawn he advances to his 8th square, and may have as many Queens as he can get on to the board at the same time.

CHESSTER.—To decide who shall move first. In a game by correspondence, you may take two scraps of paper, the one having "White men and first move" written on it, the other inscribed "Black men and second mover;" seal them up in separate envelopes, and send them to your antagonist, requesting him to choose one, and return you the other unopened.

H B Hewitt.—1. Owing to the severe indisposition of the English player, the match to decide the question you ask was postponed, but will in all probability take place at the latter end of this or the beginning of the next year. 2. Mr B took part in the last matches, and defeated his competitor gallantly.

H J C A.—They merit, and shall have, publicity.

CHAD.—It shall be reported on in the next Number. Meanwhile we shall be pleased to see some further examples of your little friend's abilities for chess.

CLUB, Scotland.—Address to Mr Löwenthal, at the St George's Club.

SUSSEXIER.—To Robert Longbottom, Esq., 3 Cavendish-square, London.

JUPP.—Received with cordial thanks.

R B W. It adds greatly to the interest of a game when we have the names of both the composers.

J H.—They shall be examined.

ANTIGO.—One of the very best little books for a beginner at Chess is Bolton's "Popular Introduction to Chess," published at the office of the *Chess-Players' Chronicle*.

G J, Eastbourne.—Major Jenkins's "Nouvelle Analyse," &c., is the most elegant and finished of the modern treatises. Apply to Williams and Margate, the foreign bookseller.

MILES.—The subscription to the St George's Chess Club is three guineas per annum for town members; and this entitles a member, not only to all the advantages of the Club, with its library, reading-rooms, &c, but to free admission at all times to the celebrated *Polytechnic* Institution, to which the Club is attached.

A GENTLEMAN.—The "Elegant Extracts" to which you allude, accompanied by a commentary on the writings and character of the author, will, we trust, be forthcoming in due time.

H E, Harrow-on-the-Hill.—Content yourself by solving Problems at present; you are evidently too unskilled to construct them.

J B of Northwood.—Nos. 1 and 3 are ineligible. No. 2 if really original, merits a diagram.

AN OLD FRIEND, New York.—The book of the Tournament will be out, we dare say, by Christmas.

SOLUTIONS OF PROBLEM No. 403, by Ralph, I I, M P, Dhu, Argus, Mona, R F, Bombardier, and no set.

SOLUTIONS OF PROBLEM No. 404, by XX, St Edmund, Jack of Shrewsbury, Dr Field, B X, H. Colman, M D, Carrick, Miles, Salem, are correct.

SOLUTIONS OF ENIGMAS, by Mona, St Edmund, Jack of Shrewsbury, Dr Field, M P, Miles, Phiz, Alpha, Ingia, Gaia, Ghandi, Frembam, Philo-Chess, D D, are correct. All others are wrong.

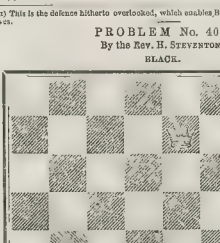
SOLUTION OF PROBLEM No. 404.

WHITE.	BLACK.	WHITE.	BLACK.
1. B to K 8th	K to B 2d (best, a)	4. R to K 6th (discovering ch)	R to K 1st (d)
2. Kt to Q 5th	Kt takes Kt (best)	5. B takes R (ch)	K moves
3. P to Kt 8th (Queens, ch)	K takes Q	6. B mates	

(a) This is the defence hitherto overlooked, which enables Black to protract the mate to six moves.

PROBLEM No. 405.
By the Rev. H. STEVENTON.

BLACK.



WHITE.

White, playing first, mates in four moves.

GAMES IN THE CHESS TOURNAMENT.
BETWEEN MESSRS ANDERSSEN AND KIESERITZKY.

GAME NO. 2.
(*Allgaier Gambit.*)

BLACK (Mr. A.)	WHITE (Mr. K.)	BLACK (Mr. A.)	WHITE (Mr. K.)
1. P to K 4th	P to K 4th	29. K R takes P	Kt to K B 4th
2. P to K B 4th	P takes P	30. Kt to K 2d (*e*)	R to K B 8th
3. Kt to K B 3d	P to K Kt 4th	31. R to K Kt (*f*)	P takes P (ch)
4. P to K R 4th	P to K Kt 5th	32. Kt takes P	Kt takes Kt
5. Kt to K 5th	P to K R 4th	33. R takes R (ch)	K takes R
6. B to Q B 4th	R to K B 2d	34. K takes Kt	R takes P (ch)
7. P to Q 5th	P to Q 3d	35. K to B 4th	R to Q 5th (ch)
8. Kt to Q 3d	P to K B 6th	36. K to Kt 3d	R to Q 4th
9. P to K Kt 3d (*a*)	B to K 3d	37. R to K 3d	K to B 2d
10. P to Q 4th	B to Q B sq	38. R to Q B 3d	P to Q B 4th
11. P to K 5th	P takes P	39. R to Q R 3d	K to B 4th
12. Kt takes P	B to Q 3d	40. R takes P	R to Q 6th (ch)
13. B to K B 4th	Kt to K 2d	41. K to B 2d	R to Q 7th (ch)
14. Castles	B to K B 4th	42. K to Kt 3d	R takes P
15. Q to Q B 3d	Kt to Q 2d (*b*)	43. R to K Kt 7th	P to Q B 5th
16. Kt takes Kt	Q takes Kt	44. R to Kt 5th (ch)	K to K 5th
17. B to Q Kt 5th	P to Q B 3d	45. R takes K R P	P to Q B 6th
18. P takes P	B to Q B 4th (ch, *c*)	46. R to Q 5th	K to Q 6th
19. K to K 2d	P takes P	47. K takes P	R to Q Kt 5th (ch)
20. B to Q 3d	B takes B	48. K to Kt 6th	R to Q B 5th
21. P takes B	P to K M 4th	49. R to Q 5th (ch)	K to K 7th
22. B to K 3d	R to Q sq	50. K to K 6th (ch)	K to K 7th
23. Q to Q R 4th	P to K B 7th (*d*)	51. R to Q Kt 5th	K to Kt 6th (*g*)
24. Kt to K 2d	Kt to B sq	52. R to Q Kt sq	R to Q B 4th (ch)
25. B to K 2d	B takes B	53. K to B 6th	K to B 6th
26. R takes B	Q to her 5th	54. R to Q B sq	K to K 5th
27. Q takes Q	K takes Q	55. R takes P	R to Q R 4th
28. Q R to K B sq	P to K B 8th	Drawn Game.	

(*a*) A preference or gaining ground for the following mode of pursuing the attack from this point:

BLACK.	WHITE.	BLACK.	WHITE.
9. P takes P	B to K 2d	11. K to Q 2d	P takes P
10. B to K 3d *	B takes P (ch)	12. Q takes P	

And, although minus a pawn, the first player has a fine game.

(*b*) Better, I think, to have taken the Kt with his Bishop first.

(*c*) Fortunate indeed for White, that he had this check in store!

(*d*) If he had taken the Q's Pawn, Black's best move would have been Q R to Q square, leaving the Queen no retreat. In White's place, however, rather than weaken the Pawns, we should have played Q to her Kt's second.

(*e*) The game is somewhat interesting just now, from the sort of "bit and counter-bit" which each player adopts to avert loss.

(*f*) All this requires great nicety.

(*g*) The position here is very instructive. We consider that if Mr. Kieseritzky had played with proper care from this point, he must have won the game easily. Let us suppose, that instead of moving K to Kt 6 h, White had played as follows:—

BLACK.	WHITE.	BLACK.	WHITE.
51. (If White play his K to Kt 6th, the natural move, he may be driven back by a check.)			
52. R takes P (best)	R takes R	57. K to Kt 7th (best)	K to Kt 4th
53. P to K B 6th (best)	K to B 4th (ch)	58. P to K R 7th (best)	R to Q B 3d
54. K to Kt 6th (best)	K to Kt 3d	59. K to Kt 8th	P becomes a Kt (best) R to B 3d
55. P to R 6th (best)	R to Q B 3d (best)		

In this position, if Black move the Kt, he loses him; if the King, mate, follows instantly: he must, therefore, advance the Q R P. White then plays his Rook alternately on Q 8d and Q B 3d, until the Pawn reaches the 7th square, when he takes it, and of course wins directly.

* 10. B to K B 4th, we have seen adopted successfully.

CHESS ENIGMAS.

No. 687.—By SOPHIA.

White: K at Q Kt 4th, R at Q B 6th, B at K B 5th, Kt at K 3d, P at K 2d.
Black K at his 5th, P at K Kt 6th.

White to move, and mate in five moves.

No. 688.—By C. S. JELLICOE, Esq., of Oxford.

White: K at K R 8th, Q at K R 7th, R at Q R 8th, Bs at K B sq and Q Kt 4th, Kts at Q B 5th and Q B 8th, P at K 2d.

White to play, and mate in five moves.

No. 691.—By R. B. WORMALD, Esq., of Oxford.

White: K at Q R 5th, R at Q 5th and Q Kt 3d, B at Q 7th, Kt at K B 7th; Ps at K Kt 4th, K 3d, and Q 2d.
Black: K at K 5th, Ps at K 4th and Q B 5th.

White, playing first, mates in four moves.

MUSEUM OF ECONOMIC BOTANY.

One of the "first fruits" of the Exhibition is to be the establishment at Kew of a Museum of Economic Botany; and Sir William Hooker, the director of Kew Gardens, is now engaged in the initiatory steps for its immediate formation, under the direction of her Majesty's Commissioners of Woods and Forests.

The object of the new institution is to bring together and exhibit such interesting products from all parts of the world as could be shown in the living plants of a garden, or in the preserved forms of a museum. In this way it is intended to collect and arrange in the new museum such fruits and seeds as are deserving of notice, especially those which are of large size, or possessing any peculiarity of form or structure. All leaves and plants, which, from their make, are unsuited to the *Hortus Siccus*, and which may require preservation in spirits or acid, specimens of woods used in commerce, or which would appear to be deserving of notice from their beauty, hardness, &c., will come within the range of the collection, and impart to it a most practical and interesting character. In the same way will be added gums and resins, especially those employed in the arts or in domestic economy; also dye stuffs, of which very few are as yet known to science. Another most important part of the collection will be the medicinal substances, which in the various shapes of seeds, leaves, gums, oils, roots, &c., exist in unknown extent throughout the East.

Active steps are being taken by the colonial authorities to secure the co-operation of governors of colonies, managers of botanic gardens abroad, travellers, merchants and others.

We may here mention that any parcels or packages will be brought from abroad free of charge by any of her Majesty's ships, or by the Royal mail vessels, or Peninsular and Oriental Company's steamers; in these cases they should be addressed—"On her Majesty's service—for the Royal Gardens, Kew." "To the Secretary of the Admiralty, London." Packages coming by merchant vessels or by private hands may be addressed to Sir William J. Hooker, director, Royal Gardens Kew, London.

DEAN MILLS.

We described, last week, at considerable length, the visit of his Royal Highness Prince Albert to this extensive manufacturing establishment on the morning of the 11th inst.

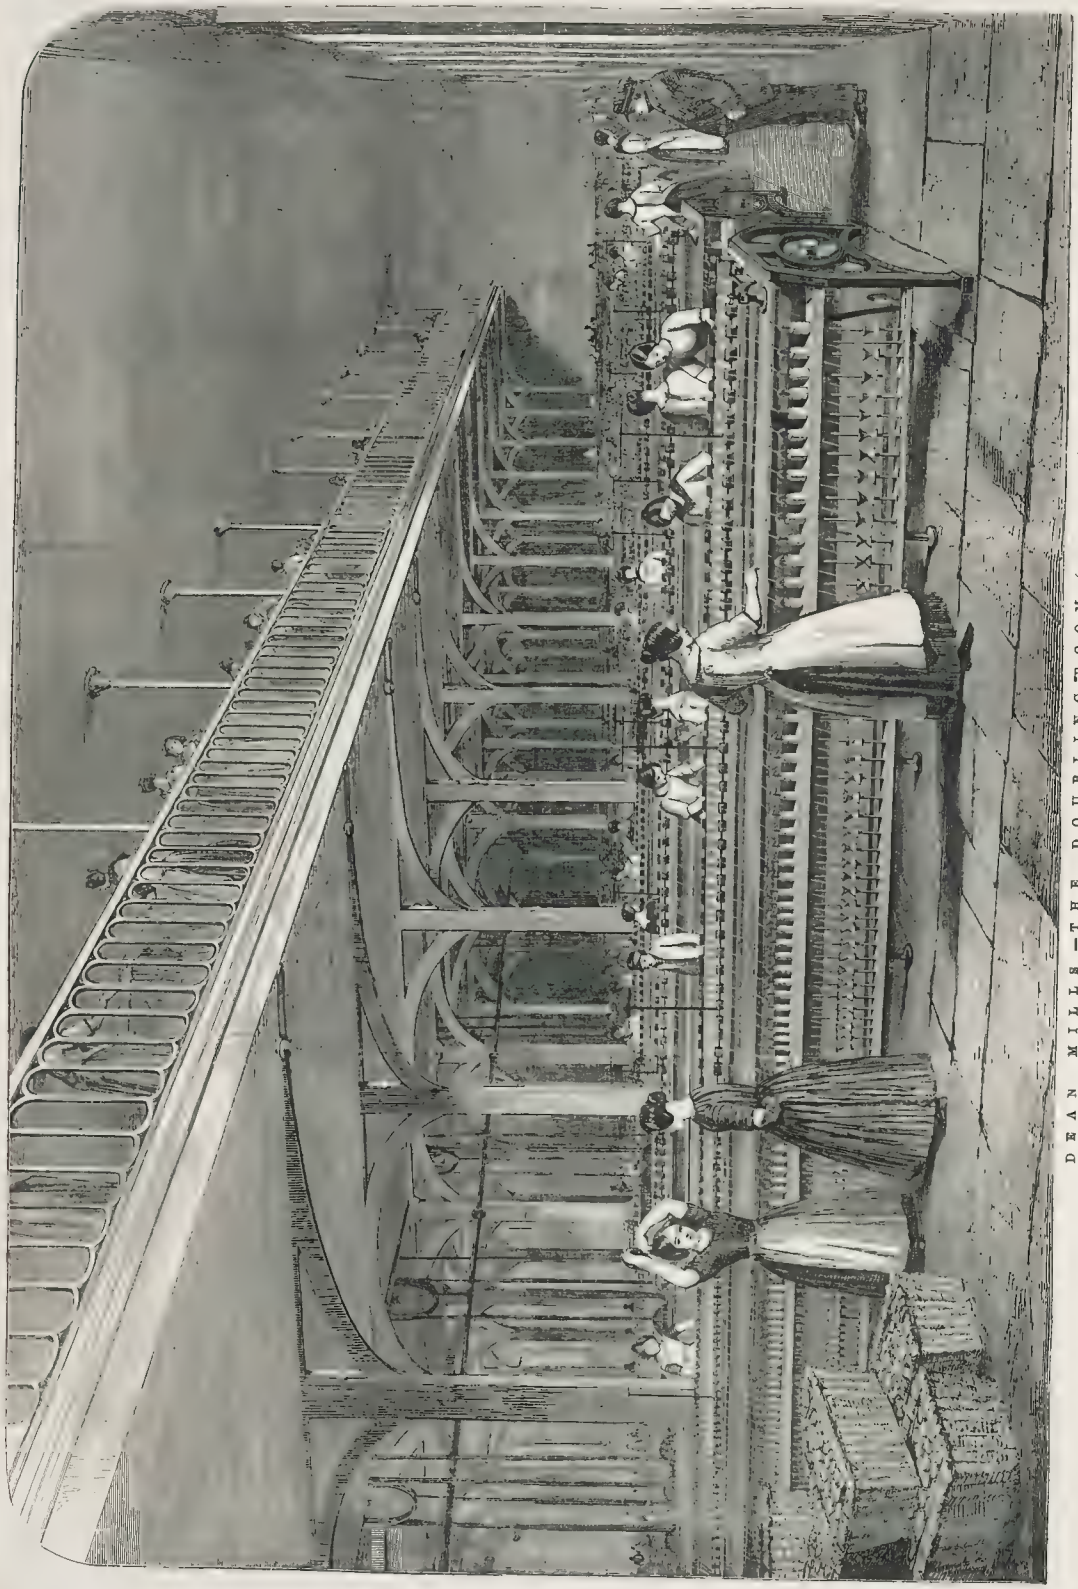
Dean Mills, of which the annexed Engraving affords a very accurate representation, are the property of Messrs. Gardner and Baxley, and are seated in a picturesque valley overlooked by the Horwich and Halliwell Moors—the haunt of the grouse—about thirteen miles from Manchester, and three from Bolton. The waters of a stream which runs through the bottom past the Mills have been collected into an artificial reservoir, or lake, which contains abundance of trout and otherfish, and forms a pleasing feature in connexion with the Mill buildings, and the village appended by the proprietors for the convenience of about 900 of the workpeople.

The space covered by the Mills, village, &c., is an area of 15 acres. The works are contained in two large stone buildings, one of which, 180 ft. in length and 90 ft. high, is the spinning mill; and the other, 265 ft. long and 105 ft. high, is the doubling mill. These edifices are connected by a building containing two large rooms, one of which is fitted up with a range of ovens for the purpose of heating the provisions of such of the workpeople as prefer to bring with them their daily supply. The adjoining room serves as the refectory, being furnished with suitable tables and benches: and, after work hours, this apartment is likewise used as a common room by the workmen, or for the practice of a very creditable instrumental band, got up among themselves. This room is lighted with gas, as are the mills and other parts of the premises, from gas-works adjoining the spinning mill. The machinery of the doubling mill is worked by four noble engines of 60 horse-power each, manufactured by Messrs. Hicks, of Bolton, at a cost of £5000; and the engines for the spinning mill make, in all, 350 horse-power. The doubling mill is the largest of its kind in the kingdom, containing 70,000 spindles in a vast room, lofty and well ventilated, in which is a gallery where the process of winding is carried on. In the spinning mill, all the processes through which, successively, the raw material is converted into fine yarn, are carried on; the work being completed in the other, by doubling the thread so as to produce the fine thread for the manufacture of lace, &c.

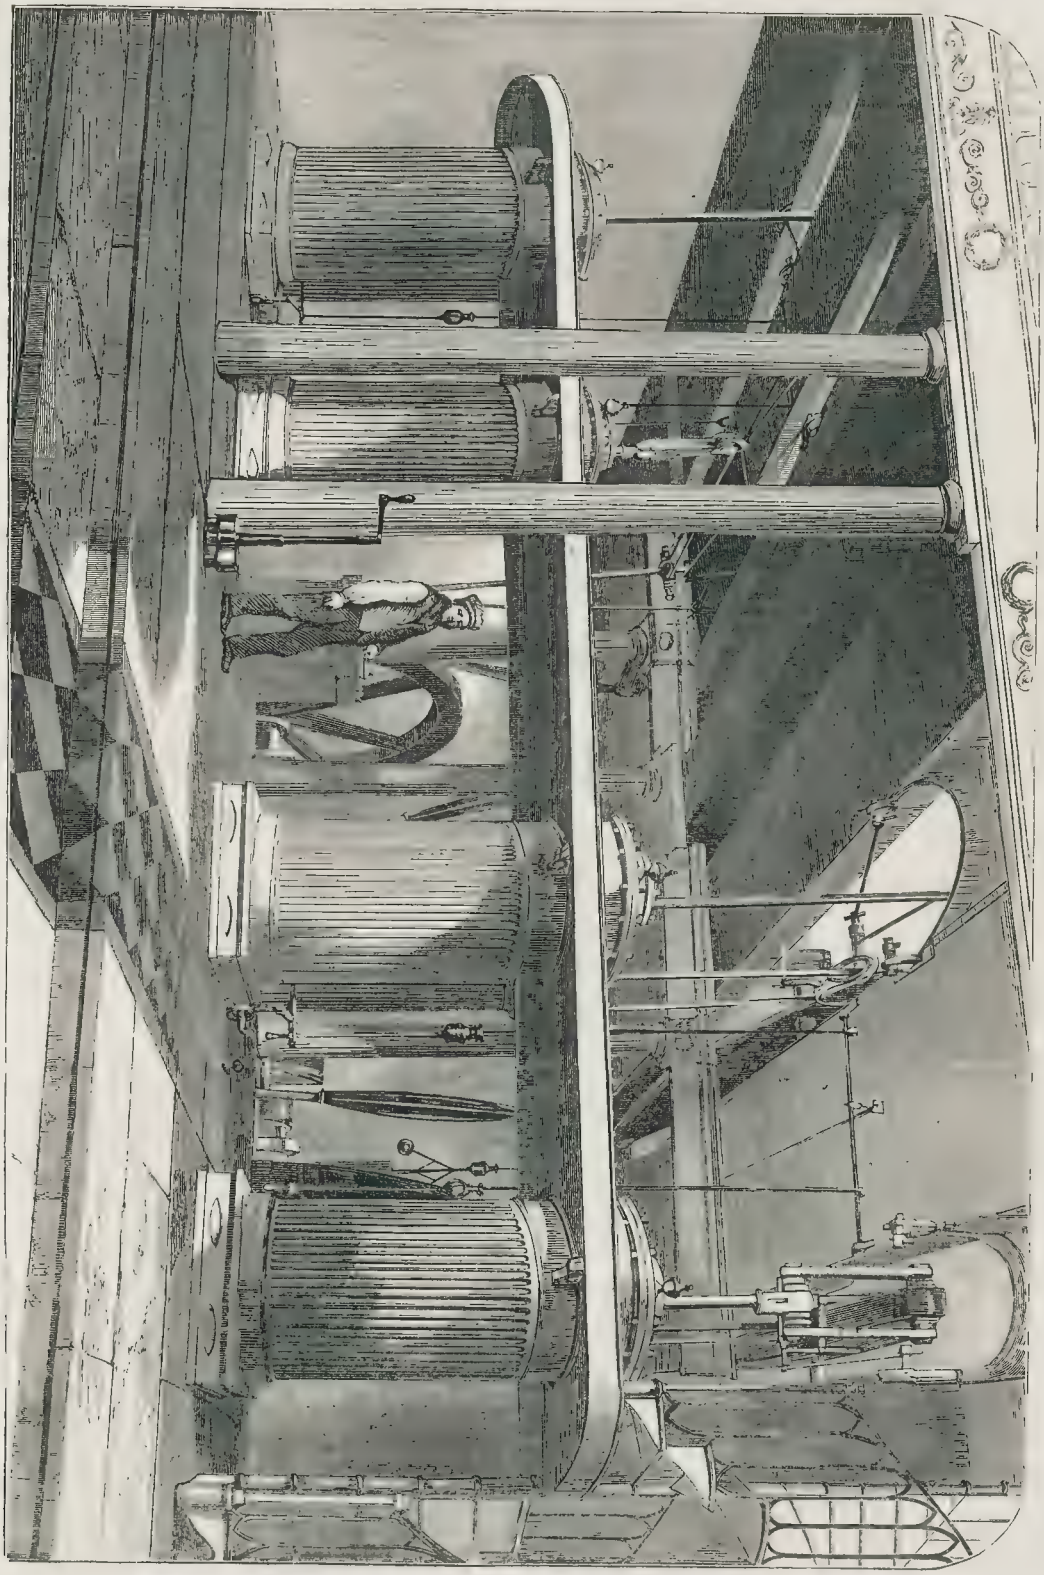
The workmen have established a co-operative provision store, for which there is a suitable allotment on the premises, with stowage for the various articles, and a blast oven which bakes 160 loaves daily, at a very moderate consumption of fuel. By these means the workpeople unadulterated articles are provided, at a cost which, although it does not appear so low as might be anticipated, is declared by the consumers to be substantially made up in point of thrift by the soundness and quality of the articles, which are retailed genuine as procured from the best market, at such a small advance only as serves to meet the expense of carrying on the concern. The retail price of bacon is 6d. per lb.; ham, 7d.; the best coffee, 1s. 2d. per lb.; tea, 4s. per lb. The store is managed by a committee of the workmen, and all accounts are settled on pay-day. About three hundred of the workpeople inhabit the neighbouring cottages, which are built of stone, standing on the slope of the valley opposite to the Mills. Each cottage, with a plot of ground, is let at from 2s. 6d. to 3s. 6d. per week. At the upper end of the village a substantial building has been erected, the dimensions of which are 116 ft. by 43 ft., the ground-floor whereof is divided into apartments for a boys' school, a girls' school, an infant-school, and class-rooms. The floor above is appropriated for a lecture-room. It is galleried, and capable of containing between two and three thousand persons. It is supplied with maps, globes, an air-pump, and other apparatus. The largest apartment is the scene of social *reunions* of the workpeople, and in which the proprietors frequently take a part. The use of it is likewise permitted lecturers, or the exhibitors of entertainments of an amusing and innocent character, with the use of the gas gratis. With such encouragement a succession of instructive displays are afforded to the workpeople, whose payments of threepence each supply, in most cases, a sufficient remuneration. The building likewise contains a library and newsroom, supplied with books of an instructive nature, newspapers, and some of the best of the journals. This building was erected at a cost of £4000. The schools are conducted by a master and two ushers, with a salary of £73; a mistress for the girls' school; and two infant teachers, at £48 and £43 per annum. The average number of scholars is 86 boys and 112 girls; and in the infant school about 70 children. The benefit of the schools is not limited to the children employed in the Mills, being open to others at the rate of 3d. a week. The former pay 1½d. a week, and attend school three hours a day. An evening school is likewise established for such of the boys as work full hours, and the average attendance of about thirty.

Halliwell, or Holywell, was of yore a solitary spot on the Moors, only distinguished as the resort of occasional devotees attracted by the miraculous powers of a spring celebrated for the cure of various infirmities; and it is only within times comparatively recent that it has become the nucleus of industry and humble affluence which it now exhibits. The spinning mill was erected by Mr. Bazley and the father of one of the present proprietors; the doubling mill has been added since, and is considered the largest among the great establishments which have sprung up under the energy and industry of the north. Mr. Bazley is known as the Royal Commissioner for Manchester; and as the coadjutor to Mr. Cobden in the Anti-Corn-Law Association, he received the commendation of Sir Robert Peel; but, to appreciate the results of a wise, just, and philanthropic management on the part of himself and his partner, Mr. Gardner, a day at Dean Mills would suffice. The community of interest between the employer and the employed being perfectly illustrated by the good-will and thoughtful attention of the former to the interest and welfare of their subordinates, and the contentment, steadiness, and affectionate zeal of the latter, provided as they are with every inducement to limit their enjoyments and recreations to such as are conducive to the reaction of willing labour as the alternation of wholesome relaxation. Situate apart from temptation, with such a base, the beneficial result is obvious in the sturdy cheerful demeanour of the men, and the gaiety which enlivens the village after the hours of labour. The active sports of the children affording the best token that the daily work has neither exhausted their bodily strength nor animal spirits, and the general harmony betokening a well organised community never equalled by the Utopias of philosophy.

A Portrait and Memoir of Mr. Bazley appeared in our Journal of last week.



DEAN MILLS.—THE DOUBLING-ROOM.—(SEE PRECEDING PAGE.)



DEAN MILLS.—THE FOUR ENGINES.—(See Page 523.)

METROPOLITAN NEWS.

LORD JOHN RUSSELL'S NEW REFORM BILL.—It is now pretty freely circulated, that at the late Council only three members of Lord John Russell's Cabinet supported his new Reform Bill proposition. The other members were opposed to any new Reform Bill at all. This division in the Cabinet has caused great consternation.—*Morning Herald*

The office of Vice-Chancellor of the County Palatine of Lancaster, which has lately been vacated by the Solicitor-General, has been conferred by the Chancellor of the Duchy on Richard Bethell, Esq., Q.C.

BANKING INSTITUTE.—At a general meeting of the friends and promoters of this scheme, held on Wednesday evening at the London Tavern, for the purpose of adopting rules, and appointing officers for the management of the institute, its objects were set forth to be the periodical meeting of all parties connected with the banking and commercial interests, reading and discussion of papers, the re-publication of rare and useful works, the establishment of a mutual guarantee fund for the fidelity of bank officers, and the opening of a central room and library and place of meeting for bankers and county members. Resolutions in accordance with the objects stated were agreed to, and a council formed of men of eminence in the banking trade.

ROYAL ORTHOPÆDIC HOSPITAL FOR THE CURE OF CLUB FOOT, &c. A meeting of the committee and friends of the above charity was held on Thursday, at the board-room, in Bloomsbury-square; Charles Harris, Esq., founder, occupying the chair. From the report, it appeared that Mr. R. W. Tampin, the senior surgeon of the hospital, had delivered the commencement of a series of lectures on the nature and treatment of deformities. The recently discovered operation, by which, in two years, no less than 18,000 cripples have had the use of their limbs restored to them, consists in severing the tendon, and was originally made known by Dupuch, of Montpellier; Dr. Stromyer, of Hanover; and from thence to England by Dr. Little. Club foot and other deformities of a similar nature has been likened to a bow tightly strung, and the operations by which so many thousand afflicted creatures have been cured may be compared to the entire or partial cutting of the string, by which the bow is immediately straightened. In the case of the human tendons, however, nature supplies the deficiency by an exudation or purulent running from each end, which, on meeting together, amalgamates, and the limb is knee'erwerd strengthened by the tendon. The report of the Institution states that there are upwards of 700 patients now under treatment; every bed is occupied, and no less than 300 are waiting their turn of admission as in-door patients.

BRITISH BENEFICENT ASSOCIATION.—On Wednesday a special general meeting of the governors and subscribers to this useful institution, which was founded for affording permanent incomes of £30 per annum to the widows and unmarried daughters of clergymen of the Church of England at the time of the society, was held at their offices, No. 63, Lincoln's-inn-fields. The report stated, that since the foundation festival, celebrated in June, 1850, there had been two elections, at which nine annuitants had been elected, each of whom is now receiving £30 per annum by monthly instalments. The council have also the gratification of announcing that the institution is now graced by the support of fifty ladies as patronesses, and 150 noblemen and gentlemen as vice-presidents, besides about 400 governors, who are annual subscribers of one guinea and upwards. From the balance-sheet appended to the report, it appeared that the total receipts from all sources had amounted to £1157 19s., and after all the necessary expenses had been paid, there was left a balance in the hands of the bankers of £270 3s. 10d. The election of five annuitants from a list of thirty-four candidates concluded the proceedings.

THE SOCIETY.—On Tuesday a general court of the governors of this charity was held at the offices of the society, Bishopsgate-street, Captain T. [illegible] presiding, supported by Admiral Sir H. Hall, one of the commissioners of Greenwich Hospital, and other naval gentlemen. The report stated, that, on the 1st of July last, there were 168 boys on board the society's ship, and 118 had been received during the quarter, giving a total of 226. Of these 20 had been sent into the Indian navy, 79 were apprenticed to the merchant service, 6 were discharged, and 1 was dead, leaving 120 on board. During the quarter, 22 boys who had served upwards of twelve months to the satisfaction of their masters, appeared before the committee, and were rewarded with new clothes; and 17 young men, who had completed their apprenticeships, also presented themselves to the committee with certificates of good conduct, and were rewarded with medals and donations. Seven girls and four boys were apprenticed during the quarter from Hicke's Charity Fund. Several gentlemen, who had made the requisite donation of £16 16s., were elected life governors. The committee noticed with expressions of regret the decease of Mr. John Deacon, the trustee of the Marine Society's funded property, and Mr. Edmund Poppys was elected in his stead. The receipts of the quarter were: From annual subscriptions, £24; donations, £13 15s.; dividends, £1161 8s. 8d.; widows' fund, £215; Hicke's fund, £248 4s. 6d.; fisheries dues, £98 15s.; apprenticeship, £3 3s.; for the discharge of boys, £6 13s 6d., giving a total of £1891 12s. 1d. The expenditure, including £2 2s. 3d. for clothing and outfits, £593 17s. 6d. to shipping agents, and £145 as apprentice fees from Hicke's fund, amounted to £1622 5s. 3d., leaving a balance of £229 1s. 1d. The report was agreed to. The number of boys sent on board the society's ship from 1786 to 1850 was 27,187. Of these, 11,387 were sent into the Royal navy; 3140 into the East India Company's navy, 10,529 into the merchant service and fisheries; 981 discharged; absconded, 1002; dead, 48; remaining on board on the 30th of May, 1850, 100.

SUBURBAN CEMETERIES.—On Saturday last the award of Mr. Barnes Peacock, Q.C., proposed as umpire on behalf of the directors of two of the metropolitan trading companies at Brompton and Norwood, and accepted by the General Board of Health, was officially announced as to the compensation to be paid on behalf of the public for taking possession of those cemeteries for use or closing. It was as follows:—

As compensation for the Brompton Cemetery, for which £168,762 14s 6d was claimed by the company, and £43,855 offered on behalf of the public ..	£74,291 14
For the Norwood Cemetery, for which £59 319 was claimed by the company, and £28,871 offered by the Board of Health on behalf of the public ..	43,158 13
Total	£117,075 7

being £151,098 5s. 8d. less than was claimed, and coming within the rate of the estimate presented by the General Board of Health to Parliament.

NEW LIFE BUOY.—On Wednesday a trial was made on the Thames, between Blackfriars and Southwark Bridges, of an invention by Mr. Keyse, of Newington, for the preservation of life from shipwreck. The invention consists of globular-shaped pieces of wood, made concave on the under side, which, being strapped round the body of a man, will enable him to support two or three persons in the water—and, by means of a buoyed line, a communication may be made between a vessel and the land, or two vessels, when at least would not live in the sea. The party wearing the apparatus is also provided with a double hand-paddle for working himself along, and may also wear wooden shoes, with concave soles, which enables him, as it were, to tread the water. In connexion with the buoyed line are also floating buoys, to keep the passengers upon the breast of the sea whilst being guided along the line to other vessels. The inventor says he can steer a sufficient number to [illegible] as to support 100 persons in the water, in case of accident, in the same space that a boat to hold 30 persons would occupy. The person wearing the apparatus would escape the tide, were the convulsed waves in the wake of steamers, and proceeded up and down a portion of the river with apparently the greatest ease; but the true merits of the invention can only be tested in rougher water than the Thames.

On Monday evening, a meeting of omnibus proprietors took place, at the Duke of Wellington, Bathurst-street, Argyle-square, to consider the proposals submitted to them at a preliminary meeting, by Mr. Crawford, the originator of the Deptford and London Town line, for changing new horses and working them by combination, at reduced fares. Mr. Crawford having explained the object of the meeting, it was resolved to form a new association for the purpose of making various arrangements to reduce the fares, and proprietors proffered their assistance. With their omnibuses and stock. It was stated that there were in various parts of London from 200 to 300 omnibuses now "laid up in ordinary," each of which, it was observed, could be brought into use at once daily, and three men. By the proposed plan of the association, any proprietor could put an omnibus on the new route until 20 were running, when another route must be chosen and so on. The first route proposed to be adopted was from Bayswater to Tottenham-court-road, 2d.; thence to the Bank, 2d. Second route, from the Great Western to the Great Northern Railway, 3d.; and from the Yorkshire Stingo to King's-cross, 2d. It was also stated that the expense of working one omnibus per day was £2 0s. 9d., supposing each omnibus, with its 10 horses, travelled 60 miles daily (15 journeys to and fro per diem, at two miles per journey). It may here be learned to carry 24 passengers, and obtained one-half, or 12 passengers at 2d. each per journey, the profit would be 1[illegible] 2s. 2d., [illegible] two-thirds full," the profit was estimated at £1 19s. 3d. per diem; [illegible] fourths full," £2 5s. 3d.; and at "full," £2 10s. 3d. Thus giving on a first calculation, a profit on the working of 100 omnibuses, £30,035 per annum; on the second, £66,436 per annum; on the third, £84,635 per annum, and on the fourth, £139,235. Rules for the regulation of the association having been agreed to, the meeting separated. During the week the first line of these cheap omnibuses were opened in Oxford-street and between the Strand and Euston-square, and were most successful.

CONSTRUCTION OF AN EXHIBITION PRIZE MACHINE.—On Saturday last about three o'clock in the afternoon, as a waggon, No. 26, belonging to the Messrs. Chaplin and Horne, drawn by three horses, was proceeding down Wellington-street, Strand, the body of the waggon, and the three horses behind having lost their footing, the waggon was brought to the ground with such violence as to precipitate upon the pavement one of the most valuable pieces of machinery of the many of the articles now on view at the Crystal Palace. The machine, which was a new invention, and for which a prize had been awarded, is for dressing cotton; and, having been purchased by a foreign manufacturer, it was on Saturday last, at the Crystal Palace, consigned to the care of Chaplin and Horne, to be taken to Woolwich Dockyard, where it was to remain until arrangements could be made for shipment. The machine is said to have been purchased for £700, but the concussion was so severe as to reduce it to fragments, rendering it valueless but as old metal. The shafts of the waggon were broken short off, and one of the horses was severely injured. The machine had not been fastened to the waggon, otherwise the damage, in all probability, might have been obviated.

THE FIRST FOG OF WINTER.—On Wednesday morning our first regular winter fog made its appearance over the metropolis. It was an exceedingly dense one, and lasted for three or four hours. Although a good deal of confusion arose in the principal public thoroughfares, no accident of consequence occurred.

NATIONAL FREEHOLD LAND SOCIETY.—This society is extending its operations in the southern counties. It has made another valuable purchase, consisting of an estate at Chichester, within three-quarters of a mile south-east of the city walls, on the Bognor-road. The estate is already laid out in a picturesque manner, and is intersected by a good road running from east to west, called Wickham-road. A meeting of the society was held at Chichester this week, to celebrate this acquisition, at which the chair was occupied by the Rev. W. Malden, a clergyman of the place.

TONBRIDGE-PLACE RAGGED SCHOOL.—At the annual meeting of the supporters of this school, held on Wednesday evening in the school-room, Tonbridge-place New-road—Mr. J. Woodward in the chair—the secretary read a report, which stated that the average attendance at the evening ragged school at Agar Town is 43 girls and 90 boys, giving a total of 90. The number of scholars attending the Tonbridge School on Sunday is 215 boys and 238 girls, and the entries on the books of the branch school 261.

THE NEW-ROAD.—The repairs so long wanted to the roadway of this great thoroughfare are progressing very rapidly. The entire length of the road from Tottenham-court-road to King's-cross is being repaired, and the part already finished presents a favourable contrast to the sunken, uneven, and really dangerous portion not yet touched.

SPONTANEOUS COMBUSTION.—About a quarter to one o'clock on Wednesday morning, a fire broke out in a timber-yard, in the tan-yard of Mr William Warrick, Willow-walk, owing to the overheating of a rick of tan. Fortunately it was discovered soon after the spontaneous combustion burst forth, and the exertions of the firemen prevented the fire from extending. The tan in which the fire originated, containing about fifty loads of tan, was completely consumed.

On Tuesday morning, about five o'clock, while the mail-cart driver of the Deptford and Greenwich ride was waiting for the letter-bags inside the post-office, in Deptford Broadway, some parties, it is supposed, for a "lark," jumped into the vehicle and drove off. The driver, upon reaching the street, was utterly bewildered at finding the vehicle and the horse had both disappeared. So traces of them could be found; and to prevent the delay of her Majesty's mails, the driver was compelled to find a cab as soon as possible, and proceed to the General Post-office with the letters. Information was given to the police and the vehicle and missing horse to the investigation of the police. During the day the vehicle and the horse were found left in front of the Six Bells Tavern, Lucas-street, Rotherhithe, but the thieves had managed to escape undiscovered.

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, Oct. 18:—Males, 773; females, 670: total, 1443. Deaths during the same period:—Males, 499; females, 482: total, 981. This return exhibits 462 deaths a small increase on those of the preceding week, when the amount was 954. Taking for comparison corresponding weeks of the ten years 1841-50, it appears that the average was 906; but this calculation takes no account of the increase of persons now living in London, it becomes 997, which differs not much from last week's mortality. Last week 425 children died under 15 years of age, 367 persons who had reached 15 years, but had not attained to 60, and 184 who were of 60 years and upwards. The table of fatal causes shows that 229 persons, 158 of whom were children, were carried off by one or other of the twenty-one diseases that are classed as "epidemic." Diseases in the aggregate do not at present produce a mortality equal to the average of corresponding weeks; but under particular heads, namely, typhus and diarrhœa, the numbers exceed the usual amount at this season. Typhus was fatal in 67 cases last week (the average being 53), and this disease appears to be on the increase. Scarlatina in this return numbers 43 cases, while the corrected average of corresponding weeks is 38. Though the mortality, as collected over the whole metropolis, is not remarkable, the complaint has fallen severely on particular families. Fifteen deaths, only one of which was that of an adult, were registered as caused by small-pox. Two cases, in which it is stated that vaccination had been previously performed, occurred to a child of seven months and a man aged 30 years. With reference to a case which proved fatal in Camden-town, and in which vaccination had been performed without effect, two other children in the family had been successfully vaccinated and escaped the contagion. Diarrhœa, which numbers 42 deaths, continues to decline, though it is still rather more fatal than usual for this late period of the year. Phthisis or consumption has been rather fatal during the week, the deaths resulting from it amounting to 138. This is a greater number than in any corresponding week of seven previous years. Fifteen deaths are ascribed to disease of the liver, four of which cases the local complaints specified as "cirrhosis." The four persons who died of cirrhosis were females.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean reading of the barometer in the week was 29.729 in. On Sunday the mean daily reading was 30.144 in. The mean temperature of the week was 52·8 deg. The mean daily temperature was above the average of corresponding days in seven years on every day except Thursday and Friday, and was 60·4 deg. on Sunday, or nearly 10 degrees above the average; after which it gradually fell to 48·9 deg. on Friday. The wind was generally in the south-west.

COUNTRY NEWS.

BRADFORD ELECTION.—On Tuesday Mr. Robert Milligan (Liberal) was elected M.P. for this borough without opposition, in the room of the late Mr. Busfield, deceased. Mr. Milligan is an eminent merchant of the locality.

PEOPLE'S COLLEGE, SHEFFIELD.—The inauguration of this excellent institution took place on Tuesday, in the presence of a numerous body of the local gentry and clergy. Professor Airy, the Astronomer Royal, delivered a lecture on the occasion.

On Tuesday a grand Masonic dinner was given at Portsmouth to Lieutenant-General Sir C. J. Napier, G.C.B., by the lodges of that town; namely, the Phœnix Lodge, 349; Royal Sussex Lodge, 428; and Portsmouth Lodge, 717. Upwards of 110 brethren were present; Brother Lord George Lennox being in the chair.

EXTENSIVE FIRE.—On Wednesday morning a fire took place at the large farmhouse and buildings of Mr. Edward Plumpton's farm, Ardingly. It was caused through the care essness of one of the farm labourers, who, neglecting a pot of tar that was heating over a temporary fire, it boiled over, and the flame instantly communicated to the straw lying about the yard, and thence to the farm-buildings. These ignited with astonishing rapidity and in less than an hour the fire swept over the entire property. The scene was truly awful; with the exception of the farmhouse, the whole homestead, consisting of three large barns, two granaries, cow-houses, stables, with eight stacks of corn and hay, presented one general blaze. Three engines reached the spot prior to the arrival of the brigade engine from London; but nothing could be done to stay the work of devastation, as no water sufficient to supply the engines could be obtained in the neighbourhood. The whole of the property was insured in the Sun Fire-office: the loss is calculated as nearly £3000.

THE BURGESS LIST OF MANCHESTER.—The burgess list for the borough of Manchester, after the recent revision, has been printed, and contains no fewer than 12,542 names. That of last year numbered 11,592, so that the increase is nearly 1000.

CONTRACT FOR TEA.—Messrs. W. S. Shuttleworth and Co., of 36 Fenchurch-street, have taken another contract to supply 30,000 lb. of tea for the use of the navy—to be delivered at Deptford and Gosport.

On Wednesday last £15 were collected at the Surrey Tabernacle, Borough-road, for the funds of the Early Closing Association, when the principles of the society were ably set forth by many leading speakers.

Last week, Mr. Justice Patterson, at the annual dinner of the Awliscombe, Buckerel, and Feniton Agricultural Association, at Feniton, about 12 miles from Exeter, over which place he presides as chairman of the quarter sessions, announced that it was his intention to retire from the bench in February next, in consequence of the infirm state of his health. He has been 21 years a judge. Fifteen years' service on the Bench entitles a judge to a retiring pension.

Turville, the well-known cricket player, who has been umpire for the Leicester County Cricket Club for several years past, and has also been the principal professional bowler for the Leicester Cricket Ground, died on Wednesday (last week) after a short illness.

Mrs. Fanny Kemble, whilst riding on the Grand Parade, Brighton, on Thursday week, was thrown from her horse by some violence, and had a narrow escape of a very serious injury. She was conveyed to her hotel; but after a few hours Mrs. Kemble quite rallied, and gave the reading which was announced for that evening, at the Dome, to a numerous audience, the hearty reception from a crowded audience, several of whom evinced great anxiety as to her safety.

Prussia has recommended a sum of between 70,000 and 80,000 rix thalers yearly, as a proper indemnity to the Duke of Augustenburg, for the loss of his possessions in Schleswig.

Oyster dredging has now become so extensively profitable in the Menai Straits, that fishermen from Jersey and other distant parts find it to their advantage to go thither, in order to partake upon the profits of a season.

Accounts from the Pacific state, that, both from the Sandwich Islands and California, a tide of emigration has set in to Australia, attracted by the gold discoveries.

READY EXCHANGE OF COIN FOR EMIGRANTS.—The Bank of England have respected a course with regard to the supply of bullion in Ireland, which may save trouble and risk to emigrants. At present these have to buy sovereigns, which they change for American money before proceeding into the interior, receiving gold or other coins, at the rate of 484 dol. [illegible] for £100. But, owing to the influx of specie from California, a surplus of gold in London have an abundant supply of American eagles, which they could part with at the rate of 484 dols. 40c. for £100. If the emigrant, therefore, were to take these instead of sovereigns (which he might do at a fractional profit of 30 cents, or 1s. 6d. per cent.), the would avoid the necessity of an exchange, or the possibility of any deception being practised upon him as to current value or fullness in weight; while, at the same time, the waste labour of melting and recoinage would be saved in the respective countries. It has, consequently, been communicated to the Bank of Ireland, that, if they would make these circumstances known, and would think proper to receive any number of eagles to meet the demand that might arise, there would be no difficulty in the arrangements.

MUSIC.

The Committee of the Sacred Harmonic Society have issued their prospectus for the season 1851-52, which will commence in November, with Haydn's "Seasons," performed for the first time by the society under Costa's direction. Spohr's oratorio, the "Calvary," will also be produced shortly.

The London Sacred Harmonic Society will commence their season on Friday, November 14th, at Exeter Hall, with the performance of Handel's "Belshazzar," conducted by Mr. Surman, with Miss Birch, Miss Dolby, Messrs. Lockey, R. F. Smith, and Lawler, as principal vocalists.

The Cecilian Society will perform, on the first Thursday in November, Romberg's "Song of the Bell."

The first concert of the new Orchestral Society, for the performance of works of the highest class, particularly new, untried, or comparatively unknown compositions, will take place on the 17th of November; the direction is in the hands of Messrs. Blagrove, Howell, Hallah, Lucas, and Nicholson. Messrs Jullien and F. Gye will commence their annual series of promenade concerts early in the next month.

Mr. Dunn is on the Continent, making arrangements for his operatic campaign at Drury Lane Theatre at Christmas. Mr. Balfe will return shortly from Dresden, to superintend the production of his new opera, the libretto by Mr. Rorer. The pantomime will be written by Mr. Morton.

An English adaptation of Verdi's "Ernani" will be produced at the Surrey Theatre in a few days, the principal parts sustained by Miss Romer, Mr. Charles Romer, Mr. Travers, and Mr. Borrani. In consequence of the great success of the "Huguenots," it is proposed to mount Meyerbeer's "Robert le Diable," according to the original score.

The Western Madrigal Society will commence on Saturday, November 1st.

The New York papers and private letters fully confirm all previous accounts as to the complete success of Miss Catherine Hayes. Without the outrageous excitement which attended the advent of Jenny Lind, the nine concerts given by Miss Hayes in New York have attracted immense audiences; and a similar result was confidently anticipated for Boston, which was to be the next city visited by Miss Hayes. Her singing in Le "Messali," at Tripler Hall, created an almost perfect sensation. She visited the Orphan Asylum, at Brooklyn, and sang "The Harp that once in Tara's Halls," to which the children responded in a chorus of "Welcome."

Mdlle. Jenny Lind will begin her series of farewell concerts with Balfe, Mr. Burke (the violinist), and Mr. Otto Goldschmidt (the pianist), at Buffalo, and will then visit Toronto, and as far west as Chicago. After a visit to Cincinnati, Mdlle. Lind returns to New York, and here her first concert will be, on December 15. In a recent number of the *Musical World*, the journals, Mdlle. Lind, in reference to the report that she was about to return to the stage, writes "—'I have not the most remote idea or ever again returning to the stage; and, although I shall always treat with respect the opinions and sayings of writers in newspapers or otherwise, yet I should feel really thankful to you to state that no inducement whatever can lead to make me change my mind in residence to the resolution I have adopted, to quit the stage."

Madame Thillon had been successful at New York in Auber's "Crown Diamonds."

The popular English Glee and Madrigal Union (Mrs. Anderson, Miss M. Williams, Messrs. Lockey, Land, Pyne, and Phillips) have given concerts this week at Birmingham, the Free-trade Hall in Manchester, and the Philharmonic Hall in Liverpool.

On the 16th inst., at St. Andrew's Hall, Norwich, Dr. Bexfield's new oratorio, "Israel Restored," was performed under the direction of the composer. Mr. Harcourt was the organist, and Misses Birch and Williams, Messrs. Benson and Phillips, were the principal vocalists. The *Norfolk News* states that the work was completely successful, and that the composer was much applauded at the conclusion.

The new organ to be built in St. George's Hall, Liverpool, will be the largest in the world. The entire instrument had passed the unanimous resolution, that Mr. Willis, whose great organ was at the western end of the Crystal Palace, is to have the building of the colossal instrument.

FOREIGN MUSICAL NEWS.

Grisi and Mario have arrived at St. Petersburgh. Meyerbeer's "Prophète" will be speedily mounted; Grisi appearing for the first time as *Fidès*. Alary, the composer of the "Tre Nozze," has composed a new grand lyric drama, "Sardanapalus," the chief parts to be sustained by Grisi, Mario, and Herr Formes. The production of Gounod's "Saffo" is also proposed; Grisi enacting the part of the disgraced poetess, with Tamberlik and Formes as their original characters.

At the Grand Opera, in Paris, a new *danseuse*, Mdlle. Bagioni (*Thé*) appeared; and Auber's "Corbeille d'Oranges" had been revived for Alboni. Mdlle. Lagrua having arrived from Dresden, the rehearsals of Scribe and Halévy's "Jaz Errant" were going on actively. Ricbert has been engaged at the Paris Italian Opera as sub-director and accompanyist.

Letters from Rome state that Verdi's last opera, "Rigoletto," produced under the title of "Viscardello," on account of the censorship, had met with no success; it was sustained by Mdmes. Evers, Bucottini, Flori; and Signori Bancardo, Benedetti, and Colotti.

For the opera campaign in Naples, three new compositions, by Pacchi, Battista, and Moscazzs are promised, to be supported by Madames Cortesi, Bendazzi, and Borghi-Masso; Signori Roppa, Marzoleno, Liverani, De Bassini, and Arati. Amalia Ferraris was to be prima donna.

The ballet of Lola Montes, at the theatre in Ghent, was a complete failure: from the moment of her appearance to the falling of the curtain, it was a battle royal between her and the audience; but the manager did not dare risk a renewal of the struggle.

The celebrated barytone, Puschel, is engaged for the United States.

THE THEATRES.

PRINCESS'.

On Friday week the season ended with the Shakspearian comedy with which it commenced—"Twelfth Night;" thus gracefully marking, as it were, the closing of a cycle. Thus play, in its stage setting and acting, symbolises the whole character and results of the management. Attention to the *mise en scène*, efficient cast, and accessories remarkably elegant: these were the characteristics of the performance. Smoothness and evenness had been accomplished on the reformed stage, previous to Mr. Keane's undertaking the management of this theatre; but means were wanting to carry out the ultimate purpose of histrionic representation by the engagement of the most excellent *artistes*. These means Mr. Keane possessed. The first night undone the management credit; and we trust that experience will, in the next, suggest improvement. Let original dramatic genius be, above all things, encouraged, and the certain pleasure of the evening translation from the French and German, in any shape, altogether discouraged. Genius of the dramatic kind superabounds in England, and is entitled to demand an arena; and every season that demand will increase in urgency, gain increased intensity and force. The four principal performers of the Princess' stage, assisted with such a working company as they have brought together, possess not only talent, but genius abundantly sufficient to answer requisitions likely to be made upon them by a new and original English drama. By carrying out such a policy as we have suggested, the Messrs. Keane and Aceley may win for themselves both immortal honour and present profit. The standard at which they should aim ought to be the plenary accomplishment of native and original dramatic genius: a standard, like all other standards, not to be perfectly reached, but to exist in recognition, that the closest possible approximation to it may be constantly, and as a rule of conscience, conscientiously attempted. The success hitherto attained will be thus best secured and rendered permanent. The audience evinced its sense of the merits of the management by calling for Mr. Keane and Mrs. Keane, Mr. Keeley and Mr. Lawrence. Both came forward, and made appropriate addresses: the former with much gentlemanly modesty, the latter with characteristic humour and point. A new season will commence on the 26th of November, when we trust that the hopes we have ventured speculatively to express, may receive practical confirmation.

SURREY.

"Dreaming and Waking" is the title of a new drama, by Mr. Morris Barnett and Mr. Angus B. Reach. It was produced on Monday. The plot is interesting, but simple. A young French lieutenant, *Edouard de Sauvai* (Mr. T. Mead), marches away to Africa, from country girl, [illegible] to whose charms, is guarded and educated by a lady, until his return, as a cousin, to her native village. *Louise* (Miss Jane Coveney) has a child, whom the Colonel saves from being drowned; and *Louise* contrives to re-awaken love by reviving his associations of the past, and other devices which are shadowed forth by the word "Dreaming" in the title. At length the Colonel recognises her, and showing her a portrait of his child, she teaches the recognition by her own, and, [illegible] being thoroughly "awakened" to mutual recognition, is acknowledged as his wife. Mr. Shepherd performs the part of *Sergeant Jean*, and Mr. Widdicomb that of *Jacquinot*, the waiter of an inn, very effectively. The scenes were, indeed, very carefully acted, and the drama was perfectly successful.

PUNCH'S PLAYHOUSE.

Mr. Belton, of the Princess' Theatre, during the closing of that establishment, is engaged here, and on Monday appeared as the blind husband of "The Artist's Wife," in the pretty and effective drama so entitled. His reception was gratifying, and such as befits the rising reputation of the young actor.

WHITTINGTON [illegible] Mr. Conquest [illegible] Miss Cyril [illegible] Mr. Conquest [illegible] Miss Cyril [illegible] Mr. Conquest [illegible] Miss Cyril

from their propriety or subtlety. Altogether, it was wonderfully exciting, and more spirit-stirring than any exhibition of the tragedy we have ever witnessed on the stage. Mr. Charles Kemble was among the audience, and applauded the most striking points.

CREMORNE GARDENS.—On Wednesday week, the performances at this popular resort concluded for the season, which, we are glad to learn, may be numbered among the successes of the Great Exhibition year, 1851. There has been an increase of 200,000 visitors upon the number in the preceding year. The director has performed all he promised, in ballet and illuminated fête, and national gala in accordance with the cosmopolite spirit of the day. The Franconi *troupe* was a first-rate attraction of its class; and balloon ascents, fireworks, &c., have kept up the gay round nightly. It is gratifying to add, that the amusements have been uniformly characterised by good taste, so as to render the proprietor's prosperity the more meritorious.

ROYAL POLYTECHNIC INSTITUTION.—The professors of this establishment are now engaged in delivering a series of lectures on subjects of great interest. Mr. Pepper has chosen for his discourse the application of iron and steel in the manufactures of the United Kingdom; while his coadjutor, Dr. Bachhoffner, illustrates the beautiful art of electro plating, and, during his discourse, exhibits numerous experiments highly interesting and useful, which, with the popular style of the learned doctor, renders the place so justly entitled to the public support. The late improvements in photography by Mr. J. Beard are now exhibited here, and prove them well worth the attention of the visitor; the colouring process is now so superior, that the pictures resemble enamels both in effect and durability.

NATIONAL SPORTS.

Although drawing near its close, the racing season has still a pretty good list of fixtures. Newmarket, of course, monopolises next week, its numerous meetings, and proposed engagements occupying every day, and promising to maintain its "hay and straw" reputation. The ensuing month teems with "autumn" gatherings; amongst others, Epsom, Worcester, Shrewsbury, Liverpool, Hampton, and Warwick. There are no steeple-chases advertised for next week, and only the following coursing *réunions*:—Tuesday, at Spiddal (Ireland), North Berwick, and Market Weighton; and Thursday, the North Union, in Massarene Park.

TATTERSALL'S.

MONDAY A full attendance, but a dull market; everything being on the decline, except Brighton and Newmarket. The general averages were as follow :—

HEREFORD STEEPLE-CHASE.—2 to 1 against Bedford.

CHELTENHAM.—3 to 1 against Daniel O Rourke.

CAMBRIDGESHIRE

11 to 2 against Breda.	18 to 1 against Prince Minister	25 to 1 against The Nigger
8 to 1 — Newminster	18 to 1 — The Heriot	25 to 1 — Manilo d
14 to 1 — Mountain Deer	20 to 1 — Lucetta	30 to 1 — Roarding-school Miss
16 to 1 — Ouri

NEWTON AUTUMN RACES AND STEEPLE-CHASES.—WEDNESDAY.

FREE HANDICAP HURDLE STAKES of 5 sovs each, and 20 added. Royal Blue, 1. Alma, 2

SCRAMBLE HANDICAP of 3 sovs each, and 25 added. Shilmalier West, 1. Warwick, 2.

SOUTH LANCASHIRE STEEPLE-CHASE STAKES of 15 sovs each.—Chieftain 1. Isaac, 2.

On Monday night, as the workmen were engaged at the new building creating for the Great Northern Railway terminus at King's-cross, a large piece fell in, two of the men engaged underneath on the lower portion; one of them fortunately escaped with injury, but the other, from the immense weight of stone falling on his abdomen and thighs, was removed in a helpless state to the Free Hospital, where every attention was paid to his injuries, but he died on Tuesday.

The British Museum was re-opened to the public on Wednesday last, at ten o'clock, and will continue open every Monday, Wednesday, and Friday, from ten till o'clock. During the recess another consignment of marbles has been received from the ruins of Nineveh. The gallery of sculptural antiquities being completed, the arrangement and classification of the objects is rapidly progressing.

Advices to the 2d inst. from Havannah state that forty-two American cents were sent to Spain in the brig *Ripa*. There were thirteen remaining in the hospital, being all that remained on the island of Cuba of the Lopez expedition. Captain Robert Ellis had been paralysed, and sent back to the United States.

General Garibaldi, the distinguished Italian patriot and defender of Rome, accompanied by his wife and Menotchini, an eminent merchant of Italy, arrived in Panama by the last steamer from New York, en route for Lima. Garibaldi was to leave Panama in the British mail steamer on the 23d inst., for the south.

The bricklayers, carpenters, and labourers employed in the erection of the terminus of the Great Northern Railway, at King's-cross, struck work last week, because the contractors refused to allow an hour and a half time on Saturday evening. The men issued placards to their fellow workmen to the effect that they have been compelled to cease work until the disagreement is settled. The strike has since been terminated by the men's demands being conceded. The general strike of bricklayers and labourers has not hampered the large body of bricklayers and labourers in the employ of Mr. Myers, the contractor for the erection of the new City of London Hospital at Victoria-park.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

The upward tendency of the English Funds received a slight check at the beginning of the week, from the unfavourable tenor of the Cape news. Consols opened on Monday at 97, being a decline of 1 per cent. upon the price of the preceding Saturday's last, notwithstanding the unchanged state of political affairs in Paris, the public were purchasers to so great an extent on Tuesday, that a rise to 97⅛ became the closing quotation. A trifling reaction, to the extent of ⅛ per cent, occurred on Wednesday; but the quarter, on Thursday, brought a firm, at 97⅛ to ⅜. Stock has been rather scarce within the last few days, leading the Government broker to operate principally in Reduced, Exchequer bills and India Bonds have declined about one-eighth advance, evidencing the increasing difficulty of employing money. The rise that has already taken place (political events apart), and seems likely to continue, is, as remarked last week, not speculative, but the result of home prospects as fair as ever marked a closing year. The purchases of stock to be made by the Government broker, and the stream of bullion that still sets inward, must afford, also, additional support to prices. At the close of the week this feeling gave Three per Cents, 86⅞; Russian Bonds, Four-and-a-half per Cents, 101½; Reduced, 96⅜; Consols, 97⅛; Three per Cent Annuities, 1726, 96⅞; New Three-and-a-Quarter per Cent. Annuities, 97⅛; Long Annuities, to expire Jan. 1860, 7 ditto, 30 years, Oct. 10, 1859, 6 11-16ths; India Bonds, £1000, 2 p.; ditto, £500, 1 p.; under £1000, 59 p.; South Sea Stock, Old Annuities, 96⅛; ditto, New Annuities, 96⅛; Consols for Account, 97⅛; Exchequer Bills, £1000, 55 p.; ditto, £500, 55 p., ditto, Small, 57 p.

Foreign securities have not commanded much attention during the past week. The committee of Spanish bondholders, at the meeting on Monday, declared that the conversion be continued to 1 March, a charge of 10s per £1000 being estimated sufficient to cover all expenses, past as well as coming. It is urged that this will afford an opportunity of not only canvassing the old bonds, but of keeping a register of the actual amount of new bonds in circulation. The committee also propose that a certificate should be issued, representing the 80 per cent. of "confiscated" stock. Since this meeting, however, information has been received that the Spanish Minister will not sanction any issue of the kind. No great effect has been produced upon the prices of the Stock, 29½ to ⅝ having been the range of the fluctuations during the week. Peruvian deferred has ranged from 41 to 41⅛; and Mexican, from 20⅝ to 21. Russian and Danish Bonds have been dealt in, and command full prices. Sardinian Scrip continues out of favour, and declines to 18⅛. The last quotation showed some buoyancy in the market, being for Chilian Bonds, Six per Cent., 104; Danish Bonds, 1825, Three per Cent., 1062; Equador Bonds, 3; Grenada Bonds, One-and-a-half per Cent., 1840, Coupons, 13; ditto, Deferred, 3⅛; Mexican, Five per Cent., ex Jan. Coupons, 21; Ditto, Account, 20⅞; Peruvian Bonds, Deferred, 41⅛; Portuguese Five per Cents, 86½; Russian Bonds, Four-and-a-half per Cent., 101½; Spanish Bonds, Five per Cents, 82½; Ditto, Scrip, 2⅜ dis.; Spanish, Five per Cent., 1840, 20½; Ditto, Account, 20⅜; Venezuela Bonds, Two-and-a-Quarter per Cent., 31½; Ditto, Deferred, 10⅜; Belgian, Four-and-a-half per Cent., 92; Dutch, Two-and-half per Cent., 58⅜; Ditto, Four per Cent. Certificates, 90.

The fluctuations have not been extensive in railways during the week, Midland Stock excepted. A sudden demand on Tuesday raised the quotation to 50, but it afterwards declined to 48⅜, affording, however, a better tone to the market generally. Business, upon the whole, continued, and prices, although not materially affected, show no immediate prospect of any permanent improvement. Last quotations are, for—

ORDINARY SHARES AND STOCKS.—Aberdeen, 5; Arbroath, Northern, Boston, and Eastern Junction, 4⅞; Bristol and Exeter, 72; Caledonian, 11; Chester and Holyhead, 16⅛; Eastern Counties, 1; Edinburgh, Perth, and Dundee, 4; Great Northern, 102; Great Western, 84; Great Southern and Yorkshire, 54; Ditto, West Riding Lease, 5; London and Blackwall, 6⅞; London, Brighton, and South Coast, 93¼; London and North-Western, 113½; London and North-Western, New Quarters, 24; London and South-Western, 81⅛; Manchester, Buxton, and Matlock, 2½; Manchester, Sheffield, and Lincolnshire, 26; Midland, 48⅛; Newport, Abergavenny, and Hereford, 3½; Newry and Enniskillen, 2; North British, 5½; North Staffordshire, 8⅛; Scottish Central, 12½; Shrewsbury and Birmingham, Class A, 6⅛; Ditto, Class B, 2; Shropshire Union, 22½; York, Newcastle, and Berwick Extension, 12½; Ditto, G N E Purchase, 5⅜; York and North Midland, 19½.

LINE LEASED AT A FIXED RENTAL.—Buckinghamshire, 17⅜.

PREFERENCE SHARES.—Chester and Holyhead, 16½; Eastern Counties New 5 per Cent., 11; Great Northern, 13½; Ditto, Five per Cent. Redeemable Scrip, 3⅜; Midland Consolidated Pref., 4⅛; Oxford, Worcester, and Wolverhampton, 8⅜

FOREIGN.—Boulogne and Amiens, 10; Northern of France, 13⅜; Orleans and Rouen, 4; Paris and Rouen, 21⅜; Rouen and Havre, 8⅜ x d; Tours and Nantes, 6⅜.

THE MARKETS.

CORN EXCHANGE.—Notwithstanding that the arrivals of English wheat up to our market, this week, have been but moderate, the trade is dull, and the very inactive demand for all kinds, at barely statutory prices. The comparative heaviness may be traced to the large number of sales now of void for delivery from some of the midland and eastern counties, from whence the imports of wheat are by no means extensive. Really fine parcels have moved off slowly, at late rates. Low and middling qualities have commanded very little attention. Floating cargoes off Falmouth have sold to a fair extent for the Continent. Polish Odessa has realised 36s 6d, including all charges. Barley has come forward somewhat more freely Most kinds have changed hands slowly, at late rates. No decline can be noticed in the value of malt. The oat trade has continued inactive Beans, peas, Indian corn, and flour dull, but not cheaper.

English.—Wheat, Essex and Kent, red, 33s to 41s; ditto, white, 37s to 43s; Norfolk and Suffolk, red, 33s to 38s; ditto, white, 36s to 43s; rye, 22s to 26s; grinding barley, 20s to 24s; distilling ditto, 26s to 30s; malting ditto, 30s to 34s; Norfolk and Lincoln malt, 48s to 52s; brown ditto, 44s to 48s; Kingston and Ware, 50s to 56s; Chevalier, 52s to 60s; Yorkshire and Lincolnshire feed oats, 17s to 19s; ditto, potato, 19s to 21s; Scotch and Cork ditto, 16s to 18s; ditto, white, 17s to 21s; tick beans, new, 25s to 27s; ditto old, 28s to 30s; grey peas, 26s to 27s; maple, 28s to 29s; white, 28s to 30s; boilers, 28s to 30s per quarter. Town-made flour, 32s to 37s; Suffolk, &c., 30s to 35s per sack. Essex and Yorkshire, 28s to 32s per 280 lbs.

Foreign: Dantzig red wheat, —s to —s; white, —s to —s; barley, —s to —s; oats, —s to —s; rye, —s to —s; beans, —s to —s; peas, —s to —s, per quarter. Flour, American, —s to 29s per barrel. Canada, 0s to 0s per barrel. French, 27s to 33s per sack

The Seed Market.—The supply of new seed continues large. Generally speaking the demand is exceed ingly inactive, at barely last week's quotations In cakes we have very few sales to report.

Linseed, English, sowing, 60s to 68s; Baltic, crushing, 42s to 44s; Mediterranean and Odessa, 44s to 46s. Rapeseed, 32s to 33s per quarter. Coriander, 9s to 11s per cwt. Brown mustard-seed, 7s to 8s; white ditto, 6s to 7s; and tares, 3s 6d to 4s per bushel. English rape-seed, new, £22 to £24 per last of ten quarters. Linseed cakes, English, £7 0s to £7 10s; Baltic, £6 10s to £6 15s; and £6 5s per 1000 lbs. Rapeseed cakes, £4 0s to £4 10s per ton. Canary, 37s to 40s per quarter. English clover-seed, red, —s to —s; extra, —s to —s; white, —s to —s; extra, up to —s. Foreign, red, —s to —s; extra, —s; white, —s to —s; extra, —s per cwt

Bread.—The prices of wheaten bread in the metropolis are from 6d to 6½d; of household ditto, 4d to 5½d per 4 lb loaf

Imperial Weekly Average.—Wheat, 36s 0d; barley, 24s 9d; oats, 17s 0d; rye, 23s 6d; beans, 37s 6d; peas, 37s 8d.

The Irish Corn Trade.—Wheat, 36s 7d; barley, 25s 3d; oats, 17s 11d; rye, 24s 10d; beans, 38s 3d, peas, 37s 5d.

Imports.—Wheat, —; barley, —; oats, —; rye, —; beans, —; peas, —.

Tea.—The first arrival of the new crop has been reported. The quality is represented as very fine. In the absence of public sales a fair average business is doing in common black teas, at 9½d to 9½d for sound Congou. Fine qualities of pale black and green command very little attention.

Sugar.—A full average business has been transacted this week in most kinds of raw sugar, the supplies of which on offer are tolerably extensive, and late rates are well supported. Floating cargoes of brown Pernambuco have realised 16s 6d; and Havannah, 24s to 35s per cwt. Refined goods steady, at 42s for brown lumps

Coffee.—Plantation kinds have given way 1s per cwt. Good old native Ceylon has changed hands at 45s to 46s per cwt. In foreign coffee very little is doing

Rice.—The demand is less active, but no material change has taken place in the quotations Good Bengal, 9s to 9s 3d; and ord to fine, 9s per cwt.

Provisions.—Fine parcels of Irish butter move off steadily, on rather higher terms Carlow, Clonmel, and Kilkenny, 78s to 80s; Waterford, 74s to 76s; Cork, 72s; Limerick, 72s to 74s; Tralee, 68s; Sligo, 70s to 74s per cwt. Foreign butter is dearer; and the same advance must be noticed in the value of English. Fine weekly Friesel, 92s to 96s, middling ditto, 76s to 84s; Devon, 86s to 88s per cwt; fresh, 9s to 12s per doz lbs. Very little is doing in bacon, at 52s to 58s for sizeable Waterford, and 50s to 54s for Hamburg. Fine Irish lard, in bladders, is selling at 56s to 58s; and hogs, 50s to 52s per cwt

Tallow.—Owing to the heavy stocks, and the prospect of large arrivals—upwards of 60,000 casks being now on passage from St Petersburg—the demand is heavy, and drooping prices Now P Y C, on the spot, is as high as 37s 9d to 38s; and old, 37s to 37s 3d. Town tallow, 37s on the spot; and rough fat, 2s 3d per 8lb.

Oils.—For home use, as well as for export, the general demand is heavy, and prices have a downward tendency. Linseed may be had at £1 0s per cwt

Spirits.—Leeward Island rum is in moderate request, at 1s 5d to 1s 6d; and East India, is 4d per gallon more. Foreign brandies are dull. Jamaica steady. A few sales have taken place in Havannah, at 1s 2d to 1s 2½d, proof Brandy moves off slowly. Irish whiskey, 1s 4d to 1s 6d; and Scotch, 1s 5d to 1s 6d net cash, and Geneva, 1s 6d to 2s per gallon

Sugar.—Barbadoes, 19s to 21s; Mauritius, 19s to 20s 6d; West-india, 19s 3d; Adelaide Town, 18s 6d; Seymour Town, 18s 6d; Tasa, 18s 3d; Hardey, 18s per ton

Hay and Straw.—Meadow hay, £2 12s to £3 3s; fine clover ditto, £3 10s to £4 4s 0d; and straw, £1 1s to £1 9s per load. Trade dull

Hops.—Prices 5s to 6s per cwt lower. Duty, 2s per cwt

Potatoes.—Potato kinds are commanded a steady sale, at an advance in the quotations of 2s per 2 lb. Other kinds of stock have moved off freely, at full prices

Beef, from 2s 4d to 3s 8d; mutton, 2s 8d to 4s; veal, 3s 6d to 4s 8d; pork, 2s 10d to 3s 10d per 8 lb, by the carcase.

ROBT HERBERT

THE LONDON GAZETTE.

FRIDAY, OCT. 17.

WAR-OFFICE, OCT. 17.

1st Life Guards: J Alexander, Earl of Hopetoun, to be Cornet and Sub-Lieut, vice Waldo.

1st Dragoon Guards: W O Sandilands to be Cornet, vice Anderson.

2d Dragoon Guards: Lieut H St John Dick to be Cornet, vice Hutchinson. 6th: T Fawcett to be Cornet, vice Johnston

10th Light Dragoons: W M A Hathway to be Cornet, vice Marshall. 11th: H A Trevelyan, to be Lieutenant, vice Williams, who retires. 12th: C G Sewell to be Cornet, vice Pigott. 14th: R T Irvine to be Cornet, vice Carew

1st Foot: J J Murphy to be Ensign, vice Phillips. 10th: Ensign M V Maher to be Lieut, vice R Taylor; Ensign H Thompson to be Ensign, vice Maher. 13th: Ensign J Hall to be Lieut, vice Osborn. 19th: Lieut C R Plant to be Captain, vice Talbot; Ensign A P C Somerset to be Lieutenant, vice Plant. 24th: Ensign R W Price to be Lieutenant, vice W R Thompson. 29th: W Moore to be Ensign, vice Price. 37th: Ensign R E Williams to be Lieutenant, vice Watkins. 39th: Ensign J Sandilands to be Second Lieutenant, vice the Hon W G Boyle; F F Vane to be Second Lieut, vice Drewe. 41st: R Wilson to be Ensign, vice Smyth. 54th: W W Jordan to be Ensign, vice Gardiner. 55th: Lieut A W Cox to be Capt, vice Harris, Ensign W Wright to be Lieut, vice Ord. 58th: Ensign J T Crester to be Lieutenant, vice Watson. 63d: Major Ridgeway to be Lieutenant-Colonel, vice Forbes; Capt N M Phillips to be Major, vice Ridgeway; Lieut F H Synge to be Captain, vice Hartcourt; Lieut F G Wilkinson to be Captain, vice Phillips; Lieut W Milnes to be Adjutant, vice Wilkinson. 69th: W Earle to be Ensign, vice Young. 81st: Ensign F C Kennedy to be Lieut, vice Bond; Second-Lieut H T Trafford to be Ensign, vice Kennedy. 83d: C F H Layard to be Ensign, vice Peel. 91st: H G A Vivian to be Ensign, vice Kempe. 91st: Bennett to be Ensign, vice Forbes. 93d: W Anson to be Ensign, vice Ray. 95th: W Forsyth to be Ensign, vice Forbes. 97th: G R Beresford to be Ensign, vice Thompson. 81st: L E Thomas to be Ensign, vice Heugo. 99th: J H Kirk to be Ensign, vice Ford. 58th: Ensign F G N Clarke to be Lieutenant, vice Hartcourt. 69th: J Abernethi to be Ensign, vice Crowdy.

Rifle Brigade.—J B Yorge to be Second Lieutenant, vice Lord Bingham

Ceylon Rifle Regiment: G M Parsons to be Second Lieutenant.

Gold Coast Corps. G B Dalas to be Ensign

HOSPITAL STAFF.—Acting Assistant-Surgeon J S Herron to be Assist-Surgeon to the Forces, vice Wedlock.

COMMISSIONS SIGNED BY LORDS-JUSTICES.

[illegible] Chaplain to be Deputy Lieutenant

Royal East Middlesex Regiment of Militia: James Archer to be Capt, vice Carrick.

BANKRUPTS.

G E NILBOUR, 8 cogh, Buckinghamshire, and Pancras-road, Middlesex, J MARRIOTT, Gracechurch-street, oilman. G LAWS, Waltham Abbey, Essex, flour-dealer. J WHITAKER and J CROWTHER, late of Bushingthorpe, Leeds, Yorkshire, stuff-dyers W ADCOCK, Manchester, hotel-keeper.

TUESDAY, OCT. 21.

OFFICE OF ORDNANCE, OCT. 18.

Royal Regiment of Artillery: Second Lieut F G Goldie to be First Lieutenant, vice Carden.

Corps of Royal Engineers. Second Lieut J C Oswall to be Second Lieutenant

BANKRUPTS.

J W GORDON, Cullum-street, Fenchurch-street, City, and Limehouse, wine-merchant.

BANKRUPTS.

[illegible] NILBOUR (and not Nilboor, as in the last *Gazette*), Slough, Buckinghamshire, musicseller. J MARRIOTT, Gracechurch-street, City, oilman. E S HOWARD and T STONE, Norwich, bankers. C COOPER, High-street, Wandsworth, grocer. E W JERRARD, jun, Oxford-street, carpenter. G HAYNES, Leek, Staffordshire, dealer and chapman. T HILL, Newport, Monmouthshire, provision merchant.

SCOTCH SEQUESTRATIONS.

JOHN STOCKS, Colinfield Mains, Almancrack, Ayrshire, farmer (deceased). D PYPE, Dundee, draper G WILKIE, jun, Cowdenlaw, horse-dealer. W ALLAN, jun, Edinburgh, provision merchant

BIRTHS.

On Wednesday, the 15th inst, at Cranfield Rectory, Beds, the wife of the Rev George Gardiner Barnes, of a daughter.—On the 15th September, Adelaide, Countess von Schlippenbach, of a daughter.—On the 15th inst, the wife of the Rev Samuel Stanley Bell, of Old Somerset, Cumberland place, Southampton, of a daughter.—On the 16th inst, the wife of the Rev D W Marks, of a son.—On the 22d inst, at Oakley Lodge, Chelsea, the wife of Charles Henry Edmonds, of a daughter.

MARRIAGES.

On the 8th inst, at St John's, Westminster, by the Rev W Jephson M A Mr Charles J [illegible] [illegible] and eldest surviving son of Admiral Sir Thomas Bladen Capel, K C B, of Bromley, Kent, to Henrietta, youngest daughter of Mr Joseph Brickwell, Bromley, Middlesex.—On the 16th instant, Sir Edward Blackett, Bart, of Matfen, Northumberland, to Frances Vere, widow of the late William Henry Ord, Esq, M P for Newport, Isle of Wight.—On the 16th inst, at Ashtead, Surrey, Henry James Baily, Esq, of Old Broomfield, Kent, to Charlotte Augusta Sarah, only daughter of Charles Robert Sparrow, Esq, of Drayton-house.

DEATHS.

On the 8th inst, at Calcutta, aged 21 years, the beloved wife of W H Cowen, Esq, solicitor, and youngest daughter of the late Rev James Cobb, St John s Cathedral, Calcutta.—On Lately, at Bath, Frances, daughter of the late Rev G Hodson, rector of Liverpool.—On the 15th ultimo, in the 70th year of her age, [illegible] Peter Leopold Otto Ansell, vicar of Broad [illegible].—On the 16th inst, at Ashfield Tyler, Esq, upwards of 30 years a Deputy-Lieutenant for the county of Gloucester.—On the 13th instant, Jannette Sarah, relict of the late Major-General Young, aged 77 years.—On the 15th instant, Jane, widow of the late Lieut-Colonel James Stoke Clarke, aged 73.—On the 16th inst, at Penzance, Cornwall, in his 70th year, John Rashleigh, Esq, formerly an eminent solicitor of the City of Waterford.

THE GREAT EXHIBITION.

NOT one of the least remark able of the facts connected with the Great Exhibition, is the rapidity with which the articles have been, so far at least, cleared out of the Building ; for, though the work has been hitherto more than that of a single week, it would be no exaggeration to say, that whole acres of the space recently filled to repletion on the British side, have been swept as completely of the articles exhibited, and the fittings, as if they had never existed. On the foreign side this change is infinitely less rapid. The arrangement with the Customs, and the question of clearance dues for those articles sold, together with the comparatively small staff at the command of the various Commissioners, prevent so rapid a movement as the British exhibitors have been enabled to make.

The reduction of the Executive staff at the end of last week was very great, and we understand, each person whose services were dispensed with had a month's wages as a gratuity. In a short time comparatively few of all the crowds of officials, confidential and subordinate, will remain, except those required to arrange the records, finish the jury work, and distribute the medals to those to whom they are awarded. This brings us to the announcement of these awards, which, whatever may be its interest to the respective expectants of council medals, or prize medals, or of those who might consider themselves wronged by "honourable mention," has certainly not interested the general public to the extent that the recipients or non-recipients might themselves suppose. No one expected that every one would be pleased; and, in spite of every effort on the part of the Royal Commission and the officers of the jury department to inform the exhibitors and the public that the awards were not intended for different *degrees* of merit, but different *kinds* of merit, they, and even some who took the trouble to understand the question ever supposed would be given. Then there are another class of objectors, who declare, that, because the jury did not proceed to criticise their productions, *ergo* the said jury never saw their goods. We have knowledge of some very ridiculous cases of this kind. In saying this, however, it is by no means intended to declare that no mistakes have been made, no errors committed, which in a less gigantic undertaking might have possibly been avoided. All we say is this, that the exhibitors expected more than men could perform, and that which never was intended to be given, and they are, as a matter of course, disappointed. As to those jurors who get nervous about the matter, let them, having done their duty, take matters coolly. We said some time ago, that the smallest man would expect the greatest medal, and so it is. The juries did their best to achieve an impossibility, they did not succeed, and what then? Let those who blame them try to do it better next time, if ever that comes; but our impression is that another exhibition will be minus any prize question, and the wisdom now gained will be worth all the trouble and anxiety of working for it.

The Royal Commissioners were summoned to meet at Windsor Castle on Thursday, for the transaction of important business connected with the winding-up of the affairs of the Exhibition; and we understand, that, at the recommendation of the Finance Committee, handsome recognition of the various officers, to whose untiring energy and zeal in the working departments the success of the undertaking is so greatly to be attributed, would be made. This is only just, for many are productive men, who have for the time abandoned their ordinary pursuits, and devoted themselves exclusively to the absorbing work of the Exhibition, in some instances gratuitously, and in nearly all at a rate by no means commensurate with their talents or the amount of labour performed, and this because they felt that in a pecuniary point of view the undertaking was problematical. Its triumphant success renders it then only just, that, before any surplus is declared, the debt due to these gentlemen should be discharged in full; and it is satisfactory to know that such is the intention of the Royal Commission

The distribution of the services of those gentlemen who have appeared more distinctly before the public as the responsible managers of the Exhibition, has so far appeared to be of a very satisfactory character. The honour of knighthood, as announced in our last, was conferred on Tuesday on Mr. Paxton, Mr. Cubitt, and Mr. Fox; and, in addition to these, Dr. Lyon Playfair has been appointed Gentleman Usher in the household of the Prince, and created a Companion of the Bath (civil service). Lieutenant-Colonel Reid is promoted from C.B. to K.C.B., and also Mr. Mayne, Commissioner of Police. Captain Hay, Police Commissioner; Sir Stafford H. Northcote, one of the secretaries of the Royal Commission; and Mr. Cole, of the Executive Committee, being honoured with the rank of C.B. Mr. Dilke, not having been in the service of the Government, and not, according to rule, be so distinguished, and it was the unanimous feeling of the Board of Commissioners that he would not be agreeable to him. Her Majesty, however, with characteristic kindness, has presented Mrs. Dilke with a ruby bracelet of great value, as a memorial of her appreciation of Mr. Dilke's services in executing commissions for purchases in the Exhibition; and the young Princes and Princesses have sent that gentleman their portraits, as a recognition of his attention to them on their visits. These things show how thoroughly desirous the Queen and the Prince are to recognise the services performed. The latter, too, has written autograph letters to the gentlemen above referred to, thanking them for the earnest zeal with which they have laboured in carrying out his ideas; and to the Society of Arts in the same manner, suggesting that the Council should proceed to organise a plan by which lectures on the various subjects of the Exhibition may be delivered during the winter session by the most eminent men in the various departments of arts, science, and manufactures. This will form a fitting introduction to the permanent results, which, it is to be hoped, will arise out of the magnificent display which we have just seen brought to so satisfactory an issue.

It is understood that the Royal Commissioners have resolved to apply the interest accumulating on the large surplus funds in their hands to the formation and maintenance of a Museum of Construction for the reception of objects illustrative of the works of industry of all nations. The Executive Committee have for some time past been engaged in collecting such materials as were available within the walls of the Crystal Palace. At the present moment the place set apart for them within the Building contains a series of objects from almost every one of the thirty classes in the Great Exhibition, some of them of considerable value.

Circulars on the subject have been addressed to Foreign and Colonial Commissioners and Exhibitors, requesting their co-operation; and the following document has this week been directed to all the Foreign Commissioners connected with the Exhibition :—

Sir,—Referring to a former circular addressed to you upon the proposal to form a collection of samples, plans, and drawings of articles exhibited, I am instructed by the Executive Committee to acquaint you, that, besides the valuable contribution offered by you, they have received liberal offers from the Commissioners of other foreign countries, as well as from large numbers of the exhibitors of our own country. And they are thus induced to hope that the collections in progress of formation may in due time become developed into systematic illustrations of the produce of all countries, raw as well as manufactured, which may be of the greatest value to the community of the world.

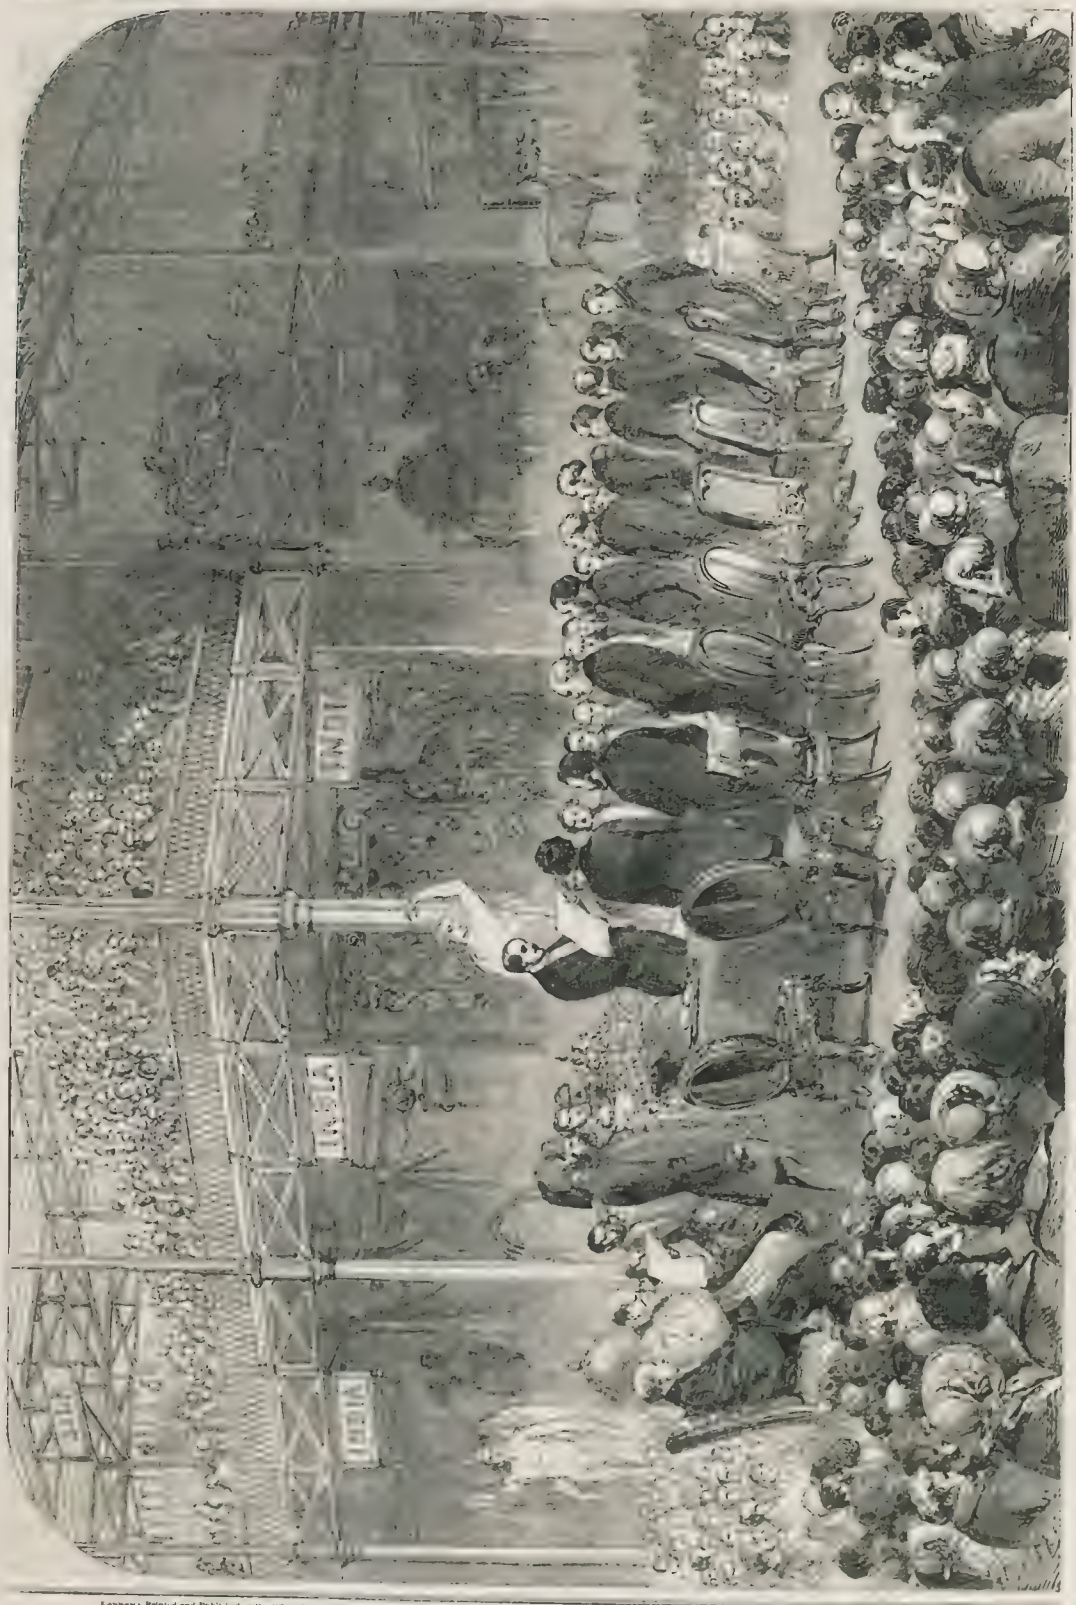
The Foreign Commissioners, in putting at the disposal of her Majesty's Commissioners specimens of the produce of their country exhibited, have naturally expressed a wish to be furnished with samples of our own produce; and the Executive Committee having represented to Prince Albert and Her Majesty's Commissioners, have been instructed to consider the best mode of furnishing you with such specimens as they can obtain, by purchase if necessary, from the [illegible] of our own country.

It will be obvious to you that it would be impracticable to form co[illegible] specimens of the British part of the Exhibition equally ample for every [illegible] and I have, therefore to request that you will be good enough to [illegible] articles you consider would be of most value to your countrymen, in commercial and manufacturing point of view, and those of which you would therefore desire that specimens should be furnished to you; and, in this view, I beg to suggest your filling up the form which I have the honour to enclose, using as much as possible the descriptions of articles in the Official Descriptive and Illustrated Catalogue. I have the honour to be, &c.,

Your obedient servant.

H. U. TYLER (for M. Digby Wyatt).

We have engraved upon the next page the interesting ceremony of the final closing of the Great Exhibition, fully detailed in our Journal of last week. In the centre of the picture our Artist has represented the dais, and his Royal Highness Prince Albert delivering his address to the Royal Commissioners.



CLOSE OF THE GREAT EXHIBITION OCTOBER 15 1851

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by Frederick Ingram, 198, aforesaid.

THE ILLUSTRATED LONDON NEWS.

SUPPLEMENT.

VOL. XIX.] SATURDAY, OCTOBER 25, 1851. [GRATIS.

THE GREAT EXHIBITION.—OFFICIAL AWARD OF THE PRIZES.

THAT a limited number of prizes should be allotted amongst 18,000 candidates, by any body of men, however immaculate, however profound in judgment, in a manner to give satisfaction to everybody, was hardly to be expected. Such a result could not have entered into the wildest dreams of the most Utopian votary of universal harmony. We were well prepared, therefore, to find that the awards of the juries in the Great Exhibition contest should give rise to much animated contention; but we were also supported by the hope that their decisions would have been such as, after free discussion, to meet with a general and conscientious support from the majority of the public. Such was our view of the difficulties inseparable from the case, such our hope of the conclusion to be arrived at. We regret to say, and it would be useless and vain to disguise it, we have in all this been grievously disappointed. If universal contentment was scarcely to be aimed at, much less expected, such general, such wholesale discontent, at the closing procedure of those intrusted with responsible authority in the affairs of the Great Exhibition of Industry of all Nations of 1851, was hardly to be apprehended, as that which has already begun to visit the contents of the ominous-looking packet delivered to the Prince President on that cold damp morning of the 15th of October, when, in almost solemn silence, the public business of the Royal Commission was brought to a close.

Wishing to deal with this subject with the gravity and in the coolness of temper which its importance to the whole industrial community of the world demanded, we abstained from making any comment in our last Publication; considering that what it took thirty-four juries, of five and upwards each, nearly six months to agree upon and propound, might well require as many days for the journalist to examine and understand. It was hardly possible, we thought, for any man to arrive at a correct conclusion upon the value and justness of so voluminous a report as that presented, a report comprising five thousand names, without some days' deliberation;—the malversation must indeed be flagrant and palpable, which could be detected upon a first blush of the document; and, therefore, although many murmurs of discontent on the one part, many suggestions of successful diplomacy on the other, in respect to these awards, had, during many weeks past, from time to time reached us, we preferred holding ourselves unprejudiced in the matter, in order to form our ultimate opinion upon an inspection of the actual decisions, coupled with our own knowledge of the facts. In this spirit we now proceed to consider the conduct of the Commissioners of the Great Exhibition and their delegates, in the all-important matter of the Adjudication of Prizes.

And, in the first place, a word about the Prizes themselves, which, although the closing honours of the whole proceeding, were, as we all must remember, held out as a primary object and inducement at the commencement of the undertaking.

We are not now going to discuss in the abstract, whether, in an international competition of industry, money rewards of considerable value, or mere honorary awards whose value must depend entirely upon the circumstances under which they are allotted, are the most desirable, and the most likely to bring about the object held in view. Our opinion, however, is in favour of a certain amount of money rewards in good round sums, in conjunction with honorary prizes: the former to be considered as premiums for a contribution of actual value to the whole community (accomplished, perhaps, at considerable cost to the producer); the latter as testimonials of individual merit, conducing eventually to the profit of the individual producer.

And, whether or not we are right in this view of the case, it was that adopted as the very basis of the Exposition of 1851; it was that confirmed in the most authoritative manner by the patent by which the Royal Commission was appointed. And it was so adopted upon grounds which are plainly set forth in the minutes of the meeting at Osborne, on the 1st July, 1849, thus recorded:—

"The Prizes proposed, to be submitted for the consideration of the Commission of Medals, and *money prizes so large as to overcome the scruples and prejudices even of the largest and richest manufacturers, and ensure the greatest amount of exertion. The first prize to be £1000; and one, at least, of £1000 to be given in each of the four sections. Medals conferred by the Queen would very much enhance the value of the prizes.*"

Here are money Prizes announced, and announced as inducements to individuals to support the project money prizes to the amount of £3000 at the least, "besides" medals conferred by the Queen." But that this was not the limit of pecuniary rewards at that time contemplated by the promoters, appears by the very words of the patent appointing the Royal Commission (dated Jan. 3, 1850), the premises of which state:—

"Whereas the Society for the Promotion of Arts, Manufactures, and Commerce, incorporated by our Royal Charter, of which our most dearly-beloved Consort the Prince Albert is President, have of late years instituted Annual Exhibitions of the Works of British Art and Industry, and have proposed to establish an enlarged Exhibition of the Works of Industry of all Nations, to be holden in London in the year 1851, *at which Prizes and Medals, to the value of* AT LEAST *Twenty Thousand Pounds Sterling*, shall be awarded to the exhibitors of the most meritorious works then brought forward; and HAVE INVESTED in the names of our right trusty and entirely beloved cousin SPENCER JOSHUA ALWYNE Marquis of Northampton; our right trusty and right well-beloved cousin and Councillor GEORGE WILLIAM FREDERICK Earl of Clarendon, Knight of our Most Noble Order of the Garter; our trusty and well-beloved Sir JOHN PETER BOILEAU, Baronet, and JAMES COUTHWAITE PEACHE, Esquire, *the sum of Twenty Thousand Pounds, to be awarded in Prizes and Medals as aforesaid*; and have appointed," &c."

This recital states that £20,000 had been actually invested by the

Society of Arts for the purpose of being distributed in Prizes, being considered as the minimum amount which it would be proper to devote in that manner as an inducement to manufacturers to come forward in competition with their best and most expensive works.

Such was the original intention of the Society of Arts, such was the scheme which was confirmed by Royal patent; and we hold that it was no unimportant feature in the affair, inasmuch as the estimates of the probable cost or risk of the whole undertaking, upon the strength of which the public was appealed to for subscriptions, included this £20,000 for Prizes as a specific item, the gross estimate being about £80,000. And to that appeal the public, though not without misgiving as replied by sending in subscriptions to the amount of £76,600, of which £64,500 had been paid up before the opening of the Exhibition, and at a time when its profitable issue was still a matter of question.

Such was the original scheme; how different has been that actually carried out, every one knows, as we said before. With respect to the abstract policy of the change decided upon in the nature and adjudication of the Prizes, we have not now to speak. It might be quite competent to a body of Commissioners, acting in a matter purely their own, and disposing of their own, to do it in any way they thought most conducive to the object they considered it desirable to attain; it might have been quite competent to them, in such case, to have substituted an unlimited number of bronze medals for a minimum amount of money prizes, in addition to medals. But how stands the question with regard to those who contributed their money to make up the required amount for the Exhibition and its announced money prizes? how stands the question with the manufacturers and other producers, who at great expense, and at great cost of labour, were induced to prepare objects for exposition upon the inducement of a possible reward in one of those money prizes?

This is a very delicate question—money matters always are—and we will not now discuss it further. We will only, with very great deference, submit that the abandonment of the large money prizes distinctly announced in the premises of the Royal patent is morally, if not legally, a fatal departure from its purpose, at least in as far as the liability of voluntary subscribers is concerned; and we will add, that nothing could justify the alteration of policy limiting the rewards to a distribution of bronze medals, except its signal and entire success.

A review of the minutes in which the altered scheme of Prizes was announced, followed by a careful consideration of the address of Vis count Canning as the head of the jury department, convinces us, that, in this very important matter—a matter involving the only tangible result of the whole proceeding—neither the Commissioners nor the Juries had arrived at any definite notions either as to what should be rewarded, or the scale of rewards to be apportioned. At the very outset of their labours, indeed, the jurors appear to have been restricted from rewarding merit according to its degree or relative importance. It was originally intended that there should be three medals: the first, for the highest degree of merit, to be awarded only by the general body; the second for superior merit, and the third for merit in a less degree—both the latter to be at the disposition of the several juries. But such a disposition of awards soon became inconsistent with an instruction from the Commissioners which at the very outset obstructed the proceedings of the juries. Viscount Canning, in his address, states:—

"The Council of Chairmen, in proceeding to the discharge of their duties, were met at the outset by a serious difficulty. Her Majesty's Commissioners had expressed themselves desirous that *merit should be rewarded wherever it presented itself, but anxious at the same time to avoid the recognition of competition between individual exhibitors.* They had also decided that the prizes should consist of three medals of different sizes; and that these should be awarded, not as first, second, and third in degree for the same class of subjects and merit, but as marking merit of different kinds and character.

"The Council of Chairmen found, to their regret, that it would be impossible to lay down any rules for the awarding of the medals, by which *the appearance at least of denoting different degrees of success amongst exhibitors in the same branch of production could be avoided.* Accordingly, after fully explaining their difficulty to her Majesty's Commissioners, they requested, as a course by which it might be materially diminished, that one of the medals might be withdrawn. Of the remaining two, they suggested that one, the Prize Medal, should be conferred *wherever a certain standard of excellence in products or workmanship had been attained*—utility, beauty, cheapness, adaptation to particular markets, and other elements of merit being taken into consideration according to the nature of the object; and they recommended that this medal should be awarded by the juries, subject to confirmation by the groups."

The English of this is unfortunately too plain. The juries having obtained authority to distribute medals just as they would halfpence in the streets—"wherever a certain (*qu.* uncertain) standard of excellence" presented itself—had absolutely abnegated their responsibility as jurors between candidate and candidate; the value of their "prize" as a test of "superior merit" was gone, and a general scramble ensued, in which the attainment of a medal might be profitable to the small publicity-hunting trader, but could never be "honourable" to the man engaged in any of the higher branches of discovery or enterprise.

The Council of Chairmen seem to have been early aware of this inevitable result of the abandonment of a portion of their functions; and, accordingly, Lord Canning says

"In regard to the other and larger medal, they suggested that the conditions of its award should be *some important novelty of invention or application, either in material or processes of manufacture*, or *originality combined with great* BEAUTY of design; but that it should not be conferred for excellence of production or workmanship alone, however eminent: and they further suggested that this medal should be awarded by the Council of Chairmen, *upon the recommendation of a jury supported by its group.*"

The proceeding was still further mystified by a device adopted by the jurors, at their own instance; who, although they would not undertake to apportion two distinct classes of bronze medals, yet attempted to distinguish between two classes of merit. The "prize medals," unlimited in number, almost unconditional in their application, were not sufficient to mark the very ordinary level of merit required of the recipients; and accordingly—

"The juries have found it just (says Lord Canning), in framing their report, to make honourable mention of certain exhibitors whose contributions were not such as to entitle them to receive a medal."

It only wanted this to crown the adjudication of awards with ridicule; and to render their value something more than questionable. Let those who feel aggrieved at being denied one of the 170 "Council medals," and thrown into the common lot of 3384 "Prize medal" recipients, consider the feelings of the 2042 who are condemned to put up with "honourable mention."

It will be curious one day to endeavour to ascertain the line by which the juries separated the "Prize medal" class from those entitled to "honourable mention." At present, a few instances of both; the result of a very cursory examination, must suffice. The exhibitor of "a well-made shirt" from the United States, of "lamb's tail oil," of a "clay tobacco pipe," of a "wedding cake," of a "box of sweetmeats," of a "walking-stick," of "a pail," of "a broom," receives a medal of equal value with that awarded for the crystal fountain of Messrs. Osler, the pianofortes of Messrs. Broadwood and Messrs. Collard, the railway break of Mr. Lee, the porcelain and statuary of Mr. Copeland, the vertical printing machine of Applegath, the new motive power and other valuable inventions of Ericsson, the nationally-important and commercially-valuable processes in the preparation of flax of Claussen, the compensated balance of Losehy, the wood-carving of Rogers and Wallis, &c.

Amongst the crowd of subjects which have been put off with "honourable mention," we find "amber cigar mouth-pieces," "canes of rare woods," "toilet soaps," "toys," "clay pipes," guns, pistols, photographs, &c. We find also, Fowler's draining plough, Shepherd's electric clock escapement, a violin combining quality and cheapness, Bunting's "collection of furniture" (including one of the best sideboards and one of the handsomest tables in the Exhibition); Heywood, Higginbottom, and Co., for a new and important process for producing paper-hangings by machinery. We find, also, Behnes' "Startled Nymph," and some others of, to our mind, the best pieces of sculpture exhibited.

And as we have come down to the Sculpture department, which enters into Class 30, we shall, by way of making an end to our present article, endeavour to investigate the principles upon which the three classes of awards (including the Council medal) have been made as instanced in this branch of production. Now, what this medal was intended to effect, or how it was to be applied, we have no very clear notion from the official statement of the Chairman of the Council of Juries; but we are very distinctly informed by his Lordship of the nature of certain cases in which it was considered necessary to withhold it; and this must suffice as our guide for the present. Viscount Canning states:—

"It was to be expected, that cases would arise in which the Council medal, as the higher reward, would be asked for exhibitors whose claims were *only somewhat stronger in degree, without differing in kind* from those of others to whom the Prize medal had been awarded. In such cases it became the duty of the Council of Chairmen to refuse their sanction to the award of the Council medal, without, however, necessarily impugning the alleged superiority of the article for which it was demanded. On the other hand, some instances have occurred in which they have felt themselves called upon to confirm the claim to a Council medal where the object for which it is claimed showed, in itself, less merit of execution or manufacture than others of its class. It follows, therefore, that the award of a Council medal does not necessarily stamp its recipient as a better manufacturer or producer than others who have received the Prize medal. It is rather a mark of *such invention, ingenuity, or originality, as may be expected to exercise an influence upon industry more extended and more important than could be produced by mere excellence of manufacture.*"

Now, taking these observations as our rule and guide, we ask what the Council of Chairmen saw in Marochetti's plaster figure of Richard Cœur de Lion—what in Rise's Amazon—what in Pradier's Phryne—what, even, in the late R. Wyatt's beautiful nymph Glycera, to call for a Council medal; when Debay's Eve, Bell's Falkland, Simonis' Godfrey de Bouillon, and Watson's portrait statue of Flaxman are sufficiently rewarded with a Prize medal? when Behnes' Startled Nymph, Engel's Group of Amazons, Ellingsley's (Denmark) ivory casket, Miller's Orphan, Nencini's Bacchus, are got rid of with "honourable mention"?—and when Gibson's Greek Hunter, Campbell's Muse, Max's Hagar and Ishmael, received neither Council medal, Prize medal, nor honourable mention? It is impossible to reconcile such glaring inconsistencies with any rule of common sense or common purpose; and the only consolation we could hope to bring to the irritated and bewildered candidates, whose pretensions have been thus dealt with, would be by recurring to the emphatic words with which Mr. Cole, six months ago, closed his introduction to the Official Catalogue:—"The work is done, and the collection made of the productions of 15,000 exhibitors, working with the ability God hath given them. To those we may say with St. Paul—'In lowliness of mind let each esteem others better than themselves.'"

We shall return to the subject; in the meantime we refer to a protest which has already been sent to the Royal Commissioners from the Musical Jury (Class 10c), on learning that their award in favour of Messrs. Broadwood had been annulled by the Council of Chairmen:—

COUNCIL MEDALS.—PROTEST.

The subjoined Protest was drawn up, signed, and sent to the Royal Commissioners of the Exhibition, by six out of ten members forming the Musical Jury (Class 10c), on learning that their award in favour of Messrs. Broadwood had been annulled by the Council of Chairmen:—

To his Royal Highness the Prince Albert, K.G., &c., President, and to the Royal Commissioners of the Great Exhibition of the Works of Industry of all Nations, 1851.

May it please your Royal Highness, my Lords, and Gentlemen.—The Jury Class 10c, consisting of the following members—Sir H. R. Bishop (chairman and reporter), Sir George Smart, M. Thalberg, Mr. Ciprani Potter, Mons. Berlioz, Le Chevalier Neukomm, Dr. Schafhaut, Mr. W. Sterndale Bennett, Dr. Black, Dr. Henry Wylde, all of whom were present except Dr. Black and Dr. Wylde—decided unanimously to award the great medal to the house of Broadwood for its successful improvements in pianofortes and pianoforte making. Dr. Black subsequently declared in the jury-room his approval of this award with the remainder of his colleagues. This decision of the jury was confirmed in the meeting of the group.

The Council of Chairmen, however (as it has been generally reported), rejected the award thus doubly confirmed; and in seeking for the grounds of this rejection, the jurors of Class 10a, who transmit these papers, are compelled to state it as their opinion, that such rejection must have been attributed to misstatements made at the meeting of the group, in the presence of many of the chairmen, affecting Messrs. Broadwood's claim as improvers of the pianoforte. The misstatements were, upon remonstrance, withdrawn; but it is a lamentable fact, that the injurious effects of such statements positively put forth can seldom be completely effaced by a retraction.

Should such a decision of the Council of Chairmen respecting Messrs. Broadwood be reported to the Royal Commissioners, the jurors who transmit this memorial beg most respectfully to be allowed to point out to his Royal Highness and the Royal Commissioners, that, *in case, a decision which has arrived at after due deliberation by the Jury Class 10a, specially qualified and selected in consequence of technical knowledge of the objects to be submitted to its judgment, and which received subsequent confirmation from the group of associated juries, has been set aside by a body of gentlemen, who, distinguished as they are for their general attainments, may have no special and technical knowledge of pianofortes and pianoforte-making, nor have they, in their capacity of chairmen (except the chairman of Class 10a, whose opinion and statements ought to have had due weight), even inspected or been called upon to become acquainted with, the instruments upon which the award which they rejected was made.* In spite of this fact, the responsibility of the award will still, probably, in the eyes of the public, rest with the primary jury; and the memorialising jurors, feeling that their professional and scientific reputation would be compromised by a decision so contrary, in their opinion, to the merits of the case, and which will, they are sure, astonish the whole European musical world, earnestly entreat his Royal Highness and the Royal Commissioners to take the case into their consideration, and to apply to it such remedy as may seem best fitted in their judgment.

With this statement is transmitted an extract from an official document setting forth the specific mechanical improvements on which Messrs. Broadwood's claims are founded. And the memorialising jurors conclude by expressing their conviction that the house of Messrs. Broadwood has eminently fulfilled every single condition contained in the terms of reference to the jurors, combining in their instruments "novelty of invention (of considerable importance and usefulness), perfection of workmanship, beauty of design, and superior quality of tone."

(Signed) HENRY R. BISHOP, Knt. (Chairman), the Professor of Music in the University of Oxford.
DR. SCHAFHAEDTL, Commissioner from Bavaria and Juror, Member of the Royal Academie, and Professor and Head Librarian in the University of Munich.
LE CHEVALIER SIGISMUND NEUKOMM.
WILLIAM LEONARD STERNDALE BENNETT, Professor in the Royal Academy of Music and Queen's College, London.
CIPRIANI POTTER, Principal of the Royal Academy of Music.
GEORGE T. SMART, Knt., Organist and Composer to her Majesty's Chapel Royal.

THE LATE CAPT. HUDDART'S ROPE MACHINE.

In consequence of the introduction of iron cables, less attention has of late years been paid to improvements in machinery for the manufacture of hempen ropes. This may account for the paucity of rope-making machines to be found at the Great Exhibition. In addition to Crawhall's vertical machine, exhibited in action, we find in a remote part of the Exhibition, among small-goods, in Class 14, a model of the late Capt. Huddart's ingenious machine for making ropes. From forty-nine bobbies, fixed regularly in a vertical frame, seven bobbins in height and seven bobbins in width, as many threads are led to a circular convex brass plate, the perforations being arranged in concentric circles. From the brass plate, which keeps all the threads separate from each other, they are led on to a circular gauge or tube of the size required for the strand, thence passing in the registering machine, which consists of a fine horizontal frame turning on its axes, one at each end, motion to which may be given either by hand or by a band in connexion with steam-impelled machinery. In this frame is a reel, on which is wound the strand after being registered. The frame in its rotation travels uniformly, by means of a cog-wheel, which works into the teeth of a fixed wheel on the top of one of the strands of the registering frame

In addition to this model, a plate and tube, as first introduced by Capt. Huddart, is also exhibited, shewing that each yarn bears its proportion of strain when in the strand; and some specimens of rope made at the rope-works at Limehouse upon this principle, together with samples of hemp—1. Italian; 2. Indian jucus; 3. American; 4. Hungarian; 5. Manilla; 6. Baltic; 7. Columbia River; and of power-loom woven sail cloth, made at the same manufactory.

It may be mentioned, in conclusion, that all the ropes used in the construction of the Crystal Palace were made by Messrs. Huddart and Company.

THE GREAT EXHIBITION.

We resume our notices of the various articles and groups of articles in the Great Exhibition. Our correspondents had prepared the following and many other papers on the subject, during the time that the Exhibition was still open, but we were compelled to postpone them for want of room. Now that the Exhibition is closed we present them to our readers in continuation of a task undertaken; and in order that we may complete our survey of the Great Industrial Gathering, and leave no branch of a great subject entirely unnoticed, we shall continue our gratuitous Supplements until the Exhibition and its contents shall have received at our hands, we will not say a complete, but, at all events, a comprehensive, survey, both literary and pictorial.

A LADY'S GLANCE AT THE GREAT EXHIBITION.

No. VI.

Our attention having been directed to the chief of those branches of manufacture which address themselves peculiarly to the use and tastes of ladies, the subjects of my present paper will be selected from features of minor importance, belonging to the same class. Of these, however, I must again distinguish merely the more prominent, as their number is great, and the interest attaching to each is far from slight.

The first claim on our attention is undoubtedly presented by a branch of elegant industry, which, as applied to certain articles of dress, has found favour with ladies of all nations, although the relative degree of its importance in their estimation has varied at different periods according to the capricious dictates of fashion. I refer to that description of embroidery which may be generally termed muslin-work, in contra-distinction to the many varieties in gold, silver, silk, wool, chenille, &c., which afford less distinctive features of interest for a description, however brilliant an effect they may present to the eye. The marvellous perfection attained by several European nations in the art of working on muslin, is proved by the exquisite beauty of many specimens contributed to the Great Exhibition. Patience and labour have indeed produced, in all the instances to be found there, but especially in the dresses, an effect which must strongly recommend them to the favour of those whose chosen style is an elaborate simplicity. Embroidery on muslin and net, applied to every purpose for which delicate ornament is suited, forms the principal attraction of the Swiss department. Our attention on entering it is first arrested by the curtains, which are displayed to great advantage on the partitions which enclose this territory. They are principally of that description generally known by the name of Swiss curtains, which have for some years been held in general estimation here; but they are, both as regards design and execution, infinitely superior to those ordinarily offered for sale in this country. On the specimen to which the place of honour is allotted, a complete *tableau* is worked, the ground consisting of coarse net. In the distance we see a chain of lofty mountains, at the base of which lies a little Swiss village: in the foreground is a placid lake, across which a girl in the picturesque costume of her country is about to guide her boat; whilst trees, figures, and animals are effectively grouped around. Thus we see the more humble arts borrowing successfully from the higher; and the everyday accessories to our comfort, no longer contented merely to serve a purpose, becoming mediums for conveying to us agreeable impressions and associations. Second only in elegance to the pattern I have described is one composed of palm trees and other tropical foliage, which, as being less elaborate in character, is, perhaps, better adapted for general manufacture: could it be frequently reproduced by the loom, and thus applied to a garment of a less expensive description, it would infallibly become extremely popular. Amidst the variety of white muslin and net draperies are interspersed a few embroidered with coloured worsted, which will doubtless find admirers and patrons.

I must dwell no longer on these more conspicuous articles, but turn at once to the delicate dresses which come especially within my province to notice. Of these, four are remarkable for their exquisite beauty, one only, out of the others on filmy muslin. The most elaborate and fairy-like embroidery is bestowed on a skirt of soft muslin, exhibited by J. Baenziger, of St. Gall; it is adorned with two deep flounces, worked in a scroll and light floral pattern. Near this, another of somewhat more ambitious design is exhibited, on which the flounces are placed almost straight, to display the deep scallop with which they terminate at the edge. The fourth dress varies in pattern, though little in quality, from the others; it consists in double skirts, the upper one varelayed and richly embroidered. The remarkable superiority of the work on these dresses would be instantly appreciated by ladies, as their general effect must be, I should imagine, by all beholders indiscriminately; but our admiration is fully equalled by surprise at the freshness and delicacy which has been preserved through the necessarily long process of their completion, for one could easily believe them unsullied by mortal fingers. This department further contains smaller articles, as handkerchiefs, collars, &c., which are enriched with even finer embroidery than that to which I have above alluded. They are too numerous to be singly distinguished; but, fortunately, I can have no difficulty in selecting the greatest curiosity from amongst them. This consists of a pocket-handkerchief cut out at the edge in scallops, of which each occupies a space of perhaps four inches. There is a narrow marginal pattern of white embroidery, and within this, in each scallop, is a view of some different Swiss scene—mountains, lakes, towns, *chalets*, each possessing so many distinctive features as to assure us that they are faithful representations of nature. I should observe, that these landscapes, which take the curved form of the edge, are worked with the finest *black* thread, by which means perfect distinctness is preserved in this very minute space. It is impossible to speak too highly in praise of this wonderful triumph of the needle; but the brief description which I have attempted to give is likely to convey a better idea of its merits than mere words of approval. The other specimens of Swiss work which remain to be noticed are two coverlets of large size, which are placed in frames, and displayed side by side. It is rather curious to compare them together, one being exactly five times as valuable as the other, in consequence of the superior fineness of its embroidered decorations: in this instance, as is frequently the case, labour and expense has been rather uselessly employed, the inferior one having a richer and more showy appearance than its rival.

The specimens of needlework which deserve the second place in our catalogue of beautiful embroidery, are contained in a glass case conspicuously situated in the Nave. They consist of baby linen made for the late Prince of Asturias, and are well worthy the purpose for which they were designed, that of adorning the heir to a great kingdom. They are extremely beautiful and fine in texture, and yet convey the impression, which is no doubt a true one, that they have been unusual, though very successful triumphs of industry, inspired, as it were, by the importance of the occasion. The best specimens of an art which had been steadily cultivated. The most elaborately designed article in this case is distinct from the set above mentioned, though contributed by a lady who bears the same name with the exhibitor of them, R. M. Guiart, of Madrid. It is a shirt front, on which are embroidered in miniature various churches and convents, all presenting the peculiar features of Spanish architecture, and is sufficiently perfect almost to earn a reputation for the country and individual that produced it.

Amongst the many examples of muslin work exhibited by France, a wedding-dress, with berthe and lappets *en suite*, from the well-known *magasin* of M. Berr, of the Rue Cléry, is deserving of especial notice. A scarf richly ornamented with a double-scalloped border, adorned with many kinds of flowers, presents an elegant variation from those generally seen. Of collars, sleeves, canezous, &c., the number is too vast to admit of a separate notice; and, indeed, there is nothing of sufficient novelty to require it. A few instances of very elaborate workmanship in shirt fronts are exhibited, the designs chiefly embodying scenes from "the chase, the turf, and the road:" they are beautiful specimens of skill, patience, and ingenuity, but, as it appeared to me, rather unworthily bestowed. A waistcoat of embroidered muslin is also presented as a novelty; but, notwithstanding the showy lining attached to it, its appearance is too little effective to secure it many admirers: we shall no doubt see similar articles occasionally worn as a caprice by those rich enough to indulge in fancies of the kind. One very attractive piece of embroidery is exhibited in this department, and must

not go unrecorded—a coverlet for a bed of full size, sent from a manufactory at Nancy. It is said to have occupied eight embroiderers nine months to complete; and very perfect it is, equally creditable to the designer who planned, and the hands which executed it. The ground-work is of the fabric called with us bishop's lawn, although of unusual width, and, for its adornment, the artist, with admirable taste, has selected those flowers only which science and fancy have chosen as emblematical of repose; and amongst them are the single and double poppy, the foxglove, nightshade, and

Every plant that ministers to rest.

How much additional interest is attached to works like these, when we obtain some little insight into their previous history, and are enabled to realise, as it were, the "means" by which the end has been accomplished!

The fame of English, Scotch, and Irish work is supported by many admirable examples, contributed by the respective countries; and it must be a source of gratification to observe the perfection they have attained in this attractive art. Messrs. Hill and Co., of Worcester and Malvern, have happily anticipated one of the wants of the day; and, at a period when the most elaborate silk embroidery is not deemed too valuable to be applied to furniture purposes, have devised coverings of worked muslin, scarcely less elegant than the materials which they are designed to protect. The patterns are arranged expressly with a view to their respective uses—as for chairs, ottomans, table-covers, screens, and even panels for the walls of a lady's boudoir. A set of tasteful specimens of these rich landscapes are exhibited, by four sisters employed in the manufactory; and although we are not likely to see work of the same quality frequently applied to such purposes, it is not difficult to prophesy the use of this material in the drawing-rooms of the higher classes during the summer season. A child's embroidered frock, stated to be of Buckinghamshire work, is exhibited (304) by Mr. Salomon, and claims admiration, both from the richness of the pattern and the excellence of its execution. It represents mingled roses and oak-leaves, plentifully interspersed with acorns, which appear literally to stand out from the cambric. The perfection of this specimen, with that of one or two others, leads to the supposition that this country, so long distinguished for its lace trade, has substituted for this branch of manufacture another likely to prove more popular and remunerative. Fewer examples than might have been expected of embroidery sent from the Moravian institutions are found in the Exhibition; but the series of elegant designs in the style, "illustrative of the poetry of flax," fully maintains their well-won reputation in the art of needlework. The beautiful dress engraved in No. 520 of the ILLUSTRATED LONDON NEWS will have given a good idea of the success which has been achieved in Ireland. An infant's robe, from a school on the Dufferin estate, and a specimen from that of the Countess of Enniskillen, are of singular excellence: they manifest, if such proof were wanting, the advantages conferred by the establishment of these industrial schools on the female peasantry, who are now enabled to secure a maintenance by their own skill and perseverance.

Another branch of Irish manufacture, although of entirely different character, must not be passed over in silence, as it presents a decided novelty in the articles of ladies' dress, and has not, to my knowledge, been noticed in any of the able articles on Textile Fabrics which have from time to time appeared. I allude to the flax cambric dresses exhibited by Mr. Henning, of Waringstown and Belfast. This beautiful material is as fine, and almost as transparent, as book-muslin; the designs and colours employed being also of very delicate character. In some few instances, the elegant and diminutive patterns selected are printed on a white ground, but usually, and with superior effect, on one of some pale shade. That they will be gladly and generally adopted for summer morning dresses, can scarcely be doubted, fashion having decided that the prevailing style is to be that of printed fabrics; and having been recently invented combining so high an intrinsic value with an appearance so modest and unpretending as is presented by those in question, they are specimens of the "pride that apes humility." It is curious to observe the revival of antique fashions, modified, however, and improved by science and taste, in the productions of the present day. An instance of this is presented by the revival, under a new name, and with good prospect of success, of the antique Japanned muslin, which has during the present century been degraded to the coarsest purposes; and the venerable Dutch linens, with their characteristic adornments of tulips, poppies, and Chinese pinks, are undoubtedly represented by the beautiful flax cambrics to which I have above alluded.

Let it not be imagined that the attention and invention of exhibitors have been unduly devoted to the more important and showy articles of costume which I have had so much occasion to extol. On the contrary, they have been proportionally directed to the less obtrusive features of ladies' attire, and to give proof of this I will glance at the glove and stocking. Our French neighbours have maintained a pre-eminence so undisputed in the manufacture of kid gloves, that no one could entertain a moment's doubt in which department they would be found in perfection. Accordingly, on quitting the more conspicuous and popular divisions of the French territory, I found myself in one of those quiet, cool nooks upon which we occasionally light in various parts of the Building. The one in question is principally devoted to the Exhibition of such comparatively humble articles as gloves, shoes, parasols, hosiery, bead-work, &c. It thus possesses no attraction sufficiently powerful to merit the attention of the crowd, and is chiefly visited by such enquiring spirits as are determined to let nothing escape them, or by ladies, who, like myself, find a positive relief in turning from the concourse of brilliant wonders to gaze on the best specimens of more familiar objects. Amongst the best assortments of gloves here displayed is that of M. Houlgiant, whose establishment in Regent-street has rendered the name familiar to us. Every shade of colour, from the most delicate to the most durable, is here presented, and even in sizes sufficiently small to fit a child of three years old, to whom any luxury greater than thread or silk has been hitherto denied. But the attraction, *par excellence*, is a variety of white gloves, embroidered, in some instances with flowers in coloured floss silk, but chiefly with the seats and coats of arms in gold and silver thread: the trimmings for the wrists are of gold and silver lace, *en suite*. Should this style become fashionable, and the ornament increasingly elaborate, a lady's glove may again become a really valuable possession, as in the days of chivalry, when, with precious stones, it formed so common a *gage d'amour*. A perfect novelty, as applied to long gloves, is observable in the case of M. Préville. It consists in a perfect imitation of lace, about three inches deep, the pattern being clearly stamped out in the kid, and so forming an ornamental gauntlet, which entirely supersedes the necessity for trimmings of any kind. This extremely pretty device is exemplified in almost every light colour, and is thus rendered available for walking, as well as evening dress. Other makers, of equal reputation with those above mentioned, send contributions worthy of their fame. M. Jouvin, and one or two others, have given us some little insight into the mysteries of the business, by exhibiting the various cutting machines by the aid of which so perfect an exactitude is preserved, and also the different divisions of the glove before they are sewn together: these specimens appear to excite much interest. I do not propose extending my remarks to the English department, as the gloves there displayed present no ornamental features, and, although undoubtedly of excellent quality, are designed rather for wear than for description.

In the materials and shapes of ladies' shoes and boots, there is, of course, far greater scope for taste, and every advantage of this kind has been seized upon by the French manufacturer. Of dress slippers, the prettiest examples are exhibited by M. Meier, and are composed of white and rose-coloured satin. The difference from those ordinarily worn consists in the introduction of three narrow bands of the satin across the instep: they are ornamented in the centre with small pearl drops. To allow room for these bands, the front of the shoe is diminished to about a couple of inches in depth, and, as far as appearance is concerned, this alteration is decidedly an improvement. In the same case are excellent specimens of the fashionable walking boots for ladies, which terminate, and are entirely composed of the upper of one uniform colour, which may, however, be selected to suit the taste of the wearer, or the shade of her dress. The only point in which M. Meier's boots differ from those now ordinarily worn is in the addition of very high heels, *fac similes* of those in vogue some fifty years since. Whether these appendages will again become popular, seems rather doubtful; for any advantage which they may be supposed to possess, in giving height and dignity to the appearance, is more than counterbalanced by the discomfort attending their use. For house slippers almost every description of material and ornament is employed, from velvet worked in gold and quilted inside with white satin, to the finest embroidered muslin lined and trimmed with pink and blue. In every branch of this manufacture, ample gratification is provided even for a taste the most fastidious and elaborate.

In the same department, and in close proximity to the cases of shoes and gloves, is the display of French parasols and umbrellas. I will, therefore, commence my survey of these "portable penthouses to carry in a person's hand" (as they are described in old dictionaries), with the specimens contributed by foreign countries. In their construction no particular novelty is observable; indeed, every invention or improvement has become so quickly and generally adopted as to allow the exhibitors little opportunity of materially distinguishing themselves, save in the variety and richness of the material and ornaments. Even in this respect luxury has become so universal, that a parasol which would some years since have been regarded as magnificent, now fails to excite any attention; and such an acquisition as would formerly have been cherished for a lifetime, is now thrown aside at the close of the season. It is rather a singular feature in the history of these articles, that, from the extremely remote period at which they were first known until the present time, they should have preserved their form almost unaltered, and that the only differences between the parasol discovered on the ancient carvings at Persepolis and that now used by ladies consists in the material and machinery. We do not find in the French collection much variety, except in the handles, to which great attention has been evidently directed. The handsomest specimens consist of light satin, covered with lace, and also of rich chené silk; the handles being of gold studded with precious stones, of branch coral, or of elaborately-worked ivory: this material is, in a few instances, carved into the forms of miniature birds and dogs. The advantageous display of the most complete, and, apparently, expensive amongst these parasols, was, at the beginning of the season, entrusted to the charge of a flying Mercury, in whose hand it replaced the caduceus: the precious freight has been removed; but the bronze figure remains, although its occupation's gone. We have for some time been familiar with the combination of parasol and driving-whip, and many have experienced its comfort and utility: the convenience, however, which may result from the union of an eye-glass and parasol is more doubtful; yet it is in more than one instance attached to the extremity of the handles. A far greater incongruity would be supposed to exist between an umbrella and opera-glass, which we may also observe united here. It is, indeed, difficult to imagine on a occasion on which these two articles could be conjointly serviceable, as a lady would be unlikely to carry her umbrella to the opera, or to indulge in a lengthened inspection of the objects which she might encounter on a rainy day. I must, however, de fail justice to the general elegance of the French umbrellas, which present far greater evidence of taste than those of British manufacture. Amongst those intended especially for ladies, are three of so much real beauty as to render their use rather a pleasure, I should imagine, than a penalty. The colours of the silks with which they are respectively covered are dark green, crimson, and purple. With regard to the durability of the two former shades, when exposed to the weather, I am rather doubtful; but the third may be safely recommended as a pretty and serviceable substitute for the colour which has been for so long the only one thus employed. The handles attached to these umbrellas are of very rare character, and consist of ivory most beautifully carved into the semblances of a lion, tiger, and child bearing fruit, the last design being the most finished and pleasing.

From almost every European country in which the power of the sun renders the parasol necessary, we have some few contributions in the Exhibition. Amongst those from Belgium, my attention was attracted by one composed of white satin, richly braided, and lined with crimson, which, from the advantageous union of colours, has a very brilliant effect. In the same case is another, rather singularly adorned with painted rice paper placed on a ground-work of white silk; it has much the appearance of a Chinese toy, and cannot be particularly commended for beauty. From the display of Austrian parasols, two may be selected as superb. The first is composed of white satin, covered with lace, and with black Brussels lace, the stick and handle being red coral, or, more probably, a perfect imitation of it, as the weight of the real substance would render it unsuitable for the purpose. I have above alluded to this design as existing in the French department: it is new and pretty, but the rugged branches must be inconvenient for real use. The second parasol deserves notice chiefly for the beauty of its handle, which is of ivory cased in twisted silver, a device, however, rather unfavourably received by ourselves, as girls' gloves. The various collections of parasols is usually added an assortment of unmounted handles, which display in many instances the most perfect workmanship and great magnificence. One specimen in the Zollverein department is enriched with precious stones to the value of £50. An elegant silver from Genoa is also applied to the purpose of parasol decoration: in the case devoted to this delicate manufacture, situated in the North-east Gallery, are two, composed of pink and blue watered silk, the handles, rings, and tops of which are formed of this exquisite though fragile work. They are perfect *bijoux*, unsurpassed—and, I should think, unsurpassable—for elegance.

Of English parasols, situated in the North Transept Gallery, perhaps the most important display is that of Messrs. W. and J. Sangster, of which a drawing was given in No. 520 of the ILLUSTRATED LONDON NEWS. This firm exhibit many specimens of their Swiss and sylphide parasols: indeed, the improvements for which we are indebted to them are applied to all the most elaborate objects in this collection. Amongst these are pre-eminent—one of green velvet, beautifully worked in gold; another of white satin, also richly embroidered; and a third of yellow satin, the adornments of which recal the pictures of Watteau. The most unquestionable novelty is the application of feathers to parasols: but, as this feature has been already noticed, I will not further enlarge upon it. Messrs. Lewis and Allenby have introduced a parasol called the Stella, which is remarkable for its lightness and elegance—twelve very fine ribs, with stretchers proportionably small, being employed, instead of the old number of eight. The fringe with which they are ornamented is graduated to form, when in use, a perfectly straight line at the extremity. These are, when compared with some others, plain and unpretending, but are not on this account less tasteful and ladylike. The distinguishing characteristic of the parasols contributed by Mr. Rutter is the deep Vandyke outline, formed by a sharp point in the centre of each section. With this rather pretty variation from the ordinary form of parasols, my notice of their beauties and singularities must conclude.

Apart from the multifarious details of costume and personal ornament, to which the attention of a lady is supposed to be more especially directed, there is scarcely any particular in which she has of late years exhibited herself more fastidious than in the novelty and elegance of the accessories of her writing-table. Formerly there was, save the handwriting, but little to distinguish the letters of a lady from those of a lawyer, and scarcely any difference was perceptible between the characteristics of a bill and those of a *billet*. Within the last few years, however, a remarkable advance in taste and refinement has become observable, and has been principally introduced into the invitation and general use of note-paper; previously to which event, a lady, when writing to a friend, was doomed either to fill the dread expanse of four sides of a sheet of post, or to exhibit, by tearing it in half, a reputation very much below that possessed by so to do. Consequent upon the introduction of note-paper came the universal adoption of envelopes, "putting up the letter in a neat little paper bag," as Mr. Power says, in one of his amusing farces. This last invention was a real convenience, and speedily superseded the square, business-like looking packet, covered with a half-sheet of letter-paper, the mere folding of which to the un-mathematical mind was a problem of almost impossible solution. After the establishment of the penny postage, letter-writing, which had been rather a luxury, appeared to have become an universal necessity, the demand for paper in stationery increased to a fearful, and the supply of novelties became proportionably great. Envelope-cases began to be substituted as depositories of writing materials for the awkward wooden desk, which had so long been universally employed. Varieties in note paper followed each other in rapid succession—the gilt-edged, when deemed old-fashioned, gave way to gilt-bordered, and the latter to coloured edges; sealing-wax after a long reign succumbed to gum wafers; and, finally, the invention of cream-laid note-paper and elaborate envelopes apparently left nothing to hope for in the way of further improvement.

A distinguished historian, recently deceased, used frequently to observe, that he never felt a few guineas at the end of his purse without experiencing a strong desire to convert them into writing-paper and sealing-wax; and, as my readers will probably more or less sympathise in this taste, I will now give the result of a rather particular inspection of this class of articles as displayed in the Great Exhibition. Having unbounded confidence in the taste of our French neighbours in connexion with every description of elegant trifles, I first directed my steps to the back regions of the French department, where, after some trouble, I discovered all that there was to find of the objects of my search. The expectations which I had entertained were certainly by no means realised, as, in the only stall professing to contain any assortment of *papeterie* (that of M. Marion, of Regent-street), I could observe nothing with which I was unfamiliar, beyond some samples of cheap bookmarks. I accordingly returned to our own regions, and was soon attracted to the display of Messrs. Delarue and Co., whose elegant and complete little envelope folding machine (engraved in a former Number of the ILLUSTRATED LONDON NEWS) has been one of the most popular features of the Exhibition. The first articles which arrested my attention were the *coffrets*, or stationery boxes, which contain, as might be observed at a glance, every requisite for use, and are adorned at all points with rich and tasteful decorations. I especially remarked one, covered with purple velvet, lined with white satin, and enriched on the exterior with ornaments of chased gold: the destination to which its extreme beauty would render it most suitable would be that of a bridal gift, which, as we all know, is usually selected with a view to elegance rather than durability. For those whose taste may be of a less elaborate character are provided other specimens, in Morocco and Russia leather, scarcely less handsome in their way, though better adapted for use. In the envelope-cases an equal variety is observable. Some are of morocco, tooled in ornamental designs, expressly devised for the occasion; others are adorned with arabesque; some, again, are of embossed wood, the process being effected by red-hot dies. As an instance of the minute attention to detail displayed in the manufacture of these boxes, I should mention that even in those of less expensive character the paper lining corresponds with the design, whatever it may be, which forms the exterior decoration. Many examples are displayed of the useful combination of desk and envelope-case, and, in fact, no scarcity of ornamental desks is omitted. Great, however, as may be the elegance of the caskets, I must not forget that their contents have an equal claim to attention, and would possess even greater interest in the estimation of the real amateur; let us, therefore, pass on to an examination of the *papeterie* in the true acceptation of this word. First, we notice the thick vellum paper ordinarily used by her Majesty, which is merely an unusually excellent quality of the plain cream-laid note paper, and is the description which, in allotting to each kind its peculiar office and employment, one would devote to the practical and important branches of correspondence. Then come the innumerable varieties of ornamental paper, which might almost serve as temptations and excuses for writing, and deserve to be sacred to the most delicate of handwritings and the prettiest of complimentary phrases. The most elegant as well as novel design offered by the exhibitors in this department of their business consists in an open border of distinct, though minute oak-leaves and acorns: they extend about a quarter of an inch from the edge of the paper, which is quite plain, with the exception of this tasteful adornment. Equally new, although less elaborate, is the paper authentically designated as goffered: from what circumstance it derives its name, I am at a loss to divine, as its characteristic is merely a small and regular scallop at the edge. The *torsade* note-paper exhibits a slight variation of this same design, being rather more ornamental at the border. Finally, there are the numerous specimens of paper adorned only by variations in the pattern of the water-mark: among these are the Alhambra Wave, the Elizabethan Wave, and a kind watered something in the manner of a dress, although on a small scale; the last to please the most uncommon, but all are in unexceptionable taste.

In articles which admit of more elaborate workmanship and design, as, for instance, Valentine papers, the most wonderful perfection is attained. They almost deserve, in their way, the title of works of art, their style and effect being greatly raised and improved by the introduction of really pretty and graceful figures amidst the embossed lace-work of which they are chiefly composed. This branch of the trade is said to be carried on principally for exportation, the demand in England being now comparatively small. In this collection is, of course, included every variety of wedding cards, and envelopes to contain them: many are adorned with symbolical figures and emblems in silver, which would, no doubt, in the estimation of many, bear away the palm from those simply embellished by a narrow silver margin, the only ornament not permitted by the strict regulations of fashion. I could dwell much longer on these, and other equally elegant trifles of the same kind, did space allow of my doing so. I trust I have said enough to convince my readers, if they had not already made the discovery for themselves, that ample gratification is provided for the indulgence of every fastidious taste in *papeterie*, as, indeed, in almost every branch of art and manufacture.

In concluding these passing "glances" at a few of the wonderful attractions collected beneath the roof of the Crystal Palace, I cannot but sympathise with the truth of the well-known observation of a distinguished writer, "that we seldom do anything, conclusively for the last time, without a lingering feeling nearly allied to regret and melancholy." Of the former of these sentiments I am fully sensible in taking leave of those friends who have kindly accompanied me in my pleasant wanderings through the various courts and galleries, since a similar opportunity of our meeting again under the same circumstances can hardly be anticipated. Objects hitherto held sacred, "from the uttermost ends of the earth," have been unveiled; the "treasures of King's houses" have been opened before us; and, better still, we have witnessed the triumphs of science and patient industry in our own day, and seen the great family of mankind united together for the purposes of a common good. That the favour and protection of the common Father of all, so emphatically sought at the inauguration of this great work, has been accorded to it, cannot be denied; and few can reflect on its progress and termination, without a sentiment of gratitude, both Divine and human, that such a sight should have been witnessed in their day and generation.

Z. M. W.

TAXIDERMY.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

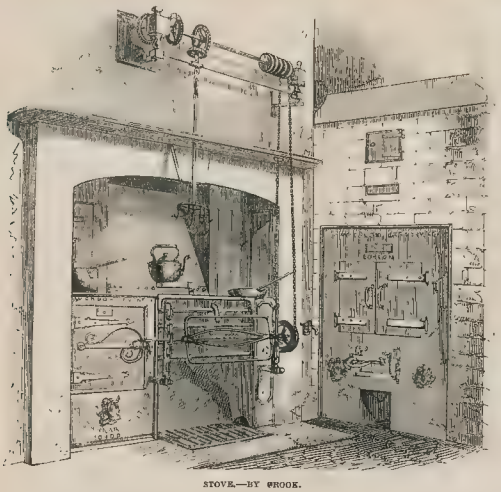
SIR,—If Mr. Waterton's sally has not quite cut away my *understanding*, it at least aims at leaving poor "Pavo," like the acquire in the ballad, in "doleful dumps." I beg Mr. Waterton's pardon, the *pegs* stand before the *person* of the bird. I have fallen inadvertently into the vain humour of the creature which is said to lament the tuckiness of its timbers. I acknowledge my fault: "*humanum est errare*." Even Waterton's *wanderings* form no exception. My adversary, I confess, has touched me on a weak point; and, no doubt, his quick eye, upon the rule of setting a thief to catch one, has found many more. If not, I can show him mine, and gladly too, for I never said that the bird was perfection—a copy at most. I only asserted, what I find Mr. Waterton is no stranger to deny, that the appearance of the bird is a near *approach* to its peculiar character when its train is spread, and that to *copy* Nature in all her ways is the true principle of the art. If your readers disbelieve that this has been in some measure accomplished, I say, let them suspend their judgment until they have an opportunity of seeing the bird alive. I quite agree with Mr. Waterton that even the legs of large birds, and it was my intention to have attended to those of the bird in question, but at the time (no exhibition of it being then thought of) I had not leisure. I could point out several other defects, from accidental causes; but none of them are of a nature to draw us away from the question Mr. Waterton started in reference to the principles of taxidermy in the Exhibition, who now, finding himself attacked, and hard pressed on a point, has fain to beat a retreat by the aid of the *legs* of my peacock. He seemed to wish to sit supremely elevated as a critic in the art; but, to use his own *happy* expression (omitting its grammar) was too *wide awake* to have sent any illustrations of his exertion in it to the Crystal Palace.

> Remember Icarus's height
> (Perhaps the observation stings);
> Dame Wisdom for a pair of wings.

May I, sir, crave your indulgence once more only? and have the honour to remain, sir, Your obedient servant, J. B. P. DENNYS.

THE PEACOCK IN THE CRYSTAL PALACE.

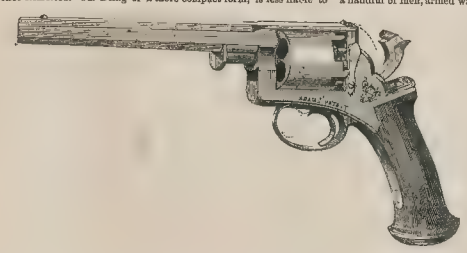
"Quantum mutatus!" By Nimrod, this is the most unsightly bird that ever a wandering forester fell in with! Could Juno see her once comely person in so sorry plight, how she would scold the author of its unpardonable deformities! Where are the peacock's nostrils, I ask?—where is that arched prominence which in life was so apparent, and which guarded the nasal sinuosities? It has shrunk to nothing; causing the face of the bird to be as ugly as that of poor Delphobus the Trojan:—"Truncas inhonesto vulnere nares." Let us proceed onwards, and take a view of the head. There is much that suits it. The crown is very fine, the cheeks are wrong; the orbits are wrong; and the ears are wrong. The skin, not dissected up to where the bill emerges from it (although it ought to have been) has dried upon the cranium. A similar disaster is visible at the anterior angle. The orbits, with their inner skin still adhering to them (and which should have been cut away), are distended by



STOVE.—BY CROOK.

RETTIE'S VICTORIA SIGNAL LAMPS

The Victoria signal lamp, or Rettie's improved patent signal lamp, for preventing collision of vessels or steamers at sea, is on the same principle as R. Rettie's patent signal lamp for the same purpose, *i. e.* indication of the course vessels are steering, by means of signalising with colours, such as red, green, and clear light. Thus, the red indicates "to port," the green indicates "to starboard," and clear light indicates steering "right on." The improvements to be found combined in the Victoria signal lamp are the invention of Messrs. Rettie and Sons, of Aberdeen, and by them provisionally patented. They are as follows, viz.—1st. Greater simplicity and precision, as, by the action of one teazel, lever, or handle, the coloured glass or other signalising medium is at once exhibited. 2d. Being of a more compact form, is less liable to injury in using, and, at the same time, is very easily repaired. 3d. From the size and form of the lens or other outer glass in front of the lamp, the signalising surface is greatly increased and more easily discernible. 4th. While signalising to vessels approaching, it also shows the steersman or person at the helm, clearly and distinctly, what signal is shown by it; and, 5th. While it shows any signal at the will of the operator, it can also be made, by the action of the helm or tiller, of itself to show, with unfailing accuracy, the course the vessel is actually steering For steamers or vessels on navigable rivers, this improvement alone will make the Victoria a valuable acquisition.



REVOLVER PISTOL.—BY DEANE, ADAMS, AND DEANE.

HERALDIC TABLE-COVER. BY UNDERWOOD.

The Heraldic Table-Cover, by Underwood, of Oxford-street, is a remarkably handsome specimen of British taste and skill, and is intended to commemorate the Great Exhibition of 1851. In the centre are the arms of the British Empire, and around are those of the principal nations of the globe. On the extreme edge are suitable inscriptions, as:—

"In tanui labor et tenuis non gloria" (The labour has been expended on a slight production, but the glory will not be trifling).

"Laborare est orare" (To work is to worship).

"Quod omnium gentium artificia apud Britannos, A.D. 1851, exposita commemorent" (To commemorate the workmanship of all nations held in Great Britain, A.D. 1851).

We understand that no less than 223 blocks and copper-plates have been used in printing this table-cover, which is two yards square.

KITCHEN STOVE. BY CROOK.

We give an Engraving of the improved open-fire hot-plate kitchen-range, with smoke-jack, &c., exhibited by Mr. Crook. It seems to be of considerable merit, combining, as it does, the improvements of the open and close fire ranges in one, with the great advantage of an open fire. The oven is heated equally all over, and the hob over it is a perfect hot plate, without any additional fire. Every process of cooking can be carried on without that unpleasant heat and effluvia which arise from those with close fires; whilst at the same time steam is afforded for kettles and hot closet, and a plentiful supply of hot water for baths in any part of the house, kitchen, scullery, &c. On the right we observed an improved furnace stove, for heating tailors' or hatters' irons, at a very small expense in fuel.

REVOLVING PISTOL. BY DEANE AND CO.

From the public interest which has been recently so much excited on the subject of fire-arms, one might be led to suppose that we were about to go to war with all the world. Happily, however, this is not the case, and, although, we adopt the maxim, "If you desire peace, be prepared for war," we are making no further preparation than to assure ourselves we shall not be taken at a disadvantage if such a calamity as war should unfortunately overtake us. This may be said to be the chief object of our Government in the various experiments they have caused to be made with fire-arms of every description. Perhaps none, from their novelty, have had more attention drawn to them than "revolvers." They were used with the most murderous effect in the late Mexican war, where a handful of men, armed with them, withstood and drove back more than ten times their number, leaving nearly three times their own number dead on the field of battle. There is a revolving pistol patented by Mr. Adams, of King William-street, of the firm of Deane, Adams, and Deane (of which we have annexed an Illustration), which, on various trials, was found so decidedly superior to any yet invented, as to elicit the unanimous approval of the officers of the army and navy, who, with several noblemen and gentlemen, attended at Enfield and Woolwich to witness its powers. The advantages it appears to possess are simplicity of construction, lightness, rapidity of loading and firing (at least ten discharges per minute), that it never misses fire, cannot easily get out of order, and does not clog up by use. As to the shooting qualities, it was found to be decidedly superior to those tried against it.

TABLE-COVER. BY M'CREA AND CO., HALIFAX.

The furniture damasks, table-covers, &c., exhibited by M'Crea and Co., display great variety and tastefulness of design. The specimen which we engrave is extremely well conceived and executed.

EMBOSSING MACHINE. BY JARRETT.

The accompanying Engraving represents a very elegant little machine, which Mr. Jarrett, the embossing press manufacturer, has presented to the Executive Committee, as his contribution towards founding a museum of record of the articles exhibited at the Crystal Palace. The ease and precision with which impressions are immediately formed by these machines have elicited general admiration during the whole period the Exhibition was open. The museum press, though under seven inches in length, and not half the width, is so constructed as to answer not only for any number of separate dies, but any combination of initial or date dies.

DESIGN FOR A CLOCK FACE. BY MISS WALTER.

This is a fanciful design for a clock face, in which the virtues and vices are arranged in two distinct circles. The former is the inner, next the Eye and Ear of Omniscience; the latter is the outer and darker circle, denominated Satan's Kingdom. It is a curiosity not undeserving of notice in a record of the contributions to the Great Exhibition of 1851.

DESIGN FOR A MONUMENT IN COMMEMORATION OF THE GREAT EXHIBITION.

PROPOSED MONUMENT IN COMMEMORATION OF THE GREAT EXHIBITION.

The closing of the Great Exhibition and the demolition of the Crystal Palace has, as might have been anticipated, evoked the taste and genius of sculptors and others to design memorials to be erected in Hyde-park, in commemoration of the great event of 1851.

Amongst other designs is one which we have engraved in this week's Supplement. It is by a French sculptor of eminence, and pourtrays in its chief design the onward march of the Genius of Civilisation. The base is Egyptian in design, with sphynxes on pedestals, placed at angles from the square base of the monument. This is intended to convey the sentiment that all our present learning is based on that of the Egyptian. The second phase in civilisation is that of the Asyrian, the step in the design above the Egyptian being intended to be marked with characters, figures, and symbols of Asyrian character. The pedestal from this part of the design rises square in plan, the angles bevilled off, and figures of Solon, Homer, Lycurgus, &c., occupy the angles, as emblematic of Grecian progress in civilisation; above them being Roman ensigns, with the eagle, to convey the idea that from Grecian rose the Roman glory in arts and arms. The panels on the faces of the pedestal are proposed to have representations of the chief statues of antiquity, such as the celebrated ivory statue of Jupiter Olympus. Forming a cornice above the Roman portion of the design comes a piece with Byzantine character of ornament in its crosses and symbols of the Evangelists; and this again is crested by an elegant frieze and cresting of Gothic character. The sloping roof would be highly enriched. Hence the design assumes an octagonal form, the ornamentation being of *cinque cento* design, containing in arches and niches statues of the greatest rulers and most illustrious men of the 15th and 16th century. Elizabeth, Francis I., Luther, Guttenberg, &c., tell the tale of the onward character of knowledge and power; and the semi-spherical top has on it busts of the illustrious of the 17th and 18th centuries. The Genius of Civilisation bears in her hand a scroll on which is to be written the list of those nations which have contributed to the Great Industrial Gathering of 1851, in the respective order of merit. The design is extremely piquant and effective, although we cannot say it *will* be carried out; yet, as a testimonial of one of the gifted sons of France to the all-important Great Exhibition, is extremely interesting and appropriate to the closing of the World's Fair.

DISTINGUISHED JURORS AND CELEBRITIES OF THE GREAT EXHIBITION.

JEAN BAPTISTE DUMAS,

LATE MINISTER OF AGRICULTURE AND COMMERCE, PROFESSOR OF CHEMISTRY AT THE SORBONNE, IN THE SCHOOL OF MEDICINE, AND IN THE ECOLE CENTRALE, MEMBER OF THE INSTITUTE, COMMANDER OF THE LEGION D'HONNEUR, &c.

J. B. DUMAS was born at Alais (Gard), in July, 1800. He completed his literary education at the age of twelve, and then studied pharmacy in his native town. At the age of fourteen Dumas proceeded to Geneva, being admitted as a pupil in the Pharmaceutical Institution, he gave himself up to chemical researches, botany, and medicine, and published an essay in connexion with the celebrated professor of Geneva, De Candolle. But what drew upon him the attention of scientific men were his researches in animal physiology, in which he was associated with M. Prevost. In 1821 he proceeded to Paris, was appointed teacher of chemistry in the Polytechnic School, and Professor in the Athenæum, and henceforth devoted himself entirely to the study of chemistry.

In 1821 Dumas published a memoir on the relations existing between the specific weights of solid bodies and their atomic weights; and extended the inquiry, the same year, in company with Le Royer, to gaseous substances. In 1823 he analysed, with Pelletier, many organic salts. In 1827 he experimented, with Boullay, upon the compounds of ethyle, and proved the atomic constitution of the different kinds of ether. Dumas investigated the nature of heavy oil of wine, and discovered the sulphate of oxide of ethyle. Nitrous ether has been investigated by Dumas and Boullay. Oxalic acid, which was discovered by Bergmann, had its principal properties shown by Dumas and Boullay. Nearly all the compounds of ether had been thoroughly investigated by Dumas, who demonstrated the chemical properties of chloroform, sodoform, and bromoform, and he, further, discovered the oxamide in 1830.

In 1832 Dumas replaced Serullas in the Academy of Sciences. In 1835 he analysed stearopthene, also the oil of rosemary and valerian. Dumas and Pelouse worked upon the oil of black mustard, Dumas and Peligot on wood spirit, Dumas and Stass upon the action of alkalies upon organic compounds, Dumas investigated the chemical properties of whita and blue indigo.

Dumas' theory of substitution is one of the most important works of the celebrated chemist. We owe to the same hand a treatise on chemistry as applied to the arts, which is the most important work hitherto published on the subject. He published also some lectures, under the title "Leçons sur la Philosopie Chimique."

As a popular lecturer, Dumas is one of the most eminent in Paris. His details of chemical phenomena are clear, and expressed in language comprehended by every one.

In 1845, Thénaud's health declining, obliged him to resign the presidency of the Society for the Encouragement of Industry. Dumas succeeded him in the office of Director.

In May, 1849, Dumas was elected to the Legislative Assembly; and the President of the Republic called him, on the 31st of October, to join the Administration, and entrusted him with the post of Minister of Agriculture and Commerce, where his chemical knowledge enabled him to render great service. He originated annual meetings bearing on agriculture, commerce, and manufactures, in which the most important social questions have been discussed and elucidated. Through his influence, the Board of Health have been obliged to depart from their established rules, which disturbed the relations of the people, without adding to their security.

In 1832 Dumas was created Knight of the Legion of Honour; in 1840, officer; and Commander, in April, 1844.

Dumas married Mdlle. Brongniart, daughter of Professor Brongniart, the learned Geologist and Director of Manufactures at Sèvres. He has a family. His son studies the sciences, and is assistant to his father. Professor Dumas was Chairman of the Jury Class 2, in the Great Exhibition.

E. EBELMEN,

DIRECTOR-GENERAL OF THE SEVRES MANUFACTORY.

MONS. EBELMEN greatly distinguished himself as a pupil of the Polytechnic School; after passing through the higher grades of which, he was appointed professor at the School of Mines; and, in 1849, director of the Royal, now National Manufacture of Sèvres; and, under his able direction, both the manufacture and decoration owe there present high distinction. He has laboured to restore the pure classic taste; and the important improvements of using coke instead of wood in the baking ovens, and the *coulage* or process of casting, instead of the manufacture at the wheel, are due to him. By this process have been produced articles as delicate as the finest specimens of the long famed egg-shell Chinese porcelain. The whole of the articles for the Exhibition were produced under the direction of M. Ebelmen. Her Majesty purchased in the department the three bottle stands of Apsley Pellatt, the two upright Raffaelle vases, and the Etruscan vase; and the Council medal, for general beauty and excellence, was awarded to the manufacturer.

RAFFAELLE MONTI.

RAFFAELLE MONTI, the son of the celebrated sculptor, Gaetano Monti of Ravenna, was born in 1819, in Milan, where he studied under the eye of his father. At the same time (1836-37) he attended the Imperial Academy, where he won several prizes, and especially the Great Gold Medal, by his group of "Alexander taming Bucephalus." In 1838, having exhibited another colossal group of "Ajax defending the body of Patroclus," he was invited to go to Vienna, to execute a model for the statue of the late Emperor Francis. He remained in Vienna nearly three years, during which time he gained a prize for that statue, and executed for the Court busts of the Emperor Ferdinand, of the Empress, of the Archdukes Franz, Karl, and Alexander, and of the Archduchesses Sophie, Dorothea, Hermione, Elizabeth, and Marie, besides those of other children of the imperial family. For many of these he received special proofs of approbation from the Emperor and his relatives. He likewise modelled the seven colossal statues for the pediment of the National Museum of Pesth, and executed several works for Prince Lichtenstein, Count Kollowrath, and for other noblemen both in Vienna and Pesth.

In 1842 he returned to Milan, to companion and help his aged father, with whom he remained till the spring of 1847, only occasionally absenting himself on journeys both for business and instruction. During this time, besides the great number of statues for the Cathedral, he produced at the annual exhibition at the Milanese Academy several works, and among others "Nerina stepping into the water," the "Marguerite of Faust," the groups of "Innocence," a veiled bust, which were received with great favour.

In 1847 he came over to England for the first time, and exhibited at Colnaghi's, besides other minor works, the veiled statue for the Duke of Devonshire, and, together with his father) the monument to the Lady de Mauley, which attracted great attention during that season. During his stay in England he lost his father, which hastened his return to Milan, where he succeded to the business of his father.

But his good fortune was of short duration. Political changes put a stop to his artistic career and turned him in less peaceful pursuits; for we see him in 1848, as one of the chiefs of the National Guard of Milan, among those sent on a mission to the camp of King Charles Albert. However, the war was soon over, and having fled from the unquiet of his country to this, which had received him so kindly the year before, he here executed several works, among which are the groups of the "Two Sisters," the "Veiled Slave," &c., and after a visit to Milan, during which he finished his "Eve after the Fall," he decided upon remaining in England as the only country where the certainty of a lasting peace, and a great number of friends and patrons, could promise him occupation and employment for many years to come.

COLONEL HAWKER.

COLONEL PETER HAWKER was born in London, on the 24th December, 1786, and educated at Eton. He was gazetted Cornet in the 1st Royal Dragoons in 1801, Lieutenant in 1802, and then reduced to half-pay by the peace of Amiens. He then exchanged into the 14th Light Dragoons, and got his troop on the 14th of August, 1804; and with this regiment he served in Portugal and Spain, and received the Peninsular medal. He left the dragoons in consequence of wounds, from which he was unable to continue on service, and was ordered a pension for four years. On his recovery, in 1815, he was appointed Major of the North Hants Militia, by command of the late King; and, in 1821, was made Lieutenant-Colonel by the Duke of Wellington, and afterwards a Deputy-Lieutenant for the county. He married, at Lisbon, in 1811, Julia, only daughter of the late Major Hooker Bartlett, by whom he has issue, Captain Hawker (late 74th Highlanders) and two daughters. In 1844 he married, secondly, Helen, widow of the late Captain John Symonds, R.N., and daughter of the late Major Chatterton.

Colonel Hawker's ancestors have, without missing one generation, served in the British army ever since the reign of Elizabeth. His great grandfather was made Governor of Portsmouth in 1717, and a tablet to his memory is placed in the garrison chapel. His father commanded the 1st Regiment of Horse (now Life) Guards. The subject of our memoir has, ever since he first entered the army, been a contributor to the press on various subjects, and particularly on guns and shooting, in which he has perhaps made more experiments than any other amateur. He was also the inventor of hand-moulds, to facilitate playing on keyed instruments, which the invention was publicly recommended by Clementi, John Cramer, Kalkbrenner, Moscheles, and other great masters, though they fell into disuse, as "bad for trade," by the host of little teachers.

Colonel Hawker's inventions for wild-fowl punts and guns we have before noticed, in Class 8 of the Great Exhibition.

Colonel Hawker has lately completed a new double gun, which was placed on his counter, in Class 8, though, unfortunately, too late for inspection of jurors, as illness prevented his having it ready in time. But on the only gun of Colonel Hawker that came under official inspection (his last new ignition stanchion), the jurors have awarded to him the prize medal "for his improvements and perfection in punt-guns." The novelty of the new sporting double gun is the self-adjusting primers, without cover or spring, that will not only defy wet weather, but also the saline atmosphere in sea-coast service, in which he has proved the failure of all copper caps and fine powder. This new gun has conical breechings, that will admit, when required (as in wet weather, or at sea), the use of the largest grain cannon powder. The proportions of this gun are the result of forty years' experience.

LAMPS.

THE lamps in the Great Exhibition proved a very important feature in the hardware department on the English side, and a very ornamental embellishment to the glittering compartments of their friendly rivals. There was scarcely a variety of lamp which was not represented. It will probably have been remarked by those who study the "signs of the shops," that, in London, no article of commerce seems to be more steadily selected as the subject of extraordinary puffing than the lamp. No commendations are too extravagant for the article: handbills, placards, advertising vans, all testify to its matchless merit. The lamps of Aladdin and of the Roxy Cross united would hardly make anything equal in value and beauty to those which are now offered at 11s. 3d., 16s. 5d., and other quaint prices. Yet, we believe, the testimony of troubled bachelors, exasperated mistresses of families, bewildered servants, and other "slaves of the lamp," goes to prove that in the art of lamp-making, as in many others, we have a great deal to learn. The candle lamp, excellent as it is, shown by the popularity that the mass of purchasers have been forced to put up with an article which is no lamp at all, but a candle kept in its place by a spring. As for the splendid and expensive lamps which look so well in the windows of shops, and were so imposing under the glass cases at the Exhibition, we admit their beauty; but a lamp which requires as much looking after, morning and evening, as a baby, is a luxury which only those who can keep a nurserymaid for it can properly enjoy. The "people's lamp" is not yet before the people.

But, in addition to the domestic lamp, there was a great variety of articles of illumination on view in the Crystal Palace. There was the carriage lamp with its elaborate array of silver crowns and satin; but there was the nautical lamp, which suddenly threw us upon the deck of an ocean steamer, making difficult way through the waves, on whose disturbed tops her lights cast fitful and agitated gleams far ahead; there was the railway lamp, that fiery eye which announces the advent of the monster behind it, even before the growling of its centipede wheels can be heard, or which, again, hoisted at the telegraph, bids a thousand slumbering travellers pass on their way in safety; there was the bull's-eye, with its eyelid, to flash sudden upon the lurking burglar simultaneously with his feeling the iron grips of the officer of law; and there was the giant beacon for the rock or the lighthouse, prepared to fling its strong ray across miles of stormy sea. In all these varieties of lamp invention appeared to have been successfully excited: it is only in the humble, domestic, every-night light that we find either a simplicity which does not entitle the article to be called lamp at all, or a complexity which wastes half the day in preparing the light for the night. The *commodia vitæ* are not the easiest things to deal with

Our space will not permit us to do more than briefly to glance at some of the more prominent displays of lamp manufacture. The argand principle, namely, that of a ring-formed wick, which admits air within and without, is that most generally adopted. The carcel lamp is one in which the oil is raised through tubes by clockwork, so as continually to overflow at the bottom of the wick, and thus keep the wick thoroughly soaked. The camphine lamp, the third principal variety, is well known, especially as a never-tired agent in the emancipation of the black-. Camphine is very pure spirit of turpentine, obtained by the distillation of common turpentine. The lamps have a reservoir, between the supporting pillars of the burner: the spirit is contained in this reservoir, and the cotton wick dips down into it. The manufacture of brass-work for lamps is one of the most important departments of Birmingham, and Mr. Knight states that many of these lamps which are produced in London made are really made in the above town, and only put together here.

The first display of lamps which caught the eye in the English department was at the stand of Messrs. Sedgwick and Taylor, who exhibited what they termed diaphonous lamps. Some of these were chocolate, the metal being white and the glass a dead white also, had a chaste yet rich appearance, which would show to advantage on a dark and polished sideboard. Their neighbours, Messrs. Miller, of Piccadilly, had a large variety. Here were the sea-lights, as ordered by the Admiralty, illustrated by a pretty little model vessel, showing the disposition of the lamps—a bright one at the foremast, a green one on the starboard side, and a red on the port side. If another vessel saw but two of these lights, namely, the forelamp and the starboard either of the green or the red, but if she saw the three, the first vessel was coming directly down upon her. There were in the same collection some tricolor hand-lamps ingeniously constructed, and some reading lamps which reminded one of the days of green tea, wet towels, and impending examinations. Messrs. Salt and Lloyd, of Birmingham, exhibited some "Vesta" lamps, the stems or columns of which were of great beauty. Some carriage-lamps, by Messrs. Martin and Gray, of the same town, were admirable, both as regarded richness of cutting and taste in the pattern. The collection shown by Messrs. Messenger, also of Birmingham, deserved still more special notice. These gentlemen claim to have been the earliest manufacturers who called in the aid of classic art to give beauty to the works they produced, and to have enlisted the genius of Flaxman and Chantrey for that purpose. The articles in their compartment were characterized by a large and bold style, and a graceful outline. Their tripods were exceedingly fine—at once striking and elaborated. Messrs. Lowe, of Birmingham, exhibited some carriage-lamps of much merit, in which the crown formed an imposing feature. There was a variety of ornament in the carriage-lamps shown by Mr. Holden, of Birmingham, the corners of the lamps being made of coloured glass, the effect of which, with the light behind, would be rich and striking. Messrs. Blews, of London, showed some remarkably fine shades, and the domes of their tables-of-art were of exceeding beauty: they were in colours, the glass of English manufacture, and the grapes and convolvulus patterns were charmingly executed. Here, also, were ship-lamps of various kinds, and hung in that easy way so pleasingly suggestive of finding comfort on board, or in the berth, everything in the cabin and in the world going wrong and tumbling about, except that mercilessly virtuous and upright lamp which nothing disconcerted. Messrs. Bright, of London, exhibited, among other lamps, an article which we presume has been put out under the sanction of the fire assurance companies: it is a safety-lamp, for "reading in bed," and is fitted up with wires, or rather pins, for insertion, like a watch-case, into the drapery. With this, and with an admirable invention called the "Iris," which we saw in another part of the Building, and which is the cleverest kind of brass arch for holding your book, either in bed or at breakfast, a student not gifted with a taste for getting up might comfortably get through a great deal of good reading. Messrs. Bright have also some safety lamps of another kind, apparently of merit; but it appears to us that the real desideratum in the safety-lamp is a machine which, if the miner attempt to take the candle out, shall accomplish the only object he can possibly have in view, viz. his own extinguishment, but shall do so without injury to his associates. Messrs. Holliday, of Huddersfield and London, exhibited some lamps which they termed "self-generating gas lamps," of course without wicks, and which were described as burning a cheap ammoniacal liquor produced from coal. Some of these lamps were exceedingly elegant; and, so far as we could examine their principle, they appears practical and rational. We have not, however, seen the lamp in action. Some extremely beautiful carriage-lamps, by Mr. Hawkins, of Dublin, must not be passed unnoticed: they combined richness with taste. There were a number of other specimens of the varieties to which we have referred, many of them of high excellence, by other manufacturers. Among the most prominent contributions were those of Messrs. Clark, of the Strand, who exhibited all the varieties of diamond, pearl, star, and other prettily-named domestic lamps, and also some large and effective articles in coloured glass. An enormous white globe lamp, with massy metal supporters, three lambs in silver, at the three corners of the foot, excited much admiration; and, perhaps, on the whole, Messrs. Clark's display, as embracing almost every invention, was the most in conformity with the spirit of the Exhibition. Two exhibitors, whose numbers do not appear in the Catalogue, but which on their stalls were 227 and 442, showed respectively—the first, a variety of bronzed lamps of much beauty, and the second a very neat specimen of reading-lamp, very small, and a good design, in which Hercules, draped in the lion's skin, is supporting the lamp, the handles of which are the serpents he slew in his cradle.

The French display of lamps was very considerable, and among the varieties were some of exceeding taste and beauty, both as regarded form and ornament. The carcel or clockwork lamp is in very great favour with our neighbours, its admitted ingenuity having an especial attraction for the Parisians. We found this lamp everywhere in the French collection, and frequently found it mounted and shaded with still greater beauty. In the mounting ornaments of the lamp the French far excel us. The medallion-like decorations of some of these articles, the classical bronze-work of others, and alternating bright and dead metal of a third class, being each in its way perfection. In the glass-work, also, much elegance was displayed: but we do not think, that, as regarded the domes, there was anything in the French department more beautiful than the glass exhibited on our own side; and the grapes and convolvulus pattern to which we have referred certainly surpassed any article of foreign rivalry. M. Hadrot (Paris and Holborn) exhibited a meritorious lamp, to which he has given his own name, and which he also describes as a "moderator." M. Trac, of Paris, exhibited some porcelain lamps, the exquisitely delicate paintings upon which attracted much notice, in spite of the unfavourable light in which they were seen. Among the lamp ornaments of the lamp the French far excel us. The medallion-like decorations of some of these articles, the classical bronze-work of others, and alternating bright and dead metal of a third class, being each in its way perfection. In the glass-work, also, much elegance was displayed: but we do not think, that, as regarded the domes, there was anything in the French department more beautiful than the glass exhibited on our own side; and the grapes and convolvulus pattern to which we have referred certainly surpassed any article of foreign rivalry. M. Hadrot (Paris and Holborn) exhibited a meritorious lamp, to which he has given his own name, and which he also describes as a "moderator." M. Trac, of Paris, exhibited some porcelain lamps, the exquisitely delicate paintings upon which attracted much notice, in spite of the unfavourable light in which they were seen. Among the lamp ornamental adjuncts were some shades, by M. Gosselin (Paris), in which georamas and uranoramas were made at once to answer the purpose of ordinary coverings and of illuminated globes. The articles were but toys, but were well finished. Some new shades, bearing designs commemorative of the Exhibition itself, Queen Victoria receiving the homage of foreign nations, all enough caricatured to be removed from the conventional tributes with which every shop window is filled commonplace, repeated ad nauseam—were also in the Gallic. M. Gagneau (Paris) sent some very handsome bronze lamps, and some specimens of suspension lamps, the just poise and ease of raising and depressing which were meritorious. We did not, however, discover anything peculiar and startling in the principle of the French lamps, and our praise must be understood to apply to the artist-like character of their details, a matter of no small importance; for the lamp—more continually before the eye, and more incessantly attracting it than almost any other object in the range of domestic furniture—ought to present beauty of outline and tasteful ornament. We repeat, however, that much has as yet to be attained as regards bringing the domestic lamp to the desirable standard of cheapness, durability, certainty, and simplicity; and until this shall be achieved, we will not trouble our own manufacturers to dwell upon the details of external garnishing.

Other nations did not appear to have considered their lamps worthy a place among their contributions. We may remark, from experience, that the further south a traveller proceeds, the simpler becomes the form of lamp. In Greece the lamp, in point of form, is in other respects as unartificial an article as can well be conceived; and, voyaging eastward, the contrivances for illumination are very pristine. In Syria we have frequently smoked our *chibouques* long into the night, in the company of camel-drivers, and in other respects unaristocratic gentlemen, by the light of a brass lamp of the rudest construction, by whose side a black attendant crouched, alternately trimming it with scissors, and watching the bowl of his owner's pipe and that of his guest, prompt to supply tobacco or fresh embers when it might be required. Of the great men in the East, however, have learned to value, and even to understand, the Frank lamps, and we found in the Lebanon several of these, chiefly Parisian, and in actual working order. When their machinery is disarranged, *il faut le faire*, there is an end; the fatalist owner and his servants look at the machine for a few seconds, and finally remarking that Allah is great, the helpless lamp is put away, and the old contrivance, such as has been used since the days of the Israelites, reappears, until, perhaps, some wandering Christian straightens the wire or tightens the screw which had refused to be rectified by the prayers of the faithful.

"Lamps" is a subject which would have afforded scope for a series of articles, illustrative and descriptive; but our space forbids us to do more than give this brief glance at the principal features of this department in the late Exhibition.

S. B.

THE GREAT EXHIBITION.—A working man, living at a small village about four miles from Peterborough, lately resolved to gratify the curiosity excited by the marvels related by his acquaintances of the Great Exhibition. He had hitherto delayed his visit to the metropolis from having no friends or acquaintances to whom he could apply for instructions as to getting a lodging. At length he started on Saturday by the express train, and after the early excursion trains, and on his arrival at Euston-square flocked it to the Great Exhibition, where he toiled most ardently, hoping to complete his inspection in one day. In this, however, he failed, and he had only examined a portion when the closing bell rang at the usual hour. Now commenced his troubles; being alone, and without friends, mighty London was a vast desert. He was, however, not to be put down by difficulty: so, after weighing the matter, he resolved to have another day of it. He walked direct to Euston-square, and returned to Peterborough the same night; arriving at his own residence, we may suppose to-tenably fatigued, about twelve or one o'clock. At four o'clock he rose again, and started for the early train for Peterborough, and spent another most laborious day at the Exhibition: completing its inspection this time to his entire satisfaction, and returning the same evening, well satisfied with all he had seen, and bowing how much he was by making a double journey, in preference to remaining one night in London, with its risks and expenses. Only a few years ago, it took five or six days to reach London by the poor man's conveyance, the waggon. In the case we have related, the visitor found it more convenient and economical to travel some 400 miles, than remain one night a stranger in the metropolis.

TO CORRESPONDENTS.

QUESTOR—Viscount Cranley married, in 1850, Katherine-Anne, youngest daughter of Earl Brownlow. Lord Cochrane married, in 1847, Louisa, daughter of W. A. Mackinnon, Esq., M.P. Lord Leigh married, 1848, Caroline Amelia, daughter of the Marquis of Westminster. Lord Nass married, in 1845, Louise-Julia, third daughter of Colonel George Wombwell, of Newcastle. Lord Crawford is married to Lucy, daughter of the late William Carr, Esq., of Forglen.

H. H. is perfectly right. Manchester at present has no title whatever to be called a city; it is a borough merely. Nothing can make it a city but a special charter or grant from the Crown, or an Act of Parliament.

H. R.—The arms are—Arg. on a fesse gu. between three mullets of the last, as many annulets of the first. *Crest:* A demi lion holding an annulet between his paws.

AN SUBSCRIBER—Manchester is not a city. We were in error in calling it such

ERNON, Manchester—Smith, of Craigend, bears for *Arms:* "Gu. a chev. ern. between two crescents in chief and a garb in base, with a bordure engr. or. *Crest:* An eagle's head erased, gorged with a ducal coronet ppr. *Motto:* Mascu "

T L—A crowd cannot be assumed in the case submitted

A SUFFOLK SUBSCRIBER—*Arms* of Dallinger, "Erm. a cross engr. gu."

H. J.—*Arms* of Masson: Arg. on a cross engr. sa., five garbs or. *Crest:* A unicorn sejant or, resting the dexter paw against a tree vert."

T L E—The Chief Clerk, Will Office, Prerogative Court, Doctors' Commons

A H C—Members of Bell's Life in London.

A SUBSCRIBER—A family of Morris, in Wales, bears for *Arms:* "Sa. a lion passant between three scaling-ladders arg"

A H C—"Debrett's Baronetage" has long since been discontinued in its annual issue

DE PLUME—A Writership in the East India Company's service is obtainable through the interest of a director

W H. Swynerton—A copy of a grant of arms registered at the Heralds' Office could be obtained at a small expense. You could not use, legally, the crest of your mother's family

The name of Sackville might be fairly assumed

S[illegible]X—Mr Gage Hokeswode's history of one portion of Suffolk is an able work. Mr Suckling's, too, is valuable and interesting

ARMIGER—Price, of Barton Regis, county of Gloucester, bears, "Arg. a cross between four pheons sa. *Crest:* Out of a mural coronet, a demi lion issuing"

J G—The best brief treatise on Heraldry generally is that prefixed to Burke's Heraldic Registrar." Guillim's is the oldest and fullest, for a minute knowledge of the science

NEW BOOKS &c.

THE NATIONAL ILLUSTRATED LIBRARY

Now ready, Fourth and concluding Volume of BOSWELL'S LIFE of JOHNSON, profusely illustrated with Wood-cuts, and handsomely bound in cloth, and gilt. Price 2s 6d.

In consequence of the extensive demands for Volumes 1, 2, and 3 of this popular series, a large edition has been already exhausted; but it is respectfully announced to subscribers and the trade, that a reprint of the whole work will be ready with the magazines on the 30th inst.

The following Volumes of the series have already been published, price 2s 6d each, handsomely bound, and copiously illustrated with Wood-cut engravings by the most eminent artists:

THE MORMONS: a Contemporary History.
THE BOOK of ENGLISH SONGS.
THE ORBS of HEAVEN; or, The Planetary and Stellar Worlds.
By D. O. MITCHELL, M.A.

Nearly ready
A WOMAN'S JOURNEY ROUND the WORLD. Translated from the German of Madame PFEIFFER. In one Volume. Price 2s 6d. copiously illustrated.

several other Volumes, original and selected, are in preparation, including Hue's Travels in China, Tartary, and Thibet, Mackay's Memoirs of Extraordinary Popular Delusions.

London: Office of the NATIONAL ILLUSTRATED LIBRARY, 196 and 197, Strand; and to be had of all Booksellers.

TUPPER'S PROVERBIAL PHILOSOPHY
Just published, Eleventh Edition, fcap., cloth, price 7s.

PROVERBIAL PHILOSOPHY: a Book of Thoughts and Arguments, Originally Treated of By MARTIN F. TUPPER, D.C.L., F.R.S., &c. of Christ Church, Oxford.

Also, by the same Author,
PROBABILITIES: an Aid to Faith. Second Edition, with Notes. Fcap. cloth, 4s.
London: T. HATCHARD, 187, Piccadilly, and all booksellers.

Now ready, in 3 vols, foolscap 8vo,
BOLE PONJIS: containing the Tale of the Good Red Knight, the Decline and Fall of Ghosts, and other ingredients. By HENRY MERRDITH PARKER, Bengal Civil Service.

Also, nearly ready, in 1 vol, 8vo,
A CATECHISM and HAND-BOOK on Regimental Standing Orders, adapted for the use of Junior Officers of the Army. By Captain WALSHE, of the 87th Fusiliers.
W. THACKER and Co., 87, Newgate-Street.

This day is published, in fcap 8vo, price 3s 6d bound,
OLYMPUS and its INHABITANTS; a Narrative Sketch of the Classics. Mythology. With an Appendix containing a Survey of the Egyptian Mythology in its relation to the Classical. and a brief Account of the different names and attributes of the Dionysius, Dumigods, and Heroes. For the use of Schools and Private Students. By AGNES SMITH. Edited by JOHN CARMICHAEL, M.A., one of the Classical Masters of the High School of Edinburgh.
Edinburgh: OLIVER and BOYD. London: SIMPKIN, MARSHALL, and Co.

NEW HISTORY OF THE POPES.
In 8vo, price 9s 6d,
THE POPES: an Historical Summary, from [illegible] to the Present Time. By JAMES STANILEY, Author of "Ecclesiastical Antiquities, and illustrated with numerous NOTES. By G A F WILKS, M.D.
RIVINGTONS, St Paul's Churchyard, and Waterloo-place.

THE BRITISH NOBILITY
In a handsome volume, price 5s,
FORSTER'S POCKET PEERAGE of GREAT BRITAIN and IRELAND; with a Baronetage of the United Kingdom, and a List of the Members of the Imperial Parliament. Tithe, &c. By HENRY HUMSEY FORSTER, of the "Morning Post."

Not inferior to the best of the Leviathans in information, is as easy of reference, portable and cheap."—Globe.
DAVID BOGUE, Fleet-street.

NEW WORK BY PROFESSOR EADIE, D.D, LL.D,
In One Volume, crown 8vo, price 6s. cloth,
EARLY ORIENTAL HISTORY; comprising the HISTORIES of EGYPT, ASSYRIA, PERSIA, PHRYGIA, and PHŒNICIA. By JOHN EADIE, D.D., LL.D., Professor of Biblical Literature to the United Presbyterian Church. With numerous Illustrations from the Ancient Monuments, Drawings by Bonomi, Vol. XVIII. of the new edition of the "Encyclopædia Metropolitana."
London and Glasgow: GRIFFIN and Co.

THE GREAT EXHIBITION PRIZE ESSAY.
By the Rev. J. C. WHISH, M.A. "It is full of noble thoughts, the product of extensive and critical Learning."—Patriot. "It has all the qualities of a genuine eloquence."
London: LONGMAN, BROWN, GREEN, and LONGMAN.
A Cheap Edition, price 1s, for general distribution, may be had on a written application to the Rev Dr Emerson, Hanwell College Middlesex.

Now publishing, with 36 Illustrations (price 1s 6d), a re-issue of
Vol. I. of
LONDON LABOUR and the LONDON POOR. A Cyclopædia of the Condition and Earnings of (1) Those that will work; (2) Those that cannot work; and (3) Those that will not work. By HENRY MAYHEW.
Office, 16, Upper Wellington-street, Strand.

Now ready, with Illustrations (price 1d.), Part X. of
LONDON LABOUR and the LONDON POOR. Commencing the Series of "Those that will not work."
By HENRY MAYHEW.
Office, 16, Upper Wellington-street, Strand.

On the First of November will be published, price 8s. 6d.,
PUNCH'S POCKET-BOOK FOR 1852.
Containing PUNCH'S ALMANACK, with Engravings, by JOHN LEECH and JOHN TENNIEL, and numerous Woodcuts by JOHN LEECH and JOHN TENNIEL.
PUNCH OFFICE, 85, Fleet-street.

PUNCH'S RECORDS of the GREAT EXHIBITION, containing FIFTY ILLUSTRATIONS, and the size of the "Times" Newspaper, is now on Sale, price Sixpence.
Office, 85, Fleet-street, and sold by all Newsmen and at all Railway Stations.

ZADKIEL'S ALMANAC for 1852.—Twenty-second Year. Thirtieth Thousand.—Fate of France! Fate of Ireland! The Magic Crystal!—Gigantic Visions. Great Eclipse of the Sun! Its Wonderful Effects! Pope Pio Nono feels them, as do Italy and Rome.—Published by A. HALL and Co., Paternoster-row. Price 6d., and post-free, 10d.

Just published, price 1s, post free,
KINESIPATHY; or, the Cure of Chronic Diseases by Medical Gymnastics. Briefly Explained by HUGH DEVEREUX, Rheumatism, Gout, Stiff Joints, Tumours, Deviation of the Spine, Sciatica or Fiery Gout, Lumbago, Deafness, Diseases of the Skin, Internal Weaknesses, Mercurial Disease, Dyspepsia, Asthma, Incipient Consumption, Wasting, Nervousness, Hypochondria, Epilepsy, Spasms, Hysteria, Palpitations and Habitual Headache, are safely cured by therapeutic Exercises.—6, Great Marlborough-street, where Mr Doherty may be consulted personally, or by letter.

Fourth Edition, enlarged, 8vo cloth, 8s 6d, by post 9s,
SALT, the FORBIDDEN FRUIT, or FOOD, and the CHIEF CAUSE of DISEASES of the Body and Mind of Man and of Animals: a truly taught by the Wise Men of Egypt, and by Pythagoras, Moses, Daniel, and Christ. The Pillar of Salt explained, showing that Salt is a Human Excretion, and a Product of Dead Bodies; not wise, therefore, but the most abhorrent in Ancient Egypt; and that, under early abstinence from Salt, a new race of Wise Men and Women will arise, of Transcendent Beauty, as of old. "Well worthy of attention: we doubt not that Dr Howard will make a great many converts."—Medico-Chirurgical Review. "Of extreme worth, interest and importance."—Asiatic Journal. "Worthy of immortality."—Lancet.
HOWARD and Co., Paternoster-row; price 2s, free for 36 stamps, of the Author, HOBART HOWARD, M.D., 6, Upper Gloucester-street, Dorset-square, London.

NEW BOOKS FOR OCTOBER.
COLBURN & CO.'S NEW WORKS.
To be had of all Booksellers.

I.
TRAVELS in EUROPEAN TURKEY in 1850, through Bosnia, Servia, Bulgaria, Macedonia, Roumelia, Albania, and Epirus, with a Visit to Greece and the Ionian Islands, and a Homeward Tour through Hungary and the Scavonian Provinces of Austria and the Lower Danube. By the adventurer. Esq. Author of "Travels in Circassia," &c. 2 vols. 8vo, with an Original Map and Illustrations.

II.
THE SULTAN and the BLUE and WHITE NILE. By GEORGE MELLY, Esq. 2 vols., with Map and Illustrations, 21s.

III.
SPAIN AS IT IS. By C. A. HOSKINS, Esq., Author of "Travels in Ethiopia," &c. 2 vols, with Illustrations, 21s.
"Mr Hoskins is a pleasant companion and a very useful guide. He has evidently taken great pains to obtain authentic information for his works of art, interesting historical associations, and exquisite scenery, and he does justice to them all."—Morning Post.

THE NEW NOVELS.

MRS. MATHEWS; or, Family Mysteries. By Mrs. TROLLOPE. 3 vols.
"A production unique in character, and of singular merit. This interesting story displays a remarkable knowledge of life and society, and unites with great variety and facility in the conception of character, greater freshness, energy, and minuteness of delineation, than any other of Mrs. Trollope's novels."—Morning Post.

II.
CECILY; or, the Pervert. By the Author of "Rockingham." 1 vol.

III
THE LIVINGSTONES; a Story of Real Life. 3 vols.
Also just ready, in 3 vols.
RAVENSCLIFFE: a New Novel, by the Author of "Emilia Wyndham," &c.
COLBURN and Co., Publishers, 13, Great Marlborough-street.

SPOONER'S VETERINARY ART.
In crown 8vo, with 50 Engravings, 3s,
VETERINARY ART: a Practical Treatise on Diseases of the Horse By W C SPOONER, Esq; forming Vol 17 of the "Encyclopædia Metropolitana."
GRIFFIN and Co, London and Glasgow

WOOD ENGRAVING.—An APPRENTICE WANTED. Apply to W. H. ASKE, 19, Barkham-terrace, St. George's-fields, Southwark.

LIBRAIRIE ETRANGERE.—LOCATION de 1,000 VERS ETRANGERES.—Plus de 25,000 volumes de Littérature anciennes et modernes, Français, Allemands, Italiens et Espagnols, Assortiment, par an £1 1s 6d; 2d série, 16s 6d; trois mois, 8s; un mois, 3s 6d; séparément, 3d par volume. Catalogues gratis. Salle spéciale pour Français, Allemands, Italiens et Espagnol, — ROLANDI, Libraire et Bibliothécaire étranger, Berners-street, Oxford-street.

THE NEW VELVET BRACELETS, in Colours and Black, with Fancy Steel Buckles. Sent free by post, on receipt of stamps to the amounts, in 3s. 6d, 2s, 2s 6d; Wide Velvet, 3s, 3s 6d, 4s, 5s, 6s, 7s, 8s, 9s, 10s, 11s, 12s. ROBERTS, 101, Borough, London.

WALKING, EVENING, and WEDDING DRESSES, FAMILY MOURNING, &c.
Silk Mercers, &c, 243, Regent-street)
beg to announce that their new Autumn and Winter Silks, Velvets, French Merinos, Embroidered Cashmeres, and Cloth Dresses, Shawls, Mantles, Lace, &c. are now ready for inspection, and that they will forward patterns of any description of Dress to any part of the Kingdom or Colonies. Fine French Merinos, from 12s 6d; all the new Silks, from 2s 3d to 4s 6d per yard.
Address to KING and Co. Regent-street. London.

THE LADIES' WINTER POLKA JACKET for riding or driving, made of stout warm beaver cloth, colours dark brown and black, price Two Guineas. Nothing can exceed this Jacket for comfort and appearance in cold weather. It fits the figure perfectly, and for riding should be worn instead of a habit body. W. FORD also recommends with the above his strong double-milled Winter Cloth Habit Skirts for riding and hunting purposes. A drawing of the jacket, pattern of material, and directions for self-measurement, sent per post, or sheet on approbation. W. FORD, Habit-maker to Her Majesty, 7, Hanover-terrace, Carendish-square, London.

RICHARD ATKINSON and CO., IRISH POPLIN MANUFACTURERS to the QUEEN, her Royal Highness the Duchess of Kent, his Excellency the Lord-Lieutenant, &c.—Although they have found it impossible to equalize the nobility and country of Great Britain, that they transmit PATTERNS for inspection per post free, and any Poplin orders are sent free of expense to London, Paris, Brussels, Berlin, Vienna, Petersburg, or Glasgow; from whence they are forwarded as addressed without any delay, and at the rate of duties and charges.
50, Upper Sackville-street, Dublin.

WATCHES and CHAINS.—GEORGE ROBERTS, CORDING offers a large assortment of first quality at lowest prices. Silver Watches, 2 to 20 gs.; in hunting cases 23 to. Detached lever ditto, four, five, and six holes. Jewelled elegant Gold Lever Watches at 4, 5, 6, 7, 8, 9, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82, 84, 86, 88,

DISTINGUISHED JURORS AND CELEBRITIES OF THE GREAT EXHIBITION.

(FROM DAGUERREOTYPES BY CLAUDET.)

HIS EXCELLENCY M. CONSTANTINE MUSURUS, ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY FOR TURKEY.

J. DUMAS, CHAIRMAN OF JURY II., FORMER MINISTER OF AGRICULTURE AND COMMERCE, MEMBER OF INSTITUTE, ETC.

E. EBELMEN, DIRECTOR OF THE NATIONAL MANUFACTURE OF SEVRES, JUROR OF CLASS XXV.

M. A. PAYEN, DEPUTY CHAIRMAN OF JURY IV., MEMBER OF INSTITUTE, PROFESSOR OF MUSEUM OF ARTS AND SCIENCES.

M. BALARD, MEMBER OF THE FRENCH INSTITUTE JUROR IN CLASS XXVIII.

SIGNOR RAFFAELLE MONTI, SCULPTOR, MILAN.

COLONEL PETER HAWKER.

M. WOLOWSKI, PROFESSOR OF THE MUSEUM OF ARTS AND SCIENCES MEMBER OF THE LEGISLATIVE ASSEMBLY, DEPUTY-CHAIRMAN OF JURY XXIX.

M. EUGENE PELIGOT, PROFESSOR AT THE MUSEUM OF ARTS AND SCIENCES, MEMBER OF THE JURY ON GLASS.

KOSSUTH IN ENGLAND.

THE demonstrations of the English people in favour of the cause of Hungarian independence are still continued, and promise to become both remarkable and important. M. Kossuth is growing in favour. The ill-judging journalists who ostentatiously boasted of expressing the public sentiment, when they classed the Hungarian patriot along with the Red Republicans and Communists of the Parisian *carrefours*, have tardily seen their mistake, and, although they continue to carp and cavil at M. Kossuth, they have lowered their tone, preparatory, it is to be supposed, to that complete adhesion to the Hungarian cause which they conceive to be the more popular course. M. Kossuth himself is rapidly justifying, by his speeches, the enthusiasm which his name has excited; and proving in himself the possession of talents as great as his patriotism. He has caught the English manner in landing on the English shore; and, avoiding the dangerous topics into which, in a moment of not unnatural irritation and disappointment, he suffered himself to be betrayed when he lay on shipboard before Marseilles, he has addressed himself to the English understanding as well as to the English heart in words of eloquence and power, yet of calmness and reason, which will carry consternation to the councils of Prince Schwartzenberg. His speech at Winchester is the most forcible and the most elaborate he has yet made, and is alike a vindication of himself and of his country—clear, positive, and convincing. It will be carried by means of the English press to every corner of Europe, in spite of the censorship of Austria and Italy to prevent its dissemination; and, in conjunction with the opinions expressed throughout England upon the subject, will, if we may use a homely English proverb in illustration, "drive a nail" into the coffin of Austrian oppression, and teach the Emperor that not even the potent armies of Russia can effectually support him, if the public feeling of Europe and of his own dominions is alike against him.

We have more than once taken occasion to observe in this Journal, that the Liberal party in Hungary and in Italy have few objects in connexion with the extreme Republican and Ultra-Revolutionary party in France and Germany. The Hungarians and the Italians have more imperative and vital work before them than the zealots of revolution, and the clamorous barricaders of Paris and elsewhere. They struggle for the first rights of humanity. They insist upon freedom from the oppressive yoke of foreign Governments, imposed upon them against their will, and which use their power in the harshest and most arbitrary manner. The extreme Republicans of France and Germany are willing to convulse, and have convulsed, society, for a barren principle; and but too often, in their rabid fanaticism, have thrown away the rational and sober liberty which they might have enjoyed under a constitutional Monarchy, and have accepted in exchange a mob tyranny, to be succeeded by the still more stringent military despotism which is inevitably its result. Not so the Hungarians and the Italians. Their objects are widely different. They struggle to *be*—and the good wishes of all civilised nations will support them—independently of all considerations that may flow from the form of government that may ultimately be the consequence. The prediction of their destinies, which was chanted long before the explosions of February, 1848, still remains with a strong probability of fulfilment:—

> Hungary,
> Ermined and crowned, *shall sit in her own seat*
> In peaceful state and sober majesty,
> And Italy, unloosening her bonds,
> By her strong will shall be at last the home
> Of broadly-based and virtuous liberty.

We shall not attempt to run through or comment upon the various topics introduced by M. Kossuth in the excellent speeches

RECEPTION OF KOSSUTH, ON BOARD THE "MADRID" STEAMER, AT SOUTHAMPTON.—(SEE PAGE 544.)

which he has delivered since his arrival in this country; but, at the dinner given to him by the Mayor and Corporation of Southampton, he mentioned one subject of a personal nature, in which, we think, he merits, and will receive, the support of the great bulk of the press, against the minority who misrepresent it. Any man who appears on the great stage of the world as a reformer must be converted to be the target at which the arrows of calumny will be discharged; and must resign himself to see his acts misconstructed, his motives misrepresented, and his public character maligned. If in the course of his life he have committed any fault, error, or mistake, he must expect to have it exhumed from the natural oblivion into which it would otherwise have fallen, and to have it reproduced before the world in a distorted and exaggerated shape. If he be not pure as an angel of light, he must expect to have all his failings observed and noted, with ill-natured comments. If, on the contrary, he *be* pure as an angel - if he be the "faultless monster whom the world ne'er saw," the invention of his enemies or opponents will discover crimes in him sufficient to drag him down to the common level of humanity, or beneath it. All this is to be expected. It is the fate of every great man who aspires to work any important social, political, or religious changes. No one can escape it. Let M. Kossuth, in this respect, bear his burden with a patient spirit, and trust to the wise and good of his own time, and to all posterity, bad as well as good, to do him justice when he is in the tomb. He need not trouble himself to bring down the avenging arm of the law against those who would injure his public usefulness by attacking his private life, not as they imagine it is, but as it was or may have been in past times. The public opinion of England is clear-sighted enough to see through the motives of such attacks, and powerful enough to render them of no avail. At the same time it is as well that those who consider they may attack the private reputation of public men with impunity should be reminded occasionally that in this country, at least, there is a remedy for libel.

In conclusion, we think that M. Kossuth, in coming to England, has done well to dissociate his name and efforts from those of the political malcontents of other countries. He has but one task—the independence of Hungary—and has no call to interfere with the domestic politics of any country which may either refuse or accord him hospitality. In stating once for all that he will not be made the instrument of any section of democrats, and that the only public invitations which he will accept during his stay amongst us will be from municipal bodies, that are supposed to be non-political, he has, we think, taken a course not only the most respectful to the English people, and the most dignified in itself, but the one which will most potently serve the cause of his country.

LORD PALMERSTON ON THE DOMESTIC POLICY OF NAPLES.

The following correspondence between the Prince Castelcicala and Lord Palmerston, relative to the communication, officially, by the former to the Foreign Office of a pamphlet published in London in reply to Mr. Gladstone's letters to the Earl of Aberdeen, has only recently been made known to diplomatic circles:—

PRINCE CASTELCICALA TO VISCOUNT PALMERSTON.

15, Princes-street, Cavendish-square, August 9.

My Lord,—In a report which appeared in the *Times* paper of yesterday of the sitting of the House of Commons, I have read that your Excellency, in answer to a question put by Sir De Lacy Evans, re ative to some publications of Mr. Gladstone against the government of the king my august master, said that you considered it your duty to send copies of the same to the British Ministers at the various Courts of Europe; and since a reply to the said publication, grounded upon substantial documents, has recently made its appearance, I have the honour to send 15 copies to your Excellency, and, therefore, request your Excellency will take precisely the same means for their distribution as you have done for those of Mr Gladstone

The known maxim, "*Audi alteram partem*," the courtesy of your Excellency, and, in the present conjuncture, what is better, your justice, all lead me to hope that your Excellency will not find my request indiscreet.

CASTELCICALA.

VISCOUNT PALMERSTON TO PRINCE CASTELCICALA.

Foreign Office, Aug. 18.

Prince,—I have had the honour to receive your letter of the 9th inst. inclosing a copy of a pamphlet entitled "The Neapolitan Government and Mr. Gladstone," and requesting that copies of that pamphlet may be forwarded to her Majesty's Ministers at the several European Courts. I have to inform you in reply that I must decline being accessory to the circulation of a pamphlet which, in my opinion, does no credit to its writer or the Government which he defends, or to the political party of which he professes to be the champion.

I should never have taken the liberty of addressing you on the subject of Mr. Gladstone's pamphlet, if you had not by your letter of the 9th inst. rendered it necessary for me to do so; and I can assure you that it is not without pain and reluctance that I state to you my opinion in regard to those pamphlets and to the matters of which they treat; but I feel that silence on my part, after the receipt of your communication of the 9th, would expose me to misrepresentation. I feel myself, therefore, compelled to say that Mr. Gladstone's letters to Lord Aberdeen present an afflicting picture of a system of illegality, injustice, and cruelty practised by the officers and agents of the Government in the kingdom of Naples, such as might have been supposed not to have existed in any European country in the present day; and the information which has been received upon these matters from many other sources leads, unfortunately, to the conclusion that Mr. Gladstone by no means overstated the various evils which he describes, but that Mr. Gladstone's letters were evidently written and published, not, as the pamphlet which you send me insinuates, in a spirit of hostility to the King of Naples, or with feelings adverse to the Parliamentary and Monarchical constitution which his Sicilian Majesty has granted to his subjects, and has confirmed by his Royal oath. Mr. Gladstone's object seems, on the contrary, to have been the friendly purpose of drawing public attention to, and of directing the force of public opinion upon, abuses which, if allowed to continue, must necessarily sap the foundations of the Neapolitan monarchy, and prepare the way for those violent revolutions which the resentments produced by a deep sense of long-continued and wide-spread injustice are sure sooner or later to produce. It might have been hoped that the Neapolitan Government would have received those letters in the spirit in which they manifestly were written, and would have set to work earnestly and effectually to correct those manifold and grave abuses to which their attention has thus been drawn. It is obvious that, by such a course, the Neapolitan Government would do more to frustrate the designs of revolutionists, and to strengthen the monarchical institutions of their country, than could be effected by the most rigorous proceedings of the most vigilant Ministers of Police. But the Government of Naples will be much mistaken if it imagines that a pamphlet consisting of a flimsy tissue of bare assertions and reckless denials, mixed up with coarse ribaldry and commonplace abuse of public men and political parties, will accomplish any useful purpose or render any real service to the Government on whose behalf it appears to have been written. And I must take leave to observe that there are admissions, direct and indirect, in Mr M'Farlane's pamphlet, which go far to establish the conclusions which he professes an intention to overthrow.

PALMERSTON.

IMPROVEMENTS IN LIGHTHOUSES.—A plan of much importance to commercial interests has been put forward by Mr. George Wells, of the Admiralty, for giving a telegraphic character to our various lighthouses. The evils of the existing lighthouses are alleged to be:—"1. Their unnecessary elevation, which gives them the appearance of being at a greater distance than they really are. 2. In giving coloured lights to some, which in worse than ordinary days, hazy or foggy weather the density of the atmosphere creates such an optical illusion as completely to vary all descriptions of colour, and consequently to lead the seaman to hesitancy, and frequently to error and destruction. 3. The general inefficiency of the light, and its similarity in appearance, which not unfrequently misleads the mariner as to the actual locality of the lighthouse and the course of his ship, as was evidenced, amongst many other instances, in the disaster that befell the *Great Britain*, though under the guidance of a most experienced sailor." And the following is the remedy proposed:—"The process is to change each the existing lighthouse is exceedingly simple, and the expense of it comparatively trifling, bearing in mind the security it would insure, being no more than the cutting of four or more peculiar apertures in all the present structures, just below the lantern, and fitting the openings with glazed sashes of ground plate glass, painted so as to leave the initial of the particular lighthouse bold and distinct. The length of the latter being three times the size of the light of the lantern would be more clearly visible, and leave no doubt as to what the lighthouse is, and where situated. "'Tis the few moments lost in thinking what lighthouse it is that allows the ship to be drawn by wind or current upon the iron-bound rock, where all are lost.' The alteration is suggested for the existing lighthouses; but where it might be necessary to construct new ones, it would be better they should not be carried to the present altitude, as the nearer the light is level to the eye, the less probability would exist as to any mistake in the distance of it."

FOREIGN AND COLONIAL NEWS.

PARISIANA.

(From our own Correspondent.)

PARIS, THURSDAY, Oct 30.

The Cabinet has, at length, been reconstructed. Most of the gentlemen named are favourably known for their attachment to the cause of order. It is understood that the President of the Republic found it necessary, in consequence of the general alarm created by the reports of his being about to abandon the Conservative policy he had hitherto acted upon, to declare, in a semi-official manner, that all rumours abroad to this effect were totally unfounded; this *eclaircissement* took place at St Cloud a few days ago, in the presence of some of the foreign ministers and others, who thought it necessary to seek explanations on the subject. The reply of Louis Napoleon, which is said to have been delivered with an unwonted energy for him, was, that, "Come what would, whether as head of the Republic, or fighting in its ranks, he would ever be found the defender of order and propriety against anarchy and Socialism." This declaration, since confirmed by the nominations in the *Moniteur*, has done much to reassure the public mind. The Ministry was organised on Tuesday; but the details were not finally settled until past one in the morning, when the list was drawn up, and at that late hour despatched to the *Ministère de l'Interieur*, whence all official insertions are sent to the *Moniteur*. Our *mauvais plaisants* have not failed to discover in this incident the subject for a joke which is heartily laughed at: it is a caricature representing poor Léon Faucher in his shirt, called up at two in the morning, to transmit the names of the new Ministers to the official journal, thus turning himself and his friends out of office with his own hands. The droll expression of despondency upon the not over-handsome features of the ex-Minister is something *inpayable!*

The Faubourg St Germain, the great stronghold of Legitimacy, has placed itself in mourning for six months in consequence of the death of her Royal Highness the Duchess of Angoulême.

Our musical season as yet moves a little languidly—in fact, it never begins, as earliest, before the middle of November. In the meantime the *loges* for the Italian Opera are in such request that a good one is not now to be had for the season. We have had "Linda" for the *début* of Mdlle. Corbari; but her performance, though commendable, was not commensurate with the expectations of the *habitues*, who had so much admired her in *Adalgisa*, and other characters of a similar kind. Calzolari was our *Edgardo*, and, though unwilling in force for the more dramatic passages, sang the other parts with a tenderness and a beauty of tone which won him golden opinions. Mr. Lumley has secured a treasure in Herr Hiller, his new musical director; nothing can be more satisfactory than the general execution of the orchestra and choruses. "Fidelio" is in active rehearsal, and promises, under the fastidious vigilance of this eminent *maestro*, to be a mirably performed. Mdlle. Cruvelli will make her first appearance for the season in this opera. Madame Barbieri-Nini gains upon the public at every hearing. The power of this great singer lies in the perfection of her style, combining with the elegance and softened grace of the beautiful old Italian school a something of the boldness an effective energy of the Verdian mode, which is not without its charm, let your London critics write as they will.

The newly-opened musical theatre, the Opera National, produced its second novelty a few nights ago. It is a little one-act affair, under the startling title of "Murdock le Bandit." The subject, a little too farcical, is just out out for the meridian of your Adelphi. The music is considerably higher, containing several pretty and well-performed motives: a roudo for the soprano is particularly noticeable for the freshness and beauty of its melody, and the quaint originality of the orchestration; this is the striking *morceau*. Generally, the composer, M. Gautier, exhibits the gift of an excellent memory, which accounts for our meeting snatches of Rossini, Donizetti, &c., more frequently than can be considered desirable. This little work is, however, one of real promise. Mdlle. Mendez, a charming young soprano, sang the principal part with ease and intelligence. She was immensely plaudied, and we trust soon to find her transferred to a region less remote than the Boulevard du Temple. As a proof of the unfitness of these distant latitudes for musical entertainments, I may mention that the new theatre, or concert-room, which was built and opened a few months since, the Salle Barthielemy, constructed to accommodate 4000 spectators—in perfect conformity with the science of acoustics, and, in fine, with every improvement which modern invention could suggest—is already advertised to be sold for the *ground rent!* The sale is to take place on the 12th of next month.

At the Français, M. Scribe's 306th (!) comedy is in preparation; *en attendant* we have had this week a little act, 'Les Derniers Adieux." A lady and gentleman, formerly lovers, after a six years' separation, accidentally meet at the hotel during the summer quarter ending Sept. 30, 1851; and the marriages in more than 12,000 churches or chapels, about 3190 registered places of worship unconnected with the Established Church, and 623 superintendent registrars' offices, in the quarter that ended June 30, 1851

The return of marriages is not complete; but the defects are inconsiderable, and approximate numbers have been supplied from the records of previous years. The marriages are assumed to 30,644 in the spring quarter of 1851; they rose to 34,268 in the spring quarter of 1844; to 37,111 in the spring quarter of 1847, decreased to 35,197 in 1847; and rose again to 39,018 in the spring quarter of 1851. Every marriage is the act of establishment of a family, and is generally the result of some deliberation: it is not surprising, therefore, that the prosperity of the country and the prospects of the people should be expressed pretty accurately by the fluctuations in the marriage returns.

While the marriages increased nearly 14 per cent in some parts, th y were stationary or decreased in others. In London 6515 couples were married; which exceeds the number married in the summer of 1848 by 1106.

It has been observed that the marriages increase after a fatal epidemic; and according to the present return the marriages have been in excess generally where cholera was most fatal in 1849.

BIRTHS.

150,584 births have been registered in the quarter ending September 30th, 1851. This is the greatest number of births ever registered in the same season of the year, and exceeds by 2141 and 15,361, and 3014, the births in the September quarter of 1847, 1848, and 1849. In the last 39 months 467,686 children have already been registered, and it is probable that in the year the numbers will not fall short of 600,000. The increase is distributed over all the divisions of the country except the South Midland and

DEATHS.—SANITARY STATE OF THE POPULATION.

While 150,584 children were born and registered in the summer quarter, 91,660 persons died; leaving an excess of 58,924 in the population. The excess of births over deaths in the first three months of the present year has been 170,411, which is probably more than equivalent to the actual increase of the population.

85,063 emigrants left the ports of the United Kingdom at which there are Government emigration offices, in the quarter ending September 30th, 1851. This is at the rate of 930 a day, 6510 a week. 13,963 sailed from Irish ports, 4378 from Glasgow and Greenock, and 67,262 from three English ports; namely, 10,052 from London, 2799 from Plymouth, and 54,401 from Liverpool. Many of the Irish emigrants are returned at Liverpool. Of the total number, 68,960 emigrants sailed to the United States, 9268 to British North America, 6097 to the Australian colonies, and 1578 to other places. The emigration has hitherto been greater in 1851 than it was in the corresponding quarters of 1850.

The health of the different parts of the country differs widely, and the difference is the greatest in summer. In the ten summer quarters of 1841-50 the mortality in 505 districts, comprising, when the census was taken, 10,136,896 people, was at the rate of 18·15 in 1000 annually; while in 117 districts, containing their towns and 7,721,979 people, the mortality was at the rate of 25 in 1000 annually. Thus, at least 7 in every 25 deaths which occur in towns are the result of artificial causes. The mortality in the quarter ending September, 1851, was at the rate of 23 and 17·93 in 1000 in the two groups of districts; it was a little below the average in the country, and considerably below the average in the towns. The annual rate of mortality per cent. in all England was, on the average of 10 summers, 2·099; in the summer quarter of 1851, it was 2·040.

London has enjoyed a degree of health above the average in the last summer quarter. 13,054 deaths were registered, which was a less number than was registered in the summer quarters of 1847 and 1848, and half the number (21,172) registered in the summer quarter of 1849, when cholera was epidemic.

Notwithstanding the severe measures taken by the French authorities, malefactors and discharged prisoners continue to make Paris their headquarters. Having learned at the beginning of last week that a number of most dangerous malefactors were residing in the capital and the suburbs, detachments of secret police were employed to arrest them, and on Saturday nineteen of them were captured. Amongst them are eight liberated convicts or prisoners, four men condemned by default, a female, a German—the latter under a decree of extradition.

FRANCE.

The Ministerial crisis has been at length terminated, and the new Cabinet installed in office. Its members are men of comparative obscurity, and therefore not likely to command confidence in political circles; and it is consequently considered probable that they will not hold their portfolios for any length of time. The following are the names and offices of the new Ministers respectively:

Justice: M. Corbin, Procureur-General of the Court of Appeal in Bourges, in the room of M Rouher. Foreign Affairs: M. Turgot, ex-peer of France, in the room of M Baroche. Public Instruction and Worship: M. Charles Giraud, member of the Institute, in the room of M. Dumbionau de Coincidnes. Interior: M Tiburce de Thorigny, formerly Advocate General of the Court of Appeal at Paris, in the room of M. Léon Faucher. Agriculture and Commerce: M. Xavier de Casabianca, representative of the people, in the room of M. Buffet. Public Works: M. Lacrosse, Member and Vice-President of the National Assembly, in the room of M. Magne. War: General de Division Le Roy de St. Arnaud, Commander of the Second Division of the Army of Paris, in the room of General Randon. Marine: M. Hippolyte Fortoul, in the room of M de Chasseloup Laubat. Finances: M. Blondel, Inspector-General of Finance, in the room of M. Achille Fould. M. De Maupas, Prefect of the Haute Garonne, is appointed Prefect of Police, in room of M. Carlier

According to the *Constitutionnel* the forthcoming message of the President of the Republic will recommend an appeal to the country at once upon the subject of the Presidency, as the natural and foreign arbitrator between the National Assembly, which refuses revision, and the 2,600,000 petitioners, with the 80 General Councils, which demand it. To wait till 1852, it is contended, is only to prolong disquietude and uncertainty, with all their attendant evils; and as the wishes of the country will then be distinctly expressed, the Legislative Assembly will be able to amend the constitution in conformity therewith.

On the other hand, the *Patrie*, wh ch is also a Government organ, contradicts this statement of the *Constitutionnel*, notwithstanding which considerable belief is attached to the article in the first-named journal, because of its close connexion with the Elysée. and the general dependence that is to be placed upon its demi-official announcements.

M. de Maupas, the new Prefect of Police, has issued his first proclamation to the inhabitants of Paris, assuring them that his utmost endeavour shall be employed in maintaining public order and tranquillity, as the only foundations upon which the happiness and prosperity of the people can with safety repose—and solicits their co-operation in carrying out the great objects he has in view.

The President of the Republic has approved of a decree by the ex-Minister of the Interior, M. Léon Faucher, dated October 12, by which it is decreed, in order to remove the complaints made of the immoral and dangerous political tendency, and the literary imperfection, of a great number of theatrical pieces, that the following prizes shall be annually given:—

A sum of 5000 francs to the author of a successful dramatic work in four or five acts, in prose or verse, represented at the Théâtre Français, and which shall be moral in character and brilliant in execution. A sum of 3000 francs to a piece of the like character, of less than four acts, represented with success at the same theatre. A sum of 5000 francs to the author of a work in four or five acts, in prose or verse, represented with success at any theatre in Paris, or even if given for the first time in a provincial theatre, "which shall be of a nature to serve in the instruction of the labouring clas es, by the propagation of healthy ideas and the spectacle of good examples." A sum of 3000 francs to the author of any such piece of less than four acts, represented with success in any Parisian or provincial theatre. A commission, consisting of the director of the department of fine arts, of four members of the academy, and of four members of the commission of the theatres, is to make a report on the pieces to be recompensed, and the Minister is to choose the author from the list is to present. The funds are to be taken from the subvention of the Théâtre Français, and from the budget of the fine arts.

The following diplomatic changes have been made:—

M. de Saligdac-Fenelon, Envoy Extraordinary and Minister Plenipotentiary from Saxony to Switzerland; M. de Ferrière-Levayer, from Hanover to Saxony; M. de Bassano, from Baden to Hanover; M. de Ménéval, first Secretary of the Legation at Vienna, to Warsaw; and M. Baude and M. Sarre, Chief of the Cabinet, and of the secretary's office in the department of Foreign Affairs, to be first Secretary at Vienna. The rank of officer in the Legion of Honour has been conferred on M. de Vallat, Council of Twelve years' standing.

UNITED STATES.

Our accounts this week from New York are to the 14th ult. The arrival of Kossuth was anxiously expected. Orders had been issued to the several ships and garrisons to salute the Hungarian patriot on his landing. As Congress has already signified its desire to treat him as the guest of the country, the President will doubtless extend to him all proper courtesy. No appropriation, however, has been made for this purpose

The President has issued orders, in consequence of the disturbed state of the frontier, to the military commanders there, to prevent an invasion of Mexico by American citizens; but, says the *Intelligencer*, later advices show but few are engaged in it.

The St. Lawrence and Atlantic Railway was to be opened on the 15th. From Havannah, under date the 8th ult., we learn that the official report of the capture of Spanish troops landed in the recent engagements estimates the number at 245 men and officers. The indemnity subscription had reached the sum of 150,000 dollars.

CANADA.

The advices from Toronto state that the Governor-General had been partially successful in forming a Ministry. The following were said to be the persons selected:—Mr. Hincks, Inspector-General; Dr. Ralph, President of the Council; Malcolm Cameron, Postmaster-General; William Morris, Commissioner of Crown Lands; W. B. Richards, Attorney-General for the Western Province; Mr. Drummond, Attorney-General for the East. Mr. Morin, Provincial Secretary. Three other members of the Cabinet have yet to be appointed.

MARRIAGES, BIRTHS, AND DEATHS.

QUARTERLY RETURN.

On Monday last the official quarterly return of the marriages, births, and deaths registered in the divisions, counties, and districts of England, was issued day, from the office of the Registrar-General.

The return comprises the births and deaths registered by 2189 registrars in all the districts of England during the summer quarter ending Sept. 30, 1851; and the marriages in more than 12,000 churches or chapels, about 3190 registered places of worship unconnected with the Established Church, and 623 superintendent registrars' offices, in the quarter that ended June 30, 1851

The return of marriages is not complete; but the defects are inconsiderable, and approximate numbers have been supplied from the records of previous years. The marriages are assumed to 30,644 in the spring quarter of 1851; they rose to 34,268 in the spring quarter of 1844; to 37,111 in the spring quarter of 1847, decreased to 35,197 in 1847; and rose again to 39,018 in the spring quarter of 1851. Every marriage is the act of establishment of a family, and is generally the result of some deliberation: it is not surprising, therefore, that the prosperity of the country and the prospects of the people should be expressed pretty accurately by the fluctuations in the marriage returns.

While the marriages increased nearly 14 per cent in some parts, th y were stationary or decreased in others. In London 6515 couples were married; which exceeds the number married in the summer of 1848 by 1106.

It has been observed that the marriages increase after a fatal epidemic; and according to the present return the marriages have been in excess generally where cholera was most fatal in 1849.

BIRTHS.

150,584 births have been registered in the quarter ending September 30th, 1851. This is the greatest number of births ever registered in the same season of the year, and exceeds by 2141 and 15,361, and 3014, the births in the September quarter of 1847, 1848, and 1849. In the last 39 months 467,686 children have already been registered, and it is probable that in the year the numbers will not fall short of 600,000. The increase is distributed over all the divisions of the country except the South Midland and

DEATHS.—SANITARY STATE OF THE POPULATION.

While 150,584 children were born and registered in the summer quarter, 91,660 persons died; leaving an excess of 58,924 in the population. The excess of births over deaths in the first three months of the present year has been 170,411, which is probably more than equivalent to the actual increase of the population.

85,063 emigrants left the ports of the United Kingdom at which there are Government emigration offices, in the quarter ending September 30th, 1851. This is at the rate of 930 a day, 6510 a week. 13,963 sailed from Irish ports, 4378 from Glasgow and Greenock, and 67,262 from three English ports; namely, 10,052 from London, 2799 from Plymouth, and 54,401 from Liverpool. Many of the Irish emigrants are returned at Liverpool. Of the total number, 68,960 emigrants sailed to the United States, 9268 to British North America, 6097 to the Australian colonies, and 1578 to other places. The emigration has hitherto been greater in 1851 than it was in the corresponding quarters of 1850.

The health of the different parts of the country differs widely, and the difference is the greatest in summer. In the ten summer quarters of 1841-50 the mortality in 505 districts, comprising, when the census was taken, 10,136,896 people, was at the rate of 18·15 in 1000 annually; while in 117 districts, containing their towns and 7,721,979 people, the mortality was at the rate of 25 in 1000 annually. Thus, at least 7 in every 25 deaths which occur in towns are the result of artificial causes. The mortality in the quarter ending September, 1851, was at the rate of 23 and 17·93 in 1000 in the two groups of districts; it was a little below the average in the country, and considerably below the average in the towns. The annual rate of mortality per cent. in all England was, on the average of 10 summers, 2·099; in the summer quarter of 1851, it was 2·040.

London has enjoyed a degree of health above the average in the last summer quarter. 13,054 deaths were registered, which was a less number than was registered in the summer quarters of 1847 and 1848, and half the number (21,172) registered in the summer quarter of 1849, when cholera was epidemic.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

THE DUCHESS OF ANGOULEME.

MARIA THERESA CHARLOTTE DE BOURBON, Duchess of Angoulême, and Dauphiness, the sole survivor of those illustrious prisoners of the Temple whose foul putting to death throws the darkest shade over the annals of France, was born 19th December, 1778. She was the elder child and only daughter of Louis XVI. by his consort Marie Antoinette of Austria; and through her mother she was granddaughter of the Empress Maria Theresa, whose names she bore. The whole life of this Bourbon Princess was one course of misfortune one long martyrdom. The first revolution broke out in her infancy, and when she had reached her thirteenth year she had to share the frightful captivity of her Royal parents, her aunt, and her brother. The three former of these quitted her for the scaffold. Louis XVII. perished under such grief and cruel treatment as childhood could not bear; he died the 8th June, 1795, and his sister remained the sole living victim. An accidental circumstance rescued her. General Dumouriez, disgusted with the horrors perpetrated in Paris, declared openly against the Jacobin power. Four commissioners of the Convention came to remonstrate with him; these he sent prisoners to the Austrian camp, and then went thither himself with the young Duke of Orleans, the late Louis Philippe. Austria, in exchange for the Convention commissioners, received, on the 19th of December, 1795, the youthful and unfortunate scion of her imperial house. The Princess, after that, resided at Vienna until she rejoined, in 1799, her uncle, Louis XVIII., then in exile at Mittau. Here, on the 10th of June of that year, she was married to her first cousin, the late Louis Antony, Duke of Angoulême, elder son of Charles X., and afterwards Dauphin. The Cardinal de Montmorency, Grand Almoner of France, officiated; and, through a pleasing coincidence, the hero of Abbé Edgeworth, one of a family of fame, the priest who had risked his life to afford the consolations of religion to the Princess's father in his last agony, was also present at her nuptials. The Duchess of Angoulême followed all the vicissitudes of her exiled family on the Continent, and subsequently in England, where she resided at Hartwell in perfect retirement until the restoration. On the 4th May, 1814, she returned to Paris with Louis XVIII.: she was at Bordeaux when the Emperor landed at Cannes. Her conduct on that occasion, when she vainly endeavoured to stem the tide that had set in in favour of Napoleon, obtained the highest praise for gallantry and spirit. The second restoration that followed brought no joy to the Duchess. Little more than four years after it, she had to attend the deathbed of her brother-in-law and cousin, the Duke of Berry, assassinated by Louvel; and in 1830 a new revolution drove her and her family again from France. In this change she may be said to have lost the most; her piety and goodness had gradually won the people to her. She had on many occasions, and especially at the inauguration of the statue of her great ancestor, Louis XIV., in 1829, at Caen, been received with marked popularity; and it was hoped that, as Queen, she would have conciliated all parties to the sovereignty of her house. But this was not to be, and she had to endure a new banishment, in which she witnessed the deaths of her father-in-law and uncle, Charles X., in 1836, and of her husband, the Duke of Angoulême, in 1844. Her own demise occurred at the Château of Frohsdorf, on the 19th ult., nearly the anniversary of the murder of her mother, Marie Antoinette, who perished on the 16th October, 1793. The Count de Chambord, Henry of Bourbon, was present at the death of his aunt, which leaves him the last of his regal line, except his sister, the Sovereign Duchess of Parma, and her children.

Marie Theresa, Duchesse of Angoulême, though naturally enough, from the horrors she had witnessed, somewhat serious and reserved, was a woman of great good sense, and much amiability of disposition. She had, too, a dash of that chivalrous valour characteristic of her race which made her act on trying occasions with marked energy and spirit. Yet she rarely appeared in public, and passed the larger portion of her time privately and piously, being a woman, to use the words of Shakspeare, "oftener upon her knees than on her feet." A few years ago, in times of revolutionary turmoil, the death of this Princess would have passed little heeded; not so now. Nothing shows more the change that is working in the French nation than the general feeling of respect and sorrow arising at the news that Maria Theresa of France was dead the last who bore the title of Dauphiness, and the relic of royalty, honoured, revered, and mighty, in times long gone by.

KATHARINE ELIZABETH, COUNTESS-DOWAGER OF MORNINGTON.

HER Ladyship, who died at her residence in Grosvenor square, on the 23rd ult., in the 92nd year of her age, was the elder daughter and co-heir (with her sister, Maria Eleanor, Countess of Clarendon) of the late highly distinguished Admiral, the Hon. John Forbes, by the Lady Mary, his wife, daughter of William, Earl of Essex.

Her Ladyship married, 17th of May 1784, Richard, Lord Maryborough, who succeeded to the Earldom of Mornington at the decease of his brother, the Marquess Wellesley, in 1842. By him she had one son, William, present Earl of Mornington, and three daughters, Mary Charlotte Anne, who married the Right Hon. Sir Charles Bagot, G.C.B., and died in 1845; Emily Harriet, married to Lieut.-Gen. Lord Fitzroy Somerset; and Priscilla Anne, married to the Earl of Westmorland.

CAPTAIN BOURNE, R.N.

CAPTAIN BOURNE, R.N., a director of the Peninsular and Oriental Steam Navigation Company, expired at his house in Blackheath Park, on the 16th ult., in the 81st year of his age.

During the late war Captain Bourne saw much active service, and was twice rewarded by the patriotic fund at Lloyd's for the gallantry he had on various occasions displayed. But it is chiefly as one of the most eminent pioneers of steam-navigation, and as the founder of the Peninsular and Oriental Company, that Capt. Bourne will be remembered. He was not, indeed, the projector of that company. That merit belongs to Majors Willcox and Anderson, the present managing directors. But their efforts to carry out the undertaking failed; they endeavoured to get up a company, in which attempt they were unsuccessful, and in all human probability the scheme would have remained unestablished had not Captain Bourne taken it up. By his skill, energy, and means he at once imparted a practical character to what was before only a project. Of the seven steam vessels of which the Peninsular line originally consisted, six belonged to Captain Bourne and his family. One small vessel, the *Iberia*, was contributed by Messrs. Willcox and Anderson, and their friends; and this was done because Captain Bourne thought it right that they should have a pecuniary interest in the success of the undertaking. The vessels put upon the Peninsular line by Captain Bourne and his family were the following:—the *Don Juan*, the *Tagus*, the *Braganza*, the *Liverpool*, and the *Royal Tar*. At first the undertaking was found to be the reverse of profitable, and it was chiefly by Captain Bourne that the loss was sustained.

In 1840 the Peninsular Company was, by an extension to India, expanded into the Peninsular and Oriental Company. Since that time its profits have greatly increased; but, as the company simultaneously became a joint-stock one, the preliminary losses sustained by Captain Bourne and his family in establishing the undertaking have never been made up.

Captain Bourne was born at Fethard Castle, in Ireland, in 1770. In 1787 he entered the navy, and in 1806 he retired upon half pay. In 1816 he married Louisa Helena Blake, sister of the 2nd Baron Lord Wallscourt, who still survives him, and by whom he has issue three sons and two daughters. Up to the end of 1850 he continued to be one of the most active members of the Direction of the Peninsular and Oriental Steam Company. He was then attacked by partial paralysis, accompanied with great debility, and these ailments continued to increase until they finally proved fatal. In bodily stature he was below the average height, but of great activity and strength in his younger years. His mental characteristics were remarkable intelligence and sagacity, great energy of will, untiring perseverance, and fastidious integrity of character. Previous to the establishment of the Peninsular Company, he had saved from miscarriage, and, with his brothers, had become almost the sole proprietor of, the line of steamers between Dublin and London. In connexion with his brothers also he had introduced the mail-coach system into Ireland, and in numerous cases he had to make the roads as well as to establish mail communication upon them. These, however, and various similar achievements it would far transcend the limits of this notice to enumerate further, but a memoir is, we believe, in preparation, which will supply the defect.

MR. SAMUEL BEASELEY.

On Sunday week died the celebrated theatrical architect, dramatic writer, and novelist, Mr. Samuel Beaseley, the committee architect and surveyor of Drury-Lane Theatre. On the previous Saturday he had attended a meeting of renters, and cheerfully transacted the routine of business, and left the meeting in apparent good health, for his offices in Soho-square, from whence he shortly afterwards took his departure for his residence, Tonbridge Castle, Kent. He was in his 66th year. His sudden death was owing to an apoplectic fit.

Mr. Beaseley was born in Parliament-street, and early attached himself to art, letters, and the stage. Besides his situation at Drury-Lane, he held that of Comptroller of the Works at her Majesty's Theatre. The colonnade in Russell-street was among the many improvements which he effected in connexion with the former establishment. He was also connected with the Old English Opera House, previous to its destruction by fire, in 1830, and wrote several farces for it: and projected the plans for the present Lyceum, St. James's, the City of London, and the Royal Birmingham Theatres. The façade of the Adelphi was also executed from his designs, the *renaissance* style of which, doubtless, has displeased Mr. Ruskin. Others, however, less ornately gifted than Mr. Beaseley as an architect; and the private and public buildings in which he was concerned are numerous, both in the metropolis and in the country. Among his productions as an author may be mentioned his novels of "The Roué" and "The Ottomans," and his farces of "A Old Custom," "Bachelors' Wives," "Jealous on all Sides," and "Is he Jealous?" the last of which introduced Mr. Wrench, as *Belmour*, to the public. Mr. Beaseley's merits as an architect were generally acknowledged; and, although he lived with great generosity, his talents and industry enabled him to realise a considerable fortune. He was buried on Saturday morning, in the family vault, Old Church, Bermondsey.

DEATH OF WILLIAM WYON ESQ., R.A.—We regret to announce the death of this distinguished artist, which took place at Brighton on Wednesday. Mr. Wyon had for several years filled the office of chief engraver to her Majesty's Mint, and his works rank among the finest productions of medallic art.

ST. ALBAN'S BRIBERY COMMISSION.

The commissioners, F. Slade, W. Forsyth, and T. Phinn, Esqrs., appointed by act of Parliament to inquire into the existence of bribery in the borough of St. Alban's opened the investigation at the Court-house, St. Alban's, on Monday.

The court was crowded each day during the week.

The most important evidence yet taken was given on Wednesday by Mr. Edwards, whose name has been so intimately connected with the Parliamentary proceedings of last session on the subject.

Mr. Edwards, on being called, said that he had not volunteered any testimony. He had been summoned, and would answer truthfully all questions. He would give a narrative if it were insisted on. But the position in which he was placed made it preferable that his evidence should be drawn from him.

In answer to questions,

Mr. Edwards then stated he had been long a resident in and about the borough. He had been manager of the St. Alban's Bank; and had had a vote for the borough. He was now a farmer. He had taken part in elections for this borough for twenty-five years.

* * * * * * *

With respect to the immediate acts of bribery, Mr. Edwards said:—When there was anything to give, he (witness) always gave it. It was a distinct understanding in St. Alban's that voters should have head-money. This was notorious. Out of the 1,200 electors about 250 always looked for head-money. The other parties were like his (witness's) own party, they all looked for head-money. He should have considered it strange if any one voted for Carden without getting money. Witness had paid money at previous elections to fifty of those who, at the last election, voted for Mr. Carden. Calculations were always made to meet the expectations of head-money. At the last election the voters got £5 each; that was the lowest. Some got £8; that was the highest. The five-pound-rs were called light-weights: there were the heavy weights. Those who got £7 were the heavy weights. The course was to come to witness to get the money. This was not the general canvass. The mode was this. The town was canvassed all day. In the evening witness took up his position at his office. The custom was for the voters to come to him, and they got their money. That had been the custom for twenty years. Those who came stopped below stairs. Witness's brother-in-law stood at the top of the stairs, and introduced the voters one by one. Generally the whole sum to each was paid at the time. The sum given to each person varied at different elections. Most of the voters were engaged at elections as messengers, spies, and so on; and each was remunerated as he deserved. A man got more or less. Each man was put upon the footing of a servant. Some were actually and some only nominally employed. Those who got money under the colour of work got least. Those who did work got most. The coming to the house in Chequers-street, or "Sovereign's lay," commenced on the 30th November. The paying commenced on the 30th November. Some men were certs lay paid that day.

Mr. Slade—Did you keep a list of the persons who came, and an account of the money you paid?

Mr. Edwards—Yes. But I have destroyed the list. I don't want to mention names. I will tell every hing else.

Mr. Phinn—But the act of Parliament renders it necessary for us to know the names

Mr. Edwards You see how painful is my position. Does the act of Parliament compel me?

Mr. Slade—The act gives us power to compel you. We feel for your position But these names must be given.

Mr. Edwards—Let me know in the presence of those around me, my townsmen, what will be the consequence if I refuse to tell the names.

Mr. Phinn—You will be imprisoned until you do.

Mr. Edwards—I have already been in gaol eighteen weeks, and would go for another eighteen weeks sooner than tell the names.

Mr. Slade But you may be imprisoned for life.

Mr. Edwards—Then I am compelled. I will give you the names. I will give every one of them. I will take an alphabetical list of the electors, and will tell all I know of each one of them. I won't select names. I won't make fish of one and fowl of another. It shall all come out.

Mr. Slade—You are tradicting nobody here. You are to satisfy the supreme power in the state, and simply to tell the truth.

Mr. Edwards—I wish to do so; and I hope it will do good.

Great excitement prevailed in court during this conversation. A scene was now about to be enacted such as had never before been witnessed.

Copies of the register were procured. The commission took a copy and began with the first name. Mr. Edwards being given to understand when a name was called the question was, "Did that man receive money from you?" Many of the parties referred to were in court at the time, and the answers offered by Mr. Edwards were followed, in each case, by murmuring comments from the audience. At four o'clock about two hundred names had been called, and ten were certs lay paid that day.

Mr. Slade—Do

THE CORSO HALLE, BERLIN.—SKATING WAITRESSES.

In these Berlin beer-houses, there is a continual endeavour to attract custom by some odd expedient: the usual resource is a novelty in the costumes of the waitresses. Last winter there was a run on fays, or fairies. The etheriality was imperfectly represented by a pair of miniature gauze wings, symbolic pinions, out of all proportion to the substantial shoulders to which they were often affixed. Before that, the Turkish costume, Bloomerism anticipated, was in vogue; but it did not take well: the Polish, or "Polka" dress, did better, and also something that was called Circassian, but which might have been Nubian for anything the public knew to the contrary. Lately, a "spirited proprietor," speculating on the weakness of the Berliners for things military, has put his damsels into uniform, as far as it can be done without dispensing with the petticoat, the police allowing no assumption of male costume by the other sex. There is a hussar, all fur cap, braided jacket, looking what the "daughter of the regiment" might have been, had fate thrown that young lady into the light cavalry instead of the line. A second uniform may pass for nondescript; a third is meant for a cuirassier, with helmet and steel breastplate, the last borrowed from the stores of the property-room, and giving the wearer the appearance of Joan of Arc reduced to the taproom. For all this, less finery and better beer would often be an infinite improvement; but no amount of competition will bring the Germans up to XXX, and the glory of brown stout in pewter.

Our Engraving is from a sketch of the "Corso Halle" by a native artist; the groups consist of soldiers, students, and other frequenters of the *kneipe*, which is not one of the first establishments in the city, but is not, therefore, less characteristic.

PARIS FASHIONS FOR NOVEMBER.

The predominant taste of the day is that of rich stuffs; and the preceding year's patterns, remarkable for their simplicity, are not sufficient for the gorgeous taste of this year. Older patterns are successfully imitated; and this, added to the fulness of the skirts, almost reminding one of the hoops of last century, completes the revivalism of ancient costume. The materials are lampas, *gros de Tours*, and figured satins.

Among the handsomest dresses which we have noticed in the shops is a marone satin dress to be trimmed with four flounces. The difference from last year is in the number of flounces: this year it is four instead of three, with which ladies were content last season. These flounces are edged with a strip of plaid velvet, woven with the stuff. Should the flounces not be made use of, the same strips would present themselves, four in number, on a plain but very full skirt. These stuffs are intended for high dresses; and the plaid strips are so arranged, that sufficient is found to trim the body, the small skirts, and sleeves. Another stuff, *reps*, bears the same ornament, and can be found of all the shades in vogue, the strips being varied according to the shade of the ground. A *gros bleu* satin, for the front of the dress, has a very rich velvet pattern, same shade, apron-shaped; and edgings of the same pattern are formed in the stuff for trimming the body and sleeves. These dresses, which, a few years back, were only intended for *soirées*, are now worn for visiting and the promenade. The *gros de Tours* stuffs are remarkable for their richness, and the fulness of the folds; also by the variety of patterns, such as detached bouquets with a thousand varied hues, and wreaths blooming with all the vivacity of natural flowers. Next to these three magnificent stuffs, which will take the lead in fashion, there are also *taffetas*, and *velours à la Reine*, or Queen's velvet, which is plain. Silk and woollen popeline is both worn plain or plaided. There is also a new kind of popeline, called double-ribbed; for the woof really has that effect. At present, we know nothing new in merino stuffs, which are all plain: still, we should mention a novelty in this texture. There are merinos with running patterns, spots, or lozenges; and with stripes, for the front of the dress; these stuffs, however, can be used only for dressing-gowns. Valencias are also fashionable for morning dresses. Bonnets have not altered their shape generally as yet, with the exception of this innovation: the crowns are plain capote-shaped; the stuff alone forming the crown, and preserving all its suppleness.

PARIS FASHIONS FOR NOVEMBER.

Mantelets of all sorts of shapes are worn; the most striking are very full, and have a hood. It requires great dexterity in cutting out the mantelet to give a graceful appearance to this innovation. The shape adopted is that called *capuchin homme femme* (or old woman's hood); it is very comfortable, and the least apt to spoil the flowers or feathers of the head-dress. There are also mantelets like the above, made of lace, lined with coloured silk, which sets off the pattern; and this is most in favour. Everything in preparation for this winter is far from plain, being trimmed with embroidery, &c., or jet, lace, ribbons, velvet, bloud, braid, half-twisted silk, gold beads, coloured embroidery; in short, all the array of rich ornaments possible will be the order of the ensuing season.

The waistcoat fashion increases somewhat; but this question is not finally settled. However, for this winter at least, we are a long way from Bloomerism.

THE ILLUSTRATIONS.

Bonnet of padussoy, quadrilled white and marone and blond; the crown of flexible stuff. Mantelet of velvet, with hood, embroidered with lace and braid, mixed with jet; fringe of chenille silk and jet. Dress of blue *gros d'Espagne*, plain, without flounces. Net cap, and Valencias dress, with pattern. Little in-door mantelet of velvet. Blond cap, with ribbons. The bodice, or front of the body of the dress, has buttons, and is trimmed with Maltese lace, waistcoat-shaped. Little Turkish pardessus, embroidered with gold.

Girl's Dress.—White satin capote; black velvet dress with berthe; and sleeves trimmed with slight silk fringe. Trousers of English embroidered work.

NEW BAPTIST CHAPEL AT SHRIVENHAM, BUCKS.

Bourton, situate in the parish of Shrivenham, Bucks, is one of those numerous little agricultural villages situate in and around the "White Horse Vale," from which the inhabitants have one or two miles to walk

NEW BAPTIST CHAPEL, SHRIVENHAM, BUCKS.

to their parish church, and of course equally distant from any spiritual instruction. But there was recently witnessed therein a very animated number congregating together, on the occasion of the opening of a little chapel (to which a clergyman's house is attached), by the Hon. and Rev. Baptist W. Noel, M.A. Both have been erected by a family who are natives of the place.

Two very appropriate sermons were preached on the occasion, both of which were attended by a very large congregation: the ministers present were the Rev. T. Gilbert, of Highworth; E. Soper, of Farringdon; R. Breeze, of Swindon; and those of Langford, Seaton, &c., &c. The Chapel, which the accompanying Engraving will testify, is a very picturesque object: it is of a substantial character, accommodating about 300 persons, being a greater half of the population of the village—but to which it is expected many in the byways will resort. The baptistry is divided from the church by an open screen; the greater portion of the seats are free. The length of the chapel is about 60 feet by 30 feet, built and covered with stone, erected under the personal superintendence of the donor; the drawings were furnished by Mr. Frederick W. Ordish, of John-street, Adelphi.

COLLEGE OF MEDICINE AND PRACTICAL SCIENCE AT NEWCASTLE-UPON-TYNE.

At the recent commencement of the winter session of the medical department of the Newcastle-upon-Tyne College of Medicine and Practical Science, the inaugural address was delivered by Sir John Fife, the founder of the Medical School, in the Barber Surgeons' Hall. The foundation-stone of the new College was laid by the Venerable and Rev. Archdeacon Thorp, Warden of the University of Durham, a few months ago. The structure is not yet finished, but sufficient progress has been made with it that its occupation by the medical students and lecturers is not impeded. The situation of the building is admirably adapted for an institution of this description. On entering the building, it is at once apparent that the architect has duly considered the facilities afforded by the favourable aspect to the south, on which side of the edifice is placed a private dissecting-room, 21 feet by 15 feet; next, the library, 30 feet by 20 feet, and students' waiting-room adjoining, 21 feet by 14 feet; and above these rooms is a magnificent museum, 60 feet by 28 feet. This spacious

NEW COLLEGE OF MEDICINE AND PRACTICAL SCIENCE, AT NEWCASTLE-UPON-TYNE.

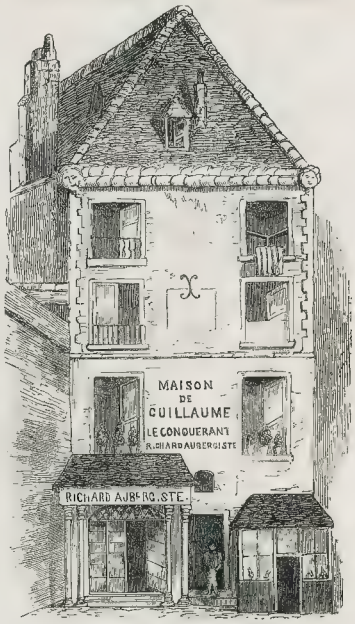
apartment is lighted, not only by five windows on the south side, but also from the roof. The rear of the hall is divided by a passage, to the west side of which is an excellent lecture-room, arranged as an amphitheatre. This room is 30 feet long by 25 wide, and is capable of seating 130 students. Adjoining it is the laboratory, 25 feet by 11. There are also, in this part of the building, dissecting and other rooms.

The elevation of the building is of the Italian style of architecture, and is divided into three bays, which rise from a noble basement. The exteriors are margined with fine rusticated quoins. The windows, in the upper division, have plain architraves, and the interior or centre bay has three windows in each stage, the lower ones being quite plain, and separated from the upper bay by a string course. The windows in the upper stage are more ornamental, having an arcade with imposts and archbolts. The arms of the Barber Surgeons' Company fill the spandrils, and the keystones are decorated with the Æsculapian Serpents. Immediately above these windows is a bold and massive dental cornice, with a dwarf attic, and the whole is surmounted by elegant chimneys, similar to these designed by Sir John Vanbrugh, as instanced at the Town Hall, Morpeth, and at Seaton Delaval Hall.

STATUE OF WILLIAM THE CONQUEROR AT FALAISE.

The visitor who has exhausted Caen, and who is in search of objects having a picturesque or historical interest, cannot turn his steps in a more profitable direction than Falaise. It is about twenty miles from Caen, and is easily accessible by *diligence*. There is little in the intervening country to call for remark; but, as you drive into the Place St. Gervais, your eye cannot fail to be directed to the castle of William the Conqueror, which towers high above the town and surrounding country. You have only to look around you to discover that Falaise is a place of great antiquity. It has a quiet, ecclesiastical air, so to speak, about it, which reminds one of an English cathedral town; but, so far as payment is concerned, any reminiscence of home is impossible. You can go in and out of the several churches here, as well as elsewhere over France, without any stronger solicitation than is conveyed by the *tronc*, which receives, if you are so inclined, your donation for the poor. Falaise contains about 10,000 inhabitants, several churches, a Palais de Justice, and a theatre. The Church of St. Gervais stands in the quadrangle of that name, and is singularly interesting. It is said to be the one in which William the Conqueror was admitted a member of the Christian Church. Be that as it may, the old building well deserves a visit. Much as we lament the injuries which have been inflicted either from sheer ignorance or from brutality, prepense and intense, we are in justice to ourselves bound to say that, with a single exception, we can remember no instance in which church walls have been converted to such uses as at Falaise. On one side the Corn Exchange blocks up the windows, on two others shops and dwellings of various sorts and sizes are built against the wall. Whatever the beauty or effect of the fenestration may have been, at present a "dim religious light" is secured in a manner of which the architect of the church could have formed no idea. It makes a picture, quite unique of its kind, but it is sad work at best.

Standing on the steps of St. Gervais, or anywhere in the market-place, you must notice the house of William the Conqueror. There appears to be some difference of opinion amongst the good folks of Falaise as to the precise *locus in quo* of William's birth, some saying that he was born in the Castle, others affirming that he was born in the house which still exists in excellent preservation in the Place St. Gervais. That Arette, or Herleva, the mother of William, was born and brought up in this house is an undisputed and most trustworthy tradition; and we incline to think that either William or his mother must have rebuilt the premises on which his grandfather carried on the business of a fellmonger or skin-merchant. The principal portion of the lower story of the house is in possession of an innkeeper of the inferior class. Passing through a glass door, you see a long row of small tables at either side, and, in the distance, the presiding genius, portly M. Richard, dispenses to the agricultural interest tough-looking collops of boiled beef and quarts of cider—the prevailing beverage of the district. At one side an eating-house, at the other a baker's shop; the upper region of the house is variously occupied, as the windows indicate, for there are no two exactly alike. The original door, narrow and high, and approached by steps, stands between the shops. The neighbouring quarries of Aubigny have furnished the material for this and other structures of ancient date. None but a perdurable material could last through the wear and tear to which a large dwelling-house must have been subjected



HOUSE OF WILLIAM THE CONQUEROR, AT FALAISE.

STATUE OF WILLIAM THE CONQUEROR, AT FALAISE.

in the course of eight centuries—indeed it has given evidence of weakness at one point, as the iron clamphin naturally leads one to surmise.

A very interesting memorial of the Conqueror has just been produced by the art of our own time, in a spirited equestrian bronze statue, which was inaugurated with great ceremony on Sunday last. We shall illustrate this spectacle in our Journal of next week. Upon the preceding page we have engraved the Statue. The King is represented mounted on a fiery charger, and turning towards his companions, whom he urges to follow him, showing them the banner which the Pope had sent to him for the northern crusade. He wears round his neck some of those relics upon which Harold swore to be loyal, to him. His costume is that in which he is represented in the celebrated tapestry of Bayeux, embroidered by Queen Matilda, the most authentic monument of that period, which Napoleon caused to be exhibited at the Louvre, in 1804, when he contemplated to repeat at Boulogne the expedition of William—that is, the invasion of England.

CALENDAR FOR THE WEEK.

SUNDAY, November 2.—20th Sunday after Trinity. All Souls.
MONDAY, 3. Sir Samue. Romilly died, 1818.
TUESDAY, 4.—William III. landed at Torbay, 1688.
WEDNESDAY, 5.—Gunpowder Plot discovered, 1605.
THURSDAY, 6 —St. Leonard. Princess Charlotte died, 1817.
FRIDAY, 7.—Milton died, 1674. First Gazette published, 1665.
SATURDAY, 8.—Day breaks, 6h. 7m.

THE NATIONAL MUSIC
OF
ENGLAND,

THE POETRY BY CHARLES MACKAY, LL.D., THE SYMPHONIES AND ACCOMPANIMENTS BY SIR HENRY R. BISHOP, KNT.

PROFUSELY ILLUSTRATED BY THE FIRST ARTISTS AND ENGRAVERS.

The Proprietors of the ILLUSTRATED LONDON NEWS have the honour to announce to their readers and the public, that they have entered into engagements with

SIR HENRY R. BISHOP, KT.,

a gentleman whose name, in connexion with the Music of England, is of itself sufficient to stamp with approval any composition to which it is attached; and with

CHARLES MACKAY, LL.D.,

whose popularity as a poet is justified by some of the most beautiful lyrical compositions of our day, to publish, in connexion with that Journal, a SERIES of the

ANCIENT AND POPULAR MELODIES OF ENGLAND,

copiously illustrated in the finest style of Wood-Engraving by the most celebrated Artists, and at a price which shall place these effusions within the reach of the humblest purchaser. It has often been alleged that the English have no national music—a reproach which the forthcoming series will show to be entirely unfounded. Many of the ancient melodies which delighted our forefathers have fallen into neglect as songs, on account sometimes of the grossness, indelicacy, or unfitness of the words with which they are associated; at others, of the vulgarity of their tone or the obsoleteness of their allusions. Good music is of all time; but it has been the misfortune of English music, in too many instances, to have been married—not to immortality—but to mortal verse. For this reason it has been banished, except in an instrumental form, from the company of the educated and refined of both sexes. It will be the object of the proprietors and editors of the forthcoming series to remove this objection, and to perform, for English music, what Burns and his coadjutors performed, to some extent, for the music of Scotland, and what the poetic genius of Thomas Moore, aided by the musical skill of Sir John Stevenson, performed so thoroughly for the music of Ireland. The music of England is as rich and varied as either, but has hitherto wanted the poet and the musician to restore it to the place which it ought to hold in the affections of the people. The Proprietors of the ILLUSTRATED LONDON NEWS, in selecting Sir Henry Bishop and Mr. Mackay to perform this task, believe not only that they have made a good, but the very best possible selection, and that their forthcoming series, while it will be a marvel of beauty and of cheapness, will recommend itself to all lovers of poetry and music as a national work.

Further particulars of the time and mode of publication will be duly announced.

198, Strand, Oct. 16th, 1851.

THEATRE ROYAL DRURY-LANE.—M. JULLIEN'S ANNUAL SERIES of CONCERTS.—M Jullien has the honour to announce that his Annual Series of Concerts will commence on MONDAY, NOVEMBER 10th, 1851.—Full particulars will be duly announced.

L'EDITION FRANCAISE.

L'ILLUSTRATED LONDON NEWS en FRANCAIS.

Le 27ème Numéro qui paraîtra SAMEDI, 1er NOVEMBRE, contiendra comme par le passé tout ce que l'histoire de la semaine renferme d'intéressant dans le domaine public de la politique, de la littérature, des sciences, et des arts.

Tous les Numéros qui ont parus depuis le commencement, ont été réimprimés On peut se les procurer séparément, ou réunis en une brochure, avec une couverture magnifiquement illustré. Prix du Cahier, contenant Douze Numéros et Vue du Palais de Cristal très à part, 6s shillings.

NOTA.—Les Propriétaires de L'ILLUSTRATED LONDON NEWS croient devoir faire observer ici, que le Journal Français publié sous le titré ci-dessus n'est point une traduction de l'Edition Anglaise, mais bien une publication avec rédaction toute séparée, et dirigée à Londres par des écrivains de la presse Parisienne.

GRAND PANORAMA
OF THE
GREAT EXHIBITION.

In order to perpetuate a complete and comprehensive view of the Great National Exhibition, as presented within the Crystal Palace, the proprietors of the ILLUSTRATED LONDON NEWS are preparing a series of Panoramic Views, based upon Photographic Sketches by Claudet, which they intend publishing.

These Views, extending to a length of nearly eighty feet, comprehend, with a reality impossible to be surpassed, every object in the whole range of the Exhibition—every Department, and each particular object in the main avenues, being successively embodied in the precise order in which they stood. This series of Views will therefore constitute a pictorial remembrance of the more striking features of this Great Industrial Gathering, at once vividly truthful, and of inherent and lasting interest.

Further particulars of the time and mode of publication will be duly announced.

THE GREAT EXHIBITION.—FINAL ILLUSTRATIONS.

Engravings of the following articles in the Great Exhibition (completing the series) will appear in

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 1, 1851.

THE most serious dilemma in which the French Government has been placed since the fearful days of June, 1848, is evidently fast approaching. The President, having dismissed his Ministers upon a principle which has brought him into direct collision with the majority of the Legislature, and having made several futile attempts to form a new administration of Parliamentary celebrities, has at length got together a kind of stopgap Ministry, formed of men devoted to the interests of the House of Bonaparte, and for the most part unknown to and unconnected with the Assembly. The next step will be the delivery of the President's message, and we shall then see what attitude the Assembly will assume, and whether active or passive hostility between the Executive and the Legislative will be the order of the day.

Amid all the conflicting interests and passions of French politics, the feud between the President and the Assembly resolves itself into a very simple and intelligible one. The President desires his re-election—the Assembly objects to it. To the President the prolongation of his powers is a matter of life and death. He is President, or he is nothing. To be consigned to private life is to be consigned to poverty and humiliation, a fall as to insignificance. His game is, in fact, "double or quits." Hitherto, the war carried on between the two powers that, in the unworkable and foolish thing called the French constitution, are supposed to form a Government, has been a bitter one on both sides, and an unseemly as well as impolitic one on the part of the Assembly. The President has been almost uniformly cold and calculating; and on the three great occasions when he has found it necessary to act with vigour, and to set the Assembly at defiance, he has justified the truth of the proverb that "Fortune favours the bold." He dismissed the redoubtable Changarnier, his rival in the race for supreme power, and the pet for the time being of the Assembly, and no more mischief ensued than if Changarnier had been a simple drummer boy of the National Guard. He formed a Ministry of men who had not seats in the Assembly, and the proud and imperious majority were compelled to endure the insult. He has done the same thing a second time, and, by raising the awkward and exciting question of Universal Suffrage, has contrived to place the Assembly, as well as himself, in a position of extreme delicacy and difficulty. Perhaps in this case, as in the other two, the boldness of the movement may be the salvation of him who made it. We have but to reflect upon the turn that a street insurrection might take, when there would be on the one side the Legislative power denying the right of the multitude to vote, and the Executive endeavouring to affirm it with a body of soldiers interested in the solution. Such an insurrection would in all probability seal the doom of the Assembly, and leave the supreme power—for a time at least—in the hands of him who staked the fortunes of the country upon the issue. In a few weeks we shall see the next move in this mighty game, in which all the powers of Europe are not simple spectators merely, but interested parties. Their policy for the next few years will depend upon the issue. It seems to us, however, that Louis Napoleon has by far the best of the position, notwithstanding all the formidable difficulties and dangers which he has conjured around him. France, by his act, and by his pretensions, is in such a situation that no power short of the universal suffrage of the people will suffice to extricate her. No minor decision by a fraction of the people would settle anything. The whole crew are on a raft, and in danger: and universal suffrage must name the captain. No other power is equal to the emergency.

AMID all the stern necessities of our daily life, in this busy nineteenth century, the good people of Falaise, an obscure town in Normandy, have suddenly recollected that William the Norman, the conqueror of England, was born among them. Though France labours in the first faint throes of a revolution, and although the present time is stern enough to demand all the care and thought of the men who live in it, these worthy provincials have gone back eight hundred years to exhume the memory of their townsman—a bygone Lopez, who chanced to be successful—and M. Guizot, the celebrated statesman, has not thought it beneath his dignity to attend upon the occasion, and read them a homily. But we may well exclaim, *ut bona?* Indeed, we are greatly at a loss to know why M. Guizot and the Falaise people think William the Conqueror so deserving of their homage. "We are right," says M. Guizot to his gaping-mouthed auditory, "to render justice to William, *as his glory has cost us dear.* It was the origin of that national struggle which lasted more than three centuries between France and England." To us it seems that this phrase is either nonsense, or that it betrays an *animus* which we should be sorry to think lay latent in the heart of that eminent orator. Is it because William, a Frenchman, invaded and conquered Saxon England, that the modern Frenchmen of Falaise raise this tardy monument to his memory? Or is it because he sowed the seeds of that animosity which lasted three hundred years, as M. Guizot reminds us, and which, if certain people in France had the power to carry their inclinations into effect, might be revived in this day? It is not long since a *coup de main* against our peaceful shores from the brigand harbour of Cherbourg, led on by the gallant Joinville, was suggested, just to wipe off an old score between the two countries. But M. Guizot can hardly think that either of these reasons has justified the inauguration of William's statue in the town of Falaise. The truth seems to be, that M. Guizot, being present on an occasion which would have been more graceful if more private, was obliged to talk a little nonsense for the benefit of the *badauds* of Falaise; but, as soon as he had disemburdened himself of it, while all the contradictions involved, he broke forth into a nobler and more natural strain, and told the people of Falaise, in effect, though not in words, that their great celebration was a great anachronism. "I care not," he said, "to dwell upon those glorious but saddening memories of the past. I rather love to contemplate ourselves and the history of our own days. In our times, also, ships without number crowd our coasts, and convey thousands upon thousands of voyagers to the shores of England. But is it for another war that they thus depart? No, no! It is peace peace that beckons all guilds them to a foreign land, and leads them back again. Their desire is not for chivalrous adventure, nor is their ambition that of conquest. They crowd thither to offer, or to bring back, the pledges of reciprocal prosperity. The intercourse between the two nations is now as pacific as it is frequent and animated. A Crystal Palace, where they congregate in thousands; an invisible thread—a flash of lightning shooting beneath the wave, which conveys from the one to the other the message of their mutual wants and their mutual services—such, gentlemen, are the tokens which now replace those that William the Conqueror wished to establish!"

If the people of Falaise did not see after this that they would have done better to have raised their statue with less parade, and without asking M. Guizot to be present at the ceremony, they have still something to learn.

NAVAL AND MILITARY INTELLIGENCE.

FURTHER SEARCH FOR SIR JOHN FRANKLIN.—The *Morning Herald* says, on this subject:—"We believe there is no truth in the report that the Admiralty have yet decided on renewing the search for Sir J Franklin and his party in the ensuing spring. In all probability their Lordships' decision will depend on the report of the committee appointed by their Lordships to consider the reports of Captain Austin, C B, and Captain Penny, and to examine the officers late of the expeditions under the above chiefs." The committee commenced their labours on Monday.

Captain Penny's crew have presented him with a handsome silver snuff-box, in proof of their gratitude and attachment; and the same compliment has been paid to his second in command, Captain Stewart, of the *Sophia*. A vote of thanks has also been presented to them by the seamen of the port of Aberdeen, to mark their sense of what may be accomplished by appealing to the better feelings of men.

SIXTH DRAGOON GUARDS (CARABINEERS).—It has been determined to convert the 6th Dragoon Guards from heavy to light cavalry; indicating, we presume, an intention of employing this regiment on foreign service.

MANSION HOUSE.—On Thursday evening, after the presentation of the address to Kossuth, the Lord Mayor and Lady Mayoress entertained a party of private friends at dinner. Covers were laid in the long parlour for seventy. Amongst the guests present were Mr. Justice and Lady Talfourd, Alderman Wilson, Alderman and Mrs. Hooper, M. and Madame Kossuth, the Governor of the Bank of England and Mrs. Thomson Hankey, Lord Dudley Stuart, M.P., Alderman Salomons, M.P., Alderman Moon, Alderman and Mrs. Lawrence, Mr. Sheriff Cotterell, Mr. Sheriff Swift, M. and Madame Pulszki, Mr. Cobden, M.P.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

The week just closed has been marked by the same round of Royal hospitalities distinguishing that which preceded it. The guests of her Majesty and the Prince Consort have included his Royal Highness Prince Frederick of the Netherlands (who arrived on Saturday last, to take leave on his return to Holland), his Excellency the Portuguese Minister and the Countess Lavradio, his Excellency the Belgian Minister and Madame Van de Weyer, Lord and Lady John Russell, Lord and Lady Normanby, the Earl and Countess of Shaftesbury, the Right Hon. Henry Labouchere, the Rev. the Provost of Eton, Sir William Reid, &c.

On Monday the Queen and his Royal Highness Prince Albert, with the Prince of Wales and the Princess Royal, paid a visit to the Countess de Neuilly, at Claremont.

On Tuesday the Queen held an investiture of the Most Honourable Order of the Bath, at which Lieut.-Colonel William Reid (Royal Engineers), Lieutenant-Governor of Malta, and Richard Mayne, Esq., Commissioner of the Metropolitan Police, had the honour of Knighthood conferred upon them by her Majesty, and were invested by the Queen with the riband, badge, and star of Civil Knights Commanders of the Bath.

Her Royal Highness the Duchess of Kent has dined with her Majesty and the Prince Consort almost daily during the week.

The Queen and the Prince Consort have taken their accustomed out-door exercise every day, occasionally accompanied by the Royal children.

Lord Elphinstone has received the Earl of Morley as Lord in Waiting, and Mr. R. Ormsby Gore has relieved Major-General Sir E. Bowater as Groom in Waiting.

His Excellency the American Minister and Mrs. Lawrence entertained at dinner, on Saturday last, at the residence of the Legation in Piccadilly, the American commissioners and jurors of the Great Exhibition, together with a number of the exhibitors from the United States.

Viscount and Viscountess Ebrington have left town for Germany, where they purpose remaining some weeks.

The Lord Chief Justice of England, Lady Stratheden, and the Hon. Misses Campbell, are now on a visit to Lord Brougham, at his *château* in Provence

The Countess Reventlow and the Countesses Hilda and Malvina Reventlow left the residence of the Danish Legation on Wednesday, on their return to Denmark.

CHURCH, UNIVERSITIES, &c.

CAMBRIDGE.

PROPOSED NEW PRIZE.—The Master of Trinity College (the Rev. Dr. Whewell) has offered to the University a prize of £20, to be given every year, for the next four years, to the student who shall show the greatest proficiency in moral philosophy, in the Middle Bachelors' Moral Science Tripos Examination, appointed to commence in 1852, provided that, in the judgment of the examiners, he possesses sufficient merit.

NEW TRAINING COLLEGE IN OXFORDSHIRE.—The defective state of education among the labouring classes of the community has attracted the attention of the Bishop of Oxford, and through his Lordship's instrumentality a scheme for the training of persons to whom the education of the rising race should be entrusted has been devised. This plan has so far succeeded as to enable the committee to commence the erection of a Training College and chapel, in the parish of Culham, and within a quarter of a mile of the Abingdon-road Railway station. The ceremony of laying the chief stone of the chapel, in connexion with the college, was performed on Tuesday afternoon by the Lord Bishop of Oxford, in the presence of a large concourse of clergy and laity. The estimated cost of the building is £12,000, towards which large subscriptions have been made in the diocese, and liberal grants have been made by the Committee of Council on Education and the National Society. The style of architecture of the buildings is the early decorated Gothic of the later period of the 14th century; they will extend over an area of eight acres, and will accommodate 150 students, four or five assistant-masters, and a principal.

PREFERMENTS AND APPOINTMENTS.—The following preferments have recently been made:—*Hon. Canonry:* The Rev. Charles Green, M.A., to the cathedra church at Norwich. *Rural Deanery:* The Hon and Rev. Grantham M. Yorke, to Birmingham. *Rectories:* The Rev. C. Wing, to Staunton, Notts; the Rev. T. C. Blofeld, M.A., collated to Drayton and Hellesdon, Norfolk; the Rev. S. W. King, B.A., to Saxlingham-thorpe and Saxlingham-Nethergate, near Norwich; the Rev. J. Marshall, M.A., to Wark, Northumber and; the Rev W. Roberts, to Radwell, near Baldock, Herts.

The Rev. Charles F. Secretan, B.A., Curate of St. Mary's Church, Vincent-square, has been appointed to the incumbency of the church of the Holy Trinity, Hanlon, now in the course of erection at the foot of Vauxhall Bridge. at the sole cost of Archdeacon and Mrs Bonfinck.

NEW CHURCH AT PRESTWICH.—The new church of St. Margaret, at Prestwich, recently erected, has just been finished, and was opened for the formal request of the Right Hon. the Earl of Wil on and Archdeacon Rushton, the Bishop of Manchester has licensed it for the performance of divine services, difficulties of a pecuniary nature standing in the way of its construction at present.

It is said that the prompt and decided tone of the Archbishop of Canterbury's monitions served on a large number of the Puseyite clergymen in his Grace's diocese has had the desired effect, and that the whole of the gentlemen alluded to have signified to his Grace their intention of discontinuing the practices objected to.

BEQUESTS TO CHARITABLE INSTITUTIONS.—George Hill, Esq., late of Egremont-road, formerly of Keston, Northumberland, has bequeathed to the Hospital for Consumption and Disease of the Chest, at Brompton, £100; and to the Newcastle Infirmary and Newcastle General Dispensary, £100 each, free of duty. Mr. John Hough, late of No. 20, Bridgewater-street, Clerkenwell, Mrs. Prince, of Newland, Oxon, £100 for the poor of Corgs; and to the National School and Matrons' Society, at Witney, nineteen guineas each. Mr. William Foster, of Bishop Wearmouth, Warwickshire House Hospital, £50 to the West Orchard Chapel, Coventry, and £50 for the Sunday-schools and Home Missions connected with that chapel. The Rev. Theodore Coldridge, of Exeter, among other bequests has left to the Devon and Exeter Central National School, and the Exeter Diocesan Association for the Employment of Additional Curates in Populous Places, nineteen guineas each. £2000 is bequeathed to the Middlesex Hospital, and also £2000 to the Hospital at Brompton for Consumption and Diseases of the Chest, left by the late Edward Briggs, Esq., of Wood-end Green, Middlesex; also, to the latter institution, £100, by the late Mr. John hill, of the Edgware-road, who also leaves £100 to the Newcastle Infirmary, and £50 to the Newcastle General Dispensary.

The late Slingsby Duncombe, Esq. (uncle of the member for Finsbury), died possessed of £350 000, funded and personal property, from which estate the Government will receive £400.

The will of the late John Deacon, Esq., banker, London, disposes of the entire property to his re ict for life, including the mansion and estate at Maidedon Park, and the furniture in any of his residences, acwesons, freehold property, leasehold, funded property, and personal estate of every kind being valued at £200,000; and authorises her to continue in any business in which he might have been engaged, or to discontinue the same if she thinks proper; and after her decease the property to be divided into four parts among his eleven children, or their issue, his elder son to take three shares, his younger son two shares, and his nine daughters to receive one-fourteenth share each; and to his executors, who are acting under the will in conjunction with the widow, namely, John Deacon, Esq., the son; G. C. Courthope, Esq., son-in-law; and the Hon. John T. L. Melville; and John Labouchere, Esq., of the firm, each a legacy of £500. The stamp duty was £3000.

The New York journals publish a correspondence, according to which the New Confederation of Central America has refused to hold any further communication with Mr. Chatfield, the British representative in those parts, Mr. Chatfield declining "to recognise a Government which does not possess the accustomed conditions of a political existence; but, on the contrary, presents anomalies and contradictions calculated to interrupt international relations."

EXTRAORDINARY ESCAPE.—An escape which was almost miraculous from destruction by a railway train occurred a few evenings since upon the South Yorkshire line, near Doncaster. Mr. Cartmell, a clerk in the employ of the company, was engaged near the Little Moor crossing in assisting the driver of a coal-engine to "shunt" his locomotive into one of the sidings. The night being quite dark, he was beckoning the driver forward in the usual manner with his hand-lamp, and for this purpose he was standing upon the main line, when the Barnsley train came upon him unawares, and before he could escape he was struck by the buffer of the tender, and his right arm caught the draw bar hook, which tore it from the socket at the shoulder and the elbow. At first he was so stunned as to be momentarily unconscious of his dangerous position, but on recovering he found himself suspended in the coupling chain, with the train going at the rate of from fifteen to sixteen miles an hour. His cries, drowned by the whistle, were not heard either by the driver or the guard, and in this way, hanging between life and death, and expecting every moment to be dashed to pieces, he was carried for nearly half a mile, fortunately his voice was heard by two platelayers on the gait-keeper at the Cherry-lane junction, which the train was then approaching; and, hallooing from the cries that some one had got entangled among the machinery, this individual, with great presence of mind, exhibited the danger signal, and the driver at once reversed the engine and brought the train to a stand. Mr. Cartmell was immediately extricated from his perilous position, and being, with the exception of the shock and an incised wound upon one of his arms, but little the worse of his accident, he was enabled in a day or two to resume his duties. Two fellow-clerks, who were with him at the point where he was struck, and who called out to him on the approach of the train, picked up his cap and lamp and walked slowly along the line in search of him, expecting every moment to find his mangled remains. Their surprise and delight on learning the providential escape of their friend may be easily imagined.

METROPOLITAN NEWS.

CHRIST HOSPITAL SOCIETY OF BLUES.—At the annual meeting of this benevolent society, at the London Tavern, on Wednesday evening, the result of the election that had taken place earlier in the day was announced. Out of eight candidates, two had been elected pensioners on the funds of the society, one an aged widow named Jane Engelheart, and the other George Chapman, formerly a solicitor, but now reduced by circumstances. According to the excellent custom of this society, the unsuccessful candidates were then called in, and presented by the chairman with the sums of £3, £2, £1, in recognition of the talents of their appeals to the society for relief. The pensions, it was stated, would in future be raised from £10 to £12 and £16 a year, as the funds in might permit of the increase. It was announced that the late trustee of the charity, Mr. Stuckeley, had bequeathed £9,000 to it.

ROYAL DISPENSARY FOR DISEASES OF THE EAR.—Of the many charitable and benevolent institutions which it is the great pride of London that it abounds with, there is not one which displays more real relief to the poor and the afflicted than the above-named dispensary, which the committee have lately issued their thirty-fourth annual report, from which it appears that the number of patients admitted during the year was 876, of whom 514 had been discharged cured, and 150 relieved, and that there were in weekly attendance 260. The danger and the pernicious effects to so delicate an organ as the ear, which result from the ignorant attempts at curative operations made by the incompetent and the unskilful, are set forth with great ability by Mr. Toynbee, surgeon to the institution, in a statistical report, which is appended to that of the committee, and runs which it may be seen how numerous are the victims of quackery in aural surgery.

ASYLUM FOR IDIOTS.—On Thursday a general meeting of the friends of this institution was held at the London Tavern; Sir George Carroll in the chair. The report stated that there were at present 141 patients, and every month bore ample testimony to the decided progress which had followed the labours and efforts made on behalf of the inmates of this asylum. The receipts for the last year amounted to £3104, and the disbursements to £7450, leaving a balance of £654. Fifteen children, from 164 candidates, were then elected, and after a vote of thanks to the chairman, the meeting separated.

LADIES' CHARITY SCHOOL.—On Tuesday afternoon, the half-yearly meeting and election of children into this charity took place at the institution, John-street, Bedford-row. Mr. J. Masterman, M.P., took the chair. The address of the committee, after adverting to the highly flourishing and progressing condition of the charity, stated that there were at the present time 5 poor girls entirely provided for until the age of fourteen, when suitable situations are sought for them by the committee; the conduct of the children after leaving the house had, with scarcely an exception, been such as to answer the wishes of their benefactors and bear testimony to the advantages which result from the early inculcations of Christian principles. The proceedings terminated with the election of three children to the charity

TOWER HAMLETS BRITISH DAY SCHOOLS.—The annual meeting and examination of these flourishing schools took place this evening, under the presidency of Sir Wm. Clay, Bart., M.P., in the school-room, a spacious and well-ventilated building, situated in Gascoigne-place, Virginia-row, where accommodation is provided for about 400 children. The answers were given by the children with promptness and accuracy, and great proficiency was displayed. According to the annual report, the number of children attending the school was greater than at any former period. There had been admitted during the year, from 28th October last, 233 boys and 112 girls: total, 345. The average attendance during the same period had been 174 boys and 121 girls: total, 295. Occasionally the total attendance had been as high as 350. The fluctuations were accounted for to a considerable extent by the time spent in visiting the Great Exhibition, and by many of the boys having, during the latter part of the year, left the school for the workshop. The number of children present in the schools at each visit paid by her Majesty's inspector, at his annual visitation, had been as follows: March, 1848 108; 1849, 119; 1850, 140; 1851, 155. There were six pupil teachers—four males and two females employed in the school, three of whom were passing through the fourth year of apprentic ship. The penny bank was maintained with increased support. The amount contributed during the year ending Christmas last was £69, and in the subsequent period upwards of £110. The committee had incurred a liability of £50, and they asked for increased support, that they might be enabled to provide an additional infant school. The treasurer's account showed an income from subscriptions and donations of £100 6s., and from children's pence of £129 10s. There was a balance due to the treasurer of £3 1s. 2d.

MISSIONARY INSTITUTION.—On Monday, the Earl of Chichester laid the first stone of an Institution connected with the London Missionary Society, to be designated the Missionaries' Children's Home," at Highbury. The site selected for the building is one extremely airy and salubrious, being on the eastern slope of the high ground on the east side of Highbury-grove, a very short distance from the entrance to Highbury Fields, and the station of the London and Blackwall Railway. The style of architecture adopted will be the modern Italian, after a design and working drawings of Messrs. Reeves and Veysey, the architects. The building will have a frontage of 200 feet, the extreme depth being 90 feet. The fronts which will be of Suffolk brick, with rustic quoins, will comprise a centre elevation and two wings, the wings being three stories in height, and the centre five. The buildings and grounds will occupy rather more than an acre of land, which has been purchased by the society. It is intended to accommodate 150 children, 75 of each sex; the object being to provide a home and suitable education for the children of missionaries resident abroad. The dining-hall, or large school room will be 60 by 30. Mr. Holland, of Duke-street, Bloomsbury, is the builder. The building is to be warmed by open fireplaces, the foul air being evolved by means of horizontal and perpendicular shafts. The institution has been undertaken by the Church Missionary Society, as a memorial of their late jubilee in 1849, the society having then existed for fifty years. It was estab ished in 1799, and has been conducted in conformity with the doctrines and practice of the Church of England, and its missionaries are under the superintendence of the bishop of the diocese where they are placed. The society has missionary stations in Western and Eastern Africa, in the Mediterranean, in India, Ceylon, China, New Zea and, the West Indies, and North-West America

METROPOLITAN BENEFIT SOCIETY ASYLUM.—On Thursday the half-year y meeting of the subscribers and friends of this society was held at Gerard's-hall, Basing'ane: Mr. R. Powell in the chair. The report stated that the receipts for the half year amounted to £156 10s. 11d., and the payments to £181. The payments, however, had far exceeded the regular expenses of the half-year, as a large amount of outstanding debts had been paid. This institution, since its establishment, had received 126 persons under its roof, 41 whom were now enjoying its benefits, consisting of house-room, coals, candles, medical attendance, and medicine. The report was adopted, and, after a vote of thanks to the chairman, the meeting separated.

METROPOLITAN SEWERS COMMISSION.—On Wednesday a special Court of Sewers was held at its principal office, No. 7, Greek-street, Soho. Present: the Chairman, Sir John Burgoyne, Captain Vetch, Mr. Allason, and Mr. Hawes. An abstract of the proceed ngs at the last Court having been read and confirmed, Mr. Hawes, in practice but recently adopted, the accountant, Mr. Hatton, reported that the balance in hand, on the 25th of October, amounted to £10,448. The Court then sanctioned payments to the extent of £5112, leaving a present balance of £5336 Works were ordered to be executed in the Finsbury division, to the extent of £434 1s. in the Surrey and Strand districts, £444 Holborn division, £108; Spitalfields, &c., level, £950 for the construction of 1750 feet of sewer in the East India Dock-road.

OMNIBUS SERVANTS.—On Monday evening a preliminary meeting was held at the school-room, Liverpool-road, Islington, to arrange for an aggregate meeting at Exeter Hall, to consider the best mode of improving the condition of the omnibus drivers and conductors of London, and affording them some relaxation and opportunity of attending public worship. Some interesting statistics were stated on the occasion. There are at present 3000 omnibuses plying on the streets, the cost of which has been £300,000. Each of them had ten horses attached, the value of which in the gross was also £300,000. The harnesses were worth £60 000, and sundries being taken at £20000, the total of capital invested amounted to £960,000. The number of drivers and conductors employed was 6000; of horse-keepers, 3000; and "all men," that is, persons occasionally employed, was 2000; making a total of 11,000 persons daily employed in the omnibus traffic of London. The number of persons conveyed by each omnibus per day was calculated to be 250, or 500 per week, which would give as the total number of persons conveyed in all the omnibuses running, no less a number than six millions a week, and about twenty-five millions per year. It was argued that something ought to be done for the men who were in fact the active servants of these numerous passengers, who, for 16 hours a day, drove between 60 and 70 miles, so as to enable them to obtain some of the comforts of social and family life. A very strong description of the hardships and serious injury to health arising from continuous labour and perpetual absence from their homes was given by Mr Scully, a working man. He advocated the claims of the "Metropolitan Omnibus Servants' Society," and expressed a hope that a school for the children of omnibus conductors and drivers would be established. It was ultimately arranged that another meeting should take place next week on the subject.

COUNTERFEIT COIN.—Information has been received by the officers of the Mint, that the coiners in the metropolis have adopted a new process for the production of base coin, with which it is of some importance the public should be acquainted. There are at the present time in circulation a large quantity of counterfeit half-crowns, which have been produced from dies in brass, and then electro-plated with silver, and by this method the base coin has much more the appearance of silver than that produced by the ordinary means of the defects apparent in the latter being by the new process altogether avoided. For instance, the milling round the edge of the coin struck from the die is as perfect as that on coin which has been issued by the Mint; and the next most greatest difficulty the coiner had to contend against was to mill the edge of the spurious equal to the genuine coin. To these brass half-crowns the little "coin-detector" has no power, and as we are of no avail, for they cannot be bent by them. The preparation of these dies is rather an extensive affair, and one not have already found their way into the possession of the authorities. These half crowns have been pronounced the best imitation of the genuine coin yet produced, and they are only to be detected by the peculiarity of the ring, and the weight—being lighter by one penny-eight than the genuine half-crown. The moulded counterfeit half-crown is about three penny-weights lighter The police are endeavouring to trace the manufacturer of the spurious coin, there being reason to believe that all the half-crowns of this character at present in circulation have emanated from one source.

THE BUTCHERS' CHARITABLE INSTITUTION.—On Thursday afternoon a general meeting of the patrons and subscribers of this institution was held at the Freemasons' Tavern, for the purpose of electing eight males and four females; Mr. Sharp in the chair. The receipts for the past year amounted to £2355 and there was a balance in the hands of the bankers of £572; total amount of funded property, £19,043. The report was adopted, and the meeting was proceeded with; after which the meeting separated.

BIRTHS AND DEATHS.—The number of births registered in the week ending Saturday, October 25, was: Males, 876; females, 787: total, 1663 during the same period Males, 813; females, 693: total 977. In the corresponding weeks of ten years, 1841-50, the number of deaths was not so great as that of last week, except in two instances, namely, in 1843 and 1848, when it rose above 1100; while the average was 923. But if this average for the same of better comparison, be raised in proportion to the increased population of the present time, it will become 1022, and last week's return will show a decrease of 59 on the estimated amount. There is a considerable increase in cases arising from epidemics, the number in this class of diseases having risen from 242 and 249, the numbers returned respectively in the two previous weeks to 326 in the last. The two epidemics which attract notice in the table are scarlatina and typhus, the latter from both bills, but only on the increase, the former having 67 deaths assigned to it, the latter 75. Small-pox was fatal last week to 23 persons, of whom all with only two exceptions, were children under 10 years. In only two cases, those of a boy of five years and a girl of four, it is stated that vaccination had been previously performed. The diarrhœa exhibits a similar decline, and numbers only 30 in the present return Cholera and ague carried off the child of a labourer, aged three months, after five days' illness, at 6, St. Peter-street, Walworth-common. Other epidemics, beside those already mentioned, present nothing of unusual character. Thirteen children died of measles, 11 of hooping-cough, 7 of croup, 5 of scrush, 1 of purpura, 1 of remittent fever, 1 of infantile fever, 3 (seven persons died of erysipelas, 3 of rheumatic fever, 2 of influenza, 4 of dysentery, 5 (of whom 3 were children) of syphilis; and 10 women died after childbirth, to half of whom the cause of death appears to have been puerperal fever. The class next to epidemics, as regards the amount of mortality ascribed to it, is the "tubercular," in which are enumerated 174 cases. These are distributed thus: to scrofula, 9; tabes mesenterica, 17; hydrocephalus, 23; phthisis or consumption, 123. To the last mentioned malady destroys more lives than any other single disease on the list, but is no more than usual at present

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the barometer was high; the mean daily reading on Tuesday was 30 131 inches; on Friday, 30.318 inches; and on Saturday, 30.286 inches. The mean of the week was 30 242 inches. The mean daily temperature was also high, and on every day of the week exceeded the average of the corresponding days of ten years. On Sunday and Monday the mean temperature was about 58 degrees, and exceeded the average by about 10 degrees On Tuesday it fell to 56 4 degrees, and was then about 9 degrees above the average. On Wednesday it fell to 51 7 degrees, and on Saturday to 50 degrees; but on all the last four days it still exceeded the average by an amount varying from 3 to 7 degrees. The mean temperature of the week was 54.5 degrees, and showed an excess above the average of 7 degrees The wind was in the south-west in the beginning of the week, calm in the middle, and in the north-east on the last two days.

COUNTRY NEWS.

THE JUDGE OF THE LIVERPOOL COUNTY COURT. APPROACHING INVESTIGATION.

At a meeting of the Town Council of Liverpool, on Wednesday, a memorial from 21 inhabitants, very numerously signed, was ready, calling upon the council to become prosecutors in the inquiry, to be held on the 5th instant, at Preston, before the Earl of Carlisle, into the conduct of Mr. Ramshay, the Judge of the Liverpool County Court.

Mr. Councillor Samuel Holme (amidst loud cheers) moved that the council adopt the prayer of the memorial, and become the public prosecutors of the inquiry; and that the Town-clerk be directed to conduct the approaching inquiry on the part of the corporation.

Mr Alderman Bramley Moore opposed the motion, on the ground that to appropriate the corporation funds in conducting the inquiry would be decidedly illegal.

After considerable discussion as to the legality of the corporate funds being applied in conducting the inquiry,

The Town-clerk was called upon for his opinion. He said his own opinion was that it would be illegal to appropriate the money of the corporation in the manner proposed; but, lesling some doubt about it, he had submitted it to counsel. He wrote to Mr. Crompton, barrister, and the gentleman had forwarded an opinion to the effect that to apply the funds of the corporation as proposed would be against the spirit of the Act of Parliament. The Town-clerk then proceeded to say that, being satisfied with the illegality of so applying the corporate funds, he should refuse to countersign the order for payment of the money, should the council decide so to expend it.

A very long discussion took place, in the course of which several councillors expressed themselves strongly in favour of the council becoming prosecutors, but the general impression seemed to be that the opinion of counsel and the town-clerk was fatal to this course.

Ultimately, Mr Holmes withdrew his motion, and substituted the following one, which was carried by a majority of 51 to 3; Mr. Holmes remarking, that, seeing the responsibility of coming to a decision in the face of the town's opinion, he had so modified it as to express the opinion of the council on Mr. Ram-hay's extraordinary proceedings The motion, as carried, was as follows:—"That, in the circumstances which the council consider to have taken place in relation to the course pursued by the judge of the county court for this district are such as to call for an inquiry before the proper authorities, but the council, having been advised that it cannot legally expend the corporate funds in prosecuting such inquiry, regrets that it cannot comply with the prayer of the memorial."

LIVERPOOL ADDRESS OF CONGRATULATION TO KOSSUTH.—A numerously attended meeting of the inhabitants of Liverpool took place on Thursday, at the Amphitheatre in that city, at which an address of sympathy and congratulation to the Hungarian patriot was unanimously adopted amid much enthusiasm.

EXPECTED VISIT OF KOSSUTH TO MANCHESTER.—Mr. George Wilson has received a letter from the Mayor of Southampton, announcing Kossuth's intention to visit Manchester. A request on is in preparation, signed by many members of the town council, requesting the Mayor of Manchester to convene a meeting of the municipal body, to consider the propriety of presenting an address to Kossuth.

PARLIAMENTARY REFORM AT MANCHESTER.—A meeting of the Council of the Parliamentary Reform Association was held at Manchester on Tuesday evening, Mr. G. Wilson in the chair, and influentially attended, to consider the propriety of a conference being held in reference to the measure of reform said to be contemplated by the Government. After a deliberation, in which great unanimity of sentiment prevailed, it was agreed, upon the motion of Mr Bright, M.P., seconded by Mr Kershaw, M.P., that the Prime Minister having announced it to be the intention of the Government to introduce a measure for the reform of the representation in the coming session of Parliament, this council, considering with the many urgent requests from various parts of the country, resolves to convene a meeting of the friends of reform, chiefly, though not exclusively, from Lancashire and Yorkshire, for the purpose of conferring on the steps which may be necessary to give due expression to public opinion, and thus to secure such a measure of reform as may be satisfactory to the country. Arrangements were to be made, if possible, to hold the conference in the first week of December.

DESTRUCTIVE FIRES.—On Saturday evening, at seven o'clock, the works of Mrs. Sheffield, fustian shearer, stiffener, and dyer, Cornbrook, Hulme (Manchester), were discovered to be on fire, and the flames burst forth amidst the combustible materials in the store, and burnt with much fierceness. By the efforts of the firemen two of the buildings were saved, but one was entirely destroyed and the low, which is covered by insurance in the West of England office, will probably be between £20000 and £30000. The origin of the fire is unknown.

About half-past nine o'clock on Sunday morning a three-story building, occupied as part of the machine manufactory of Messrs Wren and Hopkinson, Altrincham-street, Manchester, was discovered on fire. Seven engines from the police yard were taken to the spot, and were successful in preventing the remaining portion of the premises from being burnt, but that which the flames had attacked, and which contained a great number of wood patterns, the accumulation of thirty years' business, was entire y destroyed. The cause of the fire is also unknown, the works having been closed at half-past twelve o'clock on the previous night. The loss, between £3000 and £4000, is covered by insurances in the Sun, Legal and Commercial, Atlas, and three other fire-offices, so that it will all very lightly upon each.

On Monday last, as two labourers were engaged in digging chalk in a pit belonging to Mr. Ward, on the Beacon, at Cobham-hil, Kent, a large quantity of about three tons weight suddenly gave way, and fell on one of them, John Kear, who was killed on the spot, while his companion, who was fortunately standing upright at the time, escaped unhurt.

The retirement of Mr. Sullivan as Deputy-Secretary at War will make three retired Deputy-Secretaries at War on large allowances, viz. Mr. Moore, Mr. Barry, and Mr. Sullivan.

Professor Pellegrini, one of the members of the Provisional Government of Parma in 1848, and who has since occupied a chair of philosophy at Turin, died on the 16th ult.

A letter from Curistiana, in Norway, of the 16th ult., announces that, on the previous evening, the Governor-General of the Kingdom, in virtue of orders from Stockholm, caused M. Mayslender, lieutenant-General of the Norwegian army; M. Gloersen, director of the military *depôts*; M Tiltenberg, commander-in-chief of the national guard of Christiana; and M. Bergh, a merchant, to be arrested on the charge of having embezzled, or aided in the embezzlement of, 320,000 crowns (about 1,140,000 francs), the property of the Government.

A tribute is collecting in America for Father Mathew, whose pecuniary embarrassments are considerable. The £300 a year pension which he receives from the British Government is appropriated to his creditors.

ARRIVAL OF M. KOSSUTH IN THE SOUTHAMPTON DOCKS.

M. KOSSUTH.

THE arrival in England of the man who, in his noble endeavours to secure for his native country the blessings of political liberty, maintained, against overwhelming odds, by the force of his own great genius during the recent revolutionary epoch, one of the most gallant struggles which the history of nations records, will long be memorable as an occasion which has called forth on the part of the only truly free country of Europe a spontaneous and enthusiastic outburst of generous sympathy both for the extraordinary man himself and for the glorious cause which he represents, at a time when everywhere else gloomy doubts and apprehensions of the future beset the political horizon.

Kossuth has met with a series of triumphant receptions since he first touched our shores, which must have brought home to his heart and to his head, if he had ever had any misgivings on the matter, the proud feeling, the ennobling conviction, that the hero of the Hungarian contest has been, and continues to be, regarded with the highest appreciation by the vigorous minds to which the freedom and civilisation of Western Europe have given existence.

ARRIVAL AT SOUTHAMPTON.

In our Journal of last week we announced the long-expected arrival of M. Kossuth, in the *Madrid*, at Southampton, at half-past two o'clock on Monday. We now give the very interesting details of his reception.

The first indication of the reception intended for him was given by the crowds that covered the pier heads, whose cheers, as the vessel passed the entrance, and as Kossuth was recognised, gave intimation to those at the landing-place that this time there was no delusion, and that the hero had really come at last to Southampton. As the *Madrid* neared the shore, and her passengers could be personally recognised, the feelings of the Hungarians broke out afresh in affecting indications of welcome. After some little delay, the *Madrid* was brought to her moorings, and Kossuth and his attendants, taking a courteous leave of the captain and of their fellow-passengers, prepared to go on shore. The Mayor of Southampton led Madme. Kossuth up the gangway. M. Kossuth himself escorted Madame Pulszki, and the rest of his attendants followed. The moment he set his foot upon the quay, his countrymen crowded round him; many of them threw themselves upon his neck; all seized his hand, kissed it, and shook it as if they could not be persuaded to part with it. Many brawny arms were extended, and many an honest English grip was given to him. The Hungarian seemed much affected by this cordial mode of reception; he heartily entered into it, and with right good will shook every hand that was extended to him. After some little time, he and his family entered into an open carriage, drawn by four horses, that had been prepared for him by the mayor; his attendants followed in another carriage; and he proceeded by the railway station through Oxford-street, along the Esplanade, and up High-street, to the mayor's place of business (an extensive coach works), Above Bar, amidst tremendous cheering, intermixed with wild shouts of "Eljen Kossuth!" from the Hungarians in the procession. All along the road the windows were full of people, most of whom cheered or waved handkerchiefs; the joy-bells rang cheerily from all the steeples; and as Kossuth, bare-headed, stood bowing at the back of the open carriage, his hands were repeatedly seized and pressed by his own countrymen, as well as by the crowd.

In a few minutes after Kossuth and his family entered the residence of the Mayor of Southampton, the ex-governor of Hungary appeared alone in the balcony of one of the windows of the house; and then, in reality, his reception at the hands of the English people commenced. The cheering from the immense mass beneath him was tremendous. After a few words from the Mayor, Kossuth proceeded to address the multitude. His voice was clear and distinct; it was also deep and sonorous, like that of a man who had been long used to public speaking. His utterance was energetic, and his accent wonderfully good; but naturally enough he seemed sometimes embarrassed with too many words, sometimes at a loss for any suitable to express his precise ideas; but he certainly has an extraordinary command of the English language, as is evidenced by his speeches.

Silence having been obtained, Kossuth advanced to the front of the platform, and, addressing the crowd, said;—

"Excuse my bad English. (Cheers.) Seven weeks ago I was a prisoner in Kutayah, in Asia Minor; now I am a free man; because glorious England chose it—(Cheers)—that England which the genius of mankind selected for a monument of its greatness, and the spirit of freedom took to be its happy home. (Cheers.) Cheered by your sympathy, which is the anchor of hope to oppressed humanity, with the view before me of your freedom, your greatness, and your happiness, and with the consciousness of the misfortunes of my native land in my heart, you must excuse me for the emotion I feel—the natural consequence of so striking a change, and of such different circumstances. (Cheers.) Excuse me that I am not able to thank you so warmly as I feel for the generous reception with which you have honoured me, and of which I feel that I am undeserving. (No, no.) I only say, may God Almighty ever bless you and your glorious land. Let me hope you will be willing to bestow a ray of hope on my native land by this your generous reception. May England ever be great, glorious, and free! But let me hope, by the blessing of Almighty God, and by your steady, persevering, and

M. KOSSUTH LEAVING THE DOCKS AT SOUTHAMPTON.

generous aid, that England, though it may ever remain the most glorious spot on earth, may not long remain the only one where freedom dwells. (Cheers.) Inhabitants of the generous town of Southampton, in shaking hands with your Mayor, our best and truest friend (here Kossuth turned, and shook hands cordially with Mr. Andrews, amidst the cheers of the people), I have the honour to thank you, and to salute you with the deepest respect—you, the inhabitants of this industrious, enlightened, noble-minded, and prosperous borough of Southampton." Kossuth then bowed and retired, amidst renewed cheering. The Mayor then led Madame Kossuth to the edge of the balcony, when the crowd cheered her vociferously, which the lady, who was apparently labouring under deep emotion, acknowledged by waving her handkerchief. The children were also led to the front, and one enthusiastic admirer lifted the youngest boy up to the top of the balustrade, when, again the cheers broke forth.

M. KOSSUTH ADDRESSING THE PEOPLE FROM THE MAYOR'S HOUSE, AT SOUTHAMPTON.

The band in the street hereupon struck up the Scotch air of "Auld lang syne," and a great proportion of the crowd, catching up the words, joined vocally in the air. When it had been concluded,

The Mayor stepped forward and said: "Gentlemen, I thank you for the kind reception you have given to Kossuth. You will bear me witness that I have taken no means whatever to induce any man to leave his work, but I am glad to see such a noble specimen of the well-conducted people of England present."

Kossuth again came forward, and said: "Gentlemen, it is a glorious sight to see a Queen upon the throne representing the principles of liberty. (Loud cheers.) That is a right which you enjoy in Britain. It is a glorious sight to see the public authorities, the municipalities of the towns, elected by the free choice of the people—that they are the first to take the lead in carrying out the wishes of the people. Gentlemen, three cheers for my best friend, the Mayor of Southampton." The cheers were heartily given.

The band then played "God save the Queen," and the crowd joined heartily in chorus. On its conclusion,

Kossuth then addressed them and said: "I thank you once again for your generous welcome, and now, in bidding you adieu for a short time, allow me to express the warm feelings of my heart by proposing that you should join with me in giving three cheers for your gracious Queen."

Then taking off his hat, he led the cheering in a manner which seemed to indicate that he was no stranger to the practice, and it is needless to say that his call was vigorously responded to by the crowd. He ended with an impressive "God bless you all!" and, bowing, retired with his family into the room, and the crowd began slowly to disperse.

It had been arranged that two addresses—one by the corporation, another by the inhabitants at large—should be presented to Kossuth in the Town Hall; and, about half-past four, the building was filled with respectable persons, a number of them ladies. The Aldermen and

M. KOSSUTH RECEIVING THE CORPORATION ADDRESS, IN THE TOWN-HALL, SOUTHAMPTON.

Common Councilmen appeared in their robes. Among the strangers appeared Mr. Wyld, M.P.; Mr. Gilpin, Mr. George Dawson, M. Pulszki, Mr. Helmk, &c. A messenger came down from M. Kossuth to ask for a short rest, ire he felt rather indisposed after the voyage, but would appear at a quarter past five o'clock; and, punctual to the moment, M. Kossuth entered, and was received with the warmest acclamations. He was accompanied by the Mayor, who took him by the hand, and introduced him to the members of the Corporation and others.

The Mayor then proceeded to address M. Kossuth in an energetic speech, which our limits forbid us reporting, and was loudly applauded throughout. He pronounced a very warmly-coloured panegyric on the ex-Governor's acts, character, and career—declared that England was determined to emancipate the whole world—and hoped the acorn determined to emancipate the whole world—and hoped the acorn planted in Hungary to-day might grow up a mighty oak, to protect the rights and liberties of the people. He was satisfied the people of England looked on Kossuth as a great and noble man, equal to Sydney, to Hampden, or to Washington; and when he was laid in his grave his name would be handed down to posterity, as theirs had been.

The address (which has already appeared in our journal) was then read by the town-clerk, Mr. Deacon, and was received by M. Kossuth amid great cheering. When it had subsided M. Kossuth stood forward and replied, commencing his address by thanking the Mayor and Corporation, and the town of Southampton, for their generous welcome. M. Kossuth continued: "It is not on this day only, but from my early youth, that this glorious country had a mighty share in my destiny. (Cheers.) I was used to look on England as on the Book of Life, which had to teach me and the nations of Europe how to live. (Loud cheers.) Through three centuries the house of Austria has exhausted against Hungary the arts of persecution and of secret intrigue, and it was our municipal institutions which still, among the most arduous circumstances, conserved to Hungary some spirit of public life, and some part of constitutional liberty. (Loud cheers.) It was at the time when this fatal sickness of political feeling to centralise every power, and to tutor the people into this notion of political wisdom—when this fatal sickness, I say, spread over the continent, and made its way even to my own country, so that it became almost the fashion, and almost a mark of intelligence, to bend towards the doctrine of centralisation, that I, my humble self, with a few friends who stood by me, struggled against this storm—against these rushing waves coming over the spirit of Europe, because I regarded, and I ever shall regard, municipal public life as a public benefit, without which there is no practical freedom whatever.—(Loud cheers)—and for the loss of which I think all ministerial responsibilities and Parliamentary privilege but a pitiful equivalent. (Loud cheers.) In this land is seen the finest fruits of the conquest of liberty the glory outside, the freedom within, unwithered by the blighting finger of centralisation. (Cheers.)

* * * * * * *

The generous sympathy of the people of England for my bleeding, struggling, down-trodden, but not broken, nationality—(Loud cheers)—is one, but not the only one, manifestation by which England shows she is ready to accept this glorious *role* of the elder brother of humanity. (Cheers.) This country, though it has not to fear any direct attack on its own liberty, still knows that its welfare and prosperity, founded as they are on the continued development of your genius and industry, cannot be entirely independent of the conditions of other nations. The people of England know that in neither social nor political respects can it be indifferent whether Europe be free or groaning under Russia and her satellites: the people of England are conscious of their glorious position -they know that, while England preserves its freedom, it cannot grant the privilege to Russo-Austrian despots to dispose of the fate of Europe, but must have its weight in the balance of the destinies of Europe, or England would no more be an European power. (Loud cheers.) And it is this knowledge which is the source of hope and consolation to my oppressed country, as well as to all the fellow nations of Europe; for by the principle on which your freedom continues, and on which your happiness is founded, and by your generous sentiments, we are assured that, let the people of England once throw their weight into the balance of the fate of Europe, then they will never assist despotism, but freedom—(Cheers)—not injustice, but right—not the ambition of a few families, but the moral welfare and dignity of humanity. (Cheers.)

* * * * * * *

I hope the Almighty will grant, before I leave this country and cross the ocean, and go to the young giant, the younger brother of your mighty race, and thank him for the generous welcome bestowed on me, and entreat his brotherly hand for the future of Europe and my own country, that I shall see established in full activity, and spread over these glorious isles, some of those mighty associations by which you carry the triumph of every great work and of every blessing to your constitution. (Loud cheering.) I hope to see some of those associations lending their attention to the solidarity of the independence of Hungary, with the hope that the peace of Europe and the future of these glorious isles will take for its aim to give a practical direction to the sympathy of the people for your down-trodden country -that the people of England will look upon my unhappy land, and that they will reduce to a ruling principle that sense of the public spirit of Britannia which evidently shows itself to accept the solidarity of the rest of mankind, and especially of the liberties of Europe itself. (Cheers.)"

M Kossuth concluded amidst loud cheers.

The Mayor then presented a large silk banner, being the national flag adopted by the Hungarian Republic to Kossuth, at the same time stating that it had been worked by his Hungarian wife in New York, and transmitted to England for conveyance to Hungary, but before that could be done the Austrians were in the ascendant, and the banner itself was detained in the Custom House for non-payment of duty. Since then it had been purchased by the corporation of Southampton, who had deputed him to present it to the Hungarian leader.

Kossuth received the flag with great emotion, and said: "I receive it, gentlemen, as a most valuable trust entrusted to the people of Hungary; and I swear you, whatever may be my fate—cowardice or ambition shall never tarnish this flag." The noble Magyar then resumed his seat, upon which the whole meeting rose and gave several rounds of enthusiastic cheering.

The Mayor then introduced Mr. Falvey, of the *Hampshire Independent*, who read and presented an address, signed by about 1100 of the inhabitants, to which M. Kossuth briefly replied.

Upon the proposition of the Mayor were given three cheers for the Queen; three cheers for Louis Kossuth, and success to Hungarian independence; and another good one for Madame Kossuth and her family.

Mr. Charles Gilpin then addressed the meeting, and said, that, to his mind, he greater glory of Kossuth was that he had emancipated the serfs in Hungary.

Mr. George Dawson, of Birmingham, invited Kossuth to that town, and promised him a hearty reception from the most democratic town in England.

Mr. Falvey again came forward, and invited Kossuth to a banquet to be given by the working men of Southampton; and promised, if he would consent, any day would be fixed that would suit his convenience.

Kossuth and the Mayor here consulted for a few minutes; after which the Mayor stated that nothing would give Kossuth greater pleasure than to meet the working men of Southampton; but that as his stay was to be so short in this country, and his engagements so numerous, he was unable to commit himself to any positive promise.

A vote of thanks was then carried by acclamation to the Mayor, after which the meeting broke up, and the public proceedings of the reception termi. ated.

Up to a late hour the residence and factory of Mr. Andrews, the Mayor of Southampton, were surrounded by persons anxious to catch a glimpse of the Hungarian patriot; however, he remained closely within doors, receiving many visitors from London, including Mr. Gilpin, of the Court of Common Council; Mr. Wyld, M.P.; Toulmin Smith, Esq.; Mr. Dawson, of Birmingham, and the notabilities of this town.

WINCHESTER.

At eleven o'clock on Friday morning the landau and four greys, which conveyed Kossuth on the previous day from the docks to the Mayor's house in High-street, conveyed him to Winchester. Madame Kossuth, Madame Pulszki, and the lady of the American Consul, were in the carriage; on the box were Kossuth and the Mayor; and in the seat behind were Lord Dudley Stuart and the American Consul. A second carriage contained M. Pulszki, Mr. Toulmin Smith, &c. All the workmen of Mr. Andrews's factory assembled, and gave three cheers to Kossuth on his departure. The street was filled with spectators, and he was enthusiastically greeted by the populace

The three interesting children of Kossuth—a girl eight years of age, and two boys, one nine years old and the other seven—left this town by the twelve o'clock train for London. They will remain at M. Pulszki's residence, at St. Petersburgh-place, Bayswater, until the arrival of their parents.

Before Kossuth's departure he addressed a letter to Mr. Toulmin Smith, which, it will be perceived, disposes of the Baroness Von Beck's imposture. The following is a copy of the letter:—

Southampton, 24th October, 1851.

Dear Sir,—In reply to your note, I beg leave to assure you that the case of *Baroness Von Beck* is utterly unknown to me. There was a person named *Zadula* employed by the Government as a spy, whom I saw twice in my life, and gave special instructions to, *as a spy*. That is all I know about her.

I am, sir, with the highest regard, your obedient servant,

L. KOSSUTH

To J. Toulmin Smith, Esq.

When Kossuth quitted Southampton in the morning, no demonstration was anticipated in the old Tory town of Winchester. It was known, in fact, that the attempt to get an address to Kossuth had failed in the Town Council, owing to the influence exercised by the Cathedral Dean and Chapter. Application had been made to ring the bells of the ancient cathedral, in which the Dean had acquiesced, but the canons had refused their authority. Great was, therefore, the astonishment of Kossuth and his friends, on approaching Mount Cross, to find a band of music, and a regularly organised procession of men with banners, headed by gentlemen on horseback. A large flag, carried by two men, bore the inscription, "Civil, commercial, and religious liberty." A number of boys carried Hungarian colours. The streets were densely crowded—all the windows in every house were filled with spectators—and the cheering was most fervent as Kossuth's carriage passed the college, the cathedral, &c., and went up High-street, to cross the bridge over the railroad, towards the Cemetery. At the top of the hill is Mr. Andrews's villa. A Chinese edifice, which is styled "Hong-Kong." The grounds are very beautiful, and there is a magnificent view of Winchester and the surrounding country. On nearing the extensive barracks by the side of the railroad, many of the soldiers loudly cheered Kossuth. In the High-street an interesting incident for a moment stopped the slow progress of the *cortège*. A working-man stepped forth from the crowd, and tendered to Kossuth a glass of ale, which the latter gracefully accepted, and drank to the prosperity of the city of Winchester. The Mayor of Southampton added, "May they live a hundred years, and Kossuth live to see it"—a good-humoured addition, which was received with hearty approval by the crowd. After this little incident, the cavalcade proceeded without further interruption, except from the tremendous pressure of an applauding crowd, to the Mayor of Southampton's country residence. After he had entered the Mayor's house, being loudly called for, he came forward and addressed the assemblage in a most powerful address, alluding with happy facility to the historical associations connected with the old town of Winchester, and expressing his strong admiration of the municipal institutions with which this country is blessed. He thanked the population of Winchester for their generous reception of the exiled stranger. "Words," he stated, "were the offspring of ideas; but he had then no ideas to express, for his feelings were paramount, and these were of gratitude for the kindness with which he had been received." Three cheers were given for the orator at the conclusion of his brief and emphatic address; and then the Mayor of Southampton spoke to the multitude, amidst much sympathetic cheering, especially for the passage referring to Kossuth's career.

GRAND BANQUET IN SOUTHAMPTON.

We notice, in another place (see Supplement), the occasion which witnessed the first great oratorical effusion of the distinguished Magyar in this country, namely, the banquet at Winchester; and here we propose to give, with much greater fulness than we usually accord to any displays of eloquence, however attractive, a report of the proceedings at Southampton on Tuesday, when the fervid spirit of this gifted man again enchained the listening admiration of his hearers, and evoked the enthusiastic expression of sympathetic aspirations for the success of Hungarian independence, from public men of the two hemispheres.

On Monday M. Kossuth came up to London privately to visit his family, who are staying at the residence of Mr. Massingberd, an officer of the Horse Guards (Blue), who has placed his mansion in Eaton-place at the service of the illustrious exile while he stays in this country, and on Tuesday he returned to Southampton, accompanied by Lord Dudley Stuart, M. Pulszki, and several friends. The party arrived by the two o'clock train, and were received by the Mayor and Town Clerk of Southampton, Mr. Borrett, J.P., and some other members of the corporation, at a distance from the town. From the station the party proceeded at once to the house of the American Consul, and partook of a *déjeuner*, after which he proceeded to the town residence of the Mayor, to receive addresses. During his short stay at Mr. Andrewkey's office he was visited by the part of the American Ocean Steam-packet Company, of a free passage to America for M. Kossuth and his family. About five o'clock the party proceeded to the town residence of the Mayor, where an immense crowd awaited the arrival of the distinguished exile from town. Deputations were then received from Sheffield, Durham, Sunderland, and other places, to all of which M. Kossuth returned short verbal replies, and proceeded in the Mayor's carriage to the banqueting-room. So great was the crowd that filled the streets, that the Mayor and M. Kossuth were obliged to alight at some short distance from the hall, and make the rest of their way on foot, amid the most enthusiastic cheers from the people.

THE BANQUET.

The Town-hall, at which the banquet took place, was handsomely decorated with flags, flowers, &c., considerable space being set apart for ladies. A seat of honour was provided for the Mayoress, who was accompanied by Miss Croskey, the daughter of the American Consul. A magnificent dinner for 200 was provided, and it is hardly necessary to add that the room was densely crowded indeed, so great was the public interest on the occasion, that five guineas were offered for tickets in the course of the morning. His worship the Mayor presided in his robes of office, having the mace before him. On his right, attired in a close-fitting frock coat, with open sleeves, sat Kossuth, who, we regret to say, appeared to be in indifferent health. At the Mayor's table were Lord D. Stuart, M.P.; Mr. Wyld, M.P; Alderman D. W. Wire, Colonel Lawrence, U.S. Mr. Croskey, American Consul; Hon. Mr. Walker, late Secretary to the Treasury, United States; M. Pulszki, Mr. J. E. Crowe, Mr. E. G. Salisbury, Mr. C. Gilpin, Mr. Deacon, Town Clerk, Mr. Wilcox, M.P. for Southampton, Mr. Mangles, M.P., Mr. G. Borrett, J.P., Samuel Adams, Esq., banker, &c.

The usual loyal toasts having been duly honoured, the Town Clerk read the following letter from Mr. Abbot Lawrence, the American Minister:—

"Legation of the United States, London, Oct. 28.

"Sir,—I had hoped to have had the honour of being one of your guests this evening, but am prevented by a cold, forbidding me to go out. I believe, however, that I am in my present state of health suffering, as I am, under a severe cold, and the consequences of exposure in London last evening, I must not make the journey to Southampton. I feel the less regret at my unfortunate absence, as I am thus prevented from joining the authorities and citizens of Southampton, in this testimony of respect to his Excellency M. Kossuth, and their congratulations upon his release from captivity. I watched his career during his brilliant administration of affairs in Hungary, and I have seen what he has done since; and I am persuaded that he has eminently deserved the admiration of all lovers of constitutional government and freedom. He appears to possess the affection and confidence, in a rare degree, of the people among whom he was born, and with whom he has lived—a people devoted to constitutional liberty, and jealous of their rights and privileges. He is now free, through the joint efforts of the United States and Great Britain, two nations animated with a common desire to see it enjoyed by all civilised nations, and now has the opportunity to see, on the shores of England, the workings of a constitutional government, and the happiness of a free people.

"The citizens of the United States, of every shade of opinion, without yielding to the influence of any visionary ideas, sympathise deeply with every struggle for human freedom. Possessed themselves of institutions whose liberty is founded on law, and progress is compatible with stability, they cannot look with indifference on the exertions of other nations to attain the same happy state. They will welcome M. Kossuth warmly and gladly as one who, though he failed in the effort, laboured to establish in his native land a constitution which should work such results. I beg you, sir, to convey to your illustrious guest my sincere respects and congratulations, and accept for yourself and the corporation of Southampton the assurance of the distinguished consideration with which I have the honour to be, sir, your obliged and most obedient servant, ABBOT LAWRENCE.—To the Worship the Mayor of Southampton."

The various passages which referred pointedly to the late struggle in Hungary were loudly cheered by the company. The next letter was one from Captain Townshend, the member for Tamworth, which was as follows:—

"Brooks' Club, Oct., 1851.

"My dear Andrews,—Regret that the state of my health will not allow me to attend the public dinner which is to be given to-morrow to Kossuth, as nothing would have given me more gratification than to join in this mark of respect to so distinguished a man I regret it the more as an attempt has been made by a portion of the press to throw odium on his name. The acts and career, however, of this illustrious individual speak for themselves, and ought to result to the reclamation of all true and right-minded Englishmen the proudest and noblest epoch of their own country. He may safely defy the malignant insinuations of the *Times*, and the equally slanderous, though abortive, efforts of the *Morning Post*, secure in his own self-respect and approving conscience. I am happy to see that the public press has (with the two notorious exceptions) approved of Kossuth's conduct; and I shall be very much surprised if, during his short stay in England, he does not everywhere meet with the same generous, cordial, and enthusiastic reception that the people of Southampton, with their worthy and liberal mayor at their head, have already shown him. I remain, my dear Andrews, very faithfully yours,

"J. TOWNSHEND."

Some interruption was occasioned by an attempt on the part of Mr. F. O'Connor to come up and address M. Kossuth. The hon. and learned gentleman commenced an eulogistic harangue, but was met by a general shout of disapprobation from the company. The Mayor requested and peremptorily requested Mr O'Co nor to resume his seat, and harmony was restored. Another attempt was made by the hon. and learned gentleman to enter into conversation with M. Kossuth on the removal of the cloth, but the company again interfered, when the Mayor again rose and said—"If the gentleman does not know what is the proper course to be pursued at public meetings of this kind, it will be my business to teach him." He was received with the most tremendous cheering, and Mr. O'Connor again retired to his seat. The announcement of the toasts was then resumed; and the following were given amidst great applause in succession by the Mayor, who accompanied each with appropriate observations, viz. "Long life and prosperity to his Highness the Sultan of Turkey." "Health, success, and long life to the President of the United States." "Lord Palmerston and her Majesty's Ministers" Health of the two members for Southampton (Lord Dudley Stuart and Mr. Wilcox, M.P.)

The next was the toast of the evening, viz., "Our illustrious guest, Louis Kossuth."

His Worship said—In rising to propose the next toast, I feel I am quite inadequate to the duty of giving it one hundredth part of what it deserves. (Cheers) I have not the ability to do justice to the subject, or the character, or the services of our illustrious, brave, and honoured guest. (Cheers.) But having before, in his absence, in this ancient Hall, urged strongly, and I am happy to say successfully, his release from bondage, and his return at liberty in the land of the free, I thank God it has fallen to my happy lot to welcome, with my fellow-townsmen, so great, so good, and so noble a patriot. (Loud cheers.) But I am sadly wide went out to meet him and welcome him. I say the wealth of the nation the working classes. His reception by the people shows me that there is still in the hearts of my countrymen the spirit that breathed in a Cromwell, a Hampden, a Sidney, and a Russell, and I am glad to see that the sons of such great men are proving themselves worthy of such sires. (Hear, hear.) Who went out to meet an exiled Monarch, hurled from power by the voice of an injured people on the throne of France? No one went out. And her sons found him a palace to retire to in his dismay and despair. But, my friends, we have seen a contrast which must have been fresh in your memory, of a foreigner, distinguished, and I say, landing on your shores, with a splendid sword hanging by his side, and his breast covered with stars and medals for his valiancy in fighting one of the weaker sex, an act which would disgrace a savage—I mean the brute Haynau. (Groans) He was hunted and driven by the true English-hearted draymen to seek refuge in the dust-hole of a public house. But our noble illustrious guest, drawn by the cords of love, affection, and sympathy, is welcomed by a great majority of the people of England. (Hear.) This must be as gratifying to our honoured guest as it is to all. (Cheers) There is no doubt that the Czar and Kaiser have heard of the disgrace of Haynau, and no doubt they will soon hear with great terror of the triumph of Kossuth. (Cheers.) I am asked, why are these opponents to Kossuth, when his cause is so just and his eloquence so convincing? Why, the opponents are the same as they were in the days of Hampden, Milton, and Sydney, careless as to principles of liberty, whether they professed or not; and they say, as their forefather did in Holy Writ, "Am I my brother's keeper?" These are the replies of men without their proper share of into fact, and who are quite careless about the moral the social, physical, or political conditions of their fellow-creatures. (Loud cries of hear, hear)—and having not any other employment, they vilify and traduce the motives, actions, and intentions of great and good men. Our illustrious guest has come here, not with the blade of the sword victorious, but in some here with it unbroken and unburnished either by dishonour or defeat. (Hear, hear.) He had ever drawn it on the side of that which is good, and he has ever used it in defence of his country's good, but he has ever used it in defence of his country's freedom. (Loud cheers.) He has ever accompanied its exercise with words of peace and progress, of hope and comfort; for he is as eloquent in words as he is great in action, as powerful in deeds as he has been magnanimous in defeat. I give you "The health of his illustrious guest, Louis Kossuth."

It is impossible to describe the enthusiasm with which this speech was received The company rose and stood for several minutes cheering. The ladies waved their handkerchiefs, and the object of all this popularity stood with his arms folded on his breast, and indicated his gratitude by bowing repeatedly.

M. Kossuth rose, and was received with a fresh burst of cheering. He said, Mr Mayor, my Lords, and gentlemen, this is the second festive occasion upon which I have had the honour to express my sincere thanks to the Mayor and Corporation of Southampton for the generous welcome with which they have honoured me; and to you, my Lords and gentlemen, for the noble sympathy with which you have honoured the demonstration. God has awarded two blessings for those he has determined to favour—bless in heaven, and freedom in earth. (Loud cheers.) May your noble nation be ever gifted with both these blessings. (Cheers.) No man who is aware of the importance of his destiny can live satisfied without freedom; but he to whom God has granted freedom has not everything, if he has got the mind and the will to use his freedom to the development of his fellow-creatures' happiness, with such consistency of purpose as the English people have exhibited. (Cheers.) That is the basis upon which England has grown into the Paradise she now is, upon which my sad heart rests with joy, and which cannot fail to increase the desire of every foreigner to become also free, and so endowed with the capability of changing his own part of the world into a Paradise like England. (Loud cheers.) During all my life I have had one single leading idea—liberty. (Loud cheers.) The sole object of my existence was to secure the blessings of that liberty to my people, although I knew those blessings but instinctively. (Hear, hear.) Now, when I behold England, and see how liberty enables men to beautify more and more their dwellings of freedom, it is also a glory elevated to you, your proud position is to be able not only to bear goodwill to those who do not enjoy the happiness of freedom, but also to have a helping hand always ready for your more unfortunate brethren. (Cheers.) That is the glory of England, and in your national capacity you have illustrated the words of our Saviour, "Love thy neighbour as thyself." (Cheers.) It is only so I can explain the great phenomenon that I see around me, where so many men of different rank and station, but all united in the love of liberty, join to express their sympathy for that principle of liberty of which they choose to consider me the humble representative. (Cheers.) It is only thus I can explain the great phenomenon that even that honourable class whose entire capital is the labour of their hands stop in their work, and sacrifice their time, to say, with their presence, that the cause of a people before whom every individual person must bow, that the great principle of liberty can reckon on the people of England. (Cheers.) And well may the working classes of England be identified with the great principle of liberty, because without liberty there is no lasting welfare for them. It is indeed true that every man should in full security enjoy the fruits of his own labour. Without liberty, obedience to the law cannot be ensured, because, when the lawgiver is a tyrant and a despot, obedience to the law becomes a crime; then the lawgivers are the people themselves they will obey the laws, although they may be oppressive, because they know that within themselves is the power of modification (Hear, hear.) Therefore, that without liberty there is no balance to law. Without liberty there is no field for the productive labour of those who work. Without liberty there is no security for person and property. (Hear, hear.) And yet if it be not the aim of human nature to spend a field for productive labour, to create security for person and property, to soften men's hearts and to develop men's minds, I do not know what the aim of human nature can be. (Hear, hear.) It is with confidence in such principles that I come in express my fresh sympathy with that principle which, under different forms of government, but under similar institutions, is the blessing, the glory, and the happiness of the United States of America. (Loud cheers.) The blessings of this liberty may be allotted to other peoples, to enjoy it under such government as may suit their wants and wishes It is not without reason this sympathy with liberty, not only for themselves in a moral sedentary sense of the words, but also, when the product we labour of a country produces more than it can consume, such a country must have free intercourse and an interna, ed communications with the countries. (Hear.) This free intercourse, this country and interchange of products, is summed up in the words—free trade. (Hear, hear.) Now, I beg to ask the question, is this the idea of free commerce realised by the fact of free imports into England? I believe there is yet another part of the idea very important, very true, and that is the free exportation of that which the industry of England produces. (Hear, hear) But free exportation has no meaning, if that which is exported cannot find a free market in other parts of the world. Therefore I say that it is without reason the people of England sympathises with the principles of [illegible] without the liberty of Europe there can be no free trade. (Hear.) All despots fear free trade, because they commence a system of prohibitive tariffs for the extension of civilisation. Free-trade to England as to every other nation is only with a free Europe possible (Hear, hear) I hope, Mr. Mayor and gentlemen, I did not do wrong in touching upon this matter here. (No, no) I feel that it is glorious, when the material interests of a great nation are identified with the freedom of that nation. This is a providential matter. No single community can enjoy welfare and happiness, except on the condition that the interests of the communities are in harmony with the interests of individuals. Your sound judgment, gentlemen, and your comprehensive views, make it unnecessary for me to develop all that I could say about the connection of the material interests of England and the interests of the freedom of the world. Be it, therefore, sufficient to state my humble views in very true but truthful words. The principle of all evil on the European continent is the despotic and encroaching spirit of the Russian

(*Continued on page 548.*)

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Mr. Hawes, it is understood, is about to resign his office of Under Secretary of State for the Colonies, upon his appointment to that of Deputy-Secretary at War, in place of the Right Hon. Lawrence Sullivan, who retires, after upwards of forty years' service. Mr. Hawes is succeeded in the Colonial Department by Mr. Frederick Peel, second son of the late Sir R. Peel.

Circulars have been issued from the Home-office, in pursuance of a Parliamentary Address, to all the town clerks in the kingdom, requiring a return of a municipal electors within their respective boroughs.

The *Conservator Romana* announces that, in consequence of his Holiness showing under a severe indisposition, for three days' service, has been ordered in the churches, to avert evil consequences.

Earl Granville, the Paymaster-General of her Majesty's Forces, has conferred the military appointment of Whitster, or Superintendent of the Laundry at Chelsea Hospital, upon the widow of the late Captain Ebhart, 45th Regiment, and daughter of the late M.jor Ebhart, 72d Highlanders.

The National Gallery re-opened on Monday to the public, after being closed for six weeks. Three new pictures, which form a valuable acquisition, have been added to the national collection. Two of them are portrait studies, a little portrait of an old man, by Van Eyck, and of Rembrandt, by himself, both of which have been lately purchased by the trustees of the National Gallery, from the collection of Lord Middleton, formerly at Pepper Harrow Park, and at the sale, about two months since, the Van Eyck brought £365, and the Rembrandt £400. The third picture is by Sachleyven, "De Royter and his colt embarking," which was No 57 in the catalogue of the pictures at the last exhibition of the British Institution, from the collection of Mr. Bredel, who has since died and bequeathed it to the nation.

An unprecedented occurrence (says a Jamaica paper) has taken place at St. Jago de la Vega. His Excellency the Governor, Sir Charles Edward Grey, K.C.B., has been assessed for taxes to the amount of £35, and having refused to pay, and after repeated applications for payment by the lieutenant constable, his carriage was levied upon, and advertised in the *Jamaica Gazette*, by authority, for public sale to the highest and best bidder. The sale has not yet taken place; but unless his Excellency "paid up" it would inevitably occur

The late gold-dust robbery on the South-Western Railway is likely to give rise to an action in one of the law courts; some portion of the gold dust which was stolen, and which was recovered, was consigned to Messrs. Rothschild, and they demand its value of the Royal West India Mail Steam Packet Company. The latter have resolved to resist the demand in order that their liability may be settled in a proper form.

The list of arrears of the Court of Common Law, at the commencing of the ensuing term, numbers only 86 rules. The arrears of the Court of Chancery remain in very different condition, numbering about 1000. The Lord Chancellor will regulate the sittings of the appeal judges, and they are expected to sit in the court used by his Honour Knight Bruce, now one of the Lords Justices.

According to the last report of the keepers of public records, the new repository, now in the course of erection on the Rolls estate, is to be roofed in by the month of July next. A sum of £30,000 has been voted by the House of Commons and of £25 for repairs of the old building. A new scheme of arranging the public records is to be adopted in the repository.

The Earl of Dunraven has located £1000 for the repairs and fitting up of an old abbey, the remains of which are on his Lordship's demesne at Adare, county Limerick, for the reception of a society of the Redemptionist Fathers. The abbey formerly belonged to a fraternity of the Dominican order of friars.

A young lady, Miss Barke, in Dublin last week, fell into a cistern of water in the area of her brother's house, and when discovered was quite dead.

There is a report of a conspiracy against the Imperial Government at St. Petersburg, mentioned in the *Cologne Gazette*, which, if true, is very important. It is as follows:—"Rumours are in circulation of a newly-discovered conspiracy among the nobility at St. Petersburg, and of the arrest of several considerable persons standing very near the throne. The discovery, it is said, was made by officers of the body guard of the Emperor, whom the conspirators endeavoured to bring over to their party, but who revealed the whole matter to the Emperor. Further details are not known."

His Government have refused to postpone the payment of the hop-duties.

The Duke of Wellington, as Warden, held last week, at Dover, a court of leadmanage in St James's church, and after that a pilots' court, for the purpose of making a new arrangement in the room of Mr. Peake, who retired (80 years old), after having held the office many years. Mr. Austin was elected. New wardens were also appointed; eighteen younger pilots were elected in place of many of the ones who are superannuated. This is infusing new blood into the fellowship.

The annual financial statement of the treasurer to the Liverpool Corporation has been issued. It appears that there has been a considerable increase in the ordinary income, and that the surplus income, over obligatory and other expenses, has been nearly doubled, compared with the accounts of last year. The ordinary income for last year was £139,182. This year the amount is £169,704, or an increase of £27,552. The surplus income, the only available resource for many useful public purposes, has increased from £25,477 to £50,311. The town dues this year yielded £160,402, against £99,877. The fines in lieu of ground-rents, which last year amounted only to £5717, have this year produced £24,014.

On Monday morning, at seven o'clock, the British and North American royal mail steam ship *Africa*, which left Liverpool for New York on Saturday last, returned to her berth, having met with an accident when only a few hours out, by running aground near the Copeland Islands, near Belfast Lough, during a dense fog, at about two o'clock on Sunday night. There was no loss of life, and, beyond the damage done to the hull of the steamer, the disaster was unattended by any serious results.

The St. George's Hall Committee of the Liverpool Town Council have recommended that a contract be entered into with Mr. Henry White for the construction and erection of an organ for St. George's Hall, according to the plan and specification submitted, for the sum of £6250, exclusive of the case.

A farewell banquet was given at the London Coffee-house, on Monday evening, by George Peabody, Esq., an American gentleman residing in England, to his countrymen who have contributed to the Great Exhibition. There were present Mr. Lawrence, the United States Envoy; Lord Granville; Sir Henry Bulwer, the British Minister to America; Sir Joseph Paxton; Mr. Thompson Hankey, the Bank of England; Mr. Bates, the American Commissioners, the Secretary of Legation, and about eighty or ninety other gentlemen. The proceedings were of the most enthusiastic character.

From Prince Edward's Island we learn that a fearful storm was experienced from the 4th to the 6th of October, which was attended with a fearful sacrifice of property and life. The storm extended along the north side of the island to St. Peter's Harbour on the west, a distance of nearly 100 miles. At the commencement there were at least 100 sail of the north side, as reported by the fishing-vessels, 80 of which had been totally wrecked, and a still greater number foundered. No less than about 800 men had perished. The coast is described as literally covered with wrecks and dead bodies.

Accounts from Cavarzera, in Northern Italy, dated the 18th ult., mention the rising of the Adige, by which the whole country had been inundated, which it rested in the valleys destroyed. Great misery and desolation were occasioned, and 2000 persons were encamped on dikes.

It had been stated some time past that the Austrian Government intended to take under its protection the Christians in Turkey, in order to cause embarrassment to the Turkish Government for the benefit of Russia. But the *Spener Gazette* of Berlin now asserts that it has abandoned this design on the recommendation of a friendly power, and in order also not to increase its financial and political embarrassments.

A letter from Vienna to the *Indépendance* of Brussels states that the reduction of the Austrian army has at last been decreed, and will shortly be published. Thirty-five battalions of the landwehr are to be completely disbanded; the companies of the 4th Hungarian battalions are to be reduced to fifteen men each; and the expenses of fortifications are to be lessened by some millions. A saving of at least 15,000,000 florins is calculated upon.

From Rome we learn this week, that the Pope has formed a mixed commission of cardinals, prelates, advocates, merchants, and manufacturers, and simple workmen, to examine all the laws relative to corporations, and report up a due amelioration where they are susceptible.

The finest stag shot in Sutherland this season was killed in Strath Forest, on Saturday week, by Mr Hawden, Kildonan Lodge. The head is said to be the most noble that has been seen for many years. Mr. Hawden's shooting before within a few days of the Duchess of Sutherland, has gained the good fortune of bringing down more deer of large size than fall to the lot of most sport-men.

During Monday and Tuesday last the tide of the river Thames rose to its greater height than at any period this season. The area in front of Lambeth Palace, up to near the gate of the parish church, was on these occasions covered with water, and a similar state of things prevailed along the southern shore, from Battersea to Greenwich, many of the cellars being inundated; but from the precautions adopted, no serious damage has occurred.

An Industrial School, upon a small scale, has just been established at Ipswich.

A sharp shock of earthquake was felt at Pau shortly after five o'clock in the morning of the 22nd inst. At Begnères, also, a shock was felt at about the same hour. It lasted about two seconds. This is the third time the same phenomenon has been noticed in the valley of Bagnères, at the same period of the year.

The admission of the Jews to fill judicial offices in the courts of justice in Prussia, which has long occupied the public mind, has been brought to a partial settlement. The Jews will in future be admitted to the study of the law, and every opportunity afforded them for prosecuting their studies; but it has, at the same time, been notified that they cannot be admitted to the office of judge until the present laws on this subject undergo a change.

The number of poor relieved in the metropolitan parish of St. Pancras last week was 9736, and the sum expended £191 11s. The number relieved in the corresponding period last year was 9230, and the amount expended £207 18s. 10d.

CHESS.

TO CORRESPONDENTS.

CRAB—Our little friend is right in the position given White must rest content with a drawn game.

JUDY—Enigma No. 689 is extremely clever. If the ladies continue to progress at Chess as they now do, gentlemen must look warily to their laurels. Thanks for the additional Diagrams.

J V—South-down Ram—You have not quite hit upon Black's best defence in No 474, as you will perceive by reference to our Solution in our last week's Number.

R T C—In playing a match by correspondence it is quite allowable for the parties engaged to obtain assistance from books, but not from other players. S. Andy Smasher. 3. Your Solution of No. 404 is imperfect.

A SUBSCRIBER, Hoxton—In a drawing game of "check" to a King. 2. Address the publisher, who will give you every information.

J M E. Very acceptable; though like Virgil's waifs, they are far between.

BETA, Massachusetts. In writing for information, might surely have the courtesy to pay the postage of his letter.

PUNIC—Both parties should retract their moves up to the time when the King was checked, and resume the game from that point.

ASPIRANT. There is a thriving Chess Club at Kidderminster—the President of which we believe, is Lord Foley—that meets every Wednesday at the Swan House, and possesses many excellent players.

DERBYON—Send early in the week, and you will never have cause to complain.

W S, Glasgow—Your solution of Mr Horton's problem is correct. The problem shall be examined, and we think it take care that the grossly expressed complaint with which it is accompanied is unmerited by the giver as we are sure it will prove gratifying to the receiver to duly made known to the veteran composer.

LITTLE—We have no doubt as to the possibility of Black's protracting mate to six moves, unless he play K to B 3d as in first step.

SECRETARY—You should write to Mr Löwenthal himself. We believe our announcement of his absence to make a professional tour has produced him several engagements in the more Metropolitan districts, that the clubs will have no occasion of availing themselves of his services should these arrangements for his visiting them without delay.

CLERICUS, Ivan—Mr Buck is played three games out of six by Mr Andersen, and won them all. We are not informed of the results of Mr Kieseritzky's play with Mr Horwitz—we do not, indeed, if they were played together.

MARCUS—The CHESS TOURNAMENT—The Match between Mr Deacon and Mr Lowe has terminated in the triumph of the former by their final scores giving to

Deacon, 7 games
Lowe, 2 "
Drawn 1 "

EPS—A piece does not lose its attacking or checking power by being prevented moving, in the case you mention, the Black Kt would therefore give check to the White King.

HAZAR, Copley—Your solution is correct.

JOSEPHINE, Edinburgh—It can, as you suggest, be solved in *three* moves.

KNIGHT—The position is anything but difficult—Play the Rook back to Q sq, first, if then the Black King is moved to his own square, play the Rook to R 8 sq; the King is then obliged to return to K sq, and you mate at K B 8th. If the Black King, at his first move, goes to Q B square, you then play the Rook Q Kt sq, and, when he returns to Q sq, give mate at K 6th.

A C—In Casting, it is quite indifferent which piece you move first, but the best players usually move the King before touching the Castle. The only code of Chess Laws adopted in this country is that given in the "Chess-player's Handbook."

SIR, Manchester—You mistake altogether. Look again.

CARDIFF; and H T T, Reynoldston—You can Castle after your King has been checked, provided he has not moved.

SOLUTIONS OF PROBLEM No 404, by Judy, Abassa, Mirza, Philo-Bolton, Midge, and Deveron, are correct.

SOLUTIONS OF PROBLEM No 405, by Jack of Shrewsbury, Judy, Deveron, Derg, Hutt, G J B of Norwich, Sample Simon, Grower, P G S, H P, W W, S K, W T, J Q R, A, of Calcutta, M S R, St Edmund, C G, of Pendleton; T A, of Hamilton; Dr Field; A Lady, of Hoxton; Clevedon; H B, R B, M D, L S D, are correct.

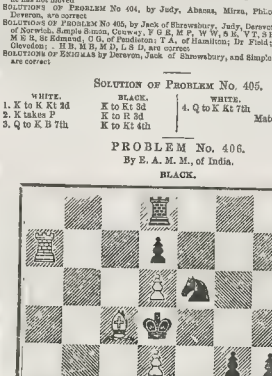
SOLUTIONS OF ENIGMAS by Deveron, Jack of Shrewsbury, and Simple Simon, St Edmund, are correct.

Solution of Problem No. 405.

WHITE.	BLACK.	WHITE.	BLACK.
1. K to K Kt 3d	K to Kt 3d	4. Q to K Kt 7th	
2. K takes P	K to B 3d	Mate.	
3. Q to K B 7th	K to Kt 4th		

PROBLEM No. 406.

By E. A. M. M., of India.



WHITE.

White, playing first, is to mate in five moves.

CHESS ENIGMAS.

No. 692—By R. B. WORMALD, Esq., of Oxford.

White: K at Q R 6th, Q at K Kt sq, B at Q R 2d, Kt at K sq, Ps at K R 3d, K B 2d, Q Kt 2d and 4th.

Black. K at Q 5th, Q at K Kt 2d, Rs at K B sq and Q R sq, Ps at K R 5th, K Kt 3d, K B 2d, Q Kt 3d, Q R 2d and 5th.

White plays, and mates in four moves.

No. 693.—*La Régence.*

White: K at K B 4th, Q at Q B 3d, K at K 4th, P at K B 5th.

Black: K at K B 3d. Bs at K Kt 2d, and K B 2d.

White to play, and mate in three moves.

No. 694.—*La Régence.*

White: K at Q 2d, B at Q B 3d, Kts at K 2d and Q 4th, Ps at K B 4th and Q B 4th.

Black: K at his 5th, P at Q 3d.

White, playing first, mates in four moves.

MATCH OF CHESS BETWEEN PARIS AND LONDON BY ELECTRIC TELEGRAPH.

At the suggestion of Mr. Staunton, an experiment the most interesting perhaps ever attempted in connexion with Chess is about to be carried out. This is no other than playing a match between this country and France through the medium of the Electric Telegraph. Amidst the many wonders of this marvellous age, a match of Chess played between two capitals three hundred miles asunder, and separated by the coast, is surely not the least. Nor is this the only astonishing feature of the undertaking, for the telegraphic communication is now completed to many of the chief continental cities, and as each move from London to Paris, and *vice versâ*, will be instantly telegraphed on to Prussia, Austria, &c., it will absolutely be a game of chess played between England and France, with the rest of Europe looking on!! The patentees of the submarine electric telegraph have offered every facility for carrying out this novel scheme, and the committee of the Tournament have liberally given fifty guineas as a compliment to the winners. In Paris too, the following communication shows, the idea is most favourably looked upon, so that we entertain but little doubt of its complete success:—

Paris, Oct. 25, 1851.

My Dear Sir,—I have the honour to acknowledge the receipt of your letter of the 17th inst. I hastened to communicate your project of playing a match at Chess by the submarine electric telegraph to the committee of our club. This happy idea was received in the most favourable manner, and the amateurs of the Paris Club willingly accept the offer of a prize which the Tournament Committee have appointed for the winner. In return, the members of the Chess Club in Paris offer a prize of 1250 francs, to be played for in a match, by correspondence, between the Sir George's Club and their. The contest to consist of two games with each opponent. The principal object of this match is to keep up the amicable relations at present subsisting between the two countries, and add to the interest of the Chess periodicals.—Awaiting your reply, I rest, with every sentiment of esteem, yours, &c.,

L. KIESERITZKY.

The projected completion of the Louvre Palace in Paris will, it is said, receive a speedy solution. The Minister of Public Works has appointed a commission to examine a plan of works to be executed for the purpose of uniting the North Gallery, which joins the Tuileries by the Pavilion Marsan, and extends as far as the Rue de Rohan, with the Pavilion de Beauvais, the construction of which, commenced in 1802, remains unfinished at the extremity of the Place de l'Oratoire, almost opposite the Rue du Coq St. Honoré. This part of the gallery near the Tuileries was commenced in 1807. It is now appropriated to the use of the National Guard, to the residence of the Commander-in-Chief to that force, and to a barracks. Its completion will (complete the Place du Carrousel by creating a building parallel to that of the picture gallery.

THE GREAT EXHIBITION.

The leading points of interest during the past week have been those connected with the grants of remuneration to the various officers; and, indeed, we may say to all parties who can be recognised as having rendered direct service in the work just completed.

Mr Paxton (now Sir Joseph) gets £5000, or about 2½ per cent. on the cost of the Building; the design for which certainly saved the Exhibition from being completely overwhelmed in the bricks and mortar of the Building Committee, or completed extinguished by Mr. Brunel's sheet-iron doom. The other rewards, or rather payments, are upon a similar scale; so to speak, Messrs. Fox and Henderson's claims to extra remuneration, in consideration of the novelty of the undertaking and the impossibility of making strictly accurate estimates, have yet to be awarded upon. There can be no doubt, however, that they will be fairly and honourably dealt with.

The remuneration voted to each of the active members of the Executive Committee—Colonel Reid, Mr. Dilke, and Mr Cole—has not publicly transpired, but the two former doubtless receive twelve hundred pounds each. Colonel Reid, on the ground that, being in the pay of the Government as an engineering officer, he was bound by etiquette and duty to render all the assistance in his power to such an undertaking; and Mr Dilke, having, fortunately for himself, these independent means which enable him to give gratuitous services, is hungry denied to so many men, declines receiving any payment now for that which he undertook as a "labour of love." Mr. Cole, being in a different position to either of his colleagues, since his official salary was suspended, feels that he was moderately paid for his services by the Royal Commission, accepts remuneration, which no one who has witnessed his exertions will begrudge him. Indeed, he deserves to be considered the real acting spirit—the mere intimidator and direct work—of the undertaking, and, therefore, deserves to be amply paid.

The question of the surplus has been referred in the first instance to the consideration of a committee of the Royal Commission. These gentlemen will, of course, examine and report upon the various propositions now before the public, or which may be made by various individuals direct to the commissaon. As a matter of course, great deliberations will be required; but all things considered, the most likely course to be adopted will be the appropriation of a sufficient sum to form such a record of the contents of the Exhibition as shall serve as a standard of manufacturing and artistic excellence, and the materials and mechanical means employed therein. This being effected, and the first difficulties funded, the interest may be used to enlarge it gradually, and promote the better application of whatever science may add to the purposes of industry. Many minor points must of course enter into this question, but the one indicated seems at once the safest, and the most likely to be adopted by the gentlemen who have so far carried this undertaking to a successful issue. Many of the leading houses in the City have expressed in favour of this course in a letter addressed to the Executive Committee. These gentlemen state that they "anticipate great benefits to merchants, manufacturers, and brokers, from the formation of a great trade museum or collection, which the one proposed would be the foundation, and in wh ch specimens of natural productions or exports of all countries should be deposited, together with such accessories, practical, and commercial information as can be procured," and that "such a museum would at all times give the most valuable aid to the mercantile community, and afford that information which is so constantly required, and which there is now no means of obtaining." The latter point finally suggests that the collection be deposited and arranged in the city of London. This latter point is questionable, but may admit of consideration.

In the meantime his Royal Highness Prince Albert has taken up the question of making the Exhibition as useful as possible in this direction, by urging, in an admirable letter to the Society of Arts the propriety of establishing, during the winter months, a series of lectures on the different departments of the Exhibition by professional men best acquainted with the various subjects His object is evidently to elicit the opinions, however varied, of all those who are best enabled to give such opinions, as to the probable influence of the Exhibition on the fine arts; chemistry, as applied to manufactures; special processes of manufacture, mechanics, railroads, agriculture, tools and implements, commercial relations, political economy, &c.; and in the course of his communication the Prince gracefully alludes to the connexion which the Society of Arts had with the early progress of the undertaking, now so far consummated, and states that he considers this matter as peculiarly within its province. The council of the society has affirmed all this, and resolved to carry out the suggestions forthwith.

We ought to state, that the Hon. Esast India Company has presented her Majesty with a most magnificent and choice selection from the objects exhibited by the company, embracing muslins, jewellery, filagree-work, jewelled agate cups, furniture, brocades, shawls, and carpets. The remainder of their collection the company intend to distribute as follows:—Having provided for an accurate and complete illustration of all raw materials, foods, or mechanical contrivances exhibited from India, the distribution of the remainder to scientific institutions or individuals is duly authorised, and the manufactured goods purchased by the company for exhibition will be sold, probably at auction, at some place appointed for that purpose.

The police returns of delinquents and lost articles in connexion with the Exhibition are curious, and therefore we give an abstract, the insertion *in extenso* being precluded by its length.

Six men and seven women (all English) were apprehended for picking pockets. Of these, six were convicted and one discharged by the magistrate. Three men and two women (all English) were taken for attempting the same delinquency, four being convicted and one discharged. For stealing articles exposed in the Exhibition, six men (all English) were apprehended, five convicted, being either fined or imprisoned, and one discharged. Of foreigners there were five for the same offence, and those were punished in one of the two modes named.

Of lost and restored articles there were an enormous number; chiefly articles belonging to females; and among them two petticoats and two busties, none of which, up to the present time, have been claimed. 1697 articles were restored to their respective owners, and £48 8s. 9½d. in purses and cash, as also £142 6s. in loose cash and checks. The number of articles still in the hands of the police amount to 3347; of those, above 700 are sunbrus pocket handkerchiefs, and 1 a carpenter's tool-basket with tools. In money yet unreclaimed there are £18 18s 9½d. in purses with cash, and £4 10s. 8½d. in loose cash, together with a 5 doz. Prussian note. Such are, briefly, the statistics of crime and lost and restored property connected with the Great Exhibition from 1st May to 24th October, both inclusive. The positive crime is wonderfully low considering the fact that 5,000,000 persons visited the building.

CIVILISATION IN "THE FAR WEST."—The *Arkansas Banner* gives the following account of a most desperate attempt at assassination recently made at Little Rock, in that state.—" While standing at the corner of the Anthony House, in this city, the editors of the *Banner* were attacked by B. F. Danley, the sheriff of the county; C. C. Danley, the auditor of State; W. Danley, a steamboat engineer; and S. Borland, United States senator. The attack was made upon Mr. Whitsey by B. F. Danley and C. C. Danley striking at him with heavy bludgeons, both at the same instant. Whitsey first drew a pistol at B. F. Danley, without effect, and closing with him succeeded in wrenching his stick, but with it beat him to the ground; during this time C. C. Danley was striking him (Whitsey) on the back part of the head with a heavy cane. Whitsey, upon turning to ward off the blows of C. C. Danley, was shot in the right breast by a pistol ball from B. F. Danley. In the meantime Mr. Reardon, who had taken no part in the affray, was seized from behind by Borland, twisted to the ground, and disarmed. Borland held him down and choked him, with a pistol presented at his head, until pulled loose by Gordon N. Peay, as Mr. Reardon, being raised from the ground, William Danley, coming up behind, dealt him a blow on the side of the head with a heavy stick, which left him apparently lifeless. When this feat was accomplished, the two desperadoes, the honourable senator joined their companions, the said tor and sheriff, in their assault upon Mr. Whitsey, which was continued until he fell exhausted by the attack and the wound he had received in the outset. When the bystanders, shocked with the proceeding, sought to prevent the murder of a man in such a state of exhaustion, they were set upon by Borland, with pistol in hand, who continued even then to cry out to his confederates, 'Shoot him! kill him! kill him!' It is due to Mr. Whitsey to state that he only saved his life by a most desperate resistance to the combined attack; that though assailed from every quarter, in front and from behind, by sticks, knives, and pistols and defending himself under every disadvantage (his right arm having rendered useless by the pistol ball), he never so far forgot himself as to strike Captain C. C. Danley, the cripple, though he had frequent opportunities to have felled him to the ground."

THE FRENCH ACADEMIES.—The great annual sitting of the five academies, united in one assembly, was held at the Institute on Saturday; M. de Tocqueville, the president of the Academy of Moral and Political Sciences, was in the chair, supported by MM. Viennain, Langlois, Royer, and Auguste Dumon, who severally represented the French Academy and those of medicine, fine arts, belles-lettres, sciences, and fine arts. The attendance was very numerous. M. de Tocqueville opened the sittings at two p.m., with an appropriate discourse. The secretary then read a report on the results of the competition of 1851 for the prizes of philology founded by M. de Volney.

Prances was awarded to M. H. Scheinthal, Ph. Dr., for an essay on certain languages spoken by the Yoolf and Bambarra negroes, considered in a philological point of view. A prize amounting to the same sum was awarded to Mr Munk, the celebrated Hebraist, or a notice on some Hebrew grammarians of the 10th and 11th centuries; a work remarkable for the sagacity displayed by the author in his researches, and for the abundance of information. Dr. Lorenz Diefenbach obtained an honourable mention for his "Comparative Dictionary of the Gothic Language." After this report the conditions of the new competition for 1852 were proclaimed, and a number of each of the five academies successively took his seat at the tribune, and read an original paper on a subject of science, literature, or fine arts; the most interesting of these was one by M. Arago, read by M. Langier, on the physical constitution of the sun and stars, and on the ancient and modern coin ons expressed on the subject.

Another screw-steamer for the Peninsular and Oriental Company was launched on Monday last at Newcastle. She is named the *Chusan*, is about 800 tons burden, and is a larger ship than the first vessel, the *Shanghai*, now en route to China. The *Chusan*, like the *Shanghai*, was designed by the late Mr. Fawcs, and was built of iron at the new premises of Messrs. Miller, Ravenhill, and Salked. She will follow the *Shanghai* as soon as she is fitted with her engines and equipped for sea, to the China station.

THE PROCESSION PASSING THE CHURCH AND HOSPITAL OF ST. CROSS, WINCHESTER.

(*Continued from page 546.*)

power. ("Hear, hear," and loud cheers.) There is the pillar which supports everybody who wishes to establish his way on the sufferings of his nation, and to raise himself upon the ruins of liberty. (Hear, hear.) There is the rock which breaks every sigh for freedom on Europe's continent. It was not without reason, then, that I said that the principle of all evil upon the Continent was Russia. (Hear, hear.) These words are so true, that even Jesuitism, which in these last times commences again to raise its head, finds its support in the power of Russia. (Hear, hear.) We are are in the neighbourhood of a great nation, which mourns enough at not enjoying the fruits of its many sorrows and sufferings. There is a party there which is called—I don't know with what right—the jesuitical party; and you all know that that party threatens France with the Cossacks. And even here, in this glorious country, it is not longfsance there was a question much agitated as well in public opinion as in Parliament. I know what is convenient in the place and due to you. I will not enter into the question, but will only state one curious coincidence. I am a Protestant—(Cheers)—not only a Protestant by birth but by conviction. (Cheers.) But I am a humble member of a nation the majority of which is composed of Catholics. Now it is not one of the less glories of my nation that in all times, in the present day as well as in former times, when our fathers bled for liberty in religion and freedom of conscience, there have been Hungarian Catholics who have taken the lead in struggling in a peaceful manner, as well as on the field of battle, for religious liberty and freedom of conscience. In that way the freedom and the rights of Protestantism, always opposed by the House of Hapsburg, who were ever strongly united with the principle of Jesuitism, this freedom, these rights, were established by treaties, by pacific means, by the victorious swords of Hungarians fighting for freedom of conscience. It is true, that, so soon as freedom was obtained, the sword was laid aside; for Hungary has been a land of loyalty in all time. It may suffice to say, that the freedom of Protestantism in Hungary was secured by laws, was secured by treaties, on the maintenance of which the existence of the Hapsburg dynasty was made to depend. In 1848 this was included amongst other reforms; and scarcely had Russia raised the fallen House of Austria, by putting its foot on the neck of Hungary, when the first deed of the restored House was to destroy the rights of Protestant liberty in Hungary. And then, gentlemen, this is connected with another fact with respect to the Catholic Church. The Kings of Hungary, in former times, were always anxious not to allow any power to meddle, and chiefly not to allow the Court of Rome to meddle, in the temporal affairs of the Catholic Church of Hungary; so much so, that one of our most glorious Kings, Matthias Corvinus, a Hungarian by birth, seeing the encroachments of the Court of Rome on his rights, said to one of the Popes, "May your Holiness remember that Hungary, which bears a double cross on her banners, has never endured that the Court of Rome should interfere with the liberty of the Hungarian people." So anxious were the Hungarians in former times to secure their independence. And when the Emperor of Russia had succeeded in crushing Hungary, one of the first things that he did was to give the Jesuits of Rome full power to feed on Hungary (Hear, hear); and with this he united the destruction of the autonomy of the Protestant Church. (Hear, hear.) Now, gentlemen, these are the things which have caused so great an agitation in this land. Jesuitism was established by the satellite of the House of Austria; and even in that respect I am entitled to say that the principle of every evil in Europe is the despotic and encroaching spirit of Russia, upon which leans every man who will do that which is wrong to the many. You know, gentlemen, that that is the power which England meets at the Bosphorus, at the Nile, and all over Europe. This identity of the interests of England with the interests of the freedom of Europe makes me hope that the generous sympathy which we meet with here will not remain an empty sound.—(Hear, hear)—that it will not remain without some practical results to my poor country and to humanity. (Much cheering.) There is my confidence, my hope. (Hear, hear.) No party in England, I believe, will deny that the armed interference of Russia in Hungarian affairs has increased beyond measure the preponderance of Russia on the European continent. (Hear.) Russia having violated the independence of nations, and taken upon herself to dispose of their domestic councils, it can scarcely be denied that so long as Hungary is not restored to its liberty and independence, the preponderance of Russia in Europe will not only not retire, not only not subside, but will increase. And what I request in the name of my poor country, and in the interest of all the oppressed nations in Europe, is not that England may draw its sword for the restoration of Hungary! Gentlemen, all I humbly request, wish, and hope, is that England may not abandon that right which in Europe is due to her—(Hear, hear)—that England may not give a charter to the Czar to dispose of the destiny of Europe. (Hear, hear.) Public opinion in England can make it a living principle in acknowledging the natural right of every nation to dispose of itself—not to allow the Czar to interfere with the domestic concerns of whatever nation in Europe. (Hear, hear.) People of the mighty Albion, that is all—there is nothing else that oppressed humanity expects, entreats, and hopes for. As to the rest, leave it to the nations of Europe. (Cheers.) Austria—but no, not Austria—I love, I esteem the people of Austria as my own brethren. (Cheers.) I feel their sufferings as truly as the sufferings of my own people; I have wishes and hopes for the people of Austria as fervent as for my own people. I have a right to say this. My life is an open book. (Cheers.) It is history which will pronounce its judgment upon me, and neither Austrian birelings, nor party spirit, nor blind passion, nor those base and absurd calumnies which, in my position, could not fail to be launched at me, though I am almost surprised to see these calumnies find their way into certain places in which I should not have expected to see them. (Hear, hear.) It may be that, relying on the fact that my people is a moral people—a people which never, never can be charged with having given its confidence or its love to a man who was not an honest man—it may be that, relying upon the testimony of my people, I shall not consider these calumnies. It may be that I shall entrust the protection of the law of England. (Loud cheers.) I will consider the matter so soon as my duties to my fatherland shall leave me a single moment to sacrifice to myself. Still I must say that I sincerely regret to see that these calumnies have spread in England, not for my own self, because I believe they can but enhance the generous affection of generous men, it being natural to generous men to feel indignation at such calumnies; but I regret this, because it is no pleasing prospect for our humanity to see our fellow-creatures delighting in such matters. But still it is history which will pronounce its verdict upon my public life. ("Hear, hear," and cheers.) Humble as I am, I have had a public life, and perhaps I may have one yet. (Loud cheers.) In respect to Austria, I had a right to say what I did, because I can declare that the people of Austria have never had, and have not now, a more faithful friend than myself. It is, therefore, not in respect to the people of Austria, but in relation to the house of Hapsburg, that I was going to say a few words. And all I am willing to say is this, that the house of Hapsburg, because of its perjury, because it has violated every right of every one of its nations, is doomed to destruction. (Cheers.) There is a God in heaven, and there must be justice on earth. (Cheers.) The house of Hapsburg, having forfeited even the possibility of the love of its nations, has no more basis for its existence. (Hear, hear.) Bayonets are no basis, because the soldier always belongs to the people. The soldier also thinks. There is a great example of this in the past struggles of Hungary, and there will be, if God grants it, another. Every citizen of Hungary was and may be—he will be—a soldier, and every soldier is a true citizen. From soldiers belonging to England I have heard the most generous sentiments; this was the case at Gibraltar; and therefore I say that bayonets alone are no basis for the existence of despotic power. On what basis, then, rests Austria? On nothing else than her being an obedient satellite. ("Hear, hear," and cheers.) But while the house of Austria cannot have a future, Hungary has a future. (Loud cheers.) It has a future because it deserves to live; it has a future because it has vitality; it has a future because its independence is necessary to the liberty of Europe. (Great cheering.) Gentlemen, to me every occasion is in the highest degree valuable when my feeble words—but the flower of eloquence, you see I designedly employ no eloquence, but rely on plain and simple statement as the means of convincing a logical understanding—to me every moment is valuable which enables me to discourse to you of the affairs of my poor native land; but I suffer here [putting his hand

AN INCIDENT IN MILL-STREET, CHESEFIELD, WINCHESTER.

EXTERIOR OF THE COTTAGE OF THE MAYOR OF SOUTHAMPTON, AT WINCHESTER.

to his chest], and am not capable of speaking very long without suffering some evil consequences; and, therefore, I beg leave to ask you to charge your glasses. It is to the future of my country, for which I hope that I devote the activity of my life—that activity which is regained by my liberation from the bondage at Kutayah. This liberation is due, in the first place, to the noble sentiments of the Sultan, who, from the beginning, in spite of all the menacing threats of Russia and Austria, preserved and protected my life and the life of my associates. For a time, yielding to the pressure of circumstances, he surrounded his hospitality with the appearance of detention; and, at last, raising himself by his own noble inspirations, and by his respect for the rights of humanity, he restored me in the most dignified manner to liberty. (Cheers.) If I were to live a thousand years, I could never forget any wrong done to my people—to my country; but as to my own self, it is part of my nature that I do not like to look to the past for griefs, but only for instruction for the future; and partly on this account, partly because I have the knowledge of the conviction that the people of Turkey has a vitality yet, because I have a conviction that the future of the Turkish empire is in no contradiction whatever to any political interest in Europe, but rather in very strong and intimate connection with the interests of some nations, especially with the interests of England and the interests of Hungary; it is by these considerations that I am led to declare that Turkey will ever find in me a faithful friend. But while acknowledging the conduct of the Sultan, I must also return my most heartfelt thanks for the magnanimous interference of the Governments of Great Britain and the United States in so high and generous a manner, supported by the public opinion of the people of both countries, and even sanctioned by the Congress of the United States. It is, therefore, in somewhat broken strains, owing to the state of my chest, but with the deepest feelings of a grateful heart, that I propose the toast, "England, Turkey, and the United States." (Loud cheering.)

RICHARD ANDREWS, ESQ., MAYOR OF SOUTHAMPTON.
(SEE NEXT PAGE.)

Colonel Lawrence and Lord Dudley Stuart responded to the toast.

Col. T. B. Lawrence said—It is with embarrassment that I rise to acknowledge the kind sentiment just proposed, and to thank you on behalf of my country for the cordial manner in which it has been received. But, gentlemen, my embarrassment is mingled with regret that the American Minister himself, whose pleasure it would have been to have united with you in this offering of hospitality, should have been prevented from being here to-night. I cannot venture to occupy your time with any lengthened remarks, but, as a member of the American Legation, and as an American citizen, I cannot but give expression to the greetings which rise responsive from the heart upon an occasion like this. In the presence of one who, animated by that spirit of freedom which sustained the patriots of my own land, and made our country what she is; of one who with undaunted purpose dared all, suffered all, endured all, for his country's good, of one who, exiled from his native land, yet holds aloft the banner of human liberty and constitutional law—in such a presence, what American, what freeman,

SPEECH OF M. KOSSUTH, AT THE MAYOR'S COTTAGE.

can avoid giving utterance to a sympathetic word—a hearty welcome? Yes, gentlemen, I am proud to be here the guest of Englishmen, in defence of whose liberties Hampden bled and Sydney died; to see about me some of the citizens of my own happy land, to secure whose freedom Washington and Franklin devoted their lives, and to unite with them in extending the right hand of fellowship to the patriot leader of the oppressed Hungarians. (Cheers.) Sir, we Americans are too young a people to have forgotten our own struggles for liberty. The generation which witnessed and took part in those arduous struggles has not yet passed away. We have still some of those who acted a part in that great drama, and we know too well what they dared; the trials and sufferings that they endured, not to sympathise, and deeply, too, with those engaged in the great revolution in Hungary. Sir, I well remember the gloom that overshadowed every countenance when the news reached America of the capture of Kossuth, and its consequent disasters—when we knew that despotism had succeeded in riding roughshod over one of the finest nations in Christendom, and one whose feelings and whose principles were akin to those of my own land. (Cheers.) But, sir, we feel that the time must yet come when the iron rule of tyranny of Eastern Europe must be broken, and when right and justice must prevail against despotism and oppression. In conclusion, let me assure your illustrious guest of the warm and fervent welcome he will meet with in the United States, from Maine to Texas, from the Atlantic to the Mississippi. But, sir, I will not detain you longer; but offer the following sentiment:—"May the star of freedom in Hungary, though now dim, yet culminate and shine in the zenith; and may the Hungarians as a people be yet reunited in the land of their fathers." (Hear, hear.)

Lord D. Stuart said he had not words to express the feelings under which he rose on the present occasion, but those were feelings common to every one who wished well to freedom over the world. (Hear, hear.) The toast to which, in common with the hon. gentleman who had just sat down, he was called upon to respond, was one of deep importance, but yet he felt proud of the occasion on which he was called upon to respond to it. The toast was, "England, the United States, and Turkey;" and what a noble thing it was to see two free countries of the Saxon race, and one in the east, which, if not free, deserved to be so, joining in a deed which would render them all famous in future history! To think of their having been brought together in such close alliance, not by their material interests, but for the advocacy of a great principle, the principle of the independence of nations. (Cheers.) But he was wrong, it was for the material interests of a nation to advocate and maintain sound principles. (Hear, hear.) Their distinguished guest who had that day delighted them had shown them that Free-trade was intimately bound up with the interests of liberty. Their illustrious friend gave all honour to the Sultan of Turkey for his magnanimity in saving him from a lingering death in a dungeon, or by the hands of an Austrian or Russian assassin. He gave all honour to the Sultan of Turkey, but it should be remembered that without the remonstrance of our foreign minister speaking the will of a noble people the Sultan would hardly have ventured to act in defiance of two of the most powerful empires in the world. It was England and the United States which, by uniting together, had procured the liberty of the Hungarians, and he trusted that they would always act together in causes equally holy. (Hear, hear.) When he spoke of these three nations, and the hopes he entertained of their union, there were other nations as well as Hungary to which the alliance might be an advantage. There was one in which he had long taken a deep interest—he meant Poland. (Cheers), to which such alliance would be an augury of hope. (Hear, hear.) The cases of Hungary and Poland are intimately connected. (M. Kossuth, "They are.") He thanked his distinguished friend for the testimony that Poles and Hungarians had common interests and common enemies. There was no doubt but that the Czar, when he perpetrated his atrocious interference in Hungary, was well aware of the truth of that observation. He had, in fact, put his intervention on a false pretence, had said that the movement of Hungary was no national movement, but the machinations of a parcel of foreigners—Poles, in fact, who had no interest or stake in the country. Why, the fact was that when the Hungarians had 200,000 men under arms there were not in the whole army more than 5000 or 6000 Polish auxiliaries

BANQUET TO M. KOSSUTH, IN THE TOWN-HALL, SOUTHAMPTON, ON TUESDAY.

amongst whom, he would add, were the glorious Boer, and some of the most able generals in the service. It was said that the Poles were turbulent, and against every Government. True, they resisted oppression to the best of their ability, and he trusted they would always be ready to draw the sword against all tyrants and oppressors. (Loud cheers.) The toast of "England, Turkey, and America," had been given by the late Governor of Hungary, and he (Lord Stuart) thought he would soon again be filling that distinguished position through the Strand towards Temple-bar. The greatest enthusiasm appeared to prevail at Temple-bar, Farringdon-street, St. Paul's Churchyard, and Cheapside; the crowd was immense, and from numerous houses were displayed innumerous banners of the Hungarian tricolor.

Precisely at eleven o'clock two carriages and four drove up in front of the residence of M. Kossuth. The crowd had by this time become immense. In a few minutes Mr. Alderman Wire and Mr. Charles Gilpin, followed by Lord Dudley Stuart, who was warmly received, entered from the house, and took their seats in the first carriage: the illustrious Kossuth immediately followed, and his appearance was the signal for the most enthusiastic bursts of welcome, with cries of "Long live Kossuth!" "Down with Austria!" &c. The appearance of the noble Magyar was most commanding and imposing; he was dressed in a blue braided uniform, and wore a green hat and feather, which he raised repeatedly, and bowed with a smile of manly gracefulness that called forth fresh shouts of "Welcome!" Having taken his seat by the side of Lord Dudley Stuart, the carriage drew on, when the second carriage drew up, and the distinguished officers and members of the Magyar's suite entered; a procession was then formed, notwithstanding the wish of the illustrious exile that all unnecessary ceremony should be dispensed with, and the carriages, preceded by the cortège (the principal carriage containing a number of Hungarian gentlemen, and cabs bearing banners with the mottoes of "Kossuth, Liberty, and Independence," the Hungarian tricolor, and various other banners and odevices. The cortège then proceeded throughout the route, during the whole line of which at various points, from the pressure of the crowd, the progress of the carriages was delayed, and the cheering became more loud and enthusiastic, the noble Magyar frequently rising from his seat and returning his acknowledgments. In Piccadilly the crowd following the carriages became increased, which continued to augment until its arrival at Charing-cross, where at least 6000 persons had by this time assembled.

As the *cortège* progressed through the Strand the enthusiasm increased, and at Temple-bar, through Fleet-street, and Farringdon street, the shout of welcome rent the air. The windows, and every point where a view could be obtained from the houses of the inhabitants of the Strand and through the City were filled with ladies and well-dressed gentlemen, who cheered, the ladies waving their handkerchiefs.

At a few minutes before one o'clock the arrival of the *cortège* at Guildhall was announced to those within by the cheering in the streets.

Madame Kossuth, who had arrived somewhat earlier, was accommodated with a seat on the platform, occupied by the aldermen, on the right of the Lord Mayor, as was Madame Pulszki. The former lady was dressed in black, and the latter in a silver-coloured silk bonnet.

Amongst those who were present were—Aldermen Humphery, Challis, Sidney, Salomons, Hooper, Gibbons, Garden, Wire, &c.; and the sheriffs, Chamberlain, and other city officers, were also in attendance.

On the entrance of Kossuth into the Hall, every person in the court rose up. He was introduced by Mr. Gilpin and Alderman Wire, amidst the most tremendous enthusiasm His face was pale and somewhat haggard, but full of intelligence and self-possession. He was immediately introduced to the Lord Mayor, and accommodated with a seat on the left of his Lordship.

The Town Clerk then read the following address to Kossuth, by the Corporation on his liberation, which was received with the most enthusiastic applause.

"Illustrious Sir,—We, the Lord Mayor, Aldermen, and Commons of the City of London, in Common Council assembled, present to you our heartfelt congratulations on your liberation from captivity, and your safe arrival in this country.

"We have watched with deepest interest your struggles in behalf of the constitutional liberties of your fellow-subjects; when these struggles proved unavailing, and you were compelled to become a fugitive in the land of the stranger, our sympathies followed you to Widdin and Kutayeh, and we addressed the Foreign Secretary on your behalf to exert his influence for your liberation.

"We now see you in this our free country, and are eager to offer you a hearty welcome.

"Accept, illustrious sir, the expression of our earnest desire that it may please Him who ruleth over all to grant you yet again to behold your native country in peace, enjoying all that constitutional liberty it has been your object to secure

"Accept, illustrious sir, the expression of our profound respect and consideration."

M. Kossuth (who remained standing while the address was read) replied to it at close repaid (the members of the Common Council standing up. He said—His heart was overpowered with gratitude and emotion in respect to the honor which had been conferred upon him by the Corporation and by Guildhall, and he was deeply impressed by thousands as he passed through the streets for the liberties of Hungary, and as he heard that expression. He asked who were the despots who could resist that noble sympathy? The inhabitants of London of all the sects had been eminent for their attachment to liberty, and it was most gratifying to him to find that they had watched the struggles of the Hungarians in the cause of liberty, and that to his person they had extended the sympathy which that noble cause in which he had been engaged. He begged to express his sincere thanks for his country as well as himself, for the reception he had met with; and if he were ambitious, that ambition would be to merit such a welcome. He would shortly enter into what he considered the real meaning of that demonstration. He considered the meaning of the demonstration to be that they approved the principles of which he had spoken in the speech he addressed on to the man. The demonstration was by the Corporation of London—not the metropolis of England, but the metropolis of the world—and there was no such bulwark connected with the liberties of the world as the Hungarian war, for they were the champions of the principles of free legislation from arbitrary power. No place in the world was more interested in freedom than London. Anarchy or despotism could not remain in London, because they could not exist where true freedom was known and appreciated. He considered here the principle of social order prevailing, and that was one of the great bulwarks of liberty. The Austrians and the despotic associates could not boast so much of the maintenance of social order in this country as they could in London, and as was exemplified by the thousands who met him in the streets that day. (Loud cheers.) In Austria, 300 bayonets could not preserve social order so well as he saw that day maintained by a few policemen. He believed one of the surest safeguards of social order was the promulgation of liberty by the principles of London and other corporations If he were before ignorant of the great principle which maintained social order in this country, that day's proceedings would have informed him of the cause. Social order was maintained, and liberty preserved, without the political institutions of England. Nations and empires had fallen mighty peoples had had a revolution; still freedom was all among preserved. What was the keystone to this preservation? It was, in his opinion, the municipal institutions of England which had not been swept away by the disease of centralisation. (Cheers.) It was that disease which was the bane of the Continental governments—it was the basis of the Governments of Russia and Austria. The tyranny of Austria was directed to get rid of the municipal institutions of Hungary; and while those institutions remained intact Austria could not accomplish its purpose; absolutism had in its train, and must have in its train, everything that was opposed to liberty. Absolutism was prohibitory and must be so, because it feared free trade in commerce and politics. The absolutism of Austria was in strong harmony with its prohibitory principles; and although Austria could boast of the millions of France per annum were consumed in Hungary, they were obliged to get them to Austria and not in England, because Austria was absolute and prohibitory. Russia had placed its foot on the neck of Hungary; in having done so, it also had placed its foot, to some extent, on the introduction of the principles of English industry wherever the influence of Russia prevailed. In England alone social order prevailed with the existence of freedom, and whatever interfered with the commerce of England was to that extent injurious to the freedom of the human race. London was the regulator of the money market of the world, and it was therefore that it should, therefore, countenance the freedom of nations, that the loans which were raised in London might be repaid. (Cheers.) He would ask whether London possessed its power of giving loans from its industry rather than its despotism? He was sure that they would agree with him that the leading powers accepted from the industry, and not its absolutism. His principle was to make free the soil, to make free labour, and to make free the people; but, at the same time, to protect, maintain, and improve every material which was produced in Hungary. That the nations of Europe were destitute of humanity, they might be certain not to pay respect to the repayment of loans which were obtained for the purpose of repressing humanity and putting down liberty. The advice for the repayment of loans was not in absolutism, but in the principle of liberty. (Cheers.) Another security was the peace of the world, and peace could only be obtained when the people were free. Nothing could prevent England to take the lead in the great work of propagating peace and promulgating liberty. (Cheers.) For the reception which he had met he begged to express his warmest thanks, and at the same time his admiration of the principles of liberty which prevailed in the city of London. (Cheers.) He did not wish to engage their sympathy for the purpose of armed intervention in the cause of Hungary, but to excite them to express an opinion that Hungarian freedom was worthy of their approbation, and ought to prevail. (Cheers.) England and America were the patterns of free nations, and their sympathy would influence the other nations of the world. M. Kossuth then sat down amidst the most enthusiastic applause.

Mr. Norris moved that the address be fairly written out, and be framed and placed in the usual way.

Mr. Bennock seconded the resolution.

Mr Deputy Harrison opposed the motion.

After some discussion the motion was carried unanimously.

Outside an immense concourse of people were assembled, and as M. Kossuth and his friends were coming out they were hailed by those in the Guildhall and the pas-ages, as well as by the crowd outside with the most enthusiastic bursts. There could not have been less than 10,000 persons in and outside the Hall.

The proceedings terminated at about half-past two.

M. Kossuth returned in procession as he went. He passed up the Strand at three o'clock, and was received with the warmest demonstration of applause.

[We purpose, next week, illustrating the scene at Guildhall.]

KOSSUTH AND THE WORKING CLASSES.—It has been announced that M. Kossuth has expressed his readiness to meet the working classes in the open air in some public place, but that, owing to the weakness of his voice, he would be compelled to give his principal answer to the address in writing. Copenhagen-fields was the place selected for the demonstration, and thither the working men, on Monday next, will walk in procession.

RICHARD ANDREWS, ESQ., MAYOR OF SOUTHAMPTON.

THE Mayor of Southampton, Richard Andrews, the coachbuilder, was born at Bishop Sutton, in Hampshire, in the December of 17 3. His father, Thomas Andrews, was a working wheelwright in the village of Brambden, in Hampshire, to the trade to which he was apprenticed by the kindness of Madame Venables, of Woodcot. The earn ngs of the father in those times, when schools were few and provisions dear, barely enabled him to send his first son, Richard, from about five until he was eight or nine years of age, to a dame-school, at twopence a week. Thus slenderly provided for with education, his mother's father, an agricultural labourer, took him to work at ploughing, turnip-hoeing, thatching, and all the other usual odds and ends of a farmboy's hard work, at the magnificent wages of 8d a day, for which he laboured away for nearly three years. He was always, however, on the look out for something better; and when a little more than twelve years old, a chance turned up for him of employment as an under sawyer, at the village of Hitchen Stoke, where, for about two years, he worked in the saw-pit at a shilling a day. For this he laboured ten hours; and, having to walk to and from Hitchen Stoke, ten miles, was on foot or in the saw-pit from four o'clock in the morning until nine at night.

The saw-pit led to a better trade; he used to go to the forge to get the tools in order, and—as might be from the flying sparks, or the free swing and ring of the hammer, or the warm look of comfort of the forge fire on a winter's day, or the pleasure of seeing the iron beaten out to any shape, that the wish took hold of him to become a smith; and, whilst waiting for the tools, he used to amuse himself trying his hand at heel and toe tips and hobnails, at which he soon became an adept, and showed much skill at iron, and spoke with such desire to learn the trade, that Mr. Beaumont, then a great stage-coachmaker, gave him employment as hammerman, under one of his smiths. Here he soon gained the approbation of his master and fellow-workmen; had his wages raised from 5s. to 6s., 7s., 8s., and 9s. a week, and in three years, being four years before the end of his apprenticeship (and a most unusual thing), had a fire to himself, and a hammerman under him.

During the last four years of his apprenticeship, Andrews was considered the first hand in the shop. He made all the heavy coach axles, which in those days were wrought from well-used wheel tyres, and he made, too, the whole of the tyres for that immense stage-coach factory, which employed at the time upwards of 100 men

At a dance at Ichbourne Down, Andrews, then nearly out of his time, met his future wife, who was living at Alresford. She soon, however, went home to Hounslow. Those were not days of railways or excursions—Hounslow was forty-seven miles from where Andrews lived; but he walked the distance in a day, and in about a week walked back on one of the hottest days in summer

Three or four months afterwards, his seven years being ended, he once walked the distance to be married: to this day Hampshire Dick's wedding is remembered in Roundham, and he put down the immense mugs on such occasions of setting up a hideous din of pokers and tongs, tin kettles, and cows' horns.

The apprenticeship over, the mystery of smithcraft thoroughly mastered, and Andrews' 21 years of age married, his employer offered him a gunne a week He knew he was worth more; so he left the shop to seek better fortune. It was the depth of winter, when, on a Thursday, Andrews and a companion workman set off from Chichester at two in the morning. The distance is 59 miles, but they arrived in time to breakfast in the city, at half-past nine. The companion failed at the breakfast table. There was no work to be had at Chichester; so next day Andrews walked back the 30 miles. His former master then offered to take him on to engage with him for a year; but he had too recently got over his apprenticeship to relish his old place, and so the very next day, Saturday, he started at four in the morning, and by nine had walked the twenty miles to Southampton. This was in 1821; and he had in all the world just 2s. 6d. in his pocket. He, however, got work at Jones's coach factory, at 24s. a week; and having in three weeks saved £2, he returned to Hitchen Stoke, to bring his wife and child home to Southampton.

For seven years he worked at the same factory, and got on from the 24s. to earning two guineas a week. He resolved, and kept to it (though his family increased rapidly), to put something, little or much, into the savings-bank every week; and at length having gathered £70, he started, in a little back street, on the 1st of October, 1832, as a master coachmaker, with two workmen. In three weeks the £70 were gone, in first expenses; but repair jobs came in fast, were well and punctually done—a name was earned, and trade grew. In the same year came on the general election, at which the Tories fought their great battle against Reform. The most influential canvassers came to Andrews. They promised him that he should make his fortune by the support of the surrounding gentry if the Tory had his vote. They urged that his was a business depending solely on the gentry, and that they must set against them he must look for rum. Southampton was then but a fashionable and invalid watering-place, a whole day's fast stage-coach journey from London; it had neither dock nor warehouses; the Peninsular and Oriental Company was not formed; there was no railway, no West India steam-boats; no one thought, then, of such a town of trade and prosperity as it is now increasing every day in Southampton water. The odds seemed dead against the man who should go against the gentry. "Give me," said Andrews, "the honor to make up my mind. Come back then, and you shall have your answer." They came, and Andrews gave his vote against Reform. Andrews looked up from the forge—"I believe," he said, "Reform to be right, and I will vote for it. I have so far worked my own way in business for himself brought him in over £2000, and within ten years of that election he had laid out £10,000 on the ground and buildings of his factory; and in a single year (1845) he earned more than £22,000, selling upwards of 300 new and second-hand carriages. Travellers by overland route to India cross the desert in Andrews' omnibuses; he built the state carriages for the late Mehemet Ali and the Sultan, has a large trade with the colonies, Mexico, Valparaiso, and Porto Rico; carries on every part of the manufacture of carriages, with the exception of patent axles, on his own premises; and employs upwards of 200 men, a majority of whom are electors of the borough.

But it was not only on the Reform occasion that Andrews stood by his opinions against his apparent interest. He was one of the first members of the Anti-Corn-law League, belonged to its Council; gave a handsome long carriage to the League Bazaar in 1844, and, in 1842, when the Mayor refused the town hall, and a public meeting was violently broken up, Andrews cleared out his carriage bazaar, which held from 2000 to 3000, his workmen mounted guard at the entrance, wheel-spokes in hand, and so Free-trade had a place for its advocacy in the home of a business and so to depend solely on the favour of those who were strong monopolists. Threats again there were in abundance of supporting others, and setting up fresh opposition in coachmaking, to all of which Andrews used to reply, "Set up as many as you please; coachbuilding has already grown to be the staple business of the town; the more makers, the more trade." The place will have for carriage-building, and I am certain of getting as good a share of it as I deserve" Nor has this been mere talk; Andrews has been always ready to help others into business with both material and patterns.

In 1843 he was elected Sheriff of Southampton; in 1849, by a great majority, Mayor, and again in 1850 and 1851; and he goes by the name of the "people's Mayor." His love of liberty and the unbecurrent energy of character, of which we have given so many instances in his memoir, have made his welcome of Kossuth, which we have elsewhere detailed, not a mere matter of official form, but of individual enthusiasm.

Our Portrait is from a Daguerréotype taken at Winchester.

MUSIC.

DR. BEXFIELD'S "ISRAEL RESTORED."

The successful performance by the Choral Society of this new oratorio, "Israel Restored," composed by Dr. Bexfield, at St. Andrew's Hall, Norwich, was recorded in our last; but the production of such elaborate works is so rare, that we willingly borrow from the *Norfolk News* and *Norwich Gazette* a more detailed notice of the composition. It is certainly a curious fact that our provincial choral societies have a somewhat the start of us in bringing forward new oratorios. We have recently seen the Liverpool Philharmonic Society produce Mr. Charles Hornby's "David;" the Mancuester amateurs, Mr. Glover's "Jerusalem;" and now Norwich takes the lead in performing Dr. Bexfield's "Israel Restored." Being a native of Norwich, he was patronised by the Bishop, the Hon. and Very Rev. the Dean, the Mayor (H. Woodcock, Esq.), and the Sheriff (E. Blakley, Esq.), E. Wodehouse, Esq., M.P., Miss Agnes Strickland, the authoress, &c

The poem has been compiled on the same plan as "The Messiah," but the work is a regularly connected story in a form of which there are no examples. We have recently seen the Liverpool Philharmonic Society produce Mr. Charles Horns

NEW BOOKS, &c.

THE NATIONAL ILLUSTRATED LIBRARY. Now ready, F urth and Concluding Volume of BOSWELL'S LIFE of JOHNSON, profusely illustrated with Wood cuts, and handsomely bound in cloth and gilt, 2s 6d.
In a convenience it the extensive demand for Volumes 1, 2, and 3 of this popular series a large addition has been already effected, and the trade that a built is rec sedulously announced to subscribers and the trade that a reprint of the whole work will be ready with the Magazines on the 25th instant.
The following volumes of the series have already been published, price 2s 6d each, handsomely bound in cloth, and copiously illustrated with Wood Engravings by the most eminent artists.
THE MORMONS: a Contemporary History.
THE BOOK of ENGLISH SONGS.
THE ORBS of HEAVEN; or, the Planetary and Stellar Worlds. By D. G MITCHELL, M.A. Nearly Ready.
HUC'S TRAVELS in CHINA, TARTARY, and THIBET, in 1844-46.
A WOMAN'S JOURNEY ROUND the WORLD, translated from the German of Mdme PFEIFFER. In 1 Vol. price 2s 6d, copiously illustrated with Wood Engravings by the most eminent artists.
NARRATIVE of a RESIDENCE at the CAPITAL of the KINGDOM of SIAM, with a description of the Manners and Customs of the modern classes. By FREDERICK ARTHUR NEALE, formerly in the service of his Siamese Majesty, and Author of "Eight Years in Syria, Palestine, and Asia Minor."
MACKAY'S MEMOIRS of EXTRAORDINARY POPULAR DELUSIONS.
THE BOOK of SCOTTISH SONGS.
London: Office of the National Illustrated Library, 199 and 227, Strand: and to be had of all booksellers

THE NEW NOVELS.
Now ready at all the Libraries, in 3 vols.,
RAVENSCLIFFE. A New Novel. By the Author of "Emilia Wyndham, &c.
Also now ready,
THE LIVINGSTONES. A Story of Real Life. 3 vols.
III.
CECILE; or, The Parvenu. By the Author of "Rockingham." 1 vol.
IV.
MRS. MATHEWS; or, Family Mysteries. By Mrs. THOMAS HENRY LEWIS.
"A profession tongue in character, and of singular merit."—Morning Post.
COLBURN and CO., Publishers, 13, Great Marlborough-street.

Now ready in post 8vo price 10s. cloth,
SUWAROW and his LAST CAMPAIGN. By the late Major HACKLAND. Edited by an Officer of Rank
London: SMITH, ELDER and CO., 65, Cornhill

NEW NOVELS.
Just published and may be had at all the Libraries,
FLORENCE SACKVILLE, or, Self-Dependence. By Mrs. BURNLEY. In 3 vols
III.
THE FAIR CAREW; or, Husbands and Wives. In 2 vols. (Just ready.)
III.
By the Author of "Pique."
AGATHA BEAUFORT; or, Family Pride. In 3 vols. Shortly.)
London: SMITH, ELDER, and Co., 65, Cornhill

This day is published, in demy price 6d, for distribution Twenty-five copies for 10s.
THE GREAT EXHIBITION SPIRITUALIZED. By Rev H HIGH. We wish we could see this invaluable little book put into the hands of every individual visiting the Crystal Palace."
London: JOHN SHOW, Paternoster-row.

BOHN'S STANDARD LIBRARY FOR NOVEMBER.
VASARI'S LIVES of the PAINTERS, SCULPTORS, and ARCHITECTS. Translated by MRS FOSTER. Vol. 4. Post 8vo 3s 6d.
Of this work, the Westminster and Foreign Quarterly says, "The entwining Biographies of Vasari—biographies which, from their peculiar diversity and fascination, have caused the late unfortunate Hayley to rue and wish repentantly that he had confined his Cowper books, in a desert island, I would certainly chose the Bible, Shakespeare, and Vasari."
HENRY G. BOHN, 4, 5, and 6, York-street, Covent Garden.

BOHN'S CLASSICAL LIBRARY FOR NOVEMBER.
LUCRETIUS, literally translated into English Prose, with Notes, by the Rev. J. S. WATSON; to which is adjoined the Metrical Version of JOHN MASON GOOD. Post 8vo. 5s.
HENRY G BOHN, 4, 5, and 6, York-street, Covent Garden

BOHN'S SCIENTIFIC LIBRARY FOR NOVEMBER.
DR. MANTELL'S PETRIFACTIONS and their TEACHINGS: an Illustrated Hand-Book to the Fossils in the British Museum, numerous beautiful Wood Engravings. Post 8vo 6s.
HENRY G BOHN, 4, 5, and 6, York-street, Covent Garden.

BOHN'S ILLUSTRATED LIBRARY FOR NOVEMBER.
REDDING'S DESCRIPTION of WINES. New and revised edition with 20 beautiful Woodcuts and Frontispiece engraved on steel. Post 8vo. 3s.
HENRY G BOHN, 4, 5, and 6, York-street, Covent Garden.

This day is published, price 5d; Part IV. of
THE CRESS PLAYER. Edited by KLING and HORSWITZ Combining Chess Problems and Chess Studies, together with a Selection of Games which have been actually played, and the Chess Intelligence of the day." Published every Saturday monthly in numbers at 5d and in monthly parts at 1s.
E. HASTINGS, 13, Carey-street, and all Booksellers.

On the 1st of November will be published in one vol. 6sap, 8vo price 7s 6d, strongly bound in cloth, with numerous Woodcuts,
A TECHNICAL DICTIONARY, or, a Dictionary explaining all terms of Art and Science used in Trade, Manufactures, and the Mechanical Arts. By GEORGE CRABB, Esq. M A, Author of "The Universal Technological Dictionary," &c.
London: W MAXWELL, 32 Bell-yard, Lincoln's Inn.

THE PETIT COURIER des DAMES; or, the Journal of French Fashion.
R and J PETIT continue to receive the above elegant Journal of French Fashion simultaneously from Paris and is delivered to the Subscribers every Saturday at the West End of the Quarter, and postage free to all parts of the country at 2s 6d the Set.
A few the JOURNAL des DEMOISELLES, on the 15th of the month, at 1s 6d and 1s the year.

PARABLES OF OUR LORD.
On the 1st December, 1851, will be published in Imperial Quarto, handsomely bound in Two Volumes,
PARABLES of OUR LORD and SAVIOUR JESUS CHRIST, Illustrated, in Twelve Designs, by JOHN FRANKLIN, and Engraved in Line by T. Lightfoot, W. E. Wash, A. Blanchard, F. Corbett, R. Goodall, and H. Nunn.
Fifty Fine-proof Copies will be printed upon large half-sheet Imperial India paper, in a portfolio, price Five Guineas
London: W. KIDD, 127, Regent-street, Publisher to the Queen, Royal Library, 71 and 72, Strand.

MONTHLY MAGAZINE FOR FAMILY READING.
THE CHURCHMAN'S COMPANION. On 1st NOVEMBER. Price 6d. Post 1½.
CONTENTS.—The Two Guardians. The Garlands.—Aunt Nelly.—Foreign Correspondence on English Church History.—Synods.—The Seven of Hollows.—All Saints' Day.—Parish Sketches.—Notices to correspondents.
Nine volumes are complete, neatly bound, price £1 8s 6d, forming a Library of entertaining and useful reading.
London: J. MASTERS, Aldersgate-street, and New Bond-street.

KOSSUTH AND THE "TIMES."
Now ready, price 6d.
KOSSUTH and the "TIMES," by the Author of "Kossuth and his Portraits," containing the Letters of Kossuth to the Editor of the "Times," and the Editor's reply, with a Letter from

THE ILLUSTRATED LONDON NEWS

SUPPLEMENT.

VOL. XIX.] FOR THE WEEK ENDING SATURDAY, NOVEMBER 1, 1851. [GRATIS.

THE GREAT EXHIBITION.

ursuance of our design of Illustrating all works of interest in the t Exhibition, we this week present our readers with another Sup- ent gratis, containing a great variety of objects in various depart- ts, British and Foreign.

BOOKCASE. BY BARBEDIENNE.

his is a remarkably elegant piece of furniture, in ebony, with bronze als, &c. The proportions and general outline are classically correct; the decoration is rich, and bestowed with a lavish hand, but at the s time is executed in a manner to render it by no means predomi- over the obvious utility of the work.

AMERICAN PLOUGH.

mong the contributions from the United States of America to the t Exhibition of '51, our readers, doubtless, have not failed to rve a large number of ploughs. We have chosen one of the best of e, by Starbuck, for illustration: it will be found on page 555.

ne American plough differs much from the English in the shortness fullness of the breast, as also the shortness and high pitch of the or handles. This plough, as adapted to English agriculture, is de- lly inferior in nearly all respects to our own; but, doubtless, for own lands and modes of culture, they are well adapted.

GARRETT'S PORTABLE STONE MILL.

lthough a variety of ingenious and really useful mills have been constructed by various millwrights for the use of small holders, yet when there is the amount of work to be done, nothing will be found to equal for nearly all purposes an efficient stone mill. The one we have engraved is exhibited by Messrs. Garrett, of Saxmundham, and is in every respect a first-rate mill. The stones are 33 inches diameter, and enclosed in a metal and wood framing. The top stone is hung on an upright shaft, and worked by a pair of bevil wheels, from which the attachment may be made to either steam, water, or horse power. Its construction admits of the stones being readily adjusted for grinding wheat, barley, beans, or peas. This mill will be found very convenient on large occupations, where it is desirable to perform all such work on the farm instead of having to convey it to a distant mill.

SIDEBOARD. BY MESSRS. BANTING.

(See page 557.)

This very handsome sideboard is made from oak grown in Windsor Forest. The form is simple, consisting of a slab resting upon four truss supports, which are richly carved. There is no attempt at allegorical conceit or story-telling. The plate-glass mirror at back is of large dimensions, and rather unusual in form. The frame has the appearance of lightness, combined with sufficient solidity. This production is favoured by the jury with "honourable mention," as part of "a collection of furniture." It was fairly entitled, individually, to a prize.

WINDOW CURTAINS. BY HEYMAN, ALEXANDER, AND CO. OF NOTTINGHAM.

The machinery wrought cotton-lace curtains of Heyman, Alexander and Co., of Nottingham, exhibit great perfection of manufacture, and most creditable taste in the various designs. The sample which we engrave is particularly handsome. This firm also exhibits some "cotton extra twist Brussels net," and Mechlin net, which, at first sight, might deceive the connoisseur.—(For the Illustrations of this and the following see next page.)

POPLIN. BY PIM, OF DUBLIN.

The poplins of Pim are of old-established celebrity, and the patterns exhibited in the Crystal Palace are of such variety and elegance as to enhance the attractiveness of this very rich and beautiful material.

CAMBRIC HANDKERCHIEF. BY J. HOLDEN AND CO., BELFAST.

Messrs. Holden and Co., of Belfast, exhibit a very rich and varied assortment of cambrics of the finest qualities, both plain and embroidered, for flouncings, insertions, and handkerchiefs. The embroidery is of the most exquisite delicacy of finish, and fairly rivals anything of the kind we ever met with of Continental origin.

RIBBON PATTERN. BY CORNELL, LYELL, AND WEBSTER.

A light and showy pattern, with colours well assorted and displayed.

POINT LACE. BY JANE CLARKE.

A very fine specimen of point lace of the richest class.

DAMASK PATTERN. BY BROWN, OF HALIFAX.

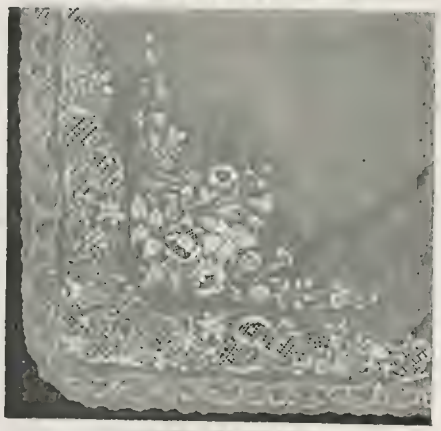
There is nothing out of the ordinary run in this pattern, which we think is likely to prove effective.

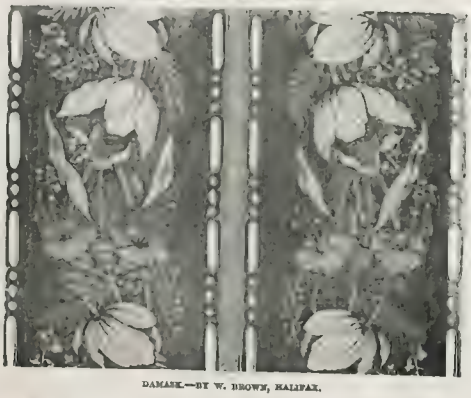
BOOKCASE,—BY BARBEDIENNE.

POPLIN.—BY PIM, DUBLIN.—(SEE PRECEDING PAGE.)

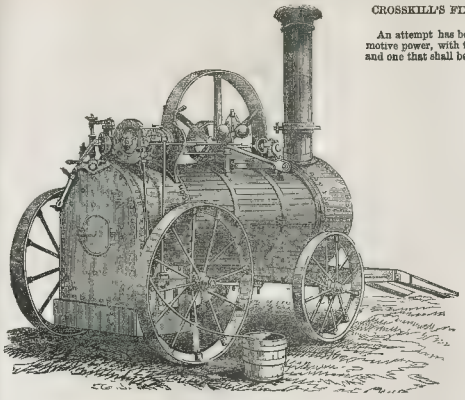
DAMASK.—BY CORNELL, LYELL, AND WEBSTER.

WINDOW-CURTAIN.—BY HEYMAN, ALEXANDER AND CO., NOTTINGHAM.





DAMASK.—BY W. BROWN, HALIFAX.



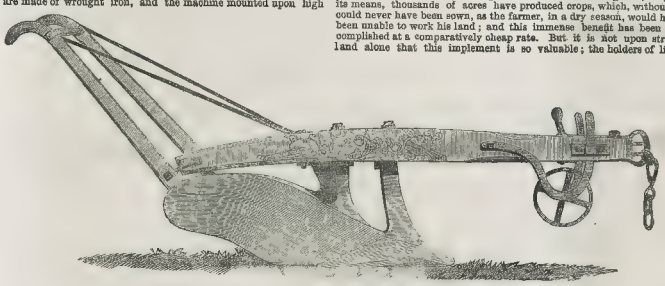
CLAYTON AND SHUTTLEWORTH'S PORTABLE STEAM-ENGINE.

CLAYTON, SHUTTLEWORTH, AND CO.'S PORTABLE STEAM-ENGINE.

This is a good specimen of a portable steam-engine; it weighs about 60 cwt., and can be removed from place to place by two horses. It is simple, and easy to manage—an important point when used for agricultural purposes. The boiler is fitted with an efficient safety-valve, acted upon by Salter's spring-balance. It has also an improved form of governor. The starting lever, water and steam-gauge, cocks, feed-pump, and steam-whistle, are all placed accessible to the driver without his moving from the front of the boiler.

HOWARD'S (OF BEDFORD) HORSE RAKE.

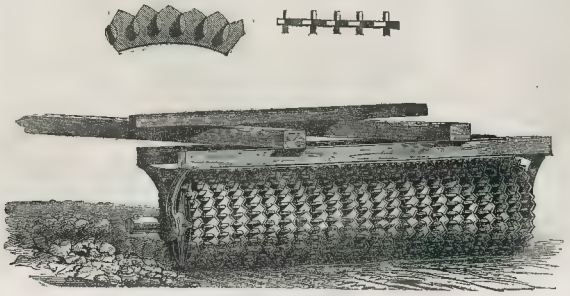
This implement is intended for raking hay, corn, stubble, or twitch grass. The draft irons are so constructed that the teeth may be made to act more or less at their points, and nearer or further from the ground. By this means, the collecting of soil or rubbish along with the corn is prevented. The teeth are so arranged as to be equally effective on all parts of the land, however unequal its surface may be. The frame and teeth are made of wrought iron, and the machine mounted upon high wheels, so fitted that no hay, &c. can work round them. The arrangement of the lever for raising the rake has been well studied, and is simple and efficient.



AMERICAN PLOUGH.—(SEE FIRST PAGE.)

BUSBY'S GREAT EXHIBITION PRIZE PLOUGH.

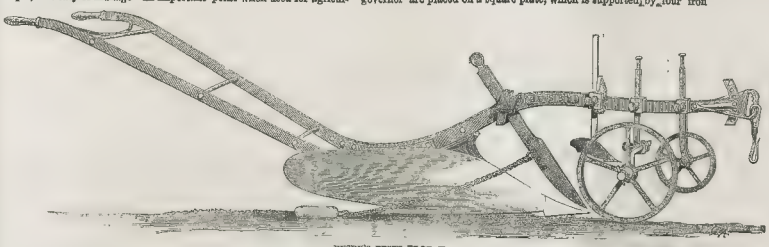
A large medal has been awarded to Mr. Busby, of Newton-le-Willows, near Bedale, Yorkshire, for the best plough exhibited at the Great Exhibition of 1851. Its chief peculiarity is in the scientific form and great length of the mould-board, which turns the seam in a better manner, and with a lighter draught, than any other. It is also fitted with a moveable nose-piece, on which the share is placed, and which will be found of great advantage where cast-iron shares are used, for as these wear down, by this arrangement the plough still retains the same hold of the ground; by the same contrivance, also, the share may be set more or less to land, and it will work from four to eight inches deep.



CROSSKILL'S CLOD CRUSHER

CROSSKILL'S FIXED STEAM-ENGINE FOR AGRICULTURAL PURPOSES.

An attempt has been made in this engine to produce a good steam-motive power, with the fewest number of parts and at the least cost, and one that shall be fixed in the easiest, simplest, and cheapest manner. For this purpose the oscillating engine has been chosen as being the simplest form of steam-engine. This is placed on a circular stone base, which requires no other foundation than a good flag-stone or a couple of stout wooden sleepers. The crank-shaft, driving-gear, fly-wheel, and governor are placed on a square plate, which is supported by four iron columns, as shown in the Engraving. The engine is exhibited at work in Class 6, and is employed in driving several universal mills constructed by the same house.



BUSBY'S PRIZE PLOUGH.

CROSSKILL'S CLOD-CRUSHER.

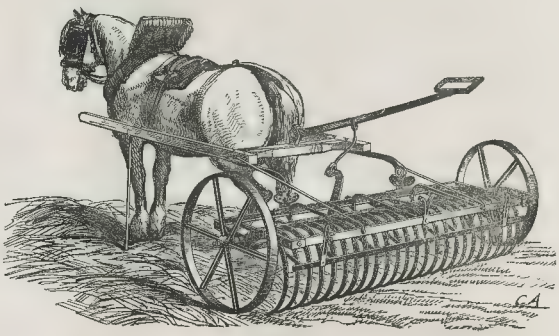
It is doubtful if any implement that has been introduced of late years has come into such general use, or conferred more benefits on the agriculturist, than the subject of our Engraving.

The original implement was first introduced by Mr. Crosskill about the year 1846. It met with but little encouragement at first; but when the improvement was made of placing the roller parts upon a round axle, its value became at once evident; and, since that period, it has found its way on to every description of land in the kingdom; for, by its means, thousands of acres have produced crops, which, without it, could never have been sown, as the farmer, in a dry season, would have been unable to work his land; and this immense benefit has been accomplished at a comparatively cheap rate. But it is not upon strong land alone that this implement is so valuable; the holders of light lands bear as ample testimony to its efficacy as they who farm stiff clay. For destroying and preventing the ravages of the wire-worm, and for producing the effect of the tread of sheep, this implement has a high reputation. For these, and a variety of other advantages, Mr. Crosskill has received an immense number of testimonials, all expressing in the strongest manner the efficacy of the implement for the various purposes to which they have applied it.

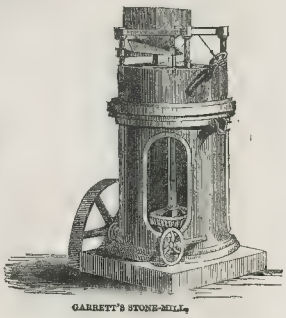
We have engraved to a larger scale the plan and side elevation of a portion of one of the serrated rings, that its action may be more fully understood.

GILLETT'S GUILLOTINE CHAFF-CUTTER.

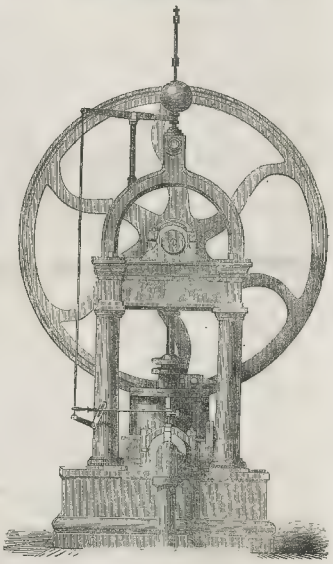
This implement is of very ingenious design, elegant appearance, and bears an excellent character for efficiency. The principle upon which it acts is totally different from the ordinary chaff-engines, and in some points has decided advantages. The knife is worked in a groove up and down by a crank, cutting both in its upward and downward stroke; the material to be cut is fed through an aperture in the face plate, and has a solid bearing while being cut. It is exceedingly compact, and works very steady at high velocity when driven by steam or water power



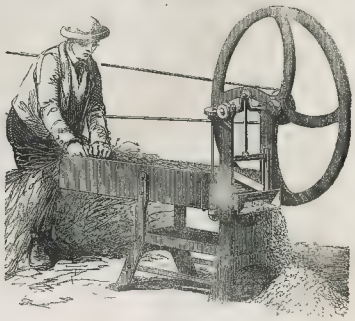
HOWARD'S HORSE-RAKE.



GARRETT'S STONE-MILL.



CROSSKILL'S FIXED STEAM-ENGINE.



GILLETT'S GUILLOTINE CHAFF-CUTTER.

FIRE-PLACE.—COALBROOK DALE COMPANY.

FIREPLACE. COALBROOK DALE COMPANY.

Amongst the various magnificent productions, upon a larger scale, of the Coalbrook Dale Company, their beautiful and highly-finished grates and fireplaces must not be overlooked. The designs are all original, and are generally extremely tasteful. That before us, which is more simple than some others, is composed of burnished and spring steel, with electro-gilt ornaments and panels. The workmanship of this and o works of this company is not surpassed by any productions of the k n the Exhibition; they fairly stand at the top of the tree.

GLASS MOSAIC TABLE. BY STEVENS.

This contributor exhibits specimens of table-tops and other article furniture, inlaid with glass mosaic, to exemplify the w ng of cr coats of arms, and geometrical patterns in this materi . One of t we engrave. The effect is light and brilliant; and, where striking varied colours are required, may be pronounced highly successful.

QUILTING FOR WAISTCOAT.—SPENCER AND SON, MANCHESTER.

A very neat pattern for summer wear.

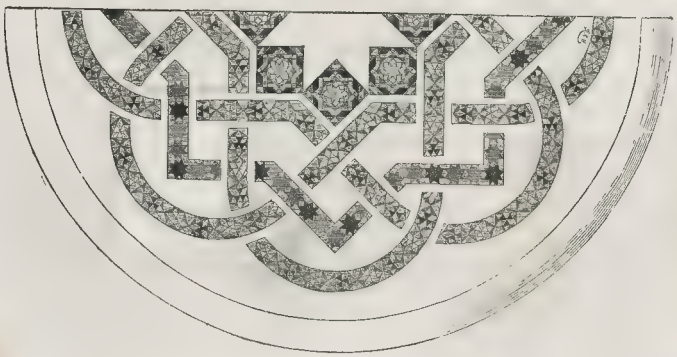
TABLE-TOP. BY HERRING AND SONS.

This is a centre table, made of fine walnut-wood, inlaid with meta ivory, and pearl. The border presents, intermixed with trophies, t six subjects designed by Flaxman, "the opening of Pandora's box," i laid in brass, and etched. The table is of handsome form, and in eve respect a most creditable piece of workmanship.

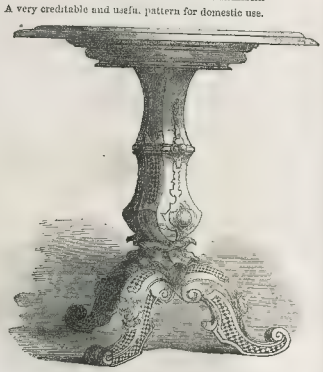
TABLE-TOP.—MESSRS. HERRING AND SON.

DAMASK PATTERN.—CADLEY AND CO., HALIFAX.

A very creditable and useful pattern for domestic use.



GLASS MOSAIC TABLE-TOP.—STEVENS.



INLAID TABLE, GLASS MOSAIC.—STEVENS.

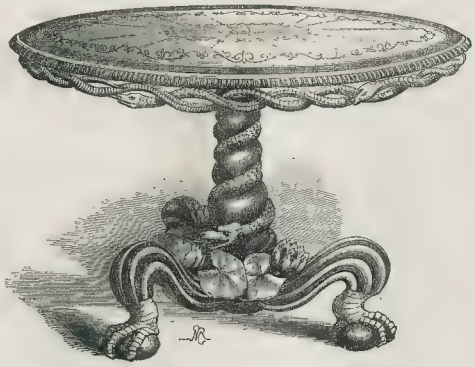


TABLE.—HOLLAND AND SONS.

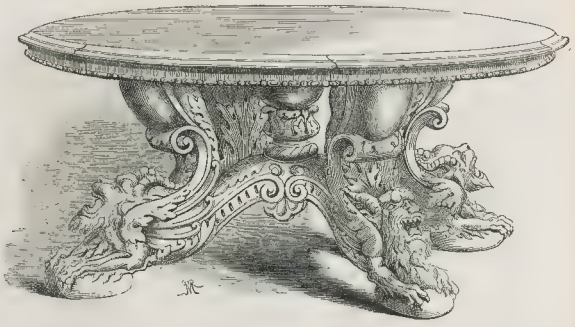


EXPANDING TABLE.—JOHNSON AND JEANES.

TABLE. BY HOLLAND AND SONS, WARWICK.

The top of this table is very beautifully inlaid; but the effect of this matter of observation is marred by the egregiously bad taste of the adjuncts introduced on the lower periphery and on the stand itself. These consist of twining snakes, the claws being those of an eagle, griffin, and other savage monsters. The very idea of such presentments in the very midst of the social circle is repulsive and absurd. When will artizans learn to know, not how to imitate, but what to adopt for imitation? Not until common sense is admitted to their councils.

RIBBON.—BERRY, COVENTRY.

BOG YEW FURNITURE.—JONES, OF DUBLIN.

BOG YEW FURNITURE. BY A. J. JONES, OF DUBLIN.

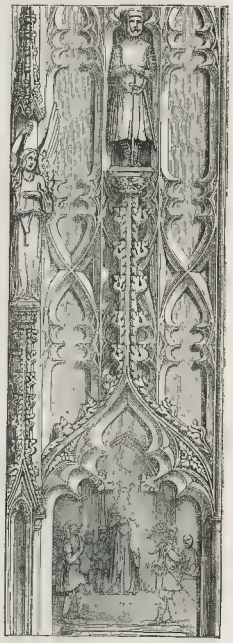
Jones, of Stephen's Green, Dublin, has brought together a very extensive series of decorative furniture in Irish bog yew, designed to illustrate the history, antiquities, animal and vegetable productions, and other national features and peculiarities of he elster isle. The intention is highly creditable to his spirit of patriotism; and he talent bestowed upon the various objects is of a character to warrant the belief hat the Irish artificer only wants encouragement, to enable him to take a position of honourable rivalry with those of any other European nation. The devices are varied and striking, and the execution, in most of the details, at once bold and careful. It is to be regretted, however, that in most cases the subjects have not been better chosen, being often extravagant and inappropriate. We will refer only to a single instance, out of many, in which an unbridled striving after variety runs into absurdity—an arm-chair, the arms of which are impersonated by dogs, the one lying down, the other half standing. Can anything be conceived less inviting, or less comfortable? The chair and card-table which we engrave, being less ambitious in style, are generally commendable as handsome and serviceable pieces of furniture.

EXPANDING CIRCULAR TABLE. BY JOHNSTONE AND JEANES.

This is an extremely ingenious invention (patented), which has received the honour of a prize medal. It is a circular table, which, by means of a very simple arrangement of radiating curved iron bars beneath the top, may be made, by a slight revolution of the surface, to expand to the size required at any moment, extra leaves being provided for insertion between the separated parts. The table exhibited is capable of being arranged to two different sizes, besides the original form; but, of course, the number of changes is optional. The mechanism is so simple, that one pair of hands can adjust it in a couple of minutes, and that apparently with very little exertion. The stand is carved in the Italian style, with grotesque masques.

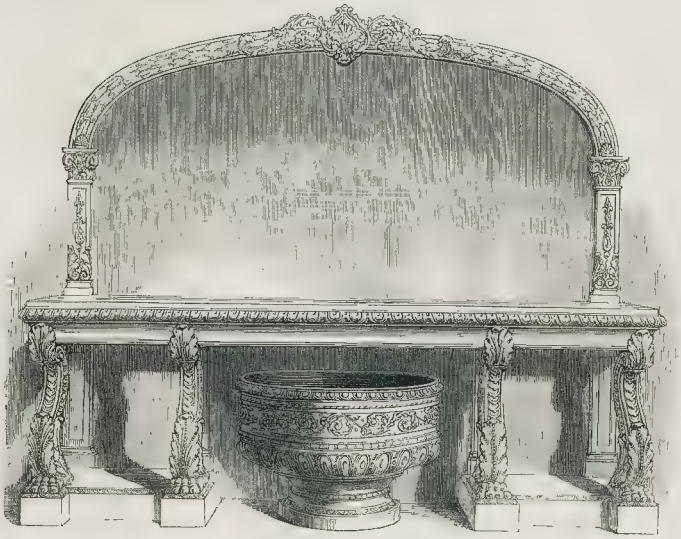
RIBBON PATTERN. BY BERRY, COVENTRY.

The reputation of the Coventry ribbons is well supported by this firm, from amongst whose display we select a very pretty pattern.



DESIGN FOR A GOTHIC PANEL.—G. THOMAS.

This design has considerable merit in the idea, which is successfully carried out.



SIDEBOARD.—MESSRS. LANTING.—(SEE FRONT PAGE.)

LEG OF SIDEBOARD.

M. KOSSUTH AT WINCHESTER.

The Mayor of Southampton gave a public dinner in honour of the Hungarian patriot on Saturday last, at his country residence, near Winchester. The party consisted of upwards of sixty gentlemen, amongst whom were Lord D. Stuart, M.P., Mr. Cobden, M.P., the American Consul, Mr. Croskey; M. Pulsky, Mr. E. E. Crowe, Mr. Sheriff Payne; Aldermen Lolshy, Brookes, Lancaster, Tucker, and Peard, and several of the Southampton Town Council.

On the occasion was remarkable for the extraordinary command over a foreign language which the ex-Governor of Hungary exhibited (for he spoke in English), and for the Anglo-Saxon energy of his style and impressive earnestness of manner, and the very English tone of the sentiments to which he gave utterance.

After the usual loyal toasts had been duly honoured, the Mayor proposed "The health of Louis Kossuth, and prosperity to his undertakings."

M. Kossuth, who was received with loud cheering and applause, spoke as follows:—Mr. Mayor and gentlemen, in rising to thank you most heartily and most sincerely for those noble-minded generous sentiments which you, Mr. Mayor, were pleased to express, and for the sharing in that expression of those noble sentiments by you all, I cannot forbear a strong emotion, which, however, is not quite subservient to eloquence. Besides, I must say that I am quite unprepared for this opportunity to address such a distinguished assembly of friends and brothers. (Cheers.) Though not quite unaccustomed to speak in my own language, still I must feel it now a double difficulty to address you connectedly in English, and therefore permit me for a moment to ask your indulgence while I address you. I feel, gentlemen, that the generous sentiments you have expressed I can attribute to nothing else than to the noble sympathy which you entertain for the free Englishman for the noble principle of liberty (Cheers), and to the belief that the cause of Hungary was a just cause, and was a cause intimately connected with the principles of freedom. (Cheers.) Now, instead of a vain effort to give you a good speech, perhaps it would be better for me to take the liberty to allow me in a plain, common manner—still begging excuses for the faults of my language, which I cannot fail to admit—to give you some information (Cheers) about the true nature of the past struggle which I have the honour to be entrusted to explain to have this egotism—to be anxious to conserve those generous sentiments, and I believe there can nothing better be done than by a plain, common statement of the facts, without any flourish, without any attributional pomp, as they passed in Hungary. (Cheers.) To understand exactly the Hungarian cause, it is quite necessary to be somewhat acquainted with the true nature of the form of Hungarian institutions. You all know that Hungary was for the benefit of 300 years in Europe always a constitutional Monarchy, and, perhaps, this is no small proof of the elements of life, which, in my notion, are to be found, when we consider the geographical position of Hungary, and the moral position of the native Magyar race—an Asiatic people thrust into the midst of European nations, without any kindred, without any affinity, without any resemblance; and when we consider they were surrounded on all sides by absolute and despotic powers; on one side Turkey, which encroached for centuries, not only upon civilization but on religion, and where my poor nation was the bulwark of Christianity in Europe; on the other side the Russian empire, which has, not for the benefit of mankind (Cheers), grown up prodigiously in the one-and-a-half century; on the third side, the Austrian power, not the Austria of to-day, for that Austrian empire is a very new one, but the Austrian power of the House of Austria, which never, if there be told truth by history, gave one friend to political freedom, though one genius it had, one friend to religious freedom, one friend to the rights of conscience, but even had the opposition to the moral and political freedom of the people—the Emperor Joseph II. This then was our position. Turkey, Russia, and Austria, or rather the House of Hapsburg, by such was Hungary surrounded; and besides, the people within must ever be considered as the most firm and mighty basis of greatness and welfare of a country (Cheers), and as the most strong, sure, and powerful safeguard of its liberties; the people in Hungary unhappily were excluded from any political, that is, raised from the constitutional benefits; and still this Magyar race, in such difficulties of circumstance, through eight centuries and more, has conserved not only its life but its constitutional liberty and national institutions. (Cheers.) There is with some race, in such a nation, elements of a future; and I believe, with some pride I have a right to say, such nation deserves to have freedom. I told you a little ago that my nation had not shared in the constitutional rights of the country. The constitution of Hungary was an aristocratic one entirely; but it was an aristocratical constitution which had somewhat a different meaning from that which you are used to attach to aristocracy. A nobleman in Hungary was not synonymous with power and with the wought of wealth, but was simply an aristocracy of birth, and was not reduced into only elder brothers, but whoever had been a nobleman, he and his children, and their children's children, remained through all centuries noblemen always. (Laugh.) What was the consequence? The consequence was, that, as human fate is subject to many changes of circumstances, the descendants of the old noblemen of Hungary did not remain wealthy, great, and powerful, but were diffused, and, by the course of centuries descending among them, became almost one part of the people itself; so that the great part of the aristocracy of Hungary remained as poor, as, poorer, than the people, because the people was not so poor, as if work was not the greatest honour to humanity. So therefore we had not only a landed proprietary, but we had these most poor classes of the aristocracy, which were not only in the same circumstances as that which exists still now and then, in a worse condition, not being so industrious. But one prominent feature was, that the old aristocracy was not quite so opposed in its great extension to the rights of the people, to the popular liberties, as we find it to be in the middle ages on the Continent, and through Europe—because we must confess that the aristocracy of England has known in time to meet the exigencies of the time, to share their privileges with the people, and to take its part in the burdens of the people. and therefore the aristocracy of England remained when those other aristocracies were swept away like dust from the earth. (Cheers.) In Hungary the nobility were not in the same position, but the noblemen raised with al. classes of the people they were not in strong opposition to the people, but they were agriculturists, working not their own land, but the soil of their landlord; but they became manufacturers; they engaged in every trade and every profession, and, therefore, it was not in such opposition to the people as the word "aristocracy" signifies here: and though it is no wonder that in Hungary, and before the bounds of this aristocracia constitution, where the people had no right to speak for itself, it should not have had its fall share of privilege; still, out of the ranks of this aristocracy which I have mentioned, there was found in the past, and through all their history, generous men, who manfully struggled by all legal means to improve the condition of their country, and who strove for the rights of humanity. Now, in the struggling for the rights of humanity, and the improvement of the condition of the country, we had, according to our constitution in Hungary, two principal means: the first was—to call it by a name which is popular, and is understood here—the Parliament of Hungary; and the second was, by our county and municipal institutions. These two great institutions were, still more than in any other part of the world whatever, against the encroachment on the rights of the nation by the Government, because these county institutions were so framed that the Government was unable to convey any order whatever, but only through the medium of the county meetings. The county meeting was composed of all noblemen who were residents in that country, and the noble population of a county might number about 20,000 to 25,000 persons, and in some counties it amounted to 30,000. Therefore every one of the nobles had a right to speak in these meetings; not, of course, every one of every occasion, but every one had a right to speak when he pleased, and the number of them that appeared in the same way at these meetings. Every noble had a right to be elected a magistrate of the county, who were the only executive power of the Government; so that when the Government ordered something to be done, the hand of execution was that of the municipal magistrate of the county, who alone had to carry it out; but, the magistrate coming from the county, the Government was nearly to receive no order but only through the medium of the county meeting, which county meeting, under public assembly, had the right to discuss the legality of the Government order, and when the majority of the assembly had an order of Government to be illegal, it did not go into the hands of the magistrate to execute it, but the meeting made a remonstrance against it to the Government, and therefore these municipal bodies were a very powerful means put forward against the encroachments of Government. And, to be sure, no country in the world had greater need of such a barrier than Hungary, because we have been governed for three centuries by the House of Austria, which never, according to the evidence of history, had a single fixed friend to political freedom. (I do not know whether I am weary. (Loud cheers, and cries of "Go on.") Now, the House of Hapsburg ruled Hungary by the necessity of its

those who had revolted against us; but the Austrians not only respected him, but his troops joined the Austrian army. The Austrian army joined him—the siege of Vienna was made, and after that these two armies came into Hungary under the command of Windischgratz, calling us, and especially my humble self, rebels. We opposed, we struggled, we fought battles; history will tell how—(Cheers)—but still I must add one single thing, and that is, that though we had been victorious, defeated the Imperial arms in repeated battles, though the Emperor of Austria issued a proclamation, dated the 4th of March, 1849, when he, relying on the false report of the Camarilla, of a victory in a battle that never was won, declared by one scratch of his pen that he blotted out Hungary as a nation, that that nation was no more in existence, that by its constitution was torn up, and that Hungary was declared to be incorporated in the Austrian empire and ruled according to the laws which his good pleasure would grant—nothing was heard beaten, nothing enemies—notwithstanding this proclamation which several allies between Austria and Hungary—still we did not even proclaim a rupture with the House of Hapsburg. When did I make the proposal to declare and pronounce the House of Hapsburg? When I got true and exact intelligence that the Russian intervention was decided on, that had been accepted, and when I had got, I am sorry to say, the intelligence that in order to avoid the Russian intervention we had no help in the world—from nobody—no, not one—(Here, overcome by irrepressible emotion, the voice of Kossuth faltered, he burst into tears, and for some moments was incapable of proceeding, while a burst of sympathy broke from the assembly. As soon as he had recovered his self-possession, he said)—Then I considered matters in my conscience, and I came to the resolution that rather my nation must submit to the deadly stroke aimed at her life, or, if we were not cowards enough, not base enough to accept this suicide, it would not be mine to put as the reward of our struggles—our fatal struggles—that which should have the merit of being worthy the sacrifice of the people; and if we had to contest with two great empires, I had no one to help us, if we had no friend, and to contest in our struggles for the liberties of Europe, because now the Hungarian question rose Europe "thigh," it assumed the dignity of an European question—if it was our fate to struggle for the liberties of Europe as once we had struggled for her Christianity, and if God should bless us, I proposed as a reward the independence of Hungary, and it was accepted. (Cheers.) That is the statement, the brief—no, not the brief, but the true statement of the relations between Hungary and Austria. What was the result? How we fall—let me not speak about it. (After a pause)—that is a matter of too deep sorrow to dwell on. So much I can say, that, through a treachery by the whole world, I, and the nation we could have been a match for the combined forces of those two despotical empires, but that it was my fault and my debility, that I, the Governor of Hungary, who had the land of the people in my hands, was unable to match Russian diplomacy, which knew how to introduce treason into our camp—(Cheers)—but I been capable even to imagine all these intrigues, we should not have fallen. As it is, you know the House of Hapsburg as a dynasty, is gone; it exists no more—it merely vegetates. The Emperor can only act as the tool and will of his master, the Czar. If only the Czar would not threaten every portion of the world where the prayers for liberty rise up from the nation to Almighty God—if the people of England would only decide that the Russian should not put his foot on the nations of Europe—if England would but only say "Stop"—and nothing more—the boast of Pashkevitch, that he put his foot on the neck of Hungary, would never be realised, and Hungary, I am sure, would have knowledge enough, truth enough, and courage enough, to dispose of its own domestic matters, as it is the sovereign right of every nation of the world.—(Loud cheers)—and would not submit to aggression on her liberty. (Cheers.) Excuse me, gentlemen, if I have not answered your expectations—I fear I have tired you. (Loud cries of "No, no!" "Go on if you can.") My intention was to show you the past of my country was worthy of your generous sympathies, because it has struggled in a fair cause, it has struggled valiantly for its national existence, which, once lost, there is no resurrection more for the people. (Cheers.) That is the case of my country, I wish to secure for her your generous sympathy for this plain exposition of facts. The principle involved is one which you honour; the cause has been honoured in my undeserving cause. When landing on your shores I was received by my kind friend the Mayor, the father of the unfortunate, brother to the oppressed. Happy is the nation where such men as he rise from the people, for I have been told by one of the glories that he has risen by his own energy, by his own perseverance, by his own integrity, from the people; and it is the glory of England that such men, rising from the people, gain the love and confidence of their countrymen. (Loud cheers.) Let me, in returning my best thanks, to the acknowledgments for the opinion you have given me, propose, with the deepest affection and respect, "The health of the Mayor of Southampton."

M. Kossuth resumed his seat amid rapturous and long-continued applause.

The Mayor of Southampton returned thanks in a well received speech, and proposed "The health of the Liberal Members of the House of Commons," coupling with it the names of Lord Dudley Stuart and Mr. Cobden, M.P.

Lord Dudley Stuart returned thanks, and expressed the gratification he felt at the great speech delivered by that great man, M. Kossuth. His name was now famous throughout the world, and would be celebrated to the latest age. It was a privilege for them to behold him in England, saved from the power of his enemies.

Mr. Cobden said:—Mr. Mayor and gentlemen, I was rusticating in a neighbouring county, where I have been seeking some repose after the labours of a session more than usually laborious, and far more exciting than usually unprofitable, and after labours of a far more pleasing nature, such as entertaining friends come up to town to see the Exhibition, when I heard of M. Kossuth's arrival. I mention these facts, because it justifies me for not being on the spot to witness the reception given to our distinguished visitor. (Cheers.) But, gentlemen, the moment I received, in my retirement, the news of the arrival of Kossuth in England, I resolved to come at once to pay him my humble respects. Not that I had any doubt about his reception at Southampton—not that I feared any want of zeal or enthusiasm among the people; but because I saw an attempt made by a portion of the press of this country upon a man who, after escaping the plots and snares of Austria, the scaffold, and the dangers of a barbarous climate, was about to visit hospitable shores. I saw that an attempt was being made in England—hospitable England—to destroy, not the character, but what he valued more dearly—the reputation of this man; and from the moment I saw that dastardly attempt I determined to be here, to show these calumniators, that, if these slanders reach his character, it shall only be through ourselves. (Loud cheers.) We owe this not only to our illustrious guest and the country which he represents—not only to that great realm, America, whose guest I may still say he is, and whom I see here represented by its worthy Consul, but we owe it to ourselves—to every man who has a regard for the character of this nation, that we should come forward and vindicate ourselves from the charge of having a share in the most base and dastardly attempt that was ever made to injure the character of any public man. (Loud cheers.) I do not presume to enter into the internal affairs of Hungary. How, then, do I judge him to be a great worthy of the hospitality and moral assistance we give him? I judge of him by the proceedings of the nation of which he is a whole nation, and endorsed by the suffrages of a people. (Cheers.) When fugitive sovereigns are driven from their shores by the execrations of their people to our shores, we throw open our vacant palaces for their reception—(Cheers and laughter)—and I will not say a word against the hospitalities of Claremont—but when a man arrives on our shores bearing not the blessings of his country—and, I say, with a cold refusal refuses a welcome to such a man, adieu for ever to that sympathy with nations and with nations' rights which has hitherto been the boast of England. ("Hear," and cheers.) But I take no merit in sharing in these honours. Selfishness as a public man might induce me, if I had no other motive, to be here to-day. But I am here speaking in the name of the great majority of the people of this country. I say it advisedly, I know as much of public opinion as any newspaper can pretend to know; and I say that this meeting, enthusiastic as it is, fairly represents a large majority of the people, I say, and the women of this country. (Loud cheers.) And why is such sympathy felt for the cause of Hungary in England? Why is it that the name of Louis Kossuth is familiar to families of the middle classes, and I would fain hope of the higher classes, one of whom we number among our visitors to-day? It is because he is believed worthy to represent the wants and wishes of a great people; he has intellect to understand, he is worthy of their confidence, and that he has these qualities of the highest character which intellect would be a curse. (Hear, hear.) I confess I had formed a reasonable opinion of the refugees from those halls I see in the honour to be acquainted with, and probably there are few who have had greater opportunities of judging of the refugees than I have had. I have seen in their demeanour a manly fortitude in the midst of their distress, which has convinced me that they possess in a great degree those qualities of which Englishmen are so justly proud. I am convinced that if a people more than any other resemble the English character, the people of Hungary, and, gentlemen, the presence of our friend amongst us and among the people of England will enhance our respect for his people. It is impossible to hear him speak, to hear his friends and colleagues speak of him, without feeling that here is a man, who, being thrown in the highest position, acted in a manner worthy of that position, and that the people who placed him in such a position were worthy of such a man. Many indeed, and most particular results can flow from our demonstrations of respect for our friend? I am sure they will not be quite barren of fruits, if they afford him some consolation for the hardships he has been obliged to undergo during the last two or three years. But there is more than that in the respect we have heard from his friends, and there is an additional passport to our favour in the malignity of his enemies, his enemies being the friends of despotism. (Hear, hear.) Now, people will see how far the aspirations of Europe will go with his cause, and how far they may expect the support of Englishmen or Americans, in their future proceedings. (Hear, hear.) Now, my illustrious friend stated, as the conclusion of his most eloquent address, if he wishes only for such a demonstration in this country as shall prevent Russia from invading his country, or from interfering with the settlement of its domestic affairs. Well, if there be one man who has a stronger opinion than an other on the subject of non-intervention, I am that man. I am fanatical in that doctrine, because I think there can be no vigour or manhood in the country which looks to the right or left for external aid, and is not allowed to develope its resources by its own internal working; but I quite agree with my friend that a word spoken by England would have an almost irresistible force in the councils of despotic sovereigns. I confess I bear with regret that the invasion of Hungary by Russia, the greatest scandal in civilisation in our day, should have been allowed to pass without an angry protest from this country. I stated that so long as the dispute lay between Austria and Hungary, we should go no further than express our sympathy with the right; but from the moment that Russia interfered it became a classical question. Here was a semi-barbarous power coming down with its hordes to crush a more civilised country, and a strong protest from the Government and people of this country would have been of immense advantage. I look back for the last Other states were in the toils of a reaction, and the leading newspapers of this country not only entered no protest, but actually expressed opinions in favour with the Russian cause. (Hear, hear.) And, I say that, were public opinion so far enlightened that newspapers would not dare to falsify it by taking side with Russia, it would not require many words from an English Foreign Minister to make the cabinets of the most wild despots. (Hear, hear.) But be that as we wish our opinion to have weight, we must come into court with clean hands. My efforts have been made to make us understand our duty with regard to intervention in foreign countries, and yet I believe that, from the passing of the Reform Bill, there has been more intervention than, in the form of "force," I am for. Let then, get to the sound principle, and then I believe that the word "Stop," applied to Russia, would be as conclusive as if we spoke with the voice of a thousand cannon. (Hear, hear, hear.) Gentlemen, my friend there is now to England, but no doubt he that has gone through the toil and turmoil of public life knows that the threats of the enemies of liberty are the same in Austria as in England. He must expect to be assailed with every calumny by the organs of Russia, and will be accused of violating every commandment in the decalogue. The only regret will be, that there is not an eleventh commandment, to charge him with breaking it. (Laughter.) I myself have been accused of every crime short of actual murder; but I can assure you that in England these shafts of calumny have very little effect, so long as you have truth and justice on your side. (Cheers.) Now my friend tells us that he comes here on the principle of non-interference, and I think we owe him some explanation before he is fairly launched on the public platform that attends him. He is asked by us whether we are to have a hand interfering in our domestic affairs, and under these circumstances I think it would be wrong for any political party to offer any act of special fraternisation with our Hungarian friends or to claim political sympathy. (Cheers.) In short, I think I may once for all avow that there is nothing in the position of our friend to warrant any party claiming political identity with him. (Hear, hear.) He has told us that the movement of the Hungarian nation was not a movement having for its object organic changes in the national institutions, but that the Hungarian movement was not a democratic movement solely, but a movement of the people, with the aristocracy at their head, to maintain the nations independence. Had it not been such a movement, they could not have achieved what my friend has detailed to us this evening. In short, we honour in him the champion of a nation that is identical with constitutional institutions. (Hear, hear.) He took the constitution as it had existed for 800 years, and therefore I see no reason to identify him with Whig, Tory, or Radical in this country. I hope that after his moderate and singularly talented address this great community will see that he is to be received on the part of the nation at large as representing an entire people, and that at no public meeting will any question be introduced which he could not, consistently with mourning the misfortunes of that intervention which he is most anxious to avoid. (Hear, hear.) I have nothing further to say, but that I feel highly gratified at the present meeting, and to propose any opinion that the Mayor of Southampton has nobly done his duty in representing on this occasion the public opinion of the large majority of the people of this country; and when our distinguished friend has passed from under this roof to the metropolis, I will leave him to judge, and he entreated to witness, whether the respect paid to him elsewhere does not justify the beginning made by the town of Southampton. (Cheers.)

Mr. Crosley, the American Consul, in returning thanks, said, that he did not wish to take a very prominent part in the demonstration, which it was his wish should be purely British in its character. He wished that when the news of the reception given to Kossuth in this country went to the other side of the Atlantic, it should have all the value of spontaneity on the part of the British people. He felt sure that when their illustrious guest reached the shores of America he would be received by all parties, whether Whig or Democrat, as Lafayette was in 1825—as the nation's guest. (Cheers.) The American people, as well as Republicans—they loved law, order, and the constitution as the basis of their liberties; and although it had not appeared that Kossuth had not intended to institute a Republic in Hungary, still he had fought for the constitutional rights of its nation. (Cheers), and as such had rendered himself dear to the friends of liberty. He would take that opportunity of saying a few words in regard to the subject of intervention and non-intervention, upon which his friend Mr. Cobden had so much dwelt. Every country had an undoubted right to the law of intervention as had the United States. The doctrine had been bequeathed to them by Washington, and they still looked upon it as a sacred bequest. But there were many of his countrymen, who considered this with their increased power and their dazzling future, a new and different policy might be forced upon them by the necessities of their condition. The time would come, if it had not already come, when the United States would be forced into taking more than an interest in European politics. When they should be so forced, he hoped that they would adhere to the advice of Washington, and, at the same time, require of other members of the great family of nations to adhere to the same doctrine. He hoped, when introduced into the arena of European politics, they would be introduced as the ally of England upon some great constitutional cause, as that of the independence of Hungary crushed by foreign intervention. Hand in hand with Great Britain, such a combination of despotic Governments could re-enact the terrible drama of placing the foot of absolutism upon the neck of national independence and constitutional freedom. (Loud cheers.)

Lord D. Stuart proposed "the Corporation of Southampton"—(Cheers)—for which Mr. Alderman Lashley returned thanks.

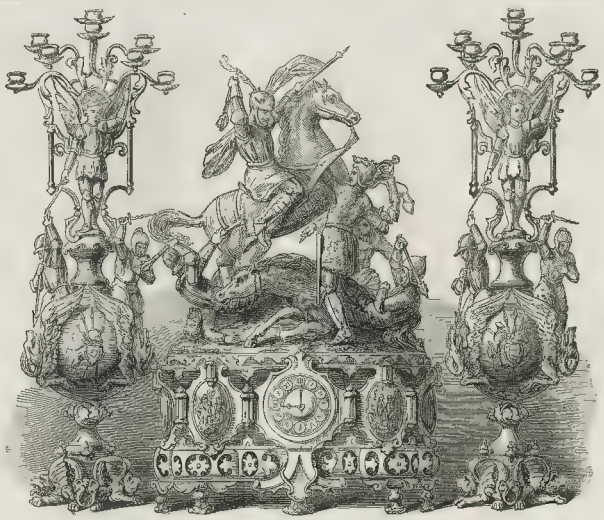
M. Kossuth rose and said:—Mr. Mayor and gentlemen, allow me to interpose for a few minutes, and make one or two observations in reply. (Hear, hear.) Allow me, in the name of my nation, to express the gratification with which I have heard the sentiments expressed, and the hope that has been uttered and so warmly responded to by you, that, through the justice of the Eternal God, my country may yet regain her liberties. (Cheers.) I am proud to find that we are supported by the sympathies of this mighty people, and of the offspring of England across the Atlantic, through whose Government the blessings of liberty are enjoyed in both hemispheres. Supported by that sympathy, I trust in God to see the hope so fervently expressed realised, and that soon. (Cheers.) I am not eloquent; but the words—I cannot say the brief words—which you have done me the honour to listen to, fell from my lips in order to explain the position of my country, and not with a view of exciting sympathy for myself. Ours is not the cause of one family—of one party—but it is the cause of a whole people claiming those just rights to which the nation is entitled. After the length at which I have already addressed you, I feel that I dare not now long detain you; but I am a man who speaks, as it were, by the inspiration; and I now feel that, had I not already spoken, I could address volumes to you from the energy and warmth of my heart. (Cheers.) In consequence of that inspiration you must allow me to address you a few more words. I had heard of the reception which I might expect in England, and I had not pictured to myself so warm, so cordial a greeting, as that which you gave me on landing, and the noble welcome with which you have given me in this room through the hospitality of your Mayor. (Cheers.) But I came from the East, where I have always loved to see and closely examine the institutions and habits of the people of the country in which I have been. No study can be more interesting, because the character of a people is chiefly dependent on that of her institutions. As I am naturally somewhat impressed with Eastern laziness, perhaps you will permit me, in the Eastern manner, to speak a brief tale. (Hear, hear.) It is reported that the Sultan Saladin, the great enemy of Richard Cœur de Lion, once met a Jew named Aaron, called "the Wise." Saladin said to him—"How is it that you, who are a wise man, do not change your religion and become either a Christian or a Mahometan, although they differ in doctrines, they agree upon one principal point? Your religion speaks to you, moreover, of that God Almighty can only take to his bosom the children of those who profess that God Almighty can only take to his bosom the children of those who profess that God Almighty can only take to his bosom the children of those who profess

MODEL OF BRIEN BOROIMBE'S HARP. EXHIBITED BY MR. BALL, OF DUBLIN.

This little subject will be viewed with interest, as a correct counterpart of the ancient Celtic harp. It is described as a model, being a restoration of the ancient harp commonly called the harp of Brian Boroimbe Brien Boru), King of Ireland, preserved in the University Museum

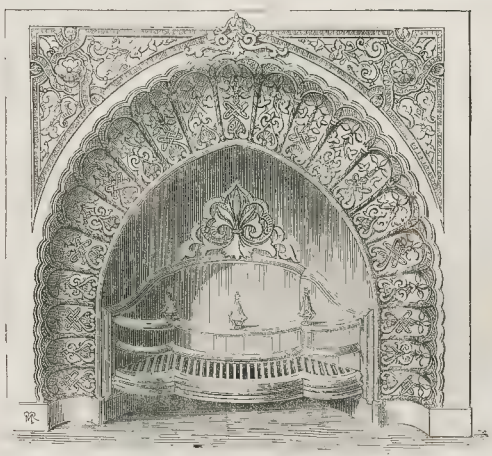
MODEL OF BRYAN BOROIMBE'S HARP.—BALL, DUBLIN.

Dublin. This restoration is made in the hope of inducing artists to adopt it as a model in emblematic devices relating to Ireland. It is certainly the oldest existing Irish harp; and is supposed to have been figured on the coins of Henry VIII., and, in the mutilated state in which it long remained, it gave origin to the curt and inelegant form not unfrequently used in jewellery, &c. It is now restored to the graceful form it originally possessed, and its elaborate carving has been carefully and accurately restored.



CLOCK.—LEROY AND SONS, PARIS.

CENTRE-PIECE.—MESSRS. WIDDOWSON AND VEALE.



ALHAMBRA STOVE, PURCHASED BY HER MAJESTY. MESSRS. STUART AND SMITH, SHEFFIELD.

CENTRE-PIECE. BY WIDDOWSON AND VEALE.

This is a very splendid and elaborate piece of table ornament. It represents a scattered group of cupids, some sporting amongst the fruits of the earth, whilst others play upon various instruments of music. The execution is of a very superior order, as regards style and finish.

CLOCK AND CHIMNEY ORNAMENTS. BY LEROY & SONS.

The decoration of this group of objects is of a *chivalresque* character, and is worked out with an expressiveness of spirit, and withal a delicate finish in the details, for which Parisian workmen are justly celebrated.

ALHAMBRA STOVE. BY STUART & SMITH, SHEFFIELD

This is one of the very handsome stoves manufactured by Messrs. Stuart and Smith, of Sheffield, which we particularly commended in a previous notice. The pattern is arabesque of the richest description, in or moulu and bright steel. It has been purchased out of the Exhibition by her Majesty.

CONSOLE TABLE. BY CLARKE.

This little piece of decorative furniture is very delicately fashioned, and has a very elegant appearance.

CONSOLE TABLE.—BY CLARKE.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, November 1, 1851.—Supplement, Gra

MERITS AND HONOURS IN ENGLAND.

If a man deserves well of his country in the military or the naval career, in the diplomatic service, or in the direct employment of the State, his merits may be recognised in England. The great soldier or sailor may receive a peerage, or a pension, or both; for services minor in degree there is a baronetcy or a knighthood; while for those who are not considered to rank quite so high as the recipients of hereditary titles, or even of the strictly personal honour of the knighthood, there is reserved the companionship of the Order of the Bath. All these matters are well understood; and the several honours are conferred according to a precedent which not even the Sovereign—the fountain of honour—can break through. The old feudal and hereditary rewards of the peerage and the baronetcy are never conferred upon individuals, however brilliant their merits or important their services, unless they are possessed of sufficient pecuniary means to support the dignity with becoming splendour, except in rare instances, like those of a Marlborough, a Nelson, or a Wellington, when pensions for a specified number of lives are granted with the title. The Order of the Bath, a personal honour, cannot, according to the same strict rule of precedent, be conferred upon any one who has not been in the civil or military service of the State; and the simple knighthood remains, therefore, the only available means at the disposal of the Sovereign or the Government for the reward of civil merit. Of late years this honour has become more civic than civil, and the knighthood of England consists principally of Aldermen and Sheriffs of London, or the Mayors and Lords Provost of provincial cities and towns, who, but too often, carry off the distinction without personally meriting it, and receive it for their office, rather than for themselves.

The recent close of the Exhibition, and the bestowal of honorary and other rewards upon the various gentlemen by whose talents and exertions it was made so eminently successful, have attracted attention to this subject, and proved how inadequate are the powers of the Sovereign to confer distinction upon individuals who do not happen to belong to a small and particular class. If the very respectable, but possibly very stupid, undignified, or illiterate person, who happens to be a Mayor or Sheriff when the Queen of England pays a State visit to his city or jurisdiction, is invested, as a matter of course, with the dignity of knighthood, the dignity, especially when the visits of the Sovereign are as frequent, and, let us add, as agreeable, as those of Queen Victoria, ceases to be a distinction which men of genius or talent are very solicitous to obtain. To be Mayor of Manchester or of Salford at a particular time, to present an address on the birth of a Princess, and to imagine or construct the Crystal Palace, discover a new truth in science, extend the fame of England in art or literature, or increase the national wealth by the development of our own resources, or those of every portion of the globe with which we may have profitable intercourse, are certainly deserving of different forms of appreciation on the part of the State. If the Knighthood is a pleasing and appropriate honour to bestow upon the Mayors and Aldermen, upon whom it falls like the gentle shower, without any desert on their parts irrespective of the accidental part which they play in a state ceremonial, it cannot be considered equally appropriate for the reward of men who owe nothing to the chances of their position, but who owe everything to their energy or learning, their virtues or genius. For this reason, a disinclination to accept the honour of Knighthood has become rather general among men on whom the Sovereign and the State would be most willing to confer dignity. It has become a question, which is peculiarly interesting at the present time, to consider whether an innovation upon established forms might not be profitably made, and whether a new Order of Merit, dating from 1851, would not be a fitting result of the peaceful and ennobling contest of art, science, and industry, which has rendered the year so memorable.

There may be a class of austere philosophers who despise, or affect to despise, the honours which it is in the power of Sovereigns to bestow, and who look with contempt upon hereditary dignities, and sneer at the crosses and ribbons which Governments can scatter around them. But these are not only a small minority of mankind, but, if sincere in their condemnation, are wofully ignorant of the latent and palpable springs of human action. The love of distinction is both natural and praiseworthy, and is only ridiculous when it is not justified by virtue or genius. In all ages, and among all nations, to be recognised as worthy of the approving voice of our fellows is a high incentive to noble deeds; and the bestowal of personal dignities is alike a cheap and a powerful means of eliciting and rewarding merit. It is easy to laugh at ribbons and crosses. The Order of the Bath is perhaps as foolish, as far as the name is concerned, as the Order of the Bathing Machine would be; and there may be as much to be said for a knighthood of the "Nettle" or the "Shoestring," as for the knighthood of the "Thistle" or the "Garter;" but while these dignities are hallowed by old and worthy associations they cannot become ludicrous. As long as they are confined to eminent and deserving men they will be held in esteem by the truly wise. They cost the commonwealth nothing, but they acquire something for it. A pennyworth of ribbon, if solemnly given by the Sovereign of a great and free state as a token, not of reward, but of appreciation, becomes a priceless treasure to the man whose abilities and whose virtues have pointed him out to his contemporaries as its fit recipient. Every man loves to have his merits recognised; and whether it be the privilege of wearing certain boots as in China, certain horse tails as in Turkey, certain bits of red ribbon as in France and Germany, certain stars and garters as in England, or the simpler privilege of appending certain magic letters to the surname, it is equally gratifying to the individual, and equally serviceable to a Government that desires to recognise its best men, and point them out to the new generation as most worthy of emulation.

The establishment of a new Order of Merit, not to supersede the ancient and respectable dignity of knighthood, but to include persons of a very different class, and on whom so feudal a title would neither sit well nor prove acceptable, would, we think, excite very general satisfaction at the present time. It has been the misfortune of the world, until the peace of Waterloo allowed it leisure to work and to think, to have been compelled to find its most brilliant examples of public usefulness in the military career; but, in the new era which has dawned upon humanity since that time, merit of a thousand other kinds has had opportunity to display itself. We have amongst us men whose splendid

ENGAGEMENT BETWEEN H. M. STEAM-FRIGATE "JANUS" AND THE RIFF PIRATES, ON THE COAST OF MOROCCO.—(SEE NEXT PAGE.)

discoveries in science have conferred inestimable benefits upon the world; we have philosophers who have shed lustre upon the country of their birth; we have poets and prose writers whose works have been the delight and the instruction of millions; we have painters, sculptors, and musicians who have added new splendour to the ancient arts which they cultivate; we have mechanicians and engineers who have practically abolished time and space for our pleasure, profit, and convenience; and we have men of energy and enterprise who have opened up the hidden places of the world for the benefit of the human race. All of these and many more might be enrolled in a new Company of Honour. The advantage would not be theirs, but that of the nation. The illustrious Prince to whose thoughtful and philanthropic mind we owe the Great Exhibition of 1851 has, if rumour speak the truth, already turned somewhat more than a passing thought to this subject. It would be an achievement worthy of his purest fame and his interesting position, if he could gather together the living worthies of the new country to which he has rendered himself so dear, and become the founder and chief of the new Order of Civil Merit. We trust, and believe, that the rumour is not entirely baseless, and that art, science, literature, and intellectual and moral greatness of every kind will receive under his auspices the appreciation which society owes, not so much to them as to itself.

PIRATES IN THE WESTERN MEDITERRANEAN.

THE African coast in the vicinity of Gibraltar and the Western Mediterranean, especially the Riff of Morocco, which was formerly so noted for its daring pirates—the Salee Rovers, as they were usually called—has again become a terror to the unarmed craft which frequent the locality. On the 16th ult. it was made known at Gibraltar that the schooner *Emilia*, belonging to Messrs. Heredia, had been captured by the Moors, and that her crew, when defending her, had been very severely handled by the pirates, many of them being seriously wounded; and, as it was thought probable that other vessels had been captured by the Moors, the Governor of Gibraltar despatched her Majesty's steamer *Janus* on the 17th, to endeavour to recover the missing vessels, and effect the release of any British subjects who might possibly be held in captivity by the Moors, and also to chastise those lawless tribes who inflicted so much inconvenience on the operations of commerce.

The following letter from Gibraltar, dated the 26th, gives an account of the proceedings of the *Janus*, from which it will be seen that the *Janus* was only partially successful, and that although she administered a severe castigation to the Moors, yet that she was in the end beaten off, with eight of the crew severely, if not dangerously, wounded:—

Although no official account has been published here, there can be no doubt but that many versions have been sent to England relative to the *Janus's* attack on the Riffians. As it may be gratifying to the friends and relatives of those on board of her to learn that no lives were lost, and that the worst case of those wounded is progressing favourably, the following short account of the affair may be interesting.

The *Janus*, which, on hearing of the capture of Mr. Heredia's schooner, had steamed for the coast of Riff on the 17th inst., came back on the 20th. She arrived there on the 18th, and found the *Emilia* high on the beach, a total wreck, entirely stripped. As some of the Riffians' boats were about the wreck, the *Janus* sent a few shells among them, and the next morning manned her boats and proceeded to the wreck. The Riffians, observing their movements, set fire to it. The *Janus's* boats thereupon commenced firing upon them with shot and shell, and, having, after two hours' firing, completely destroyed them (the boats), rejoined the steamer, which again put to sea. On the morning of the 19th, having steamed twenty miles westward of Cape das Forcas, she perceived the ribs of another vessel on the beach, and as she approached the Bedouins began to fire upon her. The *Janus's* boats were immediately manned and armed, and, the crew being landed, they endeavoured to destroy the Bedouins' boats; but their greater number enabling them to keep up an overpowering fire, our people were compelled to re-embark, and retreat to the *Janus*, which during the whole of the contest had been firing shot and shell, a circumstance which warrants the conclusion that the enemy must have sustained a very heavy loss. The following is a list of the casualties on board the *Janus's* boats:—

"Commander Powell, shot through both thighs, not dangerously; Mr. Paynter, shot through both thighs, slightly; John Ford, boatswain's mate, leg shattered, dangerously; J. Reading, seaman, thumb shattered, dangerously; James Frost, seaman, shot through the body, dangerously; J. M'Lean, marine, shot in the hip, slightly; James Connoly, boy, shot in the arm, dangerously; B. Mason, boy, slightly wounded in the head."

The *Janus* proceeded to Tangier on the 21st., no doubt for the purpose of acquainting our Consul there with what had taken place, that the same might be made known to the Emperor.

On the day of her departure accounts were brought from the Commandant of Melilla that five British subjects were in the hands of the Bedouins, who demanded the sum of 150 dollars each for their ransom. The commandant offered them 60 dollars, and immediately informed our Consul at Mazagan of it, and it is understood that the Governor of Algeziras had despatched a war-steamer to Melilla, the *Janus* being at Tangier.

It is said the brigantine *Violet*, of Whitehaven, from Galatz, has fallen into the hands of the pirates; and that her owner, Mr. Edward Bailey Cross, who was on board, and her crew (of whom one man was killed and the master wounded) are the British subjects referred to as being in the hands of the pirates.

The mishap to the *Janus* will probably be shortly followed by more effective demonstration against the pirates. The Governor of Gibraltar, on the 28th, forwarded despatches by the Peninsular and Oriental Company's steamer *Sultan* to Commodore Martin, at Lisbon; on receipt of which the *Arethusa*, 50, and screw frigate *Dauntless* were instantly ordered to Gibraltar. It was also understood that reparation would be demanded from the Emperor of Morocco for the aggressions and piracies of his subjects on the Riff coast.

The accompanying sketch by our correspondent, a young officer of the *Janus*, and present in the action, represents the *Janus* covering the landing of three of her boats—viz., the gig, commanded by Lieut. Powell; the cutter, by Mr. Paynter (master's assistant); and a paddle-box boat, by Mr. Woolridge (master's assistant); who, having succeeded in destroying three of their piratical craft on the beach, under a most galling fire from the bushes and heights, and in killing and wounding great numbers of the enemy, regained the steamer, but unfortunately having the commander, Mr. Paynter, and seven men badly wounded, one, as it is feared, mortally. Then pirates are the terror of all who sail the Mediterranean; but the *Janus* has given them a lesson which they will not soon forget. The *Janus* was also engaged the two previous days, under a heavy fire of musketry from the surrounding heights, in shelling and completely destroying several of the craft, with their stores, in a creek, when upwards of 50 of the pirates must have been killed, and although the sides and decks of the *Janus* are much cut up with bullets, and her funnels indented, &c., most fortunately no casualties occurred on those days.

FATAL COLLISION AT SEA.—On Sunday morning last, about one o'clock, the sloop *Samuels and Eliza*, Skinn, from Goole for London, was run into by the schooner *Alert*, of Ipswich, between the Longsand and Cromer, wind about S.W. a-trip. The crew of the sloop, on hearing the hailing of the schooner for her name, which was refused, were in the act of jumping on board the smack, when returning to the vessel, in between the two vessels. After the vessels cleared each other, the schooner sailed on immediately. Instead of her name being known, and the vessel in a sinking state. They, however, took no further notice. But, with great exertions at the pumps (there being only two hands and the master's wife), they kept her afloat till about eight o'clock, when, finding the vessel rapidly sinking, they took to the boat, the vessel sinking under them (with his corpse on board), and although the crew were unable to raise, and were shortly afterwards picked up by the schooner *Swan*, Hull, of Deeny, and brought to shore at half-past seven p.m. same day (Sunday). The crew have been forwarded to their homes by the honorable agents to the Shipwrecked Fishermen and Mariners' Society. The *Alert* subsequently became unmanageable from the injuries she had sustained by the collision, and she was abandoned in a sinking state by her crew, who were subsequently conveyed on shore by the *Uncle Sally*.

The excavations now being carried on near Malton, in the course of the construction of the Thirsk and Malton Railway, have disclosed several antiquities of interest. The line cuts across Orchard-hill, which is levelled, an elevated platform commanding an extensive view of the surrounding country, and which has been the site of Roman, Roman, and other encampments—part Celtic. A few days since the workmen cut down a small portion of the eastern side of Mason Dyke, which they discovered, a cavity four or five feet deep, of irregular shape, and the Roman passage which (tradition asserts) existed between the ancient castle and Malton Abbey, about half a mile distant. The foundations of ancient buildings have been laid bare, and the remains of fires extinct for centuries. Skeletons have been dug up, mingled with the bones of animals; and the workmen came upon a lachrymatory, together with a funereal urn, and various coins of Vespasian, Domitian, Constantine, and Aurelian.

FOREIGN AND COLONIAL NEWS.

PARISIANA.

(From our own Correspondent.)

THURSDAY, Nov. 6.

Society in Paris partakes of the inquietude created by the present aspect of political affairs. The galleries of the winter, which had begun with some spirit, have suddenly been brought to a standstill. Even the *Charivari*, which, like the stormy petrel, generally sports so merrily in our political tempests, shares the general dulness, and is positively at a loss for a joke.

A faint echo of our late Ministerial resignations has been heard this week in the Cour d'Assizes—M. Carlier, the late Prefect of Police (whose retirement, *en passant*, was more regretted than that of the whole Cabinet put together), having indicted *La Revolution*, a pre-eminently Liberal journal, and something more for having transformed the ex-functionary into a large landed proprietor, by making him the purchaser of a splendid estate at the cost of only half-a-million of francs, the money being, of course, obtained by the corruptions of office. M. Carlier, who has the reputation of an honest as well as an able man, at once determined to prosecute the calumniators, for the entire story was a fabrication. The publisher and editor were accordingly brought to trial a few days ago, found guilty, and fined 6000 francs, with the costs of suit, and the addition of 18 months' imprisonment each. This sentence is severe; but the system of slandering the private character of political opponents is carried to a shameful extent in the French press, and calls for energetic repression.

The attention of our Paris *savans* has for some time past been drawn to a reported discovery of nearly a thousand ancient MSS., by a young Greek named Simonides, a native of the little island of Simi (one of the Sympiegades). Among them are said to be poems, hitherto unknown, of Pindar, besides historical fragments and geographical treatises. There is some mystery respecting the alleged mode of his becoming possessed of these treasures, which he declares was by the will of a deceased uncle, a monk of Mount Athos, who first discovered the place of their concealment, and he (the present owner) found them enclosed in leaden boxes. M. Simonides, who is said to be a young man of much erudition, was desirous to induce the Government of Athens to publish them—of course with some advantages to himself; but they refused, and threw their doubts on the authenticity of the manuscripts. The entire story involuntarily reminds one of the tale of the unfortunate Chatterton. Unsuccessful at Athens, he went to Constantinople in the hope of procuring the means of publishing them—a singular route for the execution of such a design, for, if genuine, he could scarcely be ignorant that Paris, London, or Leipzic were the cities, above all others, where such an undertaking would find patronage. In Paris, M. Hase, M. Boissonade, M. Dübner, and some others, whose profound knowledge of Greek palmography is recognised throughout Europe, could at once have been able to pronounce on their authenticity, of which many persons entertain a doubt. He has, however, published one of them, purporting to be a history of the Septanim under Ptolemy Philadelphus, of which a favourable opinion is given. How such a work, however, could have found its way from Alexandria to Mount Athos, without attracting the notice of Cinyras of Samos, and other learned grammarians of that day, seems difficult to account for.

M. Jules Sandeau, one of the best of French novelists left under poor M. de Balzac, has just made his first theatrical essay with a comedy produced on Tuesday night at the Français. This production, "Mdlle. de la Seiglière," has been built in Russia, generously returns the property to its former master. Even this noble act of disinterestedness cannot, however, force the prejudices of the *Marquis* and his Lenorcal court to forget that his benefactor is a *roturier*, and they treat him accordingly with the haughtiness of caste *Ancien Cour*. These prejudices soon undergo a terrible shock by the appearance of a new character on the scene. The son of the steward supposed to have been killed suddenly returns, and, brave, accomplished, and handsome, he enters the lists in open warfare against the *bourgeoisie* against the narrow exclusiveness of mere pride of birth, and succeeds in so well that he not only turns the tables upon his supercilious adversaries, but wins the heart and hand of *Mdlle. de la Seiglière*, the only treasure of the family. The plot is not surprising; but it is enlivened with a variety of incidents and details so gay, so dramatic, and so interesting, as to be perfectly surprising in a first essay. The piece is acted as such things are only done at the Français. Madeleine Brohan, in the principal character, played most charmingly; and Samson Regnier and Mdlle. Nathalie, in the other characters, complete an *ensemble* only to be found in this theatre. The success was triumphant. The President of the Republic was present, and, notwithstanding a brow somewhat more than usually clouded at the defeat his chosen Ministers had just suffered in the Assembled, laughed heartily more than once at the allusions of the *Marquis* and his friends of the ancient *régime* to "*Monsieur de Bonaparte*," by which name he, throughout the piece, speaks of the Emperor.

FRANCE.

The annual message of the President of the Republic was read to the National Assembly on Tuesday last, on its meeting in Legislative Session at the close of the recess.

It is a State paper of the usual extended length which Presidential Messages generally reach, and treats of all the various departments of the administrative government of the country, whether relating to external or internal affairs, under the following heads—viz. Interior, Finances, Public Works, Agriculture and Commerce, Justice, Public Instruction and Worship, War, Navy, Foreign Affairs, and a general *resumé*. Its chief feature is the proposal to restore universal suffrage by the repeal of the restrictive law of May 31, 1850. It opens with a rather formidable announcement, viz. that a great Democratic conspiracy against law and order is at the present moment fermenting in France and throughout Europe.

A vast demagogical conspiracy (says Louis Napoleon) is now organising in France and Europe. Secret societies are endeavouring to extend their ramifications even into the smallest communes. All the madness and violence of party is brought forth, while these men are not even agreed on persons or things: they are armed to meet the future movement, but to conquer. Your patriotism and your courage, with which I shall endeavour to keep pace, will, I am sure, save France from the dangers wherewith she is threatened. But to conquer these dangers we must look at them without fear and without exaggeration; while we are convinced that, thanks to the strength of the Administration, the enlightened zeal of the magistracies, to the devotion of the army, France will yet be saved. Let us, therefore, unite our efforts to deprive the spirit of evil even of the hope of a momentary success.

The best means to attain this end has always appeared to me the application of that system which consists in satisfying the legitimate interests on the one hand; and, on the other, to suffocate, at the moment of their appearance, the slightest symptoms of an attack against religion, morality, and society.

Thus to procure labour by granting to companies our great lines of railway, and with the money which the State will procure by this operation, to give a strong impulse to the other works in all the other departments—to encourage those institutions destined to develop agricultural and commercial credit—to come by means of charitable institutions to the assistance of all poverty—which has been and such still must be our first care; and it is by following this course that it will become unnecessary to have recourse to means of repression when their necessity shall have become fatal.

The President then states that the Government has been obliged to declare the departments of Cher and Marne in a state of siege, in order to put down a *jacquerie*, or peasant insurrection, which had commenced there; he reports favourably of the state of the finances of the country; glances at the progress of commerce and industry, and then proceeds and dwells on its importance in a commercial, political, and military sense, and on the advantage of canals as an auxiliary to railroads; points out the benefits arising from the exertions of the Council General of Agriculture, Manufactures, and Commerce; and indicates the advance made in the promotion of national education by the establishment of free schools in the provinces.

Under the head of "War" it is stated that on the 1st of October last the army numbered 387,819 men and 84,306 horses, which would be reduced, if no unexpected obstacle interposed, in the budget for 1852, to 377,130 men and 83,435 horses; and it is added that no supplementary credit would be needed for the year 1851. The navy is pronounced to be in an efficient state, and colonial affairs in a satisfactory condition.

Under the head of "Foreign Affairs" the President says:—

I congratulate you upon the state of our relations with foreign powers; from all parts we receive the strongest assurances from the various courts of a desire that our internal difficulties may all be peacefully resolved; and, on our own part, we are unitedly doing all in our power to assist in those measures which will best secure the repose and peace of Europe.

The relations of France with Rome, Constantinople, Spain, Germany, and Denmark, are referred to with satisfaction; and the conclusion of commercial treaties with Great Britain, Tuscany, Belgium, Prussia, Denmark, and Sweden is adduced to testify the desire of the Government for the development of the commercial and maritime relations of the country.

Glancing, from the French point of view, at the Great Exhibition of Industry in London, the President eulogises it as tending to cement all nations in peace and good-will:—

The English people (he says) received our people with the most welcome cordiality; and the rivalry which took place amongst the various productions of the world, so far from fomenting jealousy, only increased the reciprocal esteem of all nations.

The grand feature of the message is reserved for its close, viz. the restoration of universal suffrage. On this all-important question Louis Napoleon thus addresses the Assembly, reasoning on the propriety of the course which he recommends:—

Well, now I have asked of myself whether, in the presence of the division of passions, of the confusion of doctrines, of the division of parties, when all combine to attack the morals, the justice, the authority of the nation, we ought to stand by and leave shaken and incomplete the only principle which in the midst of the general chaos Providence upholds for us to gather round it.

For a revolutionary and salutary agitation has taken place amongst the masses; and lastly, I have asked myself if, when new powers shall preside over the destinies of this country, we should not from the first compromise their stability if we left a pretext for questioning their origin, or for misrepresenting their legitimacy.

No doubt it was possible, and, without wishing for a single instant to swerve from the policy of order which I have always followed out, I have been obliged in many respects to separate from a Cabinet which had to the full my confidence and respect, in order to choose another which, equal y composed of honourable men, and of men in whose Conservative sentiments are publicly known, but who consented to admit the necessity of re-establishing universal suffrage on the broadest possible basis.

I am still, therefore, have presented to you the draught of a law which restores the principle in all its fullness, in returning from the law of the 31st of May everything which winnows universal suffrage from impure elements, and which makes its application more moral and regular.

The project has, consequently, no feature which can possibly govern this Assembly; for, if I think it expedient to ask to-day for the withdrawal of the first time to the Cabinet which claimed from the chief of the majority, whose work this law was, the honour of presenting it.

I appreciate the circumstances under which that law was presented, we shall not, I believe, refuse to allow that it was a political act rather than electoral law, that it was really and fully a measure of public benefit. Whenever the majority shall propose to me energetic measures for the safety of the country, it may rely on my loyal and disinterested support. But the best of measures for the public welfare have but a limited time.

The law of the 31st of May has, in its application, even gone beyond the object intended to be attained. No one foresaw it; suppression of 3,000,000 of electors two-thirds of whom are peaceful inhabitants of the country. What has been the result? Why, that this immense exclusion has served as a pretext to the anarchist party, who cloak their detestable designs beneath the appearance of a right withdrawn and to be reconquered. Too weak in numbers to take possession of society by their votes, they hope, under favour of the general confusion which the decline of the powers of the State, to kindle in several points of France at once troubles, which would be qualified, no doubt, but which would throw us into fresh complications. Independently of these dangers, the law of the 31st of May presents as an electoral law grave inconveniences. I have never ceased to believe that a day would come when it would be my duty to propose its repeal. Defective when applied to the election of an Assembly, it is still more so in the case of nominating a President; for though a residence of three years in a commune may have appeared a guarantee of discernment imposed on electors in the knowledge of those who are to represent them, so long a term of residence cannot be considered necessary for the appreciation of the candidate destined to the government of France.

Another serious objection is this, the constitution requires for the validity of the election of a President by the people at least 2 000,000 of suffrages, and, if this number is not collected, the right of election is conferred on the Assembly. The Constituent Assembly had therefore decided that, out of 10,000 000 voters inscribed on the lists, one-fifth was sufficient to render the election valid.

At the present time, the number of electors being reduced to 7,000,000, to require 2,000,000 is to invert the proportion,—that is to say, it is to demand one-third instead of one-fifth, and thus in a certain eventuality to take the election out of the hands of the people to give it to the Assembly. It is, therefore, positively changing the condition of eligibility of the President of the Republic.

Lastly, I call your particular attention to another reason which, perhaps, may prove decisive.

The re-establishment of universal suffrage on its principal basis furnishes an additional guarantee of cleaning the soil of the constitution. You have not forgotten why the adversaries of this revision refused at last session to vote for it. They urged this argument, which they knew how to render specious: "The Constitution," said they, "which is likely to be revised, is the work of an Assembly having its rise in universal suffrage, cannot be modified by an Assembly less big from a restricted suffrage." Whether or not this be a real motive or a pretext only, it is expedient to set it aside, and to be able to say to those who would bind the country down to an immutable constitution—Beloved universal suffrage re-established, the majority of the Assembly, supported by 2,000,000 of petitioners, by the greater number of the councils of arrondissement, and almost unanimously by the councils general, demands the revision of the fundamental compact. Have you less confidence than we in the expression of the popular will? The question, therefore, may be thus stated to all who desire a pacific solution to the difficulties of the day:—

The law of the 31st of May has its imperfections, but even were it perfect should it not, nevertheless, be repealed if it is to prevent the revision of the constitution, the manifested wish of the country?"

It is objected, I am aware, that on my part these proposals are inspired by personal interest. My conduct for the last three years ought to repel such an allegation. The welfare of the country, I repeat, will always be the sole moving spring of my conduct. I believe it my duty to propose every means of conciliation, and to use every effort to bring about a pacific, regular solution, whatever may be its form.

Thus, then, gentlemen, the proposal I make to you is, neither a piece of party tactics, nor an egotistical calculation, nor a sudden resolution;—it is the result of serious reflection, and of a profound conviction. I do not pretend that this measure will banish all the difficulties of the situation. But to each day its appointed task.

The way to re-establish universal suffrage is to deprive civil war of its ensign, the Opposition of its last argument. It will be to furnish France with the possibility of giving itself institutions which may ensure its repose. It will be to give back in fixture to the powers of the State that moral force which can only exist so long as it reposes on a consecrated principle and an incontestible authority.

Receive, gentlemen, the assurance of my high esteem,

Elysée National, Nov. 4. LOUIS NAPOLEON BONAPARTE.

The Message was read by the new Minister of the Interior, M. Thorigny, and throughout the greater part was listened to in attentive silence, a slight murmur of dissatisfaction only escaping from the Left at the mention of the democratic conspiracy; but towards its close the Right and Centre (Conservative) benches repeatedly expressed their dissatisfaction at the proposal for the repeal of the existing electoral law.

M. Thorigny subsequently read the draft of law, proposing the complete abrogation of the law of the 31st May, 1850, and re-establishing the electoral law of the 15th March, 1849. In virtue of the new law, all citizens 21 years of age, and having resided six months in the commune where they were born and drew the conscription. Public functionaries and ministers of religious worship recognised by the State are to exercise their electoral right in the commune where they exercise their functions, whatever may be the period of their residence.

The Minister in conclusion demanded the urgency, which was opposed by M. Berryer, and, on the question being put, the demand of the Minister for the immediate or urgent consideration of the bill was rejected by a large majority. The Assembly without taking a vote, but according to the more unceremonious method of "sitting and rising" (*assis et levé*).

The reception given by the press to the Message is not very encouraging. The Democratic papers approve of the proposed extension of the suffrage, but disapprove of all the other parts of it; while the Conservative organs express strong dissatisfaction with it throughout, and augur an unfavourable reception for it in the provinces.

The ill-concealed hostility of the majority of the Assembly to the new Ministry, and their opposition to the main proposition of the Message, have begun to produce their natural effects on the public mind—uneasiness and anxious foreboding relative to the future.

M. Daviel, Procureur-General at Rouen, is named Minister of Justice, in place of M. Corbin, who declined accepting office.

BELGIUM.

The parliamentary session of the Legislative Chambers was opened on Tuesday by the King of the Belgians in person, with a speech from the throne, in which his Majesty, having referred to the prosperous and

tranquil situation of the country, as showing at once the solidity of its institutions and the excellent spirit of its inhabitants, which recommended Belgium to the esteem of other nations, proceeded to observe that their relations with foreign powers showed the happy effects of this state of things, and that his Government continued to be on the happiest terms with regard to those foreign powers. Having then alluded to some measures of finance which would be submitted to them, his Majesty went on to say

Present circumstances, gentlemen, render more than ever desirable harmony between the powers of the state; and Belgium, which for four years had maintained herself in a strong and peaceful situation, will not, I hope, submit to any vexations embarrassment in the administration of her affairs. Independently of the new laws which will be presented to them, the Chamber will have to occupy themselves with the examination of the vote which was suspended last session. You will doubtless place among your first labours the making of laws with regard to consular jurisdiction, forest lands, pollard, the reform of the penal code and the new law of poll-tax, intended to place taxation upon the most equitable basis.

His Majesty then intimated that the tax which for twenty-five years had weighed upon the Belgian flag in English ports was about to be removed, and, having alluded to the Great Exhibition, concluded by saying that his Government looked with confidence to the support of the Chambers.

UNITED STATES.

Accounts from New York to the 22d ult. bring intelligence of considerable interest. It would appear, according to the highest legal opinion, that the persecution of the coloured population under the provisions of the recently enacted Fugitive-slave Law is opposed to the spirit and to the letter of the Constitution of the United States, and that, therefore, all the proceedings under that Argentine act are null and void. At least such is the legal doctrine drawn from a judgment recently delivered by Mr. Justice Hoadley, of the Superior Court of Cincinnati, in the case of an absconding debtor from Maryland on the occasion of the debtor's arrest at Cincinnati upon the requisition of the Governor of Maryland, who sought to have him brought back to the latter state in the same way as absconding or fugitive slaves, from any one state in the union, have been arrested and brought back to the state out of which they had fled, on the requisition of its governor. The absconding debtor, when arrested at Cincinnati, sued out a writ of *habeas corpus*, his case came up in the Superior Court, and Judge Hoadley pronounced that the arrest was illegal, and that the law of the United States, as well as all the decisions hitherto made by the higher courts, were quite unconstitutional. The matter will be carried before the Supreme Court of the United States for final decision.

It is hoped, in the cause of humanity, that the other eminent law authorities will sustain the decision of Judge Hoadley.

The air of revolution which has been for a time at least crushed in Europe, secure in the haven of the United States, raises its head against the re-action of the Absolutist Governments of the Old World. Professor Kinkel, who escaped a short time ago from his prison in Prussia, is engaged at present at Washington in raising a loan, which is to amount to 2,000,000 dollars, for the purpose of again revolutionising the German States.

Referring to this subject, the Washington correspondent of the *New York Herald* states that the Italians have already raised 2,000,000 dollars, which are now in deposit in a London bank, subject to the control of the revolutionary democrats, who are preparing to blow up the crowned tyrants of the Old World."

The President has appointed Coolidge Sharkey as consul at Havanna, in the room of Mr. Owens, recalled.

Accounts of a disastrous character from the whaling fleet in the North Pacific have reached New York. After wintering in the Gulf of Anadir, in Russian Kamtschatka, the fleet attempted to pass into the Arctic Ocean, when they became surrounded with fields of ice, by which not less than eight vessels are known to have been destroyed, and it was supposed that upwards of sixty others had experienced the same fate. Some of the crews of the lost ships reached the main land, but afterwards met with difficulty with the natives, and, in consequence, many of them were killed. The whale-fishing, during the season, is said to have been an entire failure, and a number of vessels were on their return to the north-west coast, in the hope of retrieving their ill-luck.

CALIFORNIA.

The latest intelligence from St. Francisco is dated September 15, and from it we learn that the productiveness of the gold mines continues to be most marvellously great, in some localities the supply of gold being so little exhausted being daily on the increase. The auriferous quartz veins are being extensively worked, and generally with great success. The amount shipped by the steamer *Panama*, which conveyed the present advices, was 1,700,000 dollars, and probably exhibits no falling off in the production of gold. In the dry diggings miners were only waiting for the rainy season to take out large amounts of gold.

San Francisco had recovered from the two great conflagrations of May and June, and has been rebuilt in a better style than before. Numerous fireproof brick and stone buildings have been erected, and many others have been commenced.

A destructive fire visited Marysville on the night of the 30th of August, by which three entire squares, including upwards of eighty houses and property valued at 300,000 dollars, were consumed. On the 10th of Sept. the same place was again visited by a disastrous fire, which destroyed twenty-five buildings and a large amount of valuable merchandise. Both fires are supposed to have been the work of incendiaries.

Crime has most sensibly diminished throughout the state, and no execution has taken place, either here or in the interior, since the sailing of the last steamer.

The Californian papers express their gratification at the departure of several unruly characters whom the news of the Australian gold discoveries had attracted back to Sydney, whence they had originally come.

THE RIVER PLATE.

Advices to the middle of September have been received this week from Brazil and the Confederated Republics on the river Plate, in South America.

The hostile tire at present waged in that quarter requires a few explanatory observations, in order to render intelligible the accounts which have just come to hand.

The petty states or provinces situated upon and contiguous to the river Plate and its branches, which form the Argentine Confederation or Buenos Ayrean Republic, are Buenos Ayres, Santa Fe, Entre Rios, Corrientes, and several others of less note. Of these the eastern group, lying immediately on the banks of the Plate and its tributaries, is called the Banda Oriental, and with these it is of the utmost importance to have unrestricted intercourse with the seacoast for the purposes of commerce, a policy which Rosas, the dictator of Buenos Ayres and virtual ruler of the entire Argentine Confederation, has continually thwarted in the most oppressive and unjust manner; and one of the chief objects of the present movement of these eastern provinces, headed by General Urquiza, is to put an end to the obstructive measures of Rosas against their commercial interest

The two independent states of Paraguay and Uruguay are situated between the empire of Brazil and the Argentine Confederation. The important seaport of Monte Video is in the Uruguay, and its commercial importance has long made it a bone of contention between the rival states and the military adventurers who from time to time rise to the head of affairs in them. For a considerable time back General Oribe, the ally of Rosas, has wielded the supreme power in Uruguay, which is on the sea coast, in support of the policy of Rosas, whether directed against the interests of the Banda Oriental, or the interests of the Brazilian province of Rio Grande, which latter district their agents have kept in a constant state of embroilment.

From this sketch of the parties and their objects, it will be seen that Brazil, the Banda Oriental, and the greater portion of the Argentine provinces, have a common interest in putting down both Rosas and Oribe, whose sanguinary terrorism has alienated all the various populations from them, the small number of their adherents being retained only by fear or the hope of plunder.

The Brazilian troops number 15,000, under the command-in-chief of Count Caxias. General Garzon is Commander-in-Chief of the Oriental troops, who number upwards of 5000 men; the opposing force of Oribe being under 6000.

The Brazilian Admiral Grenfell, with a small naval force in the Parana, the chief tributary of the river Plate, co-operates with the allies.

The relative position of the parties and the questions at issue between them being thus defined, the recent news from Rio Janeiro becomes more intelligible

The advices are dated September 16, and state that Oribe had been defeated by [illegible] near the Rio Negro, and had retreated, with the loss of much of his cavalry and baggage, both of that river; that the country was in the possession of the allies; and that Oribe was pursued by the Brazilian forces under Caxias. Urquiza was advancing rapidly upon the capital of the Banda Oriental, and Admiral Grenfell, with the Brazilian fleet, had turned back all the vessels proceeding up the Parana. Rosas had asked the intervention of Mr. Southern, the British Minister, to put a stop to hostilities, but there was no appearance of the raising of the siege. The Basque soldiers formerly in the army besieging Monte Video had refused to march under General Oribe, who had gone into the interior. It was reported, for the second time, from the Grande do Sul that the Brazilian force had marched into the Banda Oriental, but no conflict had taken place.

CANADA.

From Canada we learn that the ministerial crisis had terminated, and that the new Ministry is rather popular. The Governor-General had left Toronto for the city of Quebec. The Jenny Lind mania at the former city was terrific.

CAPE OF GOOD HOPE.

Advices to the 1st of October, by the screw-steamer *Bosphorus*, bring intelligence of the same melancholy character as that hitherto received from the Cape.

Our soldiers are no match for the Kaffirs in bush-fighting, and, consequently, generally get the worst of it in those perpetual skirmishes of which this most harassing war is made up. Thus, in the Fish River bush, near Committee's Drift, the 2nd Queen's Regiment, under Colonel Mackinnon, on the 6th of September had its grenadier and light companies cut off in detail, while separated from the main body. Captain Oldham was slain on the spot; and the number of killed, wounded, and missing of the rank and file was 78.

Colonel Fordyce, with the 74th Highlanders, appears to have been more successful in a foray against Macomo's Kaffirs, who were ravaging, in the early part of September, the Winterkloof colony. In a skirmish he had with them, on the 7th of September, he inflicted severe chastisement on the marauders, but lost eight of his men.

The war has all the appearance of being indefinitely protracted, unless large reinforcements are sent out to the colony.

The 60th Rifles and a detachment of the 12th Lancers, amounting in all to 850 men, had arrived in the colony, and were forwarded to headquarters, at the seat of war, on the 23d of September.

IRELAND

THE PROPOSED REFORM BILL AS VIEWED IN IRELAND.

At the public dinner recently given in Athlone to Mr. Keogh, M.P. for that borough, at which several of the Roman Catholic prelates and members of Parliament were present, that honourable gentleman, who is now regarded as the parliamentary leader of the Irish Libsral party, thus adverted to Lord John Russell's proposed measure of Reform :—

At the opening of the session (said Mr. Keogh) Lord John will introduce his new reform bill. What will be our course—the men who intellects are cramped whose souls are enslaved?—and what will be lost of the men who hung upon Lord John Russell's lips as he repeated that unfounded calumny? Will any among them support this bill? Not a man. What will be our course? The path is plain and wide. I unhesitatingly declare that I am for a bold, real, comprehensive measure of reform. I am for making the House of Commons the representatives of the people, not the mere tools of the peerage. (Cheers.) I am for making the voices of the middle and working classes, the classes of the towns, and the classes of the fields heard and strongly felt within that house. (Continued cheering.) I am for removing all incessant to corruption as the only way in which it can be done—by the ballot. (Loud cheers.) I am for securing the independance of members, and breaking down the corruption of the House of Commons in the only one way—shortening the duration of Parliament. (Hear, hear.) I am for extending the enfranchisement of an oligarchy which has ruled England for centuries by their own creatures and for their own purposes—an oligarchy regardless of every generous ambition and popular aspiration, in the only way in which that can be done—namely, by breaking up those territorial divisions, which are the foundation of the aristocratic power, and lathing into the system of our representation the full fresh tide of popular liberty. (Enthusiastic cheers.) I scarcely know the limit which I would place to the electoral franchise. This I am certain of, that every man who pays a direct tax, governmental or municipal, ought to have a vote. (Hear, hear.) Every man who has a profession or trade who has a trade after years of apprenticeship—every man who has a house or a piece of land subject to poor rates—I have no doubt should have a vote. (Cries of "Hear, hear.") I have no fears of the people. The bold history of England teaches me that the true method of avoiding revolution is by making reform. (Hear, hear.) I have had large opportunities of seeing and witnessing the bursting of the noble middle and working classes of England. The whole history of the manufacturing towns. I have seen the wealth, which they, and not the Greys, or the Russels, or the Elliots, have created. Compared with the wealth of the trading, manufacturing, and working classes, the accumulated possessions of the aristocracy sink into insignificance. The house of Bedford had a good start—i.e. plunder of the religious houses made over to the first of the line, the unscrupulous ambition of a profligate tyrant. (Cries of "Hear, hear.") But the wealth of the house of Bedford is not as a grain of sand compared with the accumulated savings of the class from which has sprung Sir Peter, the Lodges, the Brights, the Cobdens, the Brassays, and the Dargans. (Loud cheers.) I have no fear of the admission of those classes to their just rights. Their rights, be it remarked, are admitted; and never were their powers and talents more strikingly illustrated, than in the great exhibition of the industry of all nations, when, day after day, hundreds of thousands of working men passed amidst piles of precious things, and every article remained as secure as if they had been seen only by the aristocratic visitants of the royal palace. I am for the full and entire enfranchisement of the classes to which I have alluded, and in the way I have mentioned. If Lord John Russell brings in a bill of this nature it shall have my support. (Cheers.) But I will not support any instalment principle bill. And why? Upon this simple ground: when the debt is fairly due, and there is plenty of money to pay it, the creditor would be a fool who did not insist on twenty shillings to the pound. (Cheers.) I will not by my vote assent to any proposition, which, called reform, only again results in placing in power, almost of family aristocrats. I care not whether they be Greys and Russells, or Stanleys or Richmonds—Whigs and Tories. Foolish or Protectionists, are the same to me. (Cheers.) I desire to see the people governed for the benefit of the people, and by men chosen from the people for their integrity and ability, not, as now, solely on the ground of their connexion with the oligarchical power. Another topic I wish to dwell upon with respect to this promised reform bill. If it is confined to England I will vote against it. If it is confined to England, Wales, and Scotland I will vote against it. If it does not in the same bill, to the same extent, and with an enlarged and liberal measure of justice, deal with Ireland, not only as to the electoral franchise, but as to the number of representatives, I will vote against it. (Loud cheers.) The old game must not be played over again—first a bill for England, then a bill for Scotland. These two in any case, and a bill for Ireland at our leisure. I have not the slightest desire to consult the interests of her Majesty's Government. I emphatically declare—and in doing so I know I express the sentiments of my honourable friends—that unless in the same identical bill intended to be brought in for the benefit of England there is full justice for Ireland I will vote against it. (Cheers.)

MR. BIRCH, PROPRIETOR OF THE WORLD NEWSPAPER, *v.* SIR W. SOMERVILLE, CHIEF SECRETARY FOR IRELAND.

On Monday, in the Court of Queen's Bench, Dublin, an application was made on the part of the defendant that the bill of particulars furnished in this case by the plaintiff be amended, by setting out a full and accurate statement, which would enable the defendant to know for what the action was brought. Sir W. Somerville had made an affidavit, in which he stated that the bill of particulars furnished with the declaration did not afford him the necessary information to prepare his defence, and that it was necessary that he should have it for that purpose.

The motion was opposed on the ground of irregularity, and on the merits. The plaintiff had in his affidavit stated that the action was one for work and labour, and was brought to recover the sum of £6300 from the defendant for services rendered to him as chief secretary, £6000 for writing and publishing articles in support of the Government for two years and six months, and £300 newspapers forwarded to various parties by the defendant's direction during that period. The affidavit of Mr. Birch further stated that Sir W. Somerville well knew what the nature of the action was, and counsel contended that, under the new rules, it was incumbent on the defendant to have sworn that he did not know the nature of the demands to entitle him to an amended bill of particulars. It was also relied on that the copy of the affidavit of the defendant furnished to the plaintiff was not in compliance with the Act of Parliament, as it did not appear by the *jurat* to have been sworn.

The Lord Chief Justice decided that the motion should be refused upon the technical points raised against it, but they would not give costs, as it was evident that the bill of particulars furnished was an illusory document calculated to mislead—it was, in fact, a misnomer to call it a bill of particulars.

DISCOVERY IN THE MANUFACTURE OF LINEN.—The *Belfast Mercantile Register* has published the following interesting statement :—"We have the satisfaction to announce a discovery, the importance of which it is not easy to over-estimate, as marking the date of a new era in our staple trade—one scarcely less valuable than the invention of the Jacquard loom, and one which will reflect lasting honour, as it will entail the most splendid advantage, on the north of Ireland, where it has first come to light, and where it is in course of actual development. It is well known that one of the greatest difficulties hitherto to be contended with in the linen process of the linen manufacture is the great length of the steeping, and to bleach and finish for sale the woven fabric. Those unacquainted with the art of preparing linens for the market will be astonished to learn that it requires three months to bring the [illegible] to its proper colour and to that consistency in the [illegible] cloth necessary to command the highest price in the markets of [illegible] Success has an immense advantage would be derived, both by the manufacturer and by the consumers, if this delay could be materially abridged. [illegible] tens of the process absorbs, or rather locks up, during the interval, an enormous [illegible] capital, thus restricting operations, preventing to a considerable extent [illegible] manufacture, and of course largely enhancing the price of the commodity to the purchaser. This very serious difficulty, this great [illegible] at the very threshold of the trade, is now likely, we understand, entirely removed. We have learnt that one of the first linen houses in [illegible] has discovered an invaluable process by means of which [illegible] goods can be bleached and finished within from ten days to a fortnight [illegible] It not be imagined that the vast and manifest importance of this [illegible] to the extent of the interest embarked by the least in severity in the art [illegible] reverse is the case. We are assured, so far from [illegible] pure the fabric, or deteriorate its commercial value, it [illegible] quality of the article, being unattended with any of the [illegible] effect by the old process. Of the nature of this process [illegible] power to speak. We can only state, with the utmost certainty [illegible] of its effects, and of the great advantages it will confer upon the community, by improving the quality of linen fabrics, it will place them once more far ahead of the competition of the cotton goods and cotton mixtures, which has latterly run them so close; by [illegible] shrinking of so large an amount of absorbing capital, it will give great facility to the linen trade, afford a larger margin of profit, and, by consequence, a wider field of employment; while it will also have the effect of enabling the manufacturer to supply his goods to the public at a cheaper rate, thus conferring a lasting and general benefit upon the country at large. In short, by its means an entire revolution in the condition of the trade will be effected. The firm, too, is most propitious for the development of this astonishing discovery and its practical operation on the largest scale; for we learn with the most sincere pleasure that the advices from the East and West Indies, as well as from America, are exceedingly favourable for this particular branch of our native manufactures; and we have no doubt that we shall soon have a start in the supply of linens to these markets which will [illegible] to distance all competitors."

A "PEASANT PROPRIETARY."—The first practical attempt of the project for the establishment of a small proprietors' society for Ireland, suggested by Mr. Vincent Scully and Mr. John Saulier, M.P., was carried into effect, on Thursday last, in the purchase of a small estate in the county of Kilkenny, which was sold under the Encumbered Estates Court. [illegible] property was put up in two lots, the gross profit rent of which is about £540 per annum. The first of which was bought by Mr. B. Corcoran, a solicitor, and the second by the Very Rev. Dr. O'Connor, vicar-general, and parish priest of Maryborough. The *Athenæum Journal* [illegible] "Lot No. 2, purchased by the Very Rev. Dr. O'Connor, V.G., [illegible] was, it is understood, purchased by this excellent pastor [illegible] of affording to the tenants in occupation respectively [illegible] by the payment of an annual sum for a given period, [illegible] simple of their farms. We are rejoiced to be enabled to announce [illegible] ing features in the sale of this lot. As soon as the sale effected to the very rev. gentleman shall be confirmed, steps will be taken to carry out the wise and patriotic arrangements, by which a number of us, who are now little more occupiers of this estate as yearly tenants, will be gradually converted into proprietors of the soil on which they and their ancestors have been born and born. This desirable change will be effected by the machinery of the land company advocated by Mr. Sadlier, M.P., in a recent letter which [illegible] in London and in those of our contemporaries generally, the company founded on the model of the Equitable Benefit Building societies, and in accordance with the principles contended for in the first entitled 'A Proposal for the formation of a Small Proprietors' Society of Ireland,' and in the pamph et published by Mr. Vincent Scully, Q.C. It is also understood that lot No. 1, purchased by Mr. Edward Corcoran, solicitor, was purchased with a view of reselling it to the several tenants in possession, and that each tenant is quite prepared to become the owner of his own farm, availing himself of the facilities offered by the society in course of formation."

THE QUEEN'S COLLEGES.—Several privileges of an important character have been recently conferred, at the instance of the Earl of Clarendon, on those graduates of the Queen's University in Ireland, and the students of the Queen's College, who may be preparing for either branch of the legal profession. These privileges also obviate the claims of the Queen's Colleges, in respect to legal education, should receive from the members of the Queen's Universities the most favourable consideration. [illegible] [illegible] [illegible]

IRON BRIDGE RECENTLY ERECTED ACROSS THE MARTHA BRAE RIVER, NEAR FALMOUTH, JAMAICA.

REMAINS OF THE OLD HOUSES OF PARLIAMENT, OCTOBER 27, 1851.

NEW IRON BRIDGE IN JAMAICA.

THIS elegant Iron Bridge has lately been erected across the Martha Brae river, about two miles eastward of the town of Falmouth, in the north of the island of Jamaica, in the place of a wooden structure, which for some time has been greatly dilapidated, and a source of constant expense to the parish of Trelawney, in repairs. The new Bridge has a clear span of 162 feet, and is divided into a carriage-way 17 feet wide, and two foot-ways each 4 feet 6 inches wide. It is supported by four chains, resting on a cast-iron tower 16 feet high, the foundations of which are on screw-piles. The total cost of erection, including approaches will be about £3000, one-half of which is advanced by a vote of the House of Assembly, and the other half by the parish of Trelawney. It is constructed on Dredge's taper principle, from the designs of Messrs. Dredge and Stephenson, London; and Blayney W. Walsh, Kingston, Jamaica. The contractors for the iron-work were Messrs. C. D. Young and Co., of Edinburgh.

REMAINS OF THE OLD HOUSES OF PARLIAMENT.

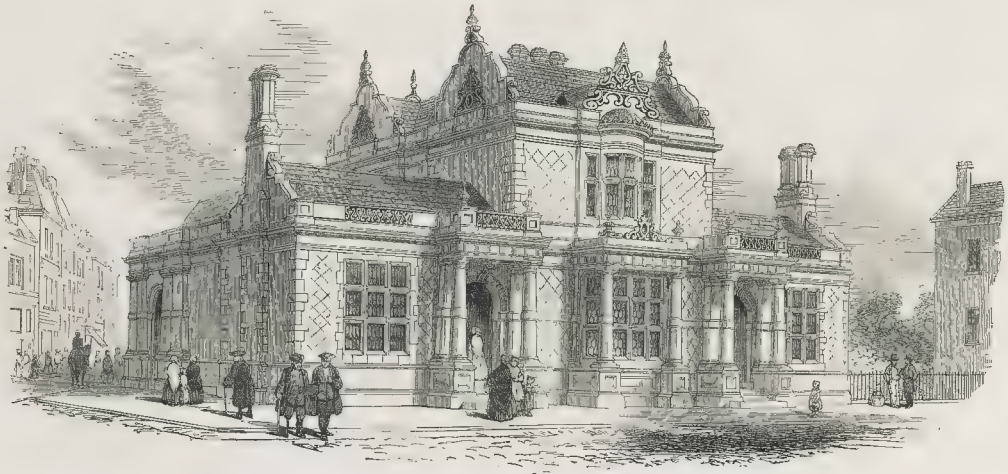
SINCE the sale of the materials of the Old Houses of Parliament, large portions have been cleared away; and the beauty of the new building has become the more striking in contrast with fragments of walls and windows of almost every age. The accompanying Sketch, taken October 27th, shows the south end of the old House of Lords (latterly used by the Commons), and is remarkable for three Norman windows, with zigzag mouldings, which the recent demolition has brought to light; while in the upper portion we have the unsightly "holes in the wall" of the last century. Beyond is seen in outline a portion of the new Houses, their embattled and crested roofs, &c.

BANNERS PRESENTED TO M. KOSSUTH AND THE MAYOR OF SOUTHAMPTON.

IN our journal of last week we described the interesting presentation of these banners to M. Kossuth at Southampton. That on the right hand is the silk flag adopted by the Hungarian Republic; it was wrought by Hungarians at New York, and transmitted to England for conveyance to Hungary, but was detained in the custom-house at Southampton, for non

HUNGARIAN COLOURS PRESENTED TO M. KOSSUTH, AND THE MAYOR OF SOUTHAMPTON.

payment of duty. It was, however, purchased at the customs sale by the Corporation, and presented to Kossuth by the Mayor. The gift has been gracefully reciprocated; for the flag upon the left hand is a present to the Mayor of Southampton by the Hungarians.



BATHS AND LAUNDRIES JUST ERECTED AT GREENWICH.—(SEE PRECEDING PAGE.)

M. KOSSUTH ADDRESSING THE PEOPLE AT CHARING-CROSS.

M. KOSSUTH IN LONDON.

THESE two Engravings illustrate two striking scenes of M. Kossuth's reception in the metropolis on Thursday, last week. The first shows the arrival of Kossuth at Guildhall. Mr. Alderman Wire and Mr. Bennoch had proceeded to the entrance of the Guildhall to be in readiness to receive Kossuth. At a few minutes after half-past twelve, the *cortège* was observed approaching up King-street, and presently the carriage, containing the ex-Governor of Hungary, drew up at the grand entrance. The shouting of the spectators at this moment was something wonderful—Kossuth was evidently deeply affected by the heartiness of his reception, and stood up for some moments in the carriage to accord his thanks before he would alight. At length he stepped from the carriage. A momentary interval was spent in mutual recognition and congratulations, while the members of M. Kossuth's suite assembled. Among these gentlemen were General Vetter, General Klapka, General Czecz, Colonel Gall, Colonel Kiss, Colonel Count Bethlen, Colonel Count Teleki, M. Vukovicks, Colonel Baron Kemeny, Lieut.-Colonel Ihasy, Captain Török, M. Hajnik, and M. Pulszki. At a quarter to one o'clock precisely, M. Kossuth entered the hall, resting on the arm of Mr. Alderman Wire. His appearance within the building was greeted with the most tumultous shouts of welcome, which the ex Governor very graciously acknowledged by turning round, when he reached the upper step of the passage leading to the Council Chamber, and bowing to the assembled multitude in the hall.

Upon page 563 we have engraved the impressive scene of the presentation of the Address in the Council Chamber.

The second Illustration shows an incident of the return from the City—

M. KOSSUTH ADDRESSING THE PEOPLE AT CHARING-CROSS.

The return procession had reached Charing-cross, when, opposite the Nelson Column, M. Kossuth's carriage halted, and he delivered a brief address to the crowd who pressed around him. He thanked them very warmly for the reception they had given him. "He hoped the noble demonstration he had that day witnessed would have its effect. All power was with the people, and it was only for the people to make known their wishes, and all the tyrants of the earth would be put down, and universal liberty established."

This incident concluded, the procession made the best of its way to Eaton-place, where M. Kossuth's admirers, still untired and hungering for oratory, would have drawn him forth, but for the interposition of a Mr. Dunford, who, from the balcony, reminded them that M. Kossuth was labouring under indisposition, and that he had already undergone that day more than sufficient exertion for an invalid. The crowd had the good sense to appreciate the justice of this appeal; and after loud cheers for M. Kossuth, and groans for Russia and Austria, they retired.

ARRIVAL OF M. KOSSUTH IN GUILDHALL-YARD.

CALENDAR FOR THE WEEK.

SUNDAY, Nov. 9.—Twenty-first Sunday after Trinity. Lord Mayor's Day.
MONDAY, 10.—Martin Luther born, 1483.
TUESDAY, 11.—St. Martin.
WEDNESDAY, 12.—Cambridge Term divides at midnight.
THURSDAY, 13.—St. Brithus.
FRIDAY, 14.—Source of the Nile discovered by Bruce, 1770.
SATURDAY, 15.—St. Machutus.

THE NATIONAL MUSIC
OF
ENGLAND,
THE POETRY BY CHARLES MACKAY, LL.D.; THE SYMPHONIES AND ACCOMPANIMENTS BY SIR HENRY R. BISHOP, KT.
PROFUSELY ILLUSTRATED BY THE FIRST ARTISTS AND ENGRAVERS.

The Proprietors of the ILLUSTRATED LONDON NEWS have the honour to announce to their readers and the public that they have entered into engagements with

SIR HENRY R. BISHOP, KT.,

a gentleman whose name, in connexion with the Music of England, is of itself sufficient to stamp with approval any composition to which it is attached; and with

CHARLES MACKAY, LL.D.,

whose popularity as a poet is justified by some of the most beautiful lyrical compositions of our day, to publish, in connexion with that Journal, a SERIES of the

ANCIENT AND POPULAR MELODIES OF ENGLAND,

expressly illustrated in the finest style of Wood-Engraving by the most celebrated Artists, and at a price which shall place these effusions within the reach of the humblest purchaser. It has often been asserted that the English have no national music—a reproach which the forthcoming series will show to be entirely unfounded. Many of the ancient melodies which delighted our forefathers have fallen into neglect as songs, on account sometimes of the grossness, indelicacy, or nullness of the words with which they are associated; at others, of the vulgarity of the tune or the obsoleteness of their allusions. Good music is of all time; but it has been the misfortune of English music, in too many instances, to have been married—not to immortal—but to immoral verse. For this reason it has been banished, except in an instrumental form, from the company of the educated and refined of both sexes. It will be the object of the proprietors and editors of the forthcoming series to remove this objection, and to perform, for English music, what Burns and his coadjutors performed, to some extent, for the music of Scotland, and what the poetic genius of Thomas Moore, aided by the musical taste of Sir John Stevenson, performed so thoroughly for the music of Ireland. The music of England is as rich and varied as either, but has hitherto wanted the poet and the musician to restore it to the place which it ought to hold in the affections of the people. The Proprietors of the ILLUSTRATED LONDON NEWS, in selecting Sir Henry Bishop and Mr. Mackay to perform this task, believe not only that they have made a good, but the very best possible selection, and that their forthcoming series, while it will be a marvel of beauty and of cheapness, will recommend itself to all lovers of poetry and music as a national work.

Further particulars of the time and mode of publication will be duly announced.

198, Strand, Oct 16th, 1851.

GRAND PANORAMA
OF THE
GREAT EXHIBITION.

In order to perpetuate a complete and comprehensive view of the Great Industrial Exhibition, as presented within the Crystal Palace, the proprietors of the ILLUSTRATED LONDON NEWS are preparing a series of Panoramic Views, based upon Photographic Sketches by Cundell, which they intend publishing.

The Work will consist of a length of nearly eighty feet, compressed, with a small space between each subject, every object in the whole range of the Exhibition being thus arranged, and each particular object in the main avenues, or transepts, being embodied in the precise order in which they stood. This series, when complete, therefore constitutes a pictorial reminiscence of the more striking features of this Great Industrial Gathering, at once vividly truthful, and of absorbing and lasting interest.

Further particulars of the time and mode of publication will be duly announced.

BOSWELL'S LIFE of Dr. JOHNSON is now COMPLETE in Four Volumes royal octavo, profusely illustrated with several hundred Woodcuts, and handsomely bound in cloth, and gilt, 31s per volume.

Or a few half-crowns a day, a good, solid and competently-edited copy of an invaluable Literary Companion.

Address (free of the ILLUSTRATED LIBRARY, 227, Strand; and to be had of all Booksellers and Railway Stalls.

THE CRYSTAL PALACE and its CONTENTS.—With this title we are happy to see a weekly publication is announced, having for its object the placing within the reach of the humblest classes a complete record of all that is present within this, to many, mysterious abode, and illustrations of a large number of the articles, gathering which have already made trips across, few if any of them have been more than a shilling each. The publication will be issued in parts of ten pages, price 6d, and will be completed in twenty-four parts, which, whether viewed in a scientific, industrial, or social point of view, will be found worthy of a place in every household. The first number is before us, and we have little doubt, from its contents, that the work will succeed. It will contain a description of the Building, the Contents of the Transepts, the Nave, the Galleries, the Avenues, the Glass Fountains, the Medium, and a host of other striking features. The publication is to be issued on the 1st and 15th of each month. THE CRYSTAL PALACE AND ITS CONTENTS, a weekly publication of the Exhibition, by Cundell and Co.

ASTLEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr. W. BATTY.—Immense success of the new grand Pantomime, entitled HARLEQUIN AND GOLDEN FLEECE, which will be repeated, for the 24th time, on MONDAY NOVEMBER 10th, and during the week, combining a performance pronounced by public report one of the most gorgeous and effective productions ever witnessed within the walls of the Establishment, which will negative all rivalry, new quadrupeds, and brilliant costumes. The new drama, in which eight of the first professionals are engaged, will be produced every evening during the week, and every night of the representation will be a Benefit. After which, Batty's extensive array of Horses, Ponies, &c. open each Evening at Half-past Seven. Stage Manager, Mr. [illegible]son.

THE DEPOSITORS of WORKS of ART and INGENUITY, in the GREAT EXHIBITION, and others, are respectfully informed that the ROYAL PANOPTICON OF SCIENCE AND ART, Leicester-square, will be CLOSED to the Public for the Season on the 15th of NOVEMBER, when all Articles not withdrawn by the Depositors will be considered as presented to the Institution, and will be disposed of accordingly. The Collection will be OPENED on the 8th of DECEMBER.

AT the PRINCE of WALES'S BAZAAR, 209, REGENT-STREET, [illegible] Fancy Articles, now exhibited for Sale during the Season. Open from 10 till 6 o'clock. Admission by Private Address Card, or by Visitors' Tickets, which may be had of the Bazaar Committee.

MUSE M. UNTAIN of GOLD from CALIFORNIA.—The mass of gold, weighing 93 lbs., lately exhibited at the Crystal Palace, is now exhibiting at 191, Regent-street, and is valued at 5000l sterling. Admission 1s.

LANGHAM BAZAAR, Langham place, Regent-street—[illegible] Articles of Vertu, Works of Art, and Miscellaneous Productions of Foreign Manufacture, are now exhibited for Sale at this Bazaar. Admission by private address card, or by visitors' tickets, which may be had of the Committee. The proceeds are most kindly applied, and may be considered strictly charitable.

GALLERY of ILLUSTRATIONS, 14, REGENT-STREET.—Dissolving Views, Stereoscopes, Chromatropes, Gibraltar, &c. &c. Open from [illegible] Admission 1s.

ZOOLOGICAL GARDENS, REGENT'S PARK.—The Gardens are now open, by the Permission of the Council, each day, Sundays excepted, from 10 o'clock till sunset. ADMISSION, 1s.; on Mondays, 6d.

LONDON to DUBLIN, via HOLYHEAD, in 12¼ HOURS.—Three communications daily on week days, twice on Sundays. Fare—Cabin passage, 4 Sovereigns. First class £3, Second, £2. Return tickets (available for a fortnight): First class, £4 10s; Second, £3. Caledonian mail-boat Twelve Half-price. For full particulars of the booking-through system between England and Ireland, see "Bradshaw's Guide," page 132; "Walsh's Irish Guide," page 96; and "Fisher's Irish Guide," page 2.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS GIVEN A SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 8, 1851.

The annual message of the French President—a document which, in the present peculiar position of affairs in that country, has been expected with more than usual interest—was read on Monday to a hostile audience in the Legislative Assembly. Seldom has a more melancholy State paper been presented to a nation. The picture which it draws of the actual and prospective condition of the Republic is anything but a flattering one, and the misfortune is that the picture is but too faithful. But, although it recals attention to the facts that a great part of the country is under the operation of martial law, that the finances are not flourishing, and that anarchists look forward to a fixed period in 1852 for the overthrow of society, the one great and immediate fact which it was framed to develop is the absolute necessity of a revision of the law of the 31st of May—that now famous day, on which the universal suffrage proclaimed by the Revolution was abolished by the Reaction. It also administers a reproof to the various warring factions, and in particular to that of the ultra-Democratic and Social Republicans, who would accomplish their ends by insurrection and anarchy. It must be acknowledged that Louis Napoleon "runs with the hare and follows with the hounds." He would at the same time destroy and uphold the law, and is as notable a Conservative as he is a Revolutionist. But these contradictions are inevitable; and he does his best to reconcile them by seeking the consent of the Legislative Assembly to his measure for the restoration of the right of voting to the whole body of the people. At present the Assembly does not appear to be in any mood to listen to him, but with sullen—not to say mutinous—precipitation, has rejected the demand of the new Ministry to debate the proposition as an "*affaire d'urgence.*" This defeat is significant; it is the first howl of the approaching tempest, and is ominous of difficulty and danger to the fortunes of the Republic. Every one asks, what will be the next incident; but as it is fast becoming evident to all Frenchmen who are not members of the majority in the Assembly, as well as to all the lookers-on in Europe, that the repeal of the law of the 31st of May is absolutely necessary to public order in the present circumstances of France, and that it affords the best, if not the only, mode for a peaceful solution of the complicated difficulties of the hour, it is possible, and most probable, that Louis Napoleon will keep his own temper, and try that of the Assembly once more, and perhaps oftener. The question which the Assembly may not consider urgent to-day may become urgent in their estimation to-morrow. Time is the great lever with which such heavy bodies can be moved by a man of strong will and desperate position; and it is so clearly the policy of the President to submit quietly to their adverse decisions to-day, and to renew his propositions to-morrow, as if nothing had happened, in the meantime, to produce estrangement between them, that we look forward to the speedy renewal of the Ministerial proposal, supported by new and by cogent reasons. The President has yet time to play his great game. He has the bulk of Frenchmen in his favour; and the enmity of Legitimists, Orleanists, and Red Republicans is only so excessive, because his popularity is so great, and because his success would so effectually prevent theirs. Let him take time and act warily. His greatest opponents in the Assembly are Orleanists—led on by a statesman whose every public act has been a public misfortune to his country—and who contributed more than any other man, M. Guizot excepted, to ruin that very house of Orleans of which he would now make himself the champion. It forms a portion of the strength of the President's position that such unlucky, impracticable, unscrupulous, and wrong-headed men should be his opponents.

The Commission now sitting in the fast-decaying town and rotten borough of St. Albans has succeeded in eliciting many facts that, although quite notorious, escaped the severe and jealous scrutiny of the Parliamentary Committee of last session. To buy and sell votes in St. Albans is proved to be as common as the sale of mutton-chops; and the dealers in the less tangible articles—if we may so call them—seem to be little ashamed of their trade as the butchers and the bakers are of theirs. The exposure, which, if it make the political Herculitus cry, will as powerfully excite the laughter of the political Democritus in edifying to both classes of philosophers. It is true that nothing new has been elicited. The venality of St. Albans was as evident before the inquiry as it is now; but still the case has been put in such a light that no Government can allow the delinquency to remain unpunished. That St. Albans will ever again return a member to Parliament is extremely improbable. Whether the borough is to be extinguished, with a score or two of others by the new Reform Bill which Lord John Russell has promised us at some early day in 1852, or whether it is to be made the subject of a special disfranchisement, independently of its nonexistence, the result, as far as the shameless voters of that town are concerned, will be identically the same. Mr. Edwards has received his last consignment of thousands of sovereigns in brown paper parcels; the last bribe has been received by the electors; the last little place in the Post-office or the Excise has been badgered out of the Treasury, and the last member has sat for St. Albans. Its power has departed, and nothing but its punishment and its infamy will remain. Should we not receive the new Reform Bill as promised, the disfranchisement of this, and a few other places almost equally notorious, and the enfranchisement of a few rising towns or populous districts—like Hammersmith, Kensington, Crewe, Birkenhead, or the Gorbals of Glasgow—would be no unacceptable substitute. At all events, St. Albans is too rotten to care, and, politically, it may be considered as defunct as Gatton or Old Sarum. It cannot possibly escape after such palpable proofs of its delinquency as the last week has afforded.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

Her Majesty and his Royal Highness Prince Albert and the younger branches of the Royal family have taken their usual exercise each day in the Home Park and on the Slopes.

On Monday Prince Albert went out shooting; and in the evening her Majesty and the Prince visited the Duchess of Kent, at Frogmore.

On Tuesday the Queen held a Chapter of the Most Noble Order of the Garter; at which the Right Hon. Charles William, Earl Fitzwilliam, was duly elected a Knight of the Most Noble Order of the Garter. After the investiture, the Knights and Officers of the Order of the Garter partook of luncheon in the dining-room. Her Majesty gave a grand dinner in the evening, in the Waterloo Chamber, to the Knights of the Most Noble Order of the Garter, and a distinguished circle.

On Wednesday the Queen gave a grand dinner party in the Waterloo Chamber, which consisted of her Royal Highness the Duchess of Kent, the Duchess of Norfolk; the Dukes of Norfolk, Wellington, Bedford, and Cleveland; the Marquises of Lansdowne, Salisbury, Hertford, and Camden; the Earls Fitzwilliam, De Grey, and Mulgrave, &c.

On Thursday his Royal Highness Prince Albert came to town to preside at a meeting of the supplementary committee of the Royal Commissioners of the Great Exhibition.

The Marquis and Marchioness of Douglas and family have arrived at Edinburgh, *en route* to their mansion in St. James's-place, London, from Bowick Castle, Isle of Arran.

Viscount Palmerston left town on Tuesday evening for Brocket Hall, Herts, the seat of Viscount Melbourne.

There is a very slight amendment in the state of health of the Earl of Elden. The noble Earl and family are staying at Shirley House near Croydon.

Lady Brougham has arrived in Grafton-street, from the noble and learned Lord's seat in Westmoreland. His Lordship is still staying at his *chateau* in the south of France, in improved health.

CHURCH, UNIVERSITIES, &c.

LEEDS RURAL DEANERY.—At the recent sittings of the rural deanery of Leeds, under the presidency of Dr. Hook, Church questions of a practical character and the deepest importance have been discussed, with a view of recommending their adoption to the bishop of the diocese. It is understood that four points have attracted the special notice of this synod. 1. The advisability of shortening the services, by having the litany and communion services in the afternoon. 2. The publication, by authority, of a hymn-book. 3. The feasibility of Archdeacon Hale's suggestion, that the Church should employ permanent deacons, who might pursue their secular calling. 4. Out-door preaching.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been made:—*Canonry:* Rev. W. W. Champneys, to the Cathedral Church of St. Paul's, London. *Prebend:* Rev. W. H. M'Causland, to Tullogh, Killaloe. *Rectories:* The Rev. J. W. Clarke, M.A., to Castleside, Dorset, Rev. G. Bellamy, M.A., to Bolam, Northumberland; Rev. W. Hale, M.A., to Cleverton, Somerset. *Vicarages.* The Rev. J. H. Brunt, B.A., to Pitchley, Northamptonshire; Rev. W. Stow, M.A., to Avebury with Winterbourne-Monkton, Wilts; Rev. T. Philips, M.A., to Walton and Felixstowe, Suffolk.

On Sunday afternoon the Rev. Frederick Gadalets, lately a Benedictine monk of the Cassinensian Order, and priest in full orders of the Church of Rome, made his public profession of Protestantism in the Hanoverian chapel, in Dufour-place. Dr. Achilli conducted the solemn service. The Rev. Mr. Gadalets then addressed the congregation at length on his reasons for separating himself from the communion of the Church of Rome, and uniting himself to the Italian Protestant Church.

The rumour in the Paris papers that Lord John Russell proposed to visit Paris has been contradicted.

At the pension of the Honourable Society of Gray's-inn, held on Monday, Edward Vaughan Kenealy, Esq., and Owen Tayler, Esq., were called to the degree of barrister-at-law. At the same pension Walter Dunn, Esq., one of the recently appointed Queen's counsel, took his seat as a bencher of the society.

The Grand Duke of Tuscany has conferred the Grand Cross of the Order of St. Joseph upon M. de Baumgartner, Minister of Commerce at Vienna.

Count d'Azinghaga, brother of Marshal the Duke de Saldanha, arrived on Monday in Paris, to enter on his functions of Envoy Extraordinary and Minister Plenipotentiary of Portugal to the French Republic. The Count has just left Brussels, where he has long been the representative of Portugal.

M. Quinette, the Ambassador of the French Republic at the Court of Brussels, has just arrived in Paris.

A parliamentary blue-book has just been issued containing the evidence given before the select committee of the House of House of Commons in the last session on the subject of assessing and levying church rates. A number of witnesses were examined, of various opinions, on church rates.

NEW REGULATION RESPECTING PETITIONS TO THE HOUSE OF LORDS.—Parliamentary Paper 249, just issued by the House of Lords, shows that that House has laid down the principle, that petitions must not be a good before the event to which they refer have happened. At the close of the session, the House appointed a private committee to consider the circumstances under which the petitions against the Waterford, Wexford, Wicklow, and Dublin Railway Bill had been signed, and the evidence which the paper now before them contains. It appears by the evidence of Mr. Nash that the petition (containing allegations of fraud) was signed *results of a special meeting of shareholders*) was signed by some before that special meeting was actually held; that it was prepared for use in case of need, time pressing, and in anticipation of the result, judging from past meetings, without any attempt or motive to mislead. The evidence of the agents of the company (now first made known) hinted that such a course was common. The committee (of which Lord Montague was an ex officio member, and Mr Spring Rice counsel for one of the bills) report against the irregularity, and censure it, and the Parliamentary proceedings of the House followed out those conclusions. The evidence was taken in private and separately, and orders not to be made known, until after the committee had decided upon it.

SHIPWRECKED FISHERMEN.—The following gentlemen of the committee of the Shipwrecked Fishermen and Mariners' Royal Benevolent Society attended at Woolwich, on Wednesday, for the purpose of inspecting a life-boat ordered by the society from Mr. Beeching, of Yarmouth, the winner of the prize given by his Grace the Duke of Northumberland for the best model of a life-boat—viz. Captain P. Clarke, Miller, and Lean, and A. Henderson, Esq., accompanied by the secretary to the institution, Francis Lean, Esq., R.N., and the travelling secretary, L. Symons, R.N. The boat was thoroughly examined on shore, then put into the water, and manned with ten men and a coxswain, to try her pulling qualities when fully laden (water ballast) for service; after which it was attempted to capsize her, by throwing her crew of 11 men on her gunwale, without effect. Then she was placed under a crane, and tried by means of ropes under her bottom, with a view to try her righting powers, and her capability of freeing herself of water: she was then loaded up, and placed on a weighing machine, to ascertain her weight, first without gear, then with it all on board, and lastly with her full crew. The boat was proved to pull well (having been a light four-oared boat belonging to her late majesty's ship *Fingard*); to right herself, when capsized, in five seconds; to ballast herself with water in twenty-five seconds; and to clear herself of water to her floatation in twenty-five seconds. Her weight was ascertained to be 30 cwts., 3 qrs. 7 lbs. in her gear, and 50¼ cwt. with her crew of eleven men; to which may be added 20 cwt. of water which she would take in, as ballast when afloat. It is the intention to test her qualities in the open sea, before sending her to her station at Teignmouth. It is to be hoped that the benevolent exertions of this society for the saving the lives of our seamen, when shipwrecked on the coast, will be liberally encouraged.

The most extensive preparations are making for the ensuing civic pageant on Lord Mayor's Day, which takes place on Monday, the 10th inst., the 9th falling on Sunday. The procession will be arranged by Mr. Fenton, R.S.A. scenic artist, in a style similar to what took place last year. The whole of Mr. Brady's staff of horses, &c., will again be employed, as well as the equestrian corps attached to the amphitheatre, all of whom will appear in splendid costumes and suits of armour of the period of Francis I. and Henry VIII., which are being made expressly, after designs sketched from the best authorities. It is said there will be the unusual number of 24 knights, armed *cap-a-pie*, with their attendants, squires, banner bearers, &c.

It is not generally known that there is an act in force called Lord Campbell's Act, under which all courts can order an indictment for perjury, instituting the Courts of Bankruptcy and Insolvency, and County Courts. It is important that this provision should be known. Some difficulties have been removed from indictments for perjury by the same act.

METROPOLITAN NEWS.

PRESENTATION OF THE LORD MAYOR TO THE LORD CHANCELLOR.—Monday being the first day of Michaelmas Term, the Lord Mayor elect, William Hunter, Esq., proceeded, accompanied by the Sheriffs and other civic officers, to the residence of the Lord Chancellor, in Eaton-square, for the purpose of obtaining her Majesty's approbation. His Lordship was introduced by the Recorder, who in an appropriate speech described the past history and personal qualifications of the Lord Mayor elect; after which the Lord Chancellor signified the approbation of her Majesty of the choice of the citizens. The Lord Mayor and the other City officials who accompanied him then returned to Guildhall. After her Majesty's approbation of the choice made by the citizens of Aldermen Hunter as Lord Mayor for the ensuing year, the Lord Mayor elect entertained a large party at the Albion, in Aldersgate-street.

CHURCH OF ENGLAND YOUNG MEN'S SOCIETY FOR AIDING MISSIONS, AT HOME AND ABROAD.—On Monday night, at the Music-hall, Store-street, a meeting of the North London Auxiliary Branch was held, to hear the second of a series of six lectures, which was given by the Rev. William Cadman, M.A., minister of Park Chapel, Chelsea; the subject being the "Traditions of Rome, contrasted with the truths of the Bible." The chair was taken by J. Cummins, Esq., who at the conclusion of the lecture conveyed the thanks of himself and the meeting to the rev. gentleman for his able lecture. The hon. secretary announced that Sir Robert H. Inglis, Bart., would take the chair at the next meeting.

SCRIPTURE-READERS' ASSOCIATION.—Last Monday night the annual meeting of the Church of England Scripture-Readers' Association was held in the large assembly Room at the Horns Tavern, Kennington. The room was quite crowded. The Venerable C. J. Hoare, Archdeacon of Surrey, took the chair. After prayer by the Rev. Mr. Gregg, the venerable chairman addressed the meeting on the necessity of the assistance of lay-readers, or Scripture readers, as in 33 districts attached to 65 churches only, in the deanery of Southwark, there were only 120 ministers and 27 scripture readers. The Rev. W. Langmore, rector of Whitechapel and canon of St. Paul's, and the Rev. C. Campbell, incumbent of St. Michael's, Stockwell, moved and seconded a resolution expressive of the thanks of the meeting at the progress making by the association, more particularly in the southern districts of the metropolis. The Rev. J. Jessop, chaplain to the King of the Belgians, and the Rev. J. M. Hussey, minister of St. John's Episcopal Chapel, moved and seconded a resolution declaratory of the determination of the meeting to support the Scripture-Readers' Association. The Rev. Mr. Weeks, and Captain F. Percy Nott, moved the vote of thanks to the chairman, who stated that the income of the society had risen from £3000 in 1845, to upwards of £5000 in 1851.

FEMALE ORPHAN ASYLUM, LAMBETH.—On Sunday morning and evening last, a "Thanksgiving" was celebrated at this deservedly popular and effectual institution, when several domestic events, former inmates of the establishment, attended to return thanks, after having completed five years of faithful service, and to receive a purse of five guineas each as a gratuity. The chapel of the institution was very crowded, and numbers were unable to gain admittance on leaving the doors. The beautiful harmony of the voices of 180 orphan girls, aided by those of the congregation, gave full effect to the psalmody and anthems selected for the day. Prayers were read by Mr. Cadby, the chaplain; and the sermons were preached by Mr. Jessop and Mr. Curling.

ENTOMOLOGICAL SOCIETY.—The usual monthly meeting of this society was held on Monday evening, Mr. J. O. Westwood, president, in the chair. The chairman exhibited a living larva of *Sesamia cerealea horrea*, which had been sent to him by Sir T. Pasley, having been found in an Italian oak which was being cut up at Pembroke dockyard. Mr. Wilkinson exhibited some wingless *tabanidæ* females and the young larvæ, produced from them without male intercourse. Mr. S. Stevens exhibited a specimen of *dircæa discolor*, and also a *gracilaria phasianipennella*, taken by Mr. Weaver, in Scotland. Mr. Saunders exhibited some wheat, destroyed by a small species of *anobium*, and some foliage of French beans, which had been attacked by a small *acarus*, in such numbers that in ten days after their first appearance the French beans had been completely destroyed. He stated that this had been very general in the neighbourhood of Wandsworth and Putney this summer. Mr. White made some interesting remarks on the new forms of *crustacea* met with during the recent Arctic expeditions by Mr. Edge.

ROYAL ORTHOPÆDIC HOSPITAL.—On Monday evening Mr. R. W. Tampin, the senior surgeon of the above charity, delivered a lecture on the nature and treatment of deformities. The lately-discovered operation, by which the cure of the most severe cases of club foot, and other bodily deformities is stated to be a certainty, was originally made known by Delpech, of Montpelier, and was taken up by Dr. Stromeyer, of Hanover, and introduced into England by Dr. Little. In 1841 the Royal Orthopædic Hospital was founded for the purpose on the principle referred to was established in Bloomsbury-square, and, during the twelve years which have elapsed, no less than 12,000 patients have had the use of their limbs completely restored to them. The applications for admission from all parts of the country since the benefits of the charity have become known have much exceeded the accommodation of the institution, and the committee are now making use endeavours to raise the necessary funds for providing a more suitable building.

UNIVERSITY COLLEGE HOSPITAL.—The committee at their meeting on Wednesday received from Messrs. Chapman, Cunningham, and Denton, the executors of the will of the late Mrs Bentham, of Gower-street, who died in the month of August last, the sum of £300, the amount of the legacy, free of duty, bequeathed to the hospital by that lady. Thanks were returned to the executors for the early settlement of the bequest, and a vote was passed to place them on the list of vice-governors. The committee resolved that the £300 should be added to the invested funds of the hospital, and that for the liquidating of the large number of debts due to the tradesmen of the charity, they would trust to the benevolence and exertions of its surviving friends.

EARLY CLOSING ASSOCIATION.—The members of the district committees of this association met at the Exeter Hall Hotel on Wednesday night; Mr. Underwood, of St. Paul's churchyard, occupied the chair. Tea and coffee were served, and the company was addressed successively by Mr. Hitchcock, Mr. Cocks, Mr. Shipton, Mr. Haslam, Mr. Waind, Mr. Heath, and others. Various sentiments were proposed and applauded. The different speakers gave information derived from their own personal knowledge and observation with respect to the progress being made by the society; and it would appear from the aggregate report that the movement is exceedingly successful.

HOXTON RAGGED SCHOOLS.—The half-yearly tea-meeting of this benevolent institution was held on Wednesday evening in the school-room, Hampton-place, Hoxton Old Town. The Rev Dr. Fletcher presided. It appeared that the day school was attended by about 140 boys and girls; that there was an evening school four times a week, frequented by 40 boys and 25 girls; and that at the Sunday school there were present on Sunday last not less than 500 boys and girls. It was further stated that those schools stay owed a sum of £288; but towards the payment of this debt a sum of £.60 had recently been contributed by Mr. H. C. Stuart, who had formerly made the promoters of the undertaking a donation of a similar sum, and had granted them the freehold of the property on which the schools are erected. The Ragged Schools Union had also promised this society a sum of £30 as soon as they should themselves have raised a sum of the same amount. Resolutions were passed to place the establishment on a more efficient footing.

KING EDWARD RAGGED AND INDUSTRIAL SCHOOLS AND EASTERN REFUGE.—The Earl of Carlisle presided at a meeting on Wednesday evening at the School-house, Albert-street, Spitalfields, being the anniversary of laying the foundation-stone of the edifice. From the report it appeared that on the first Sunday of the opening, on the 23rd of March last, 450 children were admitted, and on the second day of Monday, August 10, the number was 656. At the day school the attendance was now 300. Reading, writing, arithmetic, geography, and singing were taught, as also needlework for the girls. A ladies' committee had been formed, to prepare clothing for the poor children; 190 children had deposited £6 13s. 10½d in the Savings-bank. The Society owed £700, of which only £100 is 6d. was in hand. The total receipts had been £2412, but £1300 more were required to meet the necessities of the school. Mr. Samuel Gurney had given a donation of 50 guineas per annum for three years, and Mr. T. B. Procter had given £25. The Lord Mayor, the Rev. G. Smith, the Rev Mr. Kennedy, and Charles Buxton (who feelingly alluded to the loss of his poor John Powles, the old shoemaker of Portsmouth, and the originator of ragged schools), and other gentlemen addressed the meeting on behalf of the institution.

LECTURE AT THE LAW INSTITUTION.—On Monday night the first of a series of lectures on common and criminal law was delivered in the hall of the Incorporated Law Society, Chancery-lane, by Henry A. Hodgson, Esq., barrister-at-law, who selected the subject of the law of assurance, dividing into maritime, life, and fire. The lecturer directed attention principally to the first branch, in respect to the three classes of policies—interest or wager; second, open or valued policies; and, thirdly, voyage and fire policies. Wager policies, as regarded British ships, had been prohibited by statutes. It was enacted that the name of some essential party, either the assured or his agent, should be inserted in the policy, and broker sometimes guaranteed the solvency of the underwriters. The attendance of students was very considerable.

SPANISH BONDS.—A meeting of Spanish bondholder, dissenting from the arrangement recently entered into by the committee with the Spanish Government, was held on Monday, at the London Tavern. The chair was taken by Sir J. Fitzgerald, K.C.B. Mr. Los moved and Major Duncan seconded a resolution expressive of the disapprobation of the meeting at the conduct of the Spanish bondholders at the London Tavern, on the 20th of October. After a speech from Mr. Tasker, the resolution was carried unanimously; and a committee, to consist of an equitable adjustment of the claims, was nominated, a subscription being raised to defray the expenses of the opposition.

BLOOMERISM.—On Monday night, no less than six lady lecturers, in different parts of the metropolis, were engaged in expounding the mysteries of Bloomerism. Mrs. C. C. Foster appeared for the first time at the Hanover-square Rooms, Miss Atkins delivered her lecture at the Sussex Hall, in the City, and Miss Griswold, described in the advertisements as only 16 years of age, held forth at the Lecture Hall in the Vauxhall Bridge-road. Miss Griswold assured her auditory that in America the ladies would shortly compel the men to give them seats in Congress.

EARLY CLOSING OF THE TOWER GATES.—The gates leading from the Tower to East Smithfield are now closed at four o'clock in the afternoon, instead of at seven in the evening. Persons proceeding to the steam-vessel wharfs at the water side of St. Katharine's Docks must therefore make their way round the Tower. This notice may prevent much trouble, as the western gate near Thames-street will be open as usual.

THE LORD CHANCELLOR'S BREAKFAST.—On Monday last, being the first day of Michaelmas Term, the Lord Chancellor gave a breakfast to the Lords Justices, the Master of the Rolls, the Vice-Chancellors and Judges, Sergeants, Queen's Counsel, &c. The assemblage of the members of the long robe on Monday was exceedingly numerous, the present being considered an important era in regard to our legal government, as on Monday no less than seven equity judges took their seats on the bench, viz., the Lord Chancellor, the Lord Justices Lord Cranworth and Sir J. L. K. Bruce, the Master of the Rolls, and the Vice-Chancellors Turner, Knightsley, and Parker. On Lord Lyndhurst giving his first official breakfast after regaining the seals in 1841 there were but three equity judges, viz., the Lord Chancellor, the Master of the Rolls, and the Vice Chancellor of Lincoln. The whole of the magnificent suite of rooms of the mansion were thrown open, and the choice specimens of taste exhibited formed the subject of much admiration. The Master of the Rolls, at an early portion of the morning, received a select circle of the members of the equity bar.

GRAY'S INN.—Upwards of 100 students were present at Mr. W. Lewis's introductory lecture "On the several advantages of the study of the English statute law," last Monday evening.

MANSION-HOUSE.—The farewell ball of the present Mayoralty took place on Tuesday evening, when upwards of 600 ladies and gentlemen assembled to do honour to the closing festivities of the civic year. The Lady Mayoress received the guests in the drawing-room with her accustomed kindness and cordiality. Dancing commenced at ten o'clock to the music of a splendid orchestra, and was kept up with unflagging spirit until midnight, when a superb supper was served in the state drawing-room. The galeries were subsequently thrown open, and it was early morning when the curtain fell on the last of the brilliant entertains ents distinguishing the seventh year of office of Sir John Musgrove.

UNIVERSITY COLLEGE, LONDON.—STATUE OF SIR WILLIAM WARREN.—The committee for superintending the execution of the statue of Flaxman by the late Mr. M. L. Watson having determined that the statue, when completed, should be presented to the council of this college for erection in the Flaxman Gallery, it was last week decided that the college is being removed from the Exhibition, and the council, at their session on Saturday, received from the committee, by a communication in writing from Mr. Peter Cunningham, their honorary secretary, the formal act of presentation of the statue to the college. A vote of thanks to the committee was passed by the council. Andrews Scholarships.—At the same session the council received the report of the examiners for the Andrews scholarships for superintending the examination in classical and natural philosophy, and on their recommendation awarded a scholarship of £100 to Mr. John Charles Addyes Scott; and a scholarship of £50 to Mr. John Power Hicks. It was also examined to offer for competition in 1852 an extraordinary scholarship of £50, in addition to the three ordinary scholarships of £70, £40, and £45 for that year previously sanctioned.

NATIONAL FRIENDLY SOCIETY.—The fifth annual meeting of the members of this society took place on Wednesday, at the offices, 4ed Lion-square. The report of the directors stated that during the year there had been a steady and satisfactory progress in the business of the society. The total number of members effected was now 882. The claims upon the society for sickness, £163; for sickness, £379, being a total payment of £542. The society had provided help and succour in upwards of 150 cases of sickness and 16 of death during the year sgreat sums had been formed at diverse places. The principle of the society was to help men to help themselves; and it was entirely self-supporting, consequently each individual member was concerned for its progress. The directors wished to impress on the members the necessity of each one for himself, as they were the only parties interested, and the chief power and influence which the society possessed for its development and success. The report was unanimously adopted, and the meeting dispersed.

BRITISH LYING-IN HOSPITAL FOR MARRIED WOMEN.—On Thursday the half-yearly meeting of this institution was held at the hospital, Endell-street, Long-acre, Dr. John Clarke in the chair. The report stated that there had been 1,000 cases attended during the last six and 50 out-patients. The income for the same period amounted to £296 15s. 9d.; the expenditure had been £259 14s. 11d., leaving a balance of £46 10s. The report was adopted, and the proceedings terminated.

CEYLON BANK.—On Thursday a special meeting of the proprietors of this bank was held at the offices of the Oriental Bank, Walbrook—H. Gordon Esq., in the chair—when it was resolved that the affairs should be forthwith wound up, and the company dissolved. This dissolution arises from the fact that the Oriental Bank have recently obtained a charter, and it has been agreed to merge the Ceylon Bank into it—the Oriental taking all the liabilities, which are very small, upon themselves.

MIDDLESEX HOSPITAL.—On Thursday the quarterly court of this hospital was held in the board-room of the institution; George, Pitt, Esq., in the chair. The report recorded two legacies—one of £2000, bequeathed by Mr. E. Briggs. The number of patients admitted were 1062, and there were at present in the hospital 235. There were 68 gentlemen now pursuing their studies in the medical school, 23 of whom had entered during the present quarter. The annual income of the £9000 per annum to support this charity, and it appeared that the income was inefficient to meet the expense of the increased number of beds. The report was received; and, after a vote of thanks to the chairman, the meeting separated.

HAHNEMANN HOSPITAL.—On Thursday a meeting of the Governors of this hospital was held in Bloomsbury-square; the Hon. A. H. Moreton presiding. The report stated, that at the present time there were 50 patients in the hospital, the total number relieved as in-door patients during the past year being 212. The number of out-patients during the same period had accumulated to 2,000, and the applications for relief were daily increasing. The report was adopted, and some formal business transacted.

KING'S-CROSS INDUSTRIAL RAGGED SCHOOL.—On Thursday the first annual meeting of the supporters of this school was held at the British School House, Calthorpe-street, Gray's-inn-lane; Benjamin Hawes, Esq., M.P., in the chair. The report stated that the experiment which had been tried to render the labours of the boys productive by chopping wood had not been successful. The number of boys admitted was 96, of whom 12 left the school for situations, 2 had gone to the Shoe-black Society, and 8 or 10 had returned to their former habits. The boys generally had been instructed in tailoring and shoemaking. The receipts amounted to £.6 5s. 6d., which was totally inadequate to meet the expenses. After a few observations from the chairman, the report was adopted, and the proceedings terminated.

THE DOCK COMPANIES AND THE QUESTION.—We have some reasons for believing that the Court of Exchequer will be no longer troubled with the questions litigated between the Board of Customs and the London and St. Katharine Dock Companies. We are not yet at liberty to disclose the terms upon which the proceedings have been brought to a termination. But we believe they will be found of a character to protect the public revenue—to do away with future abuse—to benefit the Dock Companies themselves, and to secure an amicable intercourse henceforward between so important a department as the Customs and those two scarcely less important *entrepôts* of our metropolitan commerce.—*Globe*

MANNOPPAH.—The *Morning Herald* of Wednesday states, that, at a large meet ng of noblemen, members of Parliament, clergymen, and ministers of various denominations, at the Caledonian Hotel, Adelphi, on Tuesday, it was unanimously resolved to commence, without delay, a movement for the purpose of bringing the public voice to bear upon Parliament in the matter of the grant to Maynooth. A public meeting is to be held in London, and similar demonstrations are promised for the provincial towns of the Sister Kingdom.

CITY SEWERS COMMISSION.—At the meeting held on Tuesday, at Guildhall, notice was given of a motion, by Mr. Barber, at the next court, to renew the application to the Dean and Chapter of St. Paul's Cathedral for the removal of the iron railing 32cd of an inch in thickness, and 450 stid'ron were admitted. and on the evening of Monday, August 10, the number was 656. At the day school the attendance was now 300. Reading, writing, arithmetic, geography, and singing were taught, as also needlework for the girls. A ladies' committee had been formed, to prepare clothing for the poor children; 190 children had deposited £6 13s. 10½d in the Savings-bank. The Society owed £700, of which only £100 is 6d. was in hand. The total receipts had been £2412, but £1300 more were required to meet the necessities of the school. Mr. Samuel Gurney had given a donation of 50 guineas per annum for three years, and Mr. T. B. Procter had given £25. The Lord Mayor, the Rev. G. Smith, the Rev Mr. Kennedy, and Charles Buxton (who feelingly alluded to the loss of his poor John Powles, the old shoemaker of Portsmouth, and the originator of ragged schools), and other gentlemen addressed the meeting on behalf of the institution.

LECTURE AT THE LAW INSTITUTION.—On Monday night the first of a series of lectures on common and criminal law was delivered in the hall of the Incorporated Law Society, Chancery-lane, by Henry A. Hodgson, Esq., barrister-at-law, who selected the subject of the law of assurance, dividing into maritime, life, and fire. The lecturer directed attention principally to the first branch, in respect to the three classes of policies—interest or wager; second, open or valued policies; and, thirdly, voyage and fire policies. Wager policies, as regarded British ships, had been prohibited by statutes. It was enacted that the name of some essential party, either the assured or his agent, should be inserted in the policy, and broker sometimes guaranteed the solvency of the underwriters. The attendance of students was very considerable.

SPANISH BONDS.—A meeting of Spanish bondholder, dissenting from the arrangement recently entered into by the committee with the Spanish Government, was held on Monday, at the London Tavern. The chair was taken by Sir J. Fitzgerald, K.C.B. Mr. Los moved and Major Duncan seconded a resolution expressive of the disapprobation of the meeting at the conduct of the Spanish bondholders at the London Tavern, on the 20th of October. After a speech from Mr. Tasker, the resolution was carried unanimously; and a committee, to consist of an equitable adjustment of the claims, was nominated, a subscription being raised to defray the expenses of the opposition.

BLOOMERISM.—On Monday night, no less than six lady lecturers, in different parts of the metropolis, were engaged in expounding the mysteries of Bloomerism. Mrs. C. C. Foster appeared for the first time at the Hanover-square Rooms, Miss Atkins delivered her lecture at the Sussex Hall, in the City, and Miss Griswold, described in the advertisements as only 16 years of age, held forth at the Lecture Hall in the Vauxhall Bridge-road. Miss Griswold assured her auditory that in America the ladies would shortly compel the men to give them seats in Congress.

EARLY CLOSING OF THE TOWER GATES.—The gates leading from the Tower to East Smithfield are now closed at four o'clock in the afternoon, instead of at seven in the evening. Persons proceeding to the steam-vessel wharfs at the water side of St. Katharine's Docks must therefore make their way round the Tower. This notice may prevent much trouble, as the western gate near Thames-street will be open as usual.

COUNTRY NEWS.

MUNICIPAL ELECTIONS.—The municipal elections throughout the country on Saturday appear to have excited very little interest. In several boroughs there were no contests—whilst in by far the greater number they were partial—at all, extending only to three or four wards. The election of mayors, on the 9th inst., promises, with few exceptions, to be equally remarkable for the absence of opposition.

COMMITTAL OF A POOR-RATE COLLECTOR.—At Ilford, on Saturday, William George Beadle, of Barking, the late assistant overseer and collector of the poor-rates, against whom a warrant of distress had been issued, at the instance of Mr. Banks, the rector of the Romford Union, for £1069 9s. 8d., the balance due from him, appeared before the bench, pursuant to his recognizance. A return was made to the warrant, under which it appeared that the sum of £59 9s. had been realised, leaving a sum of £1010 0s. 8d. still due from him, and that sum not being forthcoming, he was committed to the House of Correction.

REFORM IN THE BOARD OF CUSTOMS.—The first of a series of visits intended to be paid to the principal seaports of the country, by deputations from the London Committee for the Reform of the Board of Customs, took place at Hull on Monday. The committee were represented by Mr. W. J. Hall, the well-known wrangler, of London; and by Mr. Sidney Smith, and there was a numerous and highly influential attendance of the principal merchants and traders of the port at the Exchange, to hear the views of the deputation, and to support the object contemplated by them. The chair was taken by Mr. J. Foster, President of the Chamber of Commerce. Resolutions, in accordance with the views and suggestions of the London committee, were moved by Mr. H. Blundell, Mr. Thomas Wilson, Mr. Alderman Thompson, Mr. Keighley, Mr. Crowther Harrison, Mr. W. B. Brownlow, Mr. Middleton, Mr. J. Blundell, and Mr. J. Malcolm, and were unanimously carried.

The Liverpool Chamber of Commerce are about to memorialise the Postmaster-General for the despatch of the north mail from London by the fast train leaving at half-past nine o'clock, instead of at ten o'clock, by which alteration the delivery of letters could be secured at that port, and also in Manchester, at four o'clock p.m.

On Friday (last week) Lady Vernon, and her sister, Lady James, with Sir Walter James, descended by the Prince Albert Pit, in Poynton, and ascended by the Lady Pit, in Worth, 180 yards in depth, having travelled more than a mile by railway underground, with perfect safety, to the astonishment and delight of all the colliers. In her progress her ladyship witnessed the whole process of hewing and wedging out large blocks of coal. She was delighted to find from experience that even by good ventilation, in one straight level or road underground, the colliers had fixed their lighted candles by clay against the wall in straight lines. On their ladyships' return to the top of the pit, they were greeted by repeated hearty cheers from the assembled multitude of the workmen, who had hastily collected in their black faces. Lady Vernon rewarded the men who had accompanied her underground, and also those there in readiness, the sum of £10, which, as might have been supposed, will have been spent in ale—instead of which, they have generously given £5 to the Colliers' Sick Club, and £5 as a subscription towards building two almshouses.

UNION OF THE ORIGINAL SECESSION AND FREE CHURCHES.—The *Berkshire Advertiser* states, apparently on authority, that a union between these two denominations of Christians is in contemplation, and favourably entertained on both sides.

THE CLEANSING AND LIGHTING OF MANCHESTER.—Sweeping the streets of the metropolis of manufactures costs the inhabitants yearly above £7000, deducting the receipts from various sources connected with the scavenging department. The gross expenditure may be thus stated:—Salaries and wages, £4705 19s. 2d.; hire of horses and drivers, £2295 12s.; tools and implements, £311 5s. 3d.; rent and taxes, £170 12s. 4d.; water for streets and allowance to men where water given, £163 17s 6d.; clothing for officers and men, £156 8s.; repairs of yards, water stations, and implements, £253 17s 5d.; printing and stationery, £10 9s. 6d.; gas for offices and gas fittings, £19 17s. 5d.; miscellaneous expenses, £39 12s. 4d.; total, £8117 1s. 11d. The committee of the town council entrusted with the management of this department employ 140 men for the actual cleansing of the streets and the superintendence of the scavengers; also 24 horses, carts, and drivers, for removing the sweepings, collecting dust, and watering the streets. The work performed during last year was the sweeping of 194,338 streets, having an area of 728 928,611 square yards, the removal of 32,395 loads of sweepings, 3618 of bell dust (so called from the character of the dust), and 2 of soot, and the watering to take it up, and consisting of ashes from offices, &c.), and 8218 of rubbish. The surface swept averaged 2,495,934 square yards each week, exclusive of the footpaths. The expense of cleansing and watering for the township last year was 13¾d. for every 1000 square yards of the surface swept. The net expenditure for cleansing ashpits, &c., was, last year, £3892, the gross expenditure being reduced to £4,000 by the amounts received. In the service 72 carts are employed, 30 horses, carts, and drivers, and 90,248 tons of the contents of ashpits, &c., removed. The total number of lamps in the township of Manchester is 12,500, of which 3250 are gas lights; the expenditure in the department, £2864. Thus the cost of cleansing the streets and ashpits of Manchester, keeping the names of the streets in a proper state of legibility, and lighting the town generally, is £6,750.

FATAL COLLIERY EXPLOSION.—On Friday afternoon (last week), between one and two o'clock, a portion of the workings of West Moor Colliery exploded, by which six men and two boys were killed, and six others (one of whom has since died) dreadfully burnt. West Moor Colliery adjoins the York and Berwick Railway, lies about five miles from Newcastle, and has been wrought for forty-six years. The colliery belongs to the "Grand Allies," of which Lords Ravensworth and Wharncliffe are the partners, but it is understood to have been wrought recently by Messrs. Nicholas Wood and Co. There is considerable interest about this old colliery, as it was the pit at which the celebrated George Stephenson followed the humble occupation of brakesman. A model of the first locomotive engines he built are still employed on the waggon-way. The explosion, it is thought, was caused by one of the men smoking his pipe in the workings.

PRESENTATION OF THE CORPORATION ADDRESS TO M. KOSSUTH.

Or this very interesting ceremony, which was fully detailed in the ILLUSTRATED LONDON NEWS of last week (page 550), our Artists have enabled us to present the large picture upon the ensuing page. It may, however, add to the interest of the scene to recapitulate the arrangements and proceedings of the day.

The Lord Mayor arrived at Guildhall, in dress state, at twelve o'clock. His Lordship was accompanied by the Court of Common Council, which at this time was densely crowded. There were nearly 200 members of the Court of Common Council present, nearly the whole of whom wore their mazarine gowns. Among the Aldermanic body in attendance we remarked Alderman Wilson, Alderman Sir Robert Carden, Alderman Carter, Alderman Challis, Alderman Sidney, M.P., Alderman Hooper, Alderman Wire, Alderman Humphery, M.P., and Alderman Sir Thomas Cotterell; were also present, in their full state robes

The Guildhall was densely crowded—a passage through the centre being with difficulty maintained by a strong body of police. All the passages and avenues leading to the chamber were also lined with spectators, each anxious to obtain a glimpse of the distinguished stranger

At a few minutes after twelve o'clock, Madame Kossuth arrived at Guildhall, in company with Mr. Rowland Hicks and Captain Messinghen. On reaching the Council Chamber, they were conducted by a private entrance on to the dais, where Madame Kossuth was received by the Lord Mayor, and accommodated with a seat on the left hand, adjacent to the Lord Mayor's throne. The entrance of these ladies into the chamber was greeted by the whole of the parties present with loud and continued applause. Mr. John Abel Smith, M.P., the Rev. Mr. Binney, and several other gentlemen, not members of the Corporation, were also admitted to places within the court.

A long interval now occurred, during which the ordinary business of the Court was proceeded with.

It was close upon one o'clock before M. Kossuth entered the court, accompanied by Lord Dudley Stuart, M. Pulszki, Mr. Alderman Wire, and Mr. Gilpin. His reception was the signal for a burst of cheering. He was received by Mr. Alderman Wire and Mr. Gilpin to the Lord Mayor, who shook him very cordially by the hand; and he was then conducted to a place on the Aldermen's bench close to the chair occupied by the Lord Mayor.

The motion under discussion having been suspended, the Town Clerk (Mr. Sergeant Merewether) approached, bearing in his hand the address of the corporation to M. Kossuth, and when he immediately proceeded to read

The conclusion of this address, which was read by the Town Clerk in a very dignified and impressive manner, M. Kossuth, who had remained standing while it was delivered, received it from the hands of Mr. Sergeant Merewether, and placed it in his breast with much fervency, and then addressed a few words, privately, to the Lord Mayor.

The Lord Mayor immediately rose, and requested that as much silence as possible should be observed, in order that they might hear the address of their distinguished visitor, who was about to address them; as he was labouring under a severe cold and oppression of the chest, and quite unable to speak with the force he could wish.

The attention of the audience was then directed to the address, which was read by M. Kossuth. Our Artist has portrayed the illustrious orator in one of his most expressive attitudes. The picture comprises the dais or western end of the Council-chamber, and part of the north side, showing a few of the patriotic tributes of art which grace the walls of the chamber; including the marble statue of George III. (Chantrey's first statue); the Hon. Mrs. Damer's bust of Nelson; Northcote's picture of [illegible] and Copley's "Siege of Gibraltar;" and Northcote's large picture of the "Death of Wat Tyler."

The picture is, altogether, a scene of intense interest; and the official personages upon the dais, and the auditory in the area of the Court, are alike impressed with the eloquence of the accomplished orator.

Mr. W. Corrie is appointed police magistrate for the district of the metropolis. Mr. Corrie was deputy steward of the Palace Court at the period of its abolition; and the annual compensation then awarded to him is saved to the public, and is to be deducted from his present salary, according to the decision of the Treasury.

M. KOSSUTH ADDRESSING THE COURT OF COMMON COUNCIL.

FINE ARTS.

HARVEY DEMONSTRATING to CHARLES the FIRST his THEORY of the CIRCULATION of the BLOOD.—Painted by R. HANNAH. Engraved by H. LEMON. Published by Lloyd, Brothers, and Co.

Mr. Hannah's masterly picture of Harvey's great discovery (which picture we noticed at the time of its exhibition at the Royal Academy) has just been engraved in the highest style of line, by Mr. Henry Lemon: the size is important, 28 inches wide by 25 inches high, including a suitable margin for framing; and the print, as our reduced copy of it shows, is a most impressive representation of this remarkable event in the history of natural science. The composition is handled with great breadth of light and shade, effects which are vividly rendered in the print. The picture is the property of Joseph Hodgson, Esq., F.R.C.S., of Westbourne-terrace, Hyde Park, who has most kindly and liberally lent it to the publishers for the purpose of engraving.

This picture is of a very interesting class, and so far superior to the scenes of battle and carnage which too often formed the "furniture prints" of the last century, that, to explain more readily the incident before us, it may be permitted to recal some of the leading phases of Harvey's life.

The date of the first promulgation of Harvey's doctrine of the "Circulation of the Blood" is not absolutely ascertained. At the age of thirty he was elected Fellow of the College of Physicians, and shortly after appointed physician to St Bartholomew's Hospital. On the 4th of August, 1615, he was chosen by the College to deliver the Lumleian lectures on Anatomy and Surgery; and, upon this occasion, is supposed to have first brought forward his views upon the circulation of the blood. It is commonly asserted that he first disclosed his opinions on the subject in 1619, after he had been lecturing four years. The Index, however, of his MS. in the British Museum, which contains the proposition whereon the doctrine is founded, refers them to April, 1616; yet, with patience and caution, peculiarly characteristic of the sound philosopher, he withheld his opinions from the world, until reiterated experiment had fully confirmed his system, and had enabled him to demonstrate it in detail, and to advance every proof of its truth of which the subject is capable. It was not before he had attained his fiftieth year that Harvey's "Treatise on the Motion of the Heart and Blood," dedicated to Charles I., appeared. It was printed at Frankfort in 1628.

Some time before this the reputation of Harvey had recommended him to the notice of the Court, and he had been appointed physician extraordinary to James I. In 1633 he was made physician to his successor, Charles I.; and was in the habit of exhibiting to him and the most enlightened persons of his Court the motion of the heart, and the other phenomena upon which his doctrines were founded.

When the Civil War broke out, Harvey, who was attached to the King as well by his office as by gratitude and affection, followed the fortunes of his master; and, on his leaving London in consequence of increasing tumults, attended him, and was present at the battle of Edgehill, in 1642. He related to a friend, that, on the day of the battle, he had charge of the two Princes (afterwards Charles II. and James II.). They sat under a hedge whilst the fight was going on; he took out Virgil (a copy of which he always carried with him) and began to read; but he had not long pursued his studies before one of the princes drew his attention to a cannon-shot, which had torn up the ground near them. He then removed his charge to safer quarters.

During their stay at Oxford, Harvey had abundant leisure to pursue his favourite studies, though under the disadvantage of having, at the beginning of the rebellion, when his lodgings at Whitehall were plundered, lost many valuable papers, containing notes of curious observations on the dissection of animals; which loss he never ceased to lament, saying, "that for love or money he could never retrieve or obtain them."

By his unfortunate Royal master, Harvey was always treated with regard and favour and the attachment to arts and sciences, which formed a conspicuous part of the King's character, contributed not a little to promote and encourage the pursuits of the philosopher. Charles's passion for stag-hunting enabled him abundantly to supply Harvey with animals for dissection; *and the King, with some of the noblest persons about the Court, were frequent witnesses of the experiments.*

It is said, that after the death of Charles, Harvey travelled again into Italy; but it is certain that he shortly after withdrew from the world, and passed his time in retirement, in a house he possessed at Combe, in Surrey. Here he prepared for publication his second great work, "Exercitations on the Generation of Animals," which had employed his time for nearly twenty years. His "Treatise on the Circulation of the Blood" cost him twenty-six years to bring to maturity. His discovery was ill received. Most persons opposed it; others said it was old; very few agreed with him. To an intimate friend he himself complained, that, after his book came out, he fell considerably in his practice; and it was believed by the vulgar that he was crack-brained; all the contemporary physicians were against his opinion, and envied him the fame he was likely to acquire. That reputation he did at last enjoy: about twenty-five years after the publication of his system, it was received in all the Universities of the world; and Hobbes has observed that "Harvey was the only man, perhaps, that ever lived to see his own doctrines established in his life-time."

He died in 1657, and was buried on the 26th of June of that year. All the Fellows of the College of Physicians attended his funeral, and one who was present states that he lies buried in a vault at Hampsted, Essex. He is lapt in lead, and on his breast, in large letters, was to be read—"DR. WILLIAM HARVEY."

The scene of the picture is Harvey's apartment in the palace. The King is seated in the foreground. The courtier who stands behind him, with his hand familiarly resting on the back of the chair, indicates the attachment and devotion of the cavaliers to the King. The close proximity of the young Prince to the philosopher indicates the gentle character of the man, and the inoffensiveness of the operation. The Prince has

FINE ARTS.—"HARVEY DEMONSTRATING TO CHARLES I. HIS THEORY OF THE CIRCULATION OF THE BLOOD."—PAINTED BY R. HANNAH.

[illegible] perused Harvey's favourite author for the greater excitement of his friend and tutor's demonstration. The extreme fondness for anatomical studies which in after-life characterised both Charles II. and James II. is thus explained.

The courtier behind is permitting himself to be entertained by some of Harvey's opponents. These are incarnations of pedantic bigotry and stolid imbecility—the two great opponents of scientific progress—who by insult and obloquy, show their hatred of him who dares, by asserting truth unsettle their long-cherished absurdities; and few men have felt this truth more keenly than the immortal Harvey.

The artist has taken great pains to preserve the likeness of Harvey, and was guided by his excellent portrait by Cornelius Jansen, in the College of Physicians, the authorities of which most kindly placed that and all that the college contained concerning Harvey at his disposal.

THE LATE WILLIAM WYON, ESQ., R.A.

THIS distinguished artist possessed a world-wide reputation as a medallist for the number and excellence of the works which he executed. He was born May 25, 1795; and was the son of Mr. Peter Wyon, who enjoyed the reputation of being at that period the best medallist of Birmingham. The subject of our memoir early attained considerable proficiency in his art, and before he was sixteen years old commissions were given to the father on the understanding that the son should execute them; and at the age of seventeen he was honoured by the Society of Arts with a prize for a beautiful head of Ceres.

His cousin Mr. Thomas Wyon at that time occupied the situation of Chief Engraver to the Mint; and, being a man of considerable talent, Mr. Wyon was placed under his tuition. On a vacancy occurring in the situation of the second Engraver, his cousin recommended William Wyon for the appointment; but, as the Master of the Mint was unfavourable to his application, a general competition was proposed. The different works were submitted to Sir Thomas Lawrence, who selected that of Mr. Wyon, and, upon that award, the office was at once conferred upon him.

At an early part of his career—in fact, when Mr. Wyon was not more than twenty-two years of age—he received a commission for a model for the Indian coin, with the understanding that Flaxman should complete it. Young Wyon, on finishing the work, carried it to Flaxman, who immediately exclaimed, "Mr. Wyon, I shall not touch this." The young artist, misunderstanding his meaning, and greatly mortified, replied, "If permitted, he would endeavour to model a second worthy of his notice." "Mr. Wyon," said Flaxman, "you mistake me; when I said that I should not touch this, I intended that you had left nothing for me to do." Being a great admirer of the genius of Flaxman, he was proud of this; and he delighted to tell the circumstance to his friends, even after he had obtained his subsequent reputation.

Mr. Wyon was appointed Chief Engraver to the Mint in 1828. The importance of this office has always been recognised by the Government no less than by the public; for, by the abilities of the medallist, the likeness of the Sovereign is familiarised to the people. The coin not only [illegible] features, but is also a record of the state of art at the period; thus, as we curiously examine ancient coins for the features [illegible] scrutinise the features of our gracious Queen, as handed down by coins, some [illegible] and years to come. Judging of the future from the past, the works of Wyon will last for ages upon ages; and, as he has executed the whole of the coins of King William IV. and Queen Victoria, together with a large portion of those of King George IV., posterity will be indebted to Mr. Wyon to a very considerable extent for the preservation of likenesses of those Sovereigns who have reigned at a very important period of English history. Of all these productions, the five-pound and crown pieces of the present reign were received by the public with the greatest favour. The latter is always preserved with great care; and we would venture to recommend to the Mint authorities that a further issue should take place, in order that the people may possess a fine work of art and a correct likeness of the Queen. Of all Wyon's coins the florin was the most unpopular. The letters "D. G." were omitted, the coin was thick, and it was badly struck. Previous to his death Mr. Wyon executed another of great beauty, with the letters "D. G."

Mr. Wyon was elected R.A. in 1836, and in his proper rotation served upon the Council. In addition to his other appointments he was engraver of the Goldsmiths' marks. As an artist, he was remarkable for the care with which he finished his models. It may be useful for the future aspirant to numismatic honours to be informed of the hours which he spent to obtain a perfect design in wax. To the uninitiated, on visiting his studio, a model would appear perfect; nevertheless, the artist would be found steadily working at the same design, at a subsequent visit two or three weeks afterwards. Whist modelling, he was fond of the company of his intimate friends, or he was pleased to have books read to him by his family. As a companion, he was greatly sought by the *élite* of literary, scientific, and artistic circles; and his engaging manners and delightful conversation, no less than his eminent talents, secured for him a very large number of friends. He appeared to have so keen a sense of classic taste, that the slightest aberration therefrom discomposed him, and gave an idea, to those who were unacquainted with his true character, of his being hypercritical.

It would be impossible for us to give a detailed list of Mr. Wyon's works; since, for several years, he has made, with few exceptions, every medal required for the services of the State or for public institutions, including all the war medals conferred by the Government and East India Company. One of the first fine works of art which he produced was the Cheselden obverse, for St. Thomas's Hospital; and the study of a subject on the reverse is a good example of his talent. The likeness of Brodie is another noble production; but perhaps the medals executed for the Royal Humane and London Shipwreck Societies must be placed amongst his most classic productions. The medal executed for the Gresham Society has always been regarded with much public favour; but, probably, of all Wyon's medals, that executed on the occasion of the Queen's visit to Guildhall has been the most popular. The high finish of its workmanship and beauty of its execution have

pleased the public; and to this day the schoolboy is delighted to electrotype it. The very noble medal, with the portrait of Prince Albert on the reverse, and St. George and the dragon on the obverse, is not known to the public. It is the beautiful work which Prince Albert has announced his intention of presenting to Messrs. Dilke, Cole, and others, who have rendered important services to the Great Exhibition. Amongst Wyon's other numerous works he executed three charming miniature medals of the Queen, Prince Albert, and the Duke of Wellington, which retain the likeness, notwithstanding their extremely diminutive size.

It should here be stated that not only is Mr. Wyon's genius testified upon the English coin, for he also executed the entire coinage of Portugal, Venezuela, and New Granada.

For the last two or three years it has been known to Mr. Wyon's intimate friends that his health has been declining. At the commencement of the year the loss of his wife, to whom he was most affectionately attached, produced its effects on his highly sensitive mind. At the Great Exhibition, the arduous duties of a juror were added to his other important avocations. Moreover, it became a great object that, in the prizes which were to be awarded, a correct and highly finished likeness of both the Queen and Prince Albert, should be handed down to posterity. The reverse was submitted to competition; but all the obverses were specially entrusted to Mr. Wyon; so that he had ample labours, with diminished physical strength. The original model of the Exhibition medal is nine inches diameter, and the electrotype therefrom is a splendid example of a medallion, which should be preserved. The purposes of the Exhibition require five medals. The Council Medals are 3½ inches diameter: the greater part of these are struck, and many of them have the names of the recipients placed upon them. The portraits of the Queen and Prince are remarkable likenesses, and are examples of the high finish which characterises all Wyon's productions. The Prize Medal is somewhat smaller than the last; and the reverse, which is by Leonard Wyon, is not to our taste than that of the Council Medal; so, in fact, the second medal is more beautiful than the first, from the obtaining of which there have been so many foolish heartburnings and vexations. These medals are all struck, but are not at present lettered. The Jury Medals are nearly finished. The Exhibitors' Medal is Mr. Wyon's last production. The obverse presents a likeness of Prince Albert, and the reverse a glory, surrounded by a dove resting upon it, as though it had just alighted, with the word "Exhibition" on a scroll, and it is somewhat remarkable that the very last work which Wyon executed should represent the emblem of peace. The fifth medal is for services. The obverse contains a portrait of Prince Albert, but the reverse is a simple wreath, perhaps hardly worthy of the occasion for which it is designed.

"In the midst of life we are in death." Whilst actually engaged in the completion of these most important works Mr. Wyon was struck with paralysis, at Brighton. On the very day of this calamity, he was amusing himself by modelling a design of high artistic power. He recovered from the effects of the paralysis; but other symptoms supervened, and, notwithstanding the unremitting attention of Dr. Jenks and Dr. Ormerod, he sunk on Wednesday morning, Oct. 29th, in the 57th year of his age. He has left four children, two sons and two daughters.

The eldest son, Mr. Leonard Wyon, who now holds the situation of second engraver to the Mint, was the designer of the reverse of the Prize Medal; and we confidently expect he will not be unworthy of the great name which has been bequeathed to him by his father, whose amiable disposition endeared him to his family and all his acquaintance.

HUSSEY'S REAPING MACHINE TESTED BEFORE PRINCE ALBERT.

A trial of the powers of this machine, a rival to M'Cormick's, which received the Prize Medal at the Great Exhibition, was made on Saturday last, at Windsor, in presence of Prince Albert. On the occasion of the Exhibition trial, Mr. Hussey, the inventor, not having been present, the working of his machine was entrusted to one of the porters at the Exhibition, who was wholly unacquainted with its action, whereas that of Mr. M'Cormick was worked by skilled labourers, and it was therefore considered that the merits of the competing inventions had not been fairly or equally tested. Messrs. Bray and Co., of Swan-lane, the London agents, accordingly gladly accepted a challenge from the proprietors of M'Cormick's patent, and a public competition took place at the Cleveland Society's show at Mitcham, Surrey, when the performances of the rival inventions were again tested by a jury of 13 gentlemen, on a crop of wheat 25 bushels to the acre, very much "laid," and a field of barley, also 25 bushels to the acre, very short in the straw, and, if possible, more laid than the wheat. The result was that the jury gave their award in favour of Mr. Hussey's machine upon seven out of the nine leading points on which it had been pre-arranged that their decision should turn. These seven points of superiority were—

1. That Hussey's reaper cut the corn in the best manner, especially across ridge and furrow, and when the machine was working in the direction of the laid. 2. That it caused least waste. 3. That it did most work (taking the breadth of the machines into consideration). 4. That it left the cut corn in the best condition for gathering and binding. 5. That it was best adapted for ridge and furrow. 6. That it was least liable to get out of order. And, 7. That its first cost was the least. Of the two remaining points (viz. which required the least amount of horse labour), the jury declined to give any decision, as they refused to express any decided opinion, in consequence of the very unpropitious state of the weather.

Messrs. Bray, to mark their success in a more emphatic manner, subsequently applied to Prince Albert to be allowed to make experiments in his presence, to which his Royal Highness assented, and on Saturday last, therefore, the trial was made, Mr. Hussey himself guiding the machine, in the presence of the Prince, General Wemyss, Colonel Seymour, Mr. J. Cathcart, and several gentlemen and ladies of the neighbourhood. The spot selected for the trial was behind the statue of George III., at the end of the Long Walk, fern—of which there is an abundance in that locality—being the article on which the machine had to operate. The machine was drawn by two strong horses, and proceeded on heedless of ruts and hillocks in its course, which was very rapid, bringing down everything it encountered cleanly and completely, including two or three slices of turf at least a foot long and more than an inch thick. The Prince inquired whether the iron wheel did not sometimes sink in the earth? to which Mr. Hussey patentee replied that in wet weather there was that inconvenience. The Prince expressing his surprise at the clearance of the opposing turf, it was remarked that nothing could withstand the action of the knives; and the further remark was to be done on the sharpening of the knives got out of repair, led the proprietor to observe that spare knives, like spare plough-shares, should always be kept on hand. For the purpose of illustration, the whole length of knives was then drawn out at the side, when it was observed that each knife was fastened to the long supporting plate at the back with small rivets. By subsequent questions of the Prince were elicited statements that, notwithstanding the precautionary necessity for a reserve, the knife is, in fact, as durable as the machine, both being estimated and proved to last from fourteen to twenty one years, and that the price of the machine complete is twenty guineas.

The performances of the machine were not confined to one single course. A considerable amount of work was performed in the most satisfactory manner.

At the close of the trial his Royal Highness ordered two of the machines for himself, one for Windsor and the other for Osborne.

The Austrian Consul applied on Tuesday to Mr. Yardley, the magistrate at the Thames Police-office, for his interference on behalf of the Captain of the Austrian ship *Etquette*, the crew having been excited by Kossuth's rival, and committed various acts of insubordination. The Consul stated that when Austrian seamen came to London they generally threw themselves entirely on anything in a free country, but their not on of "freedom" was very distinct. Mr. Yardley remarked that they had, perhaps, no real experience of it in their own country. The Magistrate explained that the police might interfere if they witnessed any serious offence against the laws, and that information of others might be given of any violence or mutiny. The inspector stated that he had seen the crew, and they had promised to be quiet for the future.

The *Official Milan Gazette* of the 27th ult announces that cries of "Kossuth for ever! the Republic for ever! viva Mazzini!" having been heard at Stradella on the occasion of a ball being given at a theatre, and similar acts having taken place at Montio de Gabbi, judicial proceedings have been commenced against the persons supposed to be the guilty parties.

A Madrid letter of the 27th ult. says:—"A letter of the 23d, from Lisbon, states that Queen Dona Maria was very dissatisfied at the interest which the Count de Sobral, the governor of Lisbon, and M. Maria Bastos, the Minister of the Interior, had shown towards Kossuth during his short sojourn in that capital. These marks of sympathy would naturally be displeasing to her Majesty, who is a near relative of the Emperor of Austria; but, although she would willingly have dismissed these two functionaries, she has not yet done so, as she could not struggle advantageously against the revolutionary tendencies of Marshal Saldanha and his ministerial colleagues. The Spanish ambassador at the court of Lisbon had received despatches, desiring him to inform the Queen of Portugal that the court of Madrid participated in her sentiments on the subject."

KOSSUTH.

THE WORKING-CLASS DEMONSTRATION.

On Monday the working classes of the metropolis expressed their sympathy with the principles for which the chosen head of the Magyar nation has contended. Russell-square was selected as the most convenient *locale*, and by half-past eleven some twelve or fifteen thousand persons had congregated together in the space between the railings of the square and the houses arranged in order according to their trades, each distinguished by appropriate banners. The members of the Central Demonstration Committee, having assembled in the square, formed in order of procession, and taking the lead, accompanied by a band of music, were followed by the immense multitude assembled, marshalled five abreast, in the order making their way round the north and to the west side of the quadrangle, leaving it slowly (and not without some difficulty, in consequence of the impediment which thousands of spectators, brought together the major part of them by a rumour that Kossuth would meet and join with the *cortège* at its outset, occasioned) by way of Keppel-street. The flags and banners displayed throughout the whole length of the procession were numerous. First came the Hungarian colours, with the motto, "Welcome Kossuth." Then followed a large banner, also with the red, white, and green ground, carried by four or five men, bearing on it the inscription "There is no obstacle for him that wills." This was followed by the Turkish flag, after which came in succession the union jack of England and the stripes and stars of the United States, and, following later in the procession, a large silk banner, having on it the words, "Kossuth and Mazzini Italy and Hungary," and another, a blood-red flag, with an inscription in Italian, "The democratic republic of Italy, and fraternity of the people." A sort of gallows was also carried in the procession, from which was suspended a number of copies of the *Times* newspaper, and a placard inscribed "The *Times* and Hayman, burn them both." Being at the time the leading rank commenced its march until the rear turned into Keppel-street, nearly three quarters of an hour had elapsed, so numerous was the body of which the assemblage was composed. Copenhagen-fields presented an appearance of animated excitement which, since the memorable gathering of the "trades' unions some few years ago, has not been witnessed in that locality. From a front window of the tavern a sort of balcony had been thrown out, where, under the protection of the British flag, Kossuth was to receive the address of the working classes, and from which he was to speak his acknowledgments. In addition to the flag which floated over the balcony there was in front of it the following inscription: "By united effort much is accomplished."

About half-past one o'clock M. Kossuth arrived, accompanied by several Hungarian friends, and at half-past two the distant sound of music and the gleam of numerous banners announced the approach of the cavalcade, and in a few minutes after it approached the balcony, when the committee alighted and repaired to M. Kossuth's apartment. The whole of the open space in front of the balcony was densely packed with human heads, of which the upturned faces, when M. Kossuth made his appearance, had a most singular effect. It is almost superfluous to say that M. Kossuth was received with the most deafening and enthusiastic cheering. He bowed gracefully in acknowledgment, and at last, having obtained silence by an expressive gesture, turned round to the committee and listened attentively while Mr. J. Petty read the address, and at the words, "Welcome to our country," placed his hand on his heart and bowed profoundly. The address, which was neatly engrossed, and mounted on a handsome gimmen roller, was presented to M. Kossuth on the termination of the reading.

M. Kossuth then came forward to address the vast assemblage, and thanked the people warmly for the generous sentiments in favour of his native land. He expressed his gratification at seeing the working classes, with whom he was identified, his beloved father having left him nothing but a name. He had lived his whole life by his own honest and industrious labour, and therefore was well acquainted with the habits, the domestic and social necessities of the people. He had laboured for the whole race, and not for a class—for agriculturists, manufacturers, and trading men; and he looked back with pride to the association he had formed for the encouragement of manufacturing industry, to the free schools, to its exhibitions, to its press, and to its industry. He had been politically persecuted, and not for class privileges. In the demonstrations of the English operative classes he recognised that natural instinct of the people before which every individual greatness must bow down with respect. Public opinion was the basis of the international code under which the republican or monarchical form, and must give direction to the policy of the country. The eloquent orator then developed at great length the question, whether the Continent was to be ruled by the principles of freedom or by the force of absolutism; and whether England could remain indifferent to the approaching struggle and final decision of the question.

The people of England (continued M. Kossuth), by its lordly-proclaimed sympathy with the cause of its freedom and independence of Hungary, has pronounced itself willing not to remain indifferent, and to side, not with absolutism, but with liberty, by supporting and protecting against all interference of foreign governments the sovereign right of every nation to dispose of itself. (Loud cheers. You have, therefore, proclaimed that principle of freedom, and that happy condition which you feel assured that your institutions, your freedom, and your public spirit, will go on peacefully developing—morally, materially, and politically. That all this is intimately connected with the victory of the principle of freedom on the European Continent. (Cheers.) In a word, you have pronounced for that truth I, since in England, on no occasion have omitted to express, viz. that there is a community in the principle of freedom as there is an identity in the destines of humanity. Besides, you have duly considered that the material welfare of Great Britain is also in the highest degree dependent on and connected with the victory of the principle of freedom in Europe. And truly it is so.

M. Kossuth then vindicated the influence of Free Trade, by showing that the amount of commerce with the United States was at the rate of 7s. per head, whilst with Absolutist Russia and Austria it was only 7d. per head. After dwelling on the importance of insuring the independence of Hungary, as indispensable to the independence of Europe, he continued:—

As to France, my sentiments are known; I have declared them openly. I will be true to those sentiments; and can only add, that it is a highly important step in mankind's destiny for the French nation, a country nations so substituted for the unhappy rivalries of old, as to elicit in England also sympathies that welcome to the French as was seen at the late Great Exhibition, and to elect such sentiments in England as that country steadily should ever be. The French nation is great enough for the pulsation of its heart to be felt always, and have been always felt over the greatest part of the European continent. Till now it is true that the French nation have been realised which Europe's oppressed nations had formed to themselves—(Hear, hear)—but it must be remembered that the French nation has fallen short in the realisation of its own democratic hopes also. (Hear, hear.) It would, therefore, be unjust to make a reproach of that which was a misfortune, which had emanated from the despotic power. I only attribute their mischance to the unfortunate propensity to centralization which the French nation during all its trials conserved centralisation which leads over to the opposition of liberty—centralisation with which the practices of liberty rest rather upon personalities than upon principles; and when an omnipotence of power is centred, be it in one man or in one assembly, that man must be a Washington, or that assembly be composed of Washingtons, not to become ambitious, and, through ambition, dangerous to liberty. (Hear, hear.) Now, Washingtons are not so thickly sown as to be gathered up everywhere for the respite. (Cheers.) I would, however, solemnly protest, should any nation attempt to meddle in the domestic concerns of my fatherland; so, of course, I cannot have the arrogant pretension of mixing with the domestic concerns of any other nation, and, least of all, of the great French nation, which is powerful enough to come at last triumphantly out of its trials and sufferings. I hope that the great French nation, in case it realises the name which it bears, will not forget that it is for her sacred mission to unite the United States to check the encroaching spirit of absolutism wherever it should dare to threaten the independence of nations and their right to dispose of themselves. (Hear, hear.) That is what oppressed humanity expects from the French Republic as well as from England and the United States.

K. Kossuth emphatically denied that Hungary was imbued with socialist notions or theoretical speculations about property. He expressed his sympathy for Italy, Poland, and Germany; he cordially thanked that England wanted no revolution at all, because, firstly, it wishes but a progressive development; and secondly, because England has sufficient political freedom to be insured that whatever Great Britain may still need, it will not only carry it out, but carry it out peaceably:—

Now this (continued M. Kossuth) being my duty and my resolution, I act consistently—my ground was, is, and will be, in England, this—such and such are the true facts of the past struggles of Hungary. These facts, I confidently hope, are certain to secure the generous sentiments of England to my country's cause. I stated that, in my opinion, the form of government can be different in different countries, according to circumstances, their wishes, and their wants; England loves her Queen, and has full motive to do so; England feels great, glorious, and free, and has full motive to feel so; but England being a monarchy, that can be no sufficient reason to her to hate and discredit republican forms of government in other countries, differing in circumstances, in habits, and in wants. (Cheers.) On the contrary, the United States of America, being likewise a great, glorious, and free country, under republican government, the circumstance of being republicans cannot give them sufficient motive to hate and discredit monarchical government in England. (Hear.) It must be entirely left to the right of every nation to dispose of its domestic concerns. Therefore, all I claim for my country also is, that England, seeing out of our past fate or cause is just, should acknowledge the sovereign right of every nation to dispose of itself; and, by acknowledging this, England should not only not interfere, but also not allow any power whatever to interfere with the domestic matters of my country, or of any other nation.

M. Kossuth then defended the conduct of Hungary towards the house of Hapsburg, and maintained that the deposition of the Austrian Monarch was quite justifiable. M. Kossuth thus concluded:—

I will ever respect the laws of England, and do nothing here contrary to them; but so much I can state, as a matter of fact, that my nation will never accept and acknowledge the perjured house of Hapsburg to become again lawful sovereigns of Hungary; never will it enter into any transactions whatever with that perjurious family, but will avail itself of every opportunity to shake off its yoke. Remember, that though the people of Hungary were monarchical for a thousand years, yet the continued perjury of the Hapsburgs during 300 years, the sacrilegious faithlessness by which it destroyed its own historical existence, with the barbarous existence of Austria, as also my country's present intolerable oppression, have so entirely plucked out of the heart of my nation every faith, belief, and attachment to monarchy, that there is no power on earth to induce the nation to submit again; and, therefore, Hungary wills and wishes to be a free and independent republic; but a republic founded on the ruin of law, secuaring social order, security to person and to property, and the moral development as well as the material welfare of the people.—(Cheers)—in a word, a republic like that of the United States, founded on institutions inherited from England itself. This is the conviction of my people, which I share in the very heart of my heart. I confidently hope that the people of England will appreciate the justice of these remarks, and appreciate the honest convictions of my heart; neither will it falter in its sympathy to that cause which it honnured with its sympathy, which it judged to be righteous and true, and which it consoled by its wishes and hopes. All I entreat is that the people of England may not give a charter to the Czar to dispose of the world, but rather make respected, by its powerful position, the right of every nation to dispose of itself. (Cheers.)

M. Kossuth, after a few minutes spent in his apartment in conversation with the committee, proceeded to his carriage, which drove off at a very rapid pace, amid the enthusiastic cheering of the crowd, which dispersed soon after in the most tranquil and orderly manner.

DINNER AT HIGHBURY BARN TAVERN.

In the evening, a public dinner was given at the Highbury Barn Tavern; Mr. Thornton Hunt in the chair. The spacious room was crowded, and the company was graced by a fair sprinkling of ladies. Probably not fewer than 800 persons sat down to the substantial repast which was provided for them. Most of the banners which had figured in the procession were now displayed on the walls, and a powerful brass band was in attendance, which played a number of popular airs during the evening; of these the "Marseillaise," "The Roast Beef of Old England," "Yankee Doodle," and "Kossuth's March," appeared to be the favourites, and were received with several rounds of applause

Speeches were delivered by Mr. Pottie, Mr. G. Massy, Dr. Hyacinthe Ronay, Mr. Conyngham, M. Leon Blanc, M. Ernest O'Brien, Mr Amand Goegg, Mr. G. F. Holyoake, Mr. Fleming, &c. M. Mazzini sent the following letter of apology for his absence:—

Sir,—Your kind invitation reached me very late on Saturday. I regret that both previous engagement and other merely personal motives will prevent me from availing myself of it, but in heart, soul, and wishes I am with you and with all those who advocate the principle contained in the address to Kossuth, that "on the brotherhood of peoples rest the hopes of civil isation and the free development of man's noblest faculties."

A truly holy alliance of the nations, on the basis of freedom and equality for the moral, intellectual, and physical progress of mankind, has been the parent thought of all the Hungarian cause has ever spoken, written, done, and endeavoured. Let that parent thought live and set through all your manifestations. God and the people, truth and might, will help you on your way, on which the hearts and friendly wishes of all now bleeding and struggling nations will welcome the English workers.

Believe me, sir, with cordial thanks, ever faithfully yours,

2, Sydney-place, Brompton, Nov. 3. JOSEPH MAZZINI.

M. Mazzini had an interview with Kossuth on Tuesday.

Sir James Clarke, the Physician to the Queen, called on Kossuth on Saturday, and kindly tendered his professional services.

Kossuth has called on Mr. Lawrence, the American Minister, and had a lengthened interview.

Letters from Vienna of the 31st ult. state that the reception given to Kossuth in England had made a profound impression; it is added that despatches had been of a menacing character in tone and temper had been written by Prince Schwarzenberg to Downing-street.

The trustees of the Kossuth fund, in aid of the Hungarian refugees, deserve all praise as much progress as possible before its departure, have requested that subscriptions may be paid into the hands of Messrs. Barnards, Devis, and Co., Cornhill; Coutts and Co., Strand; or the Commercial Bank of London. Lord Dudley Stuart has signed the request for the trustees.

It has been decided that the addresses from the metropolitan boroughs shall be presented on Thursday next, Kossuth having fixed that day in answer to the deputation headed by Lord Dudley Stuart, which waited on him in Eaton-place, on Tuesday. It was intimated that, as Kossuth had witnessed a demonstration of the working men, a middle-class demonstration should also be seen by him.

Upwards of 250 leading gentlemen of all parties in Manchester have given their names to put down a demonstration in favour of the Magyar patriot; Mr. John Potter, the Mayor of Manchester, having refused to call a meeting of the town council to address Kossuth, on the ground that the members had not the constitutional power to convene such meetings.

On Wednesday the committee to organise the reception of Kossuth met in Birmingham. Mr. Toulmin Smith attended on the part of M. Kossuth. The result was, that an invitation was accepted to a banquet in the Town-hall, on Wednesday next, and it is most likely that Kossuth will enter Birmingham on Monday next, on his way to Manchester. A grand procession will then take place, in which all the trades in the town will join. At Birmingham will be presented the addresses from Coventry, Kidderminster, Derby, Coventry, Walsall, Wolverhampton, Atherstone, Grantham, and all the towns in the midland districts. The surplus funds arising from the banquet will be devoted to the Hungarian cause, and placed at the disposal of Kossuth, to be applied by him as may seem most advantageous. The arrangements will in every way be such as to give to this the character of a great Midland demonstration, in which all parts may join, and there is no doubt that they will participate. At the banquet the chair will be taken by Mr. Scholefield, M.P., and a most influential committee and list of vice-presidents have been formed.

On Wednesday a very numerous deputation from the Society of the Friends of Italy waited on Kossuth, in Eaton-place, for the purpose of presenting an address. Mr. P. A. Taylor, chairman, *pro tem*, of the managing committee of the society, having spoken at some length, prior to the reading of the address, Kossuth replied, and declared, of course, there could be no man on earth who would not wish for peace, but in the particular life of a people such, as in large communities, the aim must never be confounded with the instrument by which it is to be attained; and so with public opinion, which in itself is no aim but only the medium for carrying that which it takes for its aim; and public opinion could not be of any weight if it were to reject media of action which circumstances may render necessary. The mere declaration of sympathy for freedom, accompanied by the assurance that in no case would arms be taken in its defence, would be a charter to despotism. He was convinced that if every Englishman gave one drop of blood or one shilling of money for England to be a country of dead as well as of sentiment, because Absolutism would consider the strength of England and peace before everything to be assured

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

According to accounts, dated Sept. 20, fresh disturbances have broken out in Chili, the only one of all the South American Republics which has hitherto preserved social order. The revolutionists had taken several towns, and were sweeping everything before them, and the troops had declared in favour of a new President—General Santa Cruz.

Mr. William Hutt Synge, of the Foreign Office, has proceeded to Washington as *Attaché* to her Majesty's Mission in the United States.

The Queen has nominated Master Walter Campbell of Islay to the to the vacant Scholarship in the Charterhouse, in the gift of her Majesty.

The residence of the Portuguese Legation has been removed to No. 12, Gloucester-place, Portman-square.

Letters from Florence, of 28th October, announce the promotion of Mr. Burke Honan, junior, from the post of *attaché* of the Naples Legation in that city, to a position of *attaché* to the embassy of his Gracious Majesty the King of the Two Sicilies at Paris. The *attaché* is son of Mr. Honan, the correspondent of the *Times* in Naples.

A severe shock of an earthquake was felt at Truxillo (Central America), on the 18th of August, and extended throughout Honduras, without, however, doing much damage, save a severe shaking to the houses, causing the inhabitants to leave them immediately.

Late accounts from Venice deny the truth of the assassination of Fraschini, the celebrated tenor singer.

The interesting ceremony of laying the foundation-stone of the Hackney National and Infant Schools (Kent) took place on Friday week, by the Right Hon. the Earl of Shaftesbury. The site is on part of the property well known as formerly Mr. Cormack's nursery, and very near the Royal Naval School. It appears that out of the £6000, the estimated cost of the intended new church, no more than £3000 is required to make up that sum.

The ceremony of turning the first sod on the Toronto and Lake Huron Railroad was performed on the 16th ult., at Toronto, by the Countess of Elgin, in the presence of some 20,000 people. Lord Elgin made an excellent address on the occasion.

Mr. Tucker, an engineer attached to the arsenal at Malta, has arrived at Alexandria on a mission from the Government to survey the prostrate obelisk (Cleopatra's needle), and report as to the practicability and expense of conveying it to England. He has had it entirely uncovered, and finds it to be in about the same defaced condition throughout.

Fifteen of the band of Pasatores, the famous Italian brigand, were executed on the 14th ult., at the gate of St. Felix, at Milan. Another was also condemned to death, but the penalty was commuted to twelve years' hard labour in irons, in consideration of his having made revelations. Six others were condemned to different periods of imprisonment, with hard labour in irons.

The directors of the Submarine Electric Telegraph have decided to open to the public the submarine telegraph between Dover and Calais very early next week, as everything is perfect for the transmission of messages between the two countries.

The Duke of Cambridge has forwarded from Dublin a donation of £10 to the Leicester-square Soup Kitchen.

M. Turgot, the new French Minister for Foreign Affairs, was an officer in the Garde-du-Corps of Charles X., and gave in his resignation in consequence of the ordonnances which led to the revolution of July. In the insurrection of June, 1848, he distinguished himself greatly against the barricades as a simple grenadier of the 1st Legion of National Guards, and it was the admiral on felt by the legion for his conduct on that occasion which led to his election as Lieut.-Colonel.

The *Courrier de la Gironde* states that the produce of the vintage in France of this year for red wine will be about half that of ordinary years, and for white rather less than that proportion. The quality cannot yet be judged of, but the Medoes and the Graves are considered to be about the same as in 1846 and 1844.

The site fixed upon for Marochetti's equestrian statues of the Queen in Glasgow is St. Vincent-place, fronting Buchanan-street. The artist has undertaken to complete his task in eighteen months, and the cost will not exceed £4000.

The committee for the erection of a monument at Genoa to the memory of Christopher Columbus has issued a notice, informing the public that the events of the last three years have caused a considerable diminution in the subscriptions for that national work, and that about 100,000 fr. more will be required to complete it.

It appears from a statistical account in the *Ecodella Speranza* of Naples, that the number of foundings received in 1850 in the hospitals of the Neapolitan continent amounted to 2939 boys and 2939 girls. The deaths among that in the same hospitals during that period to 1834 boys and 1312 girls.

Signor Denarchi, a gentleman connected with the public press of Venice, has been condemned to three months' imprisonment in irons in the military prison, for a seditious article in the *Bretta*, a Venice paper.

The Hanover Official Bulletin of the 31st ult. contains the following:—"The King has passed a good night, and no particular change has taken place in his state."

The Court of Prussia went into mourning on the 1st inst., for three weeks, on the occasion of the death of the Duchess of Angoulême. Low masses were said on the 29th ult. in all the churches of Bordeaux for the repose of the soul of the Duchess.

The statue of the late lamented Lord George Bentinck was on Tuesday placed upon the pedestal in Cavendish-square. This testimonial of the respect and gratitude of the friends and admirers of the late Protectionist leader will not, however, be open to public view for a short time, as some slight additions in the work have been deemed desirable, and until they are completed a temporary covering will surround the statue.

On Monday a general assembly of the Academicians was held at the Royal Academy of Arts, in Trafalgar square, when Mr. William Boxall, Mr. Edward William Cooke, Mr. Frank Stone, and Mr. Henry Weekes were duly elected associates of that institution.

Mr. Augustus Craven, Secretary to her Majesty's Legation at the Court of Wirtemburg, is shortly expected to arrive in this country on leave of absence.

In the event of a general election, Mr. Macdowall Grant has consented to become a candidate for the county of Banff.

It was announced at the constables' dinner, on Monday last, at Lewes, by the local agent of E. Porter, Esq., that it was not the intention of that gentleman to offer himself at the next election as a candidate for the representation of that town.

The monument in memory of the late Duchess-Countess of Sutherland, erected by tenantry and others connected with the county, at a cost of about £700, has just been completed.

Admiral Sir C. Napier, K.C.B., being at present the guest of Sir Thos. Thrvistone, Bart., of Wadsyarter, Buckinghamshire, the inhabitants of Fakenha, in honour of his distinguished services, and also to mark the high respect in which he is held by the people of that district, entertained him at dinner on Monday last. Upwards of a hundred gentlemen were present.

The new Catholic church of St. John the Evangelist, Gravesend, was formally opened for service last week by Cardinal Wiseman.

Last week from 20 to 30 young females left the Orkneys by the *Queen* steamer for the south, all bound for situations.

A splendid service of plate is about to be presented to the Mayor of Southampton for his conduct as chief magistrate, an office which he has now filled for the second year in two years.

The terrible effects of the recent gale in the vicinity of Nova Scotia are shown by the late loss of life announced. The remains of sixty persons who were lost during the storm have been buried in one grave. No less than one hundred and eighty vessels, of all kinds, are reported to have been wrecked, among which we notice one Russian ship stranded and condemned, and one English ship sold to be buried in the sand.

Mr. Megevand, the new English minister in Switzerland has arrived at Berne, and presented his credentials to the President of the Confederation.

Mr. Magennis was Chief Secretary of Legation at Vienna.

A ukase of the Emperor of Russia, dated the 19th ult., enacts, that men who may maliciously desert military service shall, on being convicted before a tribunal, be incorporated in the companies of discipline, and that if they are incapable of serving in such companies, they shall be sent as colonists to Siberia.

Parliament was on Tuesday further prorogued by Royal commission unn the 15th of January. The proceedings were of the usual formal nature, and attracted comparatively little interest. The Commons were represented at the bar of the House of Lords by two of the clerks of the Lower House, there being no member of the House of Commons present, and only two or three strangers.

The *Artemisia*, French corvette, which is about to sail from Cherbourg for Tahiti, is to carry out a certain number of masons, carpenters, smiths, and other workmen, for the Marquesas Islands, where the Government intends to erect buildings destined for lodgings for persons condemned to transportation. These workmen are to remain for four years certain, and during that period are to receive good pay.

A letter from Leipsic says, "The catalogue for the book fair of Saint Michael has just been published. It results from it, that during the short space of time which has elapsed since the last Easter fair, not less than 3600 new books have been printed in Germany, and that 1150 others are in the press. More than one-half of these works relate to scientific subjects."

The sum paid into the Paris Savings Bank on Sunday and Monday by 3115 depositors, of whom 313 made deposits for the first time, was 241,854f.

The first stone of a Protestant Church was laid at Turin, on the 25th, 26th great Monday, in the presence of the British Ambassador, Sir H. Aberdeen, the American Minister, Mr. Kinney; Count Reform, the Prussian Minister; and M. Bert, a pastor at Turin.

On the 25th ult. the Jesuits took possession of the convent of St. George at Venice.

A workmen's lodging-house of large size has just been erected at Christiania, in Norway. Twenty-two families are already established there. This is the first instance of such an establishment having been completed on the Continent of Europe.

CHESS.

TO CORRESPONDENTS.

W C B—Look at the "finish" again, and you will perceive that the game is equally drawn if White take the Rook, since the advance K B P can most always cost the place

W C K—Several correspondents have observed the same thing, and we intend submitting the point to the author

J S, Isle of Man—It is impossible to solve Mr Bolton's Problem 404 in five moves if Black makes the best defence. See our solution in a previous Number

M A—The price of Mr Boden's clever little work, called "A Popular Introduction to Chess," we believe is 6s

TOURIST, Ayr—The most becoming Christmas present to your club would be one of Mechi's magnificent "Terrace Chess-boards" and a set of the new men

X S Cantor—You are correct in No 691; but have failed to discover the key to the preceding one

ARAB, Lynn—"The Staunton Chessmen" are, we believe, procurable through any bookseller in the country. You can have no authority whatever, therefore, in obtaining them for your club

TREASURE SEEK—Ask for Bohn's "Chess-player's Companion," and Jaenisch's "Amateurs Nouvelle." &c

AN AMATEUR, High Wycombe—1. See notice above to M A. The office of the *Chess-players' Chronicle* is 31, King William-street.

L B, Nass—You will see by our solution of No. 405 that you have lost your wager

A TRUE LOVER OF CHESS—We have had many complaints of the same kind; the remedy, however, rests with the public: they should refuse to encourage such absurd publications

G A VETERAN—It shall be examined again

A CONSTANT SUBSCRIBER—You shall have them next week

B X—Quite right. Is it not pretty? BOLDONIA—We shall consider it attentively

SOLUTIONS OF PROBLEM No 404, by Argentine, Theleonous, Verger, M D, Scot, Marpiot, G M D, are correct.

SOLUTION OF PROBLEM No 405, by Lougbor, is correct

SOLUTIONS OF PROBLEM No 406, by Conway, Hunt, Dr Field, Judy, Bessie, Jack of Shrewsbury, B Kennon, J M of Sharnbrook, M B, are correct

SOLUTIONS OF ENIGMAS by Dr Field, Mentor, Quail, S S, Mitre, Fidle-Chess, P S T, Berwick, Judy, B X, Bessie, F H H of Horsham, Jack of Shrewsbury, St Edmund, are correct.

*** A number of communications on Chess must remain unanswered until next week for want of space.

SOLUTION OF PROBLEM No. 406.

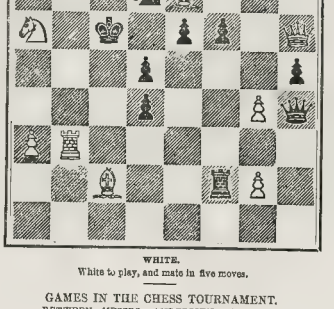
WHITE.	BLACK.	WHITE.	BLACK.
1. R to Q B 7th	Kt takes R (best)	4. P takes R (becoming a Kt	Anything
2. B to B 3d (ch)	P takes B		
3. P takes Kt	R takes R, or (a)	5. P mates	

(a) 3. P to Q 3d | 4. P to B 8th Queens
If R takes Q, the B takes P mate; and if R takes R, the P mates

PROBLEM No. 407.

By Mr. H. J. C. Andrews.

BLACK.



WHITE.

White to play, and mate in five moves.

GAMES IN THE CHESS TOURNAMENT,
BETWEEN MESSRS. ANDERSSEN AND SZEN.

GAME No. 6.

(*Sicilian Opening.*)

WHITE (Mr. S.)	BLACK (Mr. A.)	WHITE (Mr. S.)	BLACK (Mr. A.)
1. P to K 4th	P to Q B 4th	17. P to K R 4th	Q to B 3d
2. Kt to K 2d	P to Q B 3d	18. B to K 2d (d)	K R to Q square
3. P to Q 4th	P takes P	19. Q to B 3d (e)	P to Q 5th
4. Kt takes P	P to K 3d	20. P takes P	P takes P
5. B to K 3d	Kt to K B 3d	21. Kt takes P (f)	Q to K 4th (ch)
6. B to Q 3d	B to K 2d		(ch) (g)
7. Castles	Castles	22. K to his square	B to Q Kt 5th (ch)
8. P to Q B 3d	P to Q 4th	23. B to Q 2d	R takes Kt
9. Kt takes Q Kt (a)	P takes Kt	24. B takes B	R takes B
10. P to K 5th	Kt to K sq	25. Q takes Kt	R to K 8th (h)
11. P to K B 4th	P to K B 4th	26. K to K B 2d	Q to K R 8th (ch)
12. Kt to Q 2d	Kt to Q B 2d	27. R to K R sq	Q to Kt 6th (ch)
13. P to K Kt 4th (b)	P to K Kt 3d	28. K to Q sq	R takes B
14. P to K Kt 5th	P to Q B 4th	29. K takes R	R to Q R 3d (ch)
15. Kt to K B 3d	P to Q Kt 3d	30. K to Q 2d	Q to her 6th (ch)
16. K to B 2d (c)	Q to her 2d	And White resigns.	

(a) Better, we believe, to have taken P with P, when we should have had an even game.

(b) This move, under present circumstances, appears to be quite safe, and calculated, with judicious after play, to give an advantage to White.

(c) The King is well posted here, and affords White an opportunity of pursuing his attack on the side with vigour.

(d) An unaccountable error. By playing R to K Kt square, Mr Szen would have been secured from all immediate danger of Black's attack, and have been in a small liberty to prosecute his own.

(e) One mistake in three is in life is too often the forerunner of another. After this unfortunate move, White becomes subjected to an attack which it is not to be resisted. Instead of playing B to Q 3d, we believe he might have saved his Q Kt to Q B square, and have relieved himself entirely from the pinch of Black's assault, and have got out of the press with a game of very nearly equal position.

(f) It is pretty clear that White cannot exchange Queens, on account of Black's being able to take the Bishop with Pawn, checking; and now we perceive the immense importance of the play K B to K Kt square, as recommended by him at his 8th move

(g) Mr Andersen considers the termination very skilfully

(h) The correct move. White is now bereft of all resources

*** This game was the concluding one between these eminent players. The score giving to Anderssen 4 games
Szen 2 do.

BETWEEN MR. WYVILL, M.P., AND HERR ANDERSSEN.

GAME No. 6.

BLACK (Mr. W.)	WHITE (Herr A.)	BLACK (Mr. W.)	WHITE (Herr A.)
1. P to Q B 4th	P to K B 4th	26. K to B sq (d)	B takes Q
2. P to K 3d	Kt to K B 3d	27. P takes Q	B to R 8th
3. P to K 4th	P to K 3d	28. B to K Kt 4th (e)	K to B sq
4. Kt to K B 3d	B to K 2d	29. R to Q B 5th	Q to Q sq
5. B to K 2d	Castles	30. P to Q Kt 4th	P takes Q Kt P
6. Castles	P to Q 3d	31. B P takes P	B to K 2.
7. P to Q Kt 3d	K to K 5th	32. K R to Q B sq	B to Q 3d (f)
8. P to Q R 3d (a)	B to K B 3d	33. B to K sq	R to K R 3d
9. B to Q R 3d	P to Q B 4th	34. Q R to Q B 2d	K to K 3d

25. Q to K B 2d	B to K R 5th	And White resigns.	

(a) In anticipation of White's move of B to K B third

(b) To enable him to move his Kt

(c) An extraordinary lapse for such a player in such a contest

(d) Fairly in the teeth of spirits. It is in situations of peril like the present that the science of an old hand is necessary

(e) Having succeeded to obtain immediate danger, Black now plays cards in

(f) Seeing the Q Kt P would have avail him nothing, since Black was sure to win the Q Kt P or Q B P in return

(g) Which never recovers for in the consequences of shutting his Rook in thus

(h) Drawing for mate. The rest of the game is beautifully played by Mr. Wyvill

(i) In the making of a masterly combination

(k) It was in expectation of White's endeavouring to extricate his unfortunate R that the Black Bishop was played to Q B 5th, and now the aggrandised player will soon perceive the full force of that fine coup

(l) It is clear he has no better retreat

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

LORD PRESIDENT HOPE.

THE RIGHT HON. CHARLES HOPE, of Granton, a distinguished lawyer, and formerly Lord President of the Court of Session, was the eldest son of John Hope, Esq., a London merchant, and the great grandson of the first Earl of Hopetoun: he was born the 29th June, 1763. Having been admitted an advocate in 1784, he very soon obtained an eminent position at the Scottish bar. Endowed with no common powers of oratory, Charles Hope took part in most of the important cases of his day. His celebrated defence of Sir Archibald Gordon Kinlock, an unhappy lunatic who, in a moment of frenzy, had killed his brother, Sir Francis Kinlock, is a fine and remarkable specimen of Mr. Hope's eloquence: it is to be found in the "State Trials," and in a series of celebrated trials recently published. Mr. Hope attained successively most of the high honours of his profession. Two years after he was at the bar he was made Deputy-Judge Advocate; he was named Sheriff of Orkney in 1792, and became Lord Advocate of Scotland in 1800. He was appointed in 1804 a Lord of Session; in 1811 Lord President of the Court of Session, and in 1837 Lord Justice General of the High Court of Justiciary: he retired from the bench, in his seventy-ninth year, in 1841. Prior to his elevation to it he had been M.P. for Haddington for several years. He was made a privy councillor of Great Britain in 1822.

The Lord President married, the 8th Aug., 1793, his cousin, the Lady Charlotte, fourth daughter of John, second Earl of Hopetoun, by whom (who died the 22nd Jan., 1834) he had issue four sons and eight daughters: his eldest son is the present Right Hon. John Hope, Lord Justice Clerk.

Besides his legal fame, the Right Hon. Charles Hope obtained other repute, as Lieut.-Colonel of the Edinburgh Volunteers. He was also Lieut.-General of the Royal Archers, the Queen's Body Guard, and Director of the Royal Academy of Scotland. To the regret of all who knew him, this venerable lawyer and judge, whose private virtues were as great as his public worth, departed this life on the 31st ultimo, at his residence, Moray-place, Edinburgh. He will be long remembered as one of the brightest ornaments of the Scottish bar.

JAMES NOBLE, ESQ., VICE-ADMIRAL OF THE BLUE.

THIS gallant officer entered the Royal Navy in July, 1787, and served as midshipman in the *Bedford*, in Rodney's action. In 1795 he was nominated acting lieutenant of the *Agamemnon*, under Nelson, and, in 1796, was severely wounded by a ball in the throat, at Leghorn. "In this with the greatest grief I have to mention," says Nelson, in his report of this affair, "that Lieutenant James Noble, a most worthy and gallant officer, is, I fear, mortally wounded." He soon, however, recovered this, and followed his heroic chief into *La Minerve*, serving as aide de camp at Porto Mejo, Corsica, &c. He was present, and again wounded, at the capture of the Spanish frigate *Sabina*, and shortly after, as flag lieutenant to Nelson in the *Captain*, he highly distinguished himself at Cape St. Vincent, taking a prominent part in boarding the two line of battle ships *St. Josef* and *St. Nicholas*. In one of his despatches Nelson thus expresses himself:—"Lieutenant James Noble's merit and repeated wounds entitle him to every reward a grateful country can bestow." He attained to post rank April 29th, 1802, and became rear-admiral in 1837.

This eminent seaman was the second son of Major Isaac Noble, of North Tawton (and Bristol), who settled in New Jersey, North America, and lost his life and sacrificed very considerable property as a loyalist in the war of independence.

Admiral Noble married first, in 1801, Sarah, daughter of James Lamb, Esq., of Eye, Co. Sussex, and by her (who died in 1818) he had seven sons and three daughters. He married, secondly, in 1820, Dorothy, daughter of the late Dr. Hallifax, and by her, in 1842, Jane Anne, wife of Edmund Spettigue, Esq. His eldest surviving son, Jeffrey Wheelock Noble, is a Captain in the Royal Navy. Two brothers and one son of the deceased likewise lost their lives in the naval service of their country.

THE REV. SIR H. D. BROUGHTON, BART.

THE REV. SIR HENRY DELVES BROUGHTON, eighth Baronet of Broughton, in the county of Stafford, was the second son of the Rev. Sir Thomas Broughton, the sixth Baronet, and the next brother of General Sir John Delves Broughton, the seventh Baronet: he was born 10th Jan., 1777. Having entered holy orders, he was appointed perpetual curate of Broughton, Staffordshire; he succeeded to the family honours at the decease of his brother, the 9th Aug., 1847, and in 1821 married, the 15th June, 1807, Mary, daughter of John Pigott, Esq., of Capard, and had issue five sons and several daughters. The Rev. Baronet's death has just occurred at his seat, Broughton Hall, Staffordshire; he is succeeded by his eldest son, now Sir Henry Delves Broughton, the ninth Baronet. The families of Broughton and Delves, which this baronetcy represents, are amongst the oldest in the realm.

SIR EDWARD CROMWELL DISBROWE, G.C.H., ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY TO THE NETHERLANDS.

The decease of this eminent diplomatist occurred at the Hague, on the 29th ult. Sir Edward Disbrowe, a scion of the ancient Huntingdonshire house, was in direct descent from the family of Oliver Cromwell, was son of Col. Disbrowe, by the Lady Charlotte his wife, daughter of the 3rd Earl of Buckinghamshire. From an early age he was attached to the diplomatic service, and filled high ambassadorial offices at the Court of Russia, Wirtemberg, Sweden, and Holland. He received the honour of knighthood in 1831.

Sir Edward married in 1801, Anne, eldest daughter of the Hon. Robert Kennedy, third son of the eleventh Earl of Cassilis.

LIEUT.-GENERAL LLOYD.

LIEUT.-GENERAL ARTHUR LLOYD entered the army at an early age, and served many years in Egypt, the West Indies, and America. In Egypt his sight was greatly impaired; and, in 1819, he retired from active duty; since that time he has resided mostly in Upper Canada, where he was a member of the Legislative Council, and where he possessed a large property. General Lloyd's early repute in Egypt, and his subsequent honourable military career, had been a short time ago rewarded by a medal and a distinguished service pension, conveyed in terms highly complimentary by the Duke of Wellington.

General Lloyd married in 1811, Anne Derig, youngest daughter of the late Hon. Geo. Henry Monk, judge in Nova Scotia, which lady survived him; he leaves no issue. The gallant general died recently at Lybham, in Lincolnshire, in the 79th year of his age.

CAPTAIN THOMAS TAYLOR WORSLEY.

THIS gentleman died on the 25th ult., aged 57, at Wallingwells, the seat of his cousin, Sir Thomas W. White, Bart. He was a military officer of great personal distinction, having served through the Peninsular war in the Rifle Brigade. At the siege of Badajoz he was wounded in the head and in the ears: the musket ball, making the circuit of the neck, was taken out at the opposite side. Again at Waterloo Captain Worsley received a severe wound, singularly enough under the other ear, the ball, as before, making the circuit of the neck. He, of course, had the Waterloo medal and a Peninsular one with nine clasps.

Captain Worsley was second son of James Worsley, Esq., by Lydia, his wife, sister of Sir Thomas Woolaston White, Bart., of Wallingwells.

The funeral of the Duchess d'Angoulême took place on the 28th ult., in the Franciscan convent at Goritz. The *cortège*, which was very numerous, was headed by the Count de Chambord, Don Carlos of Spain, and his two sons; and in it, also, were the Count de Montbel, Duke de Lovis, and Count de Blacas. Waiting in the church were the Countess de Chambord, the Duchess of Parma, the Duchess de Berry, Count Lucchesi Palli, and Marshal Marmont.

The total amount of municipal dues and duties levied on the importation of coal and coke into all the ports in 1850 was £201,847 11s. 7d., against £241,382 1s. 1d. in 1849. Of the above sum £233,733 12s. 7d. was levied in England and Wales; £10,857 8s. 3d. in Scotland; and £6986 9s. 9d. in Ireland; London alone contributing £175,911 15s. 6d. The export dues for the same periods for the United Kingdom were £94,932 15s. 4d. and £93,768 19s. 9d. respectively. The amount of duties levied on coal brought by railway into the ports of the United Kingdom during 1850 was £8363 9s. 3d. against £6392 7s. 5d. in 1849.

The long-expected match at billiards between Lord Eglinton and Captain Mr. Jy, the best of eleven games, was played at Eglinton Castle on Monday (last week), and terminated in favour of the former winning six games to the latter's three.

THE ELECTRIC TELEGRAPH IN PARIS.—A group of eighteen wires starts from the telegraph tower at the Hotel of the Minister of the Interior, follows the Rue de Grenelle, goes along the Esplanade of the Invalides as far as the parapet of the Quai d'Orsay, and, following the line of that parapet, goes as far as the Pont de la Concorde, at that bridge the group divides into two parts. One goes along to the octrol wall at the Barrière de la Conscrite, which it follows as far as the terminus of the Chartres Railway at the Barrière du Maine and the Orleans terminus. The other part of the group crosses the Pont de Jena, ascends the Trocadero to the octroi wall of the bank of the Rue Neuve des Bons Hommes, and thence to the Rouen, Northern, Strasburg, and Louis Railways. As the new electric telegraph watch crosses the Champs-Elysées to form a communication between London and Paris, the wires are placed underground in a wrapper of gutta percha, and follow the following itinerary:—They leave the Batignolles, follow one of the side alleys in the outer Boulevards to the Barrière de Passy, that over the Grande Epicerie de Paris, the Pont Neuf, then by the Allée d'Antin to the river, which it crosses under the Pont des Invalides, and, following the right Quay, reaches the Ministry of the Interior by the Rue de Grenelle. The wire, with its wrapper of gutta percha, is only placed about from 40 to 50 centimetres under ground on a bed of sand. It has been already laid down as far as the Barrière du Maine, and it is expected that it will be completed in about a week.

STATUE OF WILLIAM THE CONQUEROR AT FALAISE.

THE INAUGURATION.

We continue, from our Journal of last week, page 542, our account of this commemorative Statue.

The inauguration (engraved in the ILLUSTRATED LONDON NEWS of last week) took place at eleven o'clock on the morning of the 26th of October. The *cortège*, arranged in the order of procession beforehand at the Palais de Justice at Falaise, first moved towards the spot appointed for the ceremony with the Sappers' band of the Garde Nationale at its head. It was composed of the Prefect, Mayor, and his two colleagues at Caen; of M. Guizot, with his grand decoration of the Legion of Honour; and the representatives of Calvados, the magistracy, advocates, members of the committee for the Monument, the College professors, followed by M. Louis Rochet, the sculptor, and M. Julien Travers, professor at the Faculty of Arts at Caen, author of the cantata set to music by M. Auber.

The *cortège* stopped at St. Trinity, an ancient church of the time of William, and decorated for the occasion. The celebrated mass was then performed (not, as has been stated, by the Bishop of Bayeux, but by Monsieur le Curé of the parish, preceded by the clergy, placed around the statue. The *façade* of the Hotel de Ville was richly ornamented with the armoury of the five departments of Normandy. The cannon thundered from the top of the ramparts, music below gave the reply, and the veil covering the statue was suddenly lowered. Then the members of the Société Neustrienne of Caen performed the music of the Song of the Normans, by MM. Travers and Auber. After the inauguration and the music came the addresses—first the Curé, followed by the Mayor and associate functionaries, and lastly M. Guizot, whose speech seemed to be ill received by some of his auditors.

The various representatives and other official personages re-assembled at a banquet, at five o'clock, which was followed by a grand ball.

Scarcely any English attended; Lord Palmerston, although announced in the programme, was absent. His presence would have rendered more remarkable (if possible) the circumstance of an inauguration in France, and by France, of a statue erected to the founder and chief of the dynasty of England.

THE CASTLE OF FALAISE.

Those who have stood in the Grass-market of Edinburgh, and looked up at the old walls which frown high above the crags, or those who have lain outstretched on some projecting rock, "midway down the cliff" at Stirling, looking out over Bannockburn and the silver links of Forth, and far away towards the highland peak, will find themselves irresistibly carried back to Auld Reekie, or Stirling, as the case may be, when they ascend the gentle slope which leads to the donjon of Falaise. Its situation is even more picturesque than either of the Scotch strongholds we have named, and its strength was in high repute before 9-pounders were in vogue. It sustained in all fourteen sieges, from the time of William to the wars of the League, inclusive. It was stormed by Henry of Navarre (A.D. 1589). Henry in person conducted the siege, and the breach which he effected in the wall remains unimpaired till the present time. Falaise was the prison of Prince Arthur, nephew of King John; and it was of this castle that Hubert de Burgh was governor—the "good Hubert" who failed to execute on the helpless heir to the throne of England the ferocious mandate of his unscrupulous uncle. "The wall is high" are the words which Shakspeare puts into the mouth of the princely boy; and the words occur forcibly enough to those who look down upon the town far beneath. The view of the summit of the keep is magnificent, and repays one even for an attack of *la maladie de mer*. You may linger here as long as it suits your humour; and a few sous will satisfy the old gentleman who acts as janitor and guide. But you must not leave without seeing the apartment in which the Conqueror is said by some to have been born. It is about eight feet square, about as many high, with an arched recess at one end, about four feet deep and six in height. Whether William was born here, or in the house of his maternal grandfather, it is indubitably certain that the scenes of his birth, youth, and early manhood were intimately connected with both places, and both are on that account interesting. As you cross the castle-yard, you are warned to avoid the open mouth of a well which is said to be unfathomable. Without the least wish to disturb one article of belief in the legendary creed of Falaise, we cannot help stating our opinion that the bottom of the well, though "deeper than did ever plummet sound," has been found out, happily very long ago; but at the same time we imagine that those who made the discovery never found their way up again to describe its exact whereabouts.

THE CASTLE OF FALAISE, THE BIRTHPLACE OF WILLIAM THE CONQUEROR.

INAUGURATION OF THE STATUE OF WILLIAM THE CONQUEROR, AT FALAISE.

FIREWORKS ON GUY FAWKES DAY.—(SEE NEXT PAGE.)

MONUMENTAL FOUNTAINS AT BARCELONA.

Much has been written of late upon the construction of fountains, which formed very appropriate contributions to the Crystal Palace. Neither of them will, however, detract from the interest of the accompanying design, which has lately been constructed at the Spanish fortified city and port of Barcelona, on the Mediterranean. The tasteful work was inaugurated some three months since, and is dedicated to the memory of Galceran Marquet, ancient Conceller of Barcelona, and renowned commander of the Catalan galleys, in the Mediterranean, in the beginning of the 14th century.

The fountain consists of a hewn stone basement, with four wings; from the centre of which rises a cast-iron rostral column, 3 feet 5 inches in diameter at its base, and 45 feet in height, composed of six pieces fitted into each other, and fastened by a bar which passes down the interior to the base of the foundation. On each wing is a satyr mounted on a triton, throwing forth water through his mouth and shell.

This monument was designed by the architect Don Francisco Damel Molina, who proposed it to the municipality of Barcelona; and Don Valentin Espara, iron-founder and machinist, of Barcelona, having undertaken the execution of the entire work, the statue, tritons, and other metal parts, were made on his premises under the direction of Mr. John Whytehouse, an English gentleman

In the centre of the column is a reservoir for receiving the water, as well as the water-pipes for its distribution; and for the examination of the water-pipes an elliptical door is made both above and below the reservoir, large enough to allow a man to enter.

This work, the first of its kind in Spain, has given general satisfaction; and the civil, military, and civic authorities vied with each other in celebrating its consummation.

MONUMENTAL FOUNTAINS RECENTLY ERECTED AT BARCELONA.

PEDESTRIANISM.—MANKS'S FEAT OF WALKING ONE THOUSAND MILES IN ONE THOUSAND CONSECUTIVE HALF-HOURS.

Some years since, the feat of walking one thousand miles in one thousand hours was considered next to an impossibility; but here we have to record the wonder doubled. This has been accomplished on the Surrey Cricket-ground, Kennington Oval, by Richard Manks, whose feats of walking present instances of the capability and endurance of the human frame altogether unparalleled. Manks commenced this feat on Friday, the 26th of last September; but, being suddenly attacked with diarrhœa, he was compelled to give up on the Monday following, after having walked 129 miles. His surgeon ordered Manks to rest for a time to recruit his health and strength. This the pedestrian reluctantly yielded to, and for a fortnight he remained under medical treatment. On Friday the 10th October, he re-commenced his great task, starting for the first mile at four o'clock in the afternoon; on he went, full of spirit, completing his first 100 miles at 43 min. 15 sec. after five o'clock on Sunday evening, 12th Oct., his second 100 miles at 44 min. 10 sec. past seven o'clock on Tuesday, 14th Oct., his third 100 miles on Thursday, 16th Oct., at 44 min. 45 sec. after nine o'clock P M., his fourth 100 miles, at 45 min. 16 sec. after 11 o'clock, P M, Saturday, 18th Oct; his fifth 100 miles, on Monday, 20th Oct., at 44 min. 10 sec. after 1 o'clock in the morning; his sixth 100 miles on Wednesday, 22nd Oct., at 47 min. 10 sec after 3 o'clock in the morning; his seventh 100 miles on Saturday morning, 25th Oct. at 44 min. 16 sec., after 5 o'clock; his eighth 100 miles on Monday morning, 27th Oct., at 44 min. 30 sec. past 7 o'clock; his ninth 100 miles on Wednesday morning, the 29th Oct., at 45 min. 15 sec. after 9 o'clock; his 960th mile at 45 min. 20 sec. past 10 o'clock in the morning of Thursday, 30th Oct.; and finally going for his 1000th mile at half-past 11 o'clock on Friday morning, Oct. 31.

The weather was delightfully fine for the season up to Wednesday, 15th October, when it rained heavily throughout the whole of the day; after which it continued favourable up to Tuesday night, 28th October, when, at about ten o'clock, there commenced a heavy fall of rain, which continued for nearly six hours: this was very trying for the almost worn-out pedestrian; and, although so near the finish, many persons were apprehensive that he would not be able to complete his task; still onward Manks went, against the most fearful odds and obstacles, although his feet were severely blistered, his limbs in great pain, and he altogether showed the frightful

RICHARD MANKS, THE PEDESTRIAN, COMPLETING HIS THOUSANDTH MILE, ON KENNINGTON-OVAL.

effects of his incessant labour. On Wednesday the weather cleared up, yet the ground was slippery and difficult to traverse; notwithstanding his trotting-path was a rowed with sawdust, each separate mile took two or three minutes more off his limited per od to go through, whilst a few were covered with blasts and sand. The surgeon ordered them to be poulticed, which was done. Manks's shoes were then changed and cut, to give him more ease, and in that state he kept on his task. During Wednesday night it again rained heavily, so that it was with great difficu ty Manks could get over the ground. Thursday morning brought again sunshine, which enab ed the pedestrian to proceed, and the 1000th mile was gone over in 7 min. 40 sec. In the presence of upwards of 30 0 spectators, besides a great crowd outside the Oval.

To perform every 100 miles, 50 hours were required, including rest, meals, change of clothing, ablution, &c. The average rate of walking for the first 300 miles was at the 14 minutes per mile, leaving about 16 minutes only for rest, &c. The next 300 miles took 16 minutes on an average for a mile, leaving less than 14 minutes for rest, &c. The third 300 miles averaged 16 min. 30 sec. per mile, allowing about 13 minutes' respite between each mile; and it is to the finish about the same time per mile was taken.

During his Manks was d rank of 1781 yards, being 21 yards beyond the required distance, exceeding by eight or nine miles any previous effort, he went 11 miles more and was able to walk the last mile 11 minutes.

Manks's appetite remained good, and his general health excellent; on minute examination of his person, not a blister was discovered on his feet, and only eight or ten blisters during the twenty-four hours, including game and poultry, roast beef and steaks, mutton and chops, &c., since the last he drank in considerable quantities of milk and tea, but the latter he sipped, and he took tea with brandy in it during the night.

Manks has been heard to declare that never again will he attempt such a frightful feat. At half-past two o'clock on Friday morning, he refused to rise, cried like a child, and said to the timekeeper, "I shall walk no more," asking, "Do you want to kill me?" But he at length was induced to persevere unto the finish.

THE FIFTH OF NOVEMBER.

Powder Plot is a general holiday in our calendar, but with many modifications from the olden state. It was first appointed in 1605, as a day of thanksgiving, when all persons were required to go to church. In Spelman's time the judges went to church in state on this day. Bishop Sanderson, in one of his sermons, says—"God grant that we may not ever live to see November the fifth forgotten, or the solemnity of it all-nused."

The sacred observance of the day has formed a feature of the revivalism which characterises the present age; has far the most commonly engaged the attention of the clergy; and has far the most widely extended notoriety. But the secular treatment of the subject has assumed a great variety of complexions, varying almost with the year itself. Last year Guido Fawkes gave way to the Pope and an offending Cardinal, whose notoriety was in full force at the time. On Wednesday last there was no lack of observance of the anniversary, and the Pope and the Cardinal were not forgotten; but the street humour took another turn, and certain persons—no friends to the legitimate subject of the day—allowed their fancy to run in effigies of the Emperor of Austria, Marshal Haynau, and the Czar Nicholas; and, to complete the chapter of absurdities, a monster "Bloomer" was added to the grotesque bevy. But, like another pageant we could name, that of Guy Fawkes was, in many instances, too theatrical or stagy; and they appeared to excite a good deal of curiosity among foreigners not well versed in the calendar of our Church.

The even ng brought its "wonted fires." Upon Tower-hill there was the customary blaze; Clapham-common had its bonfire, as well as the suburbs generally, with the usual accompaniment of fireworks.

The scene which our artist has pictured upon the preceding page is, however, not a public observance, but a display got up to please a family party, the lawn adjoining a well-appointed house, and the spectators enjoying the spectacle from the window balcony. Below, all the pyrotechnic fun: the "Guy" has just been consigned to the bonfire; the boys and girls are in high glee, and the fireworks fret the dark atmosphere with their golden fires. The pastime, within proper limits, is harmless enough; though pyrotechny is about as expensive a game as any we know.

By the way, a 5th of November display has of late years been made subservient to the cause of charity as well as mere amusement. Here is a laudable instance. On Wednesday evening a grand display of fireworks took place on the grounds of the Merchant Seamen's Orphan Asylum, Bow-road, in aid of the funds of the institution. The grounds were illuminated somewhat after the fashion adopted at Vauxhall, and a band of music was engaged. In the rear of the premises was a gibbet, to which was suspended an effigy of Guy Fawkes, and around it were several barrels of tar, which at the proper time were consumed in a most formidable blaze. The exhibition was attended by a large concourse of people, and the result promised to be of considerable benefit to the funds of the charity.

REFINED SPORT AT THE PARIS JOCKEY CLUB.

—We take from a daily contemporary the following extraordinary account:—"The long-talked-of fight between Lord H. Vane and Count Romagnesi took place at twelve min. to one o'clock on the 27th of October, in the drawing-room of the Jockey Club. The bets on the side of the rats, amounting to £1250, were all taken by Lord H., who backed his pluckiest champions. The combatants were placed in the drawing-room. The place of every spectator was assigned to him by the judges of the battle, whose orders were implicitly submitted to. Lord H. had on his right M. Méry, the poet of Marseilles, while the warlike preparations were going on, improvised a dozen strophes inspired by the singular occasion. At about half-past seven Victor Couturier introduced the rats. The large cage in which they were contained was placed upon a table in the centre of the room, in order that the inmates, who had fasted for twenty-four hours, might be publicly fed. The dish chosen to sustain their strength and animate their ardour was a pasty of Perigueux truffles, prepared by that worthy successor of Vatel, the head cook of the club. In three minutes these delicacies were disposed of, with an evident relish and appreciation which cordially have been predicated of them. Lord H. then ordered the caterer to bring in the owls. Iron Beak and Young were born in Scot and, under the auspices of his Lordship's, where for two years they inhabited an old tower, on which they were one day surprised and captured by William Perkes, the falconer. They are owls of the largest kind. They are each two feet high; their eyes of a ghastly transparency; their plumage a mixture of various shades of grey; their talons remarkable for their form, strength, and flexibility. As the clock struck twelve, the signal for the combat was given. Victor Couturier let loose the twelve rats. They had previously organised each a separate system of defence. The former placed themselves on the 8 or of the drawing-room, while the digestion of the truffles was going on, were about to fall foul of each other, when William Perkes turned the two owls into the arena. At this moment a profound silence prevailed among the spectators. Nothing was heard but the piercing cries of the rats and the gnashing of the beaks of the owls. Iron Beak opened the war by flying at Robert Macaire, *alias* the Greek, and seizing him by the back-bone, rounded him as completely as a box connector would do a calf's head; he was about to swallow Young at the same time as effectually disposed of the m lancy Cogaard, *alias* the Book-keeper. Prince Pe hient *alias* Chamounix, Rodhard *alias* the Yankee, and Richard the Lion-hearted, all fell altogether upon Young and hung on to his claws. Young caused Rodhard and Briaquet successively to bite the dust, but Prince Petulant obstinately renewed his attack upon Young's talons, and broke his thigh in the two places. By this time Iron Beak had slain Voltaire *alias* the Enemy of Obscurity; the brave Ratapoil *alias* the Vexer, and Darkness *alias* the Pancake-eater. Bec Salerne had also injured Jack Baker so much that the chances were now nearly equal. The two owls were seriously wounded, but five rats only, more or less injured, survived. The interest of the battle was at the highest pitch; Boulanger, of the Vigneraie, and Prince Lubbet covered in a corner as if ashamed of himself, suddenly rushed upon Young, threw him upon his side, and literally ate out his eyes. The owl utter d a horrible cry, but in his pain he tore open the bowels of Poulestrol with his beak, and the two enemies expired side by side at the same moment. Iron Beak was now singly opposed to Tourieuron, *alias* the Brushmaker, the Baker, Pipe-in-Mouth, the Parisian, the Chief, the Cloister, and Prince Petulant. The latter, who had eaten more truffles than any other rat, was furious beyond measure. He clung to the sound leg of Iron Beak, and, considering the battle lost, while the owl killed all the remaining rats. Of all the gallant combatants, Iron Beak, the owl, and Prince Petulant, the rat, alone survived, both mortally wounded, disabled, but still flashing sparks of fury at each other from their eyes. The judges at this stage declared the battle a drawn one for the present, but decided that the attacks are to be hat d d to the owner of the combatant who shall live the longest. Upon this announcement, Prince Petulant was carried to the Parisian, who, after having examined and nursed. Wm. Perkes, the falconer, took care of Iron Beak, and the backers on either side are now awaiting with anxiety the result of the skill of the respective medical attendants of the mutilated heroes."

NOLO EPISCOPARI.—From a note in "Blackstone's Commentaries," vol i. p. 380, edit. Christian, we learn that "it is a prevailing vulgar error, that every bishop, before he accepts the bishopric which is offered him, affects a modest coyness, and answers *Nolo episcopari*. But these words are the notion I have not been able to discover; the bishops certainly give no such refusal at present, and I am inclined to think they never did at any time in this country.—From *Notes and Queries*.

In an inquest on two young men, killed while making fireworks, Mr. Payne, the coroner, stated that the manufacture of fireworks was prohibited by law, and that, being an illegal act, any one who should be accessory to the death of another, by an explosion of the composition for making them, would be guilty of manslaughter. The Recorder had supported this view of the law. As all the parties concerned were the sufferers, and in all probability the proprietor of the manufactory would not live long, the coroner suggested that the law should not be pressed to the extremity in this case.

FOREIGN MUSICAL NEWS.

Alboni has terminated her engagement at the Grand Opera in Paris; her destination is stated to be Italy. After her visit to her native country, it is rumoured that she will sing in English at Drury-lane theatre, under Mr. Bunn's operatic management. Madame Tedesco was to make her *début* in Halévy's "Reine de Chypre," in which M.M. Roger and Massol were to perform. The new ballet "Vert, Vert," for Mdlle. Priora, the new danseuse, and Mdlle. Plonkett, was to be soon produced. Halévy's "Juif Errant," for Mdlle. Lagrua, Mdme. Tedesco, Morelli, and Roger, in active rehearsal. Meyerbeer's "Prophète" and the ballet were to appear at the Parisian Italian Opera in *Semiramide* and *Oberon*, and Mdlle. Cruvelli was to re-appear in *Norma*. Beethoven's "Fidelio" became a favourite piece at the Hungarian Opera; it has created a great sensation to Richard Wagner, the composer who was compelled to fly from Dresden in consequence of his, and who was a refugee at Zurich. At the request of Liszt, the Grand Duke of Weimar has given Herr Wagner the permission to produce one of his great operas, in a Scandinavian subject. Meyerbeer, on passing through Brussels, on his way to Berlin, received ovations offered at the theatre, where were present Mdlle. Caroline Duprez's *Fiora*. Having been recognised, M. Hanssen, the conductor, proposed a performance of portions of the "Prophète," and the composer was compelled to come forward and receive the cheers of the audience at this act of manifestation, after which the third act of "Lucia" was given in due course. Esther Kicken has been nominated Chapel-Master to the Royal Theatre of Stuttgard. The Duke of Saxe-Coburg's opera "Casilda," is going the round of the German stages; it will shortly be produced at Mannheim, on the Queen's *fête*-day. Spontini's "Olympia" has been received with the greatest success at Berlin, Mdlle. Wagner and Mdme. Köster sustaining the principal parts.
